1. The trees or the blossoms may be injured from drouth. It sometimes happens that a very wet spring with such weather as will stimulate the trees into a very strong growth during the earlier part of the growing period is followed by a summer and fall of extreme drouth. Under such conditions the fruit trees are unable to set fruit buds with sufficient vitality to carry them far enough to form fruit. Fruit buds make heavier demands on the tree than leaf buds. After such extremes as the above the tree uses its whole energy to recover its vegetative power and it may often happen that a tree will fail to set fruit from this cause.

Winter Freezing.

2. The fruit buds may be injured by winter freezes. It is impossible to say just how much freezing the fruit buds of the apple will stand. In sections of this country where the air is less dry than in the west the buds will stand a much lower degree of temperature than they will in our dry atmosphere, and a very low temperature of one winter will have less of an evil effect on the fruits of our region than another winter when the thermometer does not record so low a degree of temperature. There are so many influences that affect the formation of fruit buds and their proper nourishment that it is impossible to say how far and to what extent freezing affects the next summer's crop of apples. The vitality of the buds, their maturity, the condition of the atmosphere as to moisture, the amount of moisture in the soil, and the amount of snow on the ground, are a few of the things we must consider.

Late Spring Freezes.

3. The buds may be injured by late spring frosts. The amount of injury to buds from frosts can not be computed; a few days before or after the blossoming period may make an untold amount of difference. Buds that have been injured by frosts may yet have enough vitality to bloom and yet not enough to set fruit. Some buds, from their position, their state of maturity, or because the yare more hardy, may be less injured than others on the same tree. Varieties considered tender may be able to set fruit after experiencing an unusually heavy frost, yet fail the next year when lighter frosts have touched them. The advancement or retardation of the buds may account for this. Though neither the pistil nor the stamens are badly injured by the frost, the ovary may be so badly injured that fecundation is impossible. Heavy frosts during the blossoming period may so impair the fruiting organs as to cause the dropping of the fruits after they have set.

Insufficient Nourishment.

4. The trees may lack proper nourishment. This may be from a lack of other plant foods. Orchards which have been improperly cultivated, or which have grown heavy crops of apples and have not had the elements removed by these crops returned, may fail to set fruit buds in the proper manner. In an experiment with pollen from an improperly nourished Missouri Pippin, it was found that this pollen was very much less potent than pollen from a more thrifty tree. Poorly nourished trees were found to be more liable to self sterility. Many orchards set in the early history of the different sections have ceased bearing, in al probability from the effects of continued starvation, and many other younger orchards fail to set fruit from the same cause.

Too Much Nourishment.

5. The trees may fail to set fruit from an excess of certain kinds of nourishment. The above may be the case, or they may have plant food at the wrong season of the year. It is a well-known fact that the reproductive and the vegetative powers of a tree are exercised in direct opposition to each other, and a tree making too great a vegetative growth is liable to be barren. This is especilly true of orchards planted close to barns, feed lots or corrals, where the owner is in the habit of dumping manures. Under such favorable conditions to the development of vegetative portion of a tree, it would be much longer in reaching maturity and would never bear as well as another tree planted in soil with nearer the optimum amount of plant food or with plant food better adapted to its needs. On such a tree the fruit buds would be few and would go into winter in an immature condition, with few chances of escaping winter injury. Orchards may fail to set fruit because of too great a growth during the season when fruit buds are forming. A later fall growth may open the road to winter injury because of improper ripening of the wood. Winter killing of the immature wood, together with the fruit buds, is very often the result.

Cereal Seeded in Spain.

Recent figures show that the area seeded in wheat in Spain for 1917 was over 126,000 acres larger than in 1916; in barley, nearly 139,000 acres more; in oats, nearly 19,000 acres more and in rye, only about 700 acres more.

Preserving Strawberries for Show

I have received a communication from J. W. Lott, Olympia, Wash., asking how to preserve show fruit, or strawberries for show purposes. The letter is as follows:

To the Editor: I am a reader of The Washington Farmer and an expert raiser of pedigreed strawberry plants and I do wish some one would tell me, through The Washington Farmer, how to preserve some show fruit in alcohol to retain their full size when picked from the vines. I wish to put up about two gallons in different jars.—J. W. L. Olympia, Wash.

The alcohol process of preserving fruit is probably not the best. At least it is not so considered by experts, and not in general use. There are six ways of preserving foods of different kinds:

1. Preservation by cold, or freezing.
2. Preservation by drying, as in evaporated fruits, meats, etc.
3. Preservation by salting.
4. Preservation by sterilization by heat and exclusion of air.
6. Preservation by chemical or antiseptic substances.

Why Food Decays.

1. The starch during the ripening process turns to sugar.
2. The sugar turns to alcohol.
3. The alcohol ferments, and certain fungi and bacteria get in, grow and multiply that decompose and break down the organic compounds. This is called decay.

When Decay Ceases.

1. When the nutritive elements of the fermenting substance is exhausted. This is true when sweet cider is allowed to alcoholize, then to change from alcohol to vinegar. Provided fresh cider is not added, the vinegar will be changed to water and carbon-dioxide, because the nutriment for the vinegar-forming organisms is consumed.

2. When a substance deletereous to the fermenting organism is produced. This may be true of alcohol above 14 per cent. In a less amount of alcohol the fermenting organism can live, and the fermentation go on. But in a larger amount the fermentation will cease. The same might be true of sugar and salt in certain proportions.

3. Fermentation ceases, but the fermenting organism is not killed, where the mercury reaches the freezing point. It is killed if the heat temperature is 122 or above.

4. Any antiseptic which acts as a poison to the fermenting organism will preserve the fruit.

Recipes for Preserving.

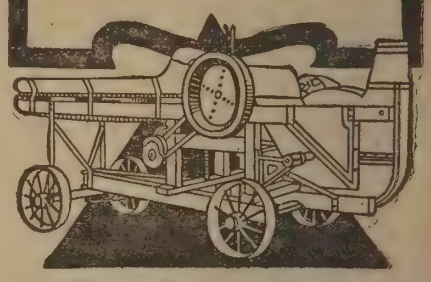
The following recipes for preserving fruits for exhibition are generally used:

The fruit should be put up when very firm, and at least 48 hours after being put into the preserving fluid, should be kept under a low temperature and in a darkened room. The following recipes are in common use:

1. Formalin, one pint; salt solution, two pints; water, 17 pints.
2. Formalin, three parts; salt solution, 10 parts; water, 87 parts.
3. For raspberries: Formalin, one part; glycerine, 10 parts; water, 89 parts.
4. For strawberries: Formalin, one ounce; alum, one drachm; glycerine, five ounces; water, three pints.

Strawberries may be preserved for considerable time in a solution of common salt. So they say; but I never tried it.

I never tried the alcohol solution, although I know that alcohol at a certain degree of strength will kill the organized ferments that cause decay. I never tried it because I followed the direction of our chemists working in the agricultural colleges to discover the many things of practical use. Alcohol may be better than any of the recipes I have given. I wish our friend, Mr. Lott, would try it, and if he finds it works well, I wish he would publish his discoveries, so that all may benefit by them. G. L.



ROWELL CUTTERS PAY DIVIDENDS

GET all the profit. ROWELL CUT and properly packed means good ensilage. J. W. Kerr, Galena, Mo., says, "I can say that the Rowell Automatic is all right and everybody here likes it better than any cutter because of its efficiency and the class of ensilage it produces." Buy the

To Check Tuberculosis.

A subscriber of the Farmer concludes from a description of foul tuberculosis, given in these columns, that her flock is infected with the disease and asks what can be done to check the trouble. The safest and surest way to get rid of the disease is to kill off the fowls and start new wth chicks on new ground.

If possible cultivate the feeding grounds and keep chickens off till next year. If the young chicks have been running with the old fowls and eating on the same ground, they are likely to be infected and it wouldn't be wise to keep them. The disease is spread mainly through the droppings, the germs coming in contact with the feed. This indicates the methods of prevention to follow. There is no known cure for the disease. J. D.

White Leghorns' Record.

To the Editor: I have just 14 White Leghorn chickens, and in the five months, from January 1 to May 31, they have made the following record: In January they layed 107 eggs, February 173, March 267, April 267, and in May 281, making a total of 1095 eggs in five months. MRS. JAMES H. MULES.
Seattle, Wash.

Reducing the Feed Bill

In reducing the feed bill care should be taken that the egg production is not reduced more than the feed bill. It is easy to reduce the feed bill, but harder to keep up production. The object should be not to reduce the feed bill, but rather to reduce the feed cost per dozen of eggs. A cheap ration may mean dear eggs.

There has been a considerable decrease in prices of grain since April and May, and poultrymen are encouraged. Prices of eggs are high, however, some 30 or 40 per cent higher than a year ago. Feed prices are still a little higher proportionately than eggs. With a good grain crop promised it is probable by the time farmers are selling grain that the poultry situation will have been much improved.

If there should be a big corn crop this year there will be far more corn fed to poultry than ever before. Corn will undoubtedly be much lower than wheat, and where this is the case the poultryman can get along without wheat.

A few years ago corn was roundly condemned as a food for laying hens. Hens wouldn't lay if fed corn, so it was said. Later it was found in actual test that hens laid well when corn was fed in proper combination with other foods. There must, of course, be a combination of foods. No one grain will make the hen lay profitably.

"Corn is the best liked grain that is fed to poultry in the middle west," says Lippincott. Lewis in his book says: "Corn is probably the grain most widely fed; moreover, it is greatly relished by all classes of poultry. Corn is very fattening and birds eat it greedily."

This change in viewpoint resulted very largely from careful experiments made with corn in comparison with wheat. These were made by Brooks at the Massachusetts experiment station, where the egg yield from a corn ration was as good as from a wheat ration. The prejudice against corn had been so great that it was freely suggested that there must have been "something the matter" with the experiments. The experiments were corroborated, and the prejudice against King Corn as an egg food had to beat a retreat. All experiments have to run the gauntlet of prejudice, and this is only one case where the results of a careful, laborious experiment have been attacked because the results did not accord with preconceived opinions.

Because of this prejudice much high priced wheat in other years has been fed in place of cheap corn. Now when the demand is so great for wheat and wheat flour and corn is likely to be very much cheaper than wheat the probability is that corn will be substituted largely for wheat.

If wheat and corn should be the same price, which no one expects for years to come, then the poultryman would do well to feed equal parts of each. At present range of prices, wheat could be left out of the ration altogether. But first, let it be understood that the change should not be made all at once. Give the hens two or three weeks time to learn to like corn, and discontinue the wheat and increase the corn gradually.

Here is a sample ration. It is not the only combination that may be used. Others as good might be made without using wheat.

Whole Grain.

Corn, 100 pounds.
Oats, 50 pounds.

Mash.

Bran, 100 pounds.
Middlings, 50 pounds.
Ground corn, 25 pounds.

Animal Food.

Skim milk or buttermilk as drink and no water, and mash mixed with the milk. If no milk is available, use commercial meat scrap, kept in a hopper all the time. If the mash is fed dry in a hopper, add 25 pounds of meat scrap to it if there is no milk to drink. If milk to drink add 10 pounds to dry mash. Grit, shell, charcoal and in a hopper all the time, and green food all the fowls will eat regularly.

Where it is cheaper than oats, or where oats of good quality can not be bought, barley may be substituted.

This wheatless ration, if fed properly, will result in producing eggs at lower cost. It will also serve the patriotic purpose of conserving the supply of wheat to feed the nations at war. J. D.

Enlargement of Liver.

To the Editor: The hens have been laying right along, but every little bit I find one of them dead. I found one of them dead today. I know she had not been dead over an hour. I cut her open. She was awfully fat and her liver was as big as both of my hands. —E. H. Ferris, Winsap, Wash.

This is a case of enlargement of the liver, or hypertrophy of the liver, if the symptoms are fully described. A change should be made in method of feeding. The fowls are evidently getting too much of a fattening ration and the best thing to do is to put them on half grain rations for a week or two. Give them free range or make them exercise in a deep litter of straw for all the grain they eat. Feed liberally on a mash of bran and shorts mixed with milk and give them all the green feed they will eat all the time. If these overfat hens are two or three years old they are not likely laying and at present prices of feed had better be marketed.—J. D.

Larger Crops in Nebraska.

Reports at the Nebraska conservation congress indicate that the beet sugar crop of the state will be 140,000,000 pounds, an increase of 30,000,000 pounds over last year. Of potatoes, 17,000,000 are promised instead of 8,000,000 bushels raised last year, and 400,000,000 bushels of corn in place of 290,000 bushels in 1916.

Brand Farm Products

During these years of readjustment, when every business is coming in for an efficiency examination and is being made to conform to higher standards than ever before, selling farm products under a brand or trademark has frequently been advocated. The foremost educational influence in this direction is probably that exerted by the United States agricultural department. Recently Printers' Ink, a journal for advertising men, printed an article on this subject of branding farm products, from which we summarize the following important points:

Establishing a market for trademarked goods is not an in-and-out business. If you are going into it, go in to stay. The man who sells his potatoes or his apples under his own brand this year only to jump the fence and sell through a jobber or an association next, has thrown away most of his work. It takes time to educate a buying public to know and ask for your goods. If you don't intend to stick don't begin.

A second important point is in regard to handling the products of off years. After you have established a reputation for prime quality you can't afford to jeopardize it by selling an inferior product under your trade name.

Do You Know That

America was discovered in 1492?

Useful on the Farm

By J. C. KNOLLIN.

This large iron kettle, with a capacity of 25 gallons, represents a very small investment in proportion to its usefulness. It is almost indispensable in the old-fashioned process of making "hard soap" and also has a place wherever farm butchering is done, being useful for heating water, rendering lard and cooking the various "trimmin's."

It was purchased with only the bail, the hanging device having been manufactured in the farm blacksmith shop. This consists of a rod of sufficient length to hold the kettle away from the post, with a hook on one end on which the kettle is hung. An iron

Hanging Iron Kettle.

socket was set into the post for the other end of the rod, the weight of the kettle holding it in the socket. This allows the kettle to swing back and forth, the socket being considerably larger than the rod. The rod is suspended by means of a piece of log chain, which is hooked under the bail of the kettle and fastened at a height of about six feet on the post by means of a bolt hook, which goes through the post and is held by nut and washer. By hooking the chain in different links the kettle may be raised or lowered.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

Copyright, 1917 Joe L. Ashlock.

CHAPTER XVI.

In which the 16-year-old bunchgrass boy attends business college at Walla Walla and "batches" and fears his beautiful teacher thinks him a "boob."

The fall I was 16, I rode horseback 170 miles to go to school. The school I wished to attend was the old Empire Business college, run by the Brewer brothers in Walla Walla city. During the preceding planting, plowing and harvest season I had worked and saved about $75. Orlando Fulton, a neighbor, paid me $50 for three months' work. In harvest I was paid $1.50 a day, the same as the men. A couple of pairs of shoes, three or four pairs of "overalls," some shirts, some socks and two pairs of gloves represented most of my expenditure during the summer, and the rest of my earnings I managed to save.

Mother had preceded me to Walla Walla to can and dry fruit, and when I rode into Uncle Bill Stanfield's farm on Dry creek, she was there to meet me, greatly rejoiced that I had made the ride in safety. She went with me to see the principal of the business college. He asked me what I desired to study. I had not the slightest notion. One of our family traditions was that my great grandfather had practiced law in partnership with Stephen A. Douglas some time prior to the Lincoln-Douglas debates. Remembering this, I was prompted to say that "I had thought some of studying law."

The principal smiled in a winning way and assured me that "the field was broad." I thought this was his way of saying that I had chosen exactly the right thing.

But I did not study law at the Empire Business college. I had bookkeeping, penmanship, spelling, commercial law and football. I did not "make good" on the football team. I was afraid of hurting the other fellow, and he wasn't afraid to hurt me.

The principal who assured me that law was a broad field was a fine teacher. But he made love to one of the girls who was pretty, and, inasmuch as he was a minority stockholder in the school, notwithstanding that he was principal, the other and majority part of the firm fired him.

I can not remember the principal's name. The teacher who taught me commercial law and spelling after he left was an astonishingly beautiful girl. I studied very hard, and had my lessons every day; but I was so appalled by her beauty that I stuttered and "forgot" every time she called on me for a recitation. I had an idea that she thought I was a "regular boob"; but if she thought so she was kind enough not to say so in my presence, for which consideration I was grateful. I used to wonder why she let me and a few other homely jays come into her classroom. It never occurred to me that she was being paid to do it.

That fall and winter I "batched." Sweet potatoes and celery were cheap in Walla Walla, and I fed on them till to this day I do not like either. Meat was too high in town for my slender resources, so I walked eight miles out in the country to Uncle Bill Stanfield's, and, for $1.75, bought a huge smoked ham and lugged it back to town.

The ham lasted all winter. Levi Malone's house, in which I had an upper story back room for $2 a month, had on top of it a small windowed cupola reached by a stairway and ladder up through the garret. I hung my ham up in this cupola and journeyed to it once or twice a day to cut off what I wanted to eat.

My worst mishap, I think, was in doing my own washing. I had a red flannel shirt which was part of my equipment brought from the Big Bend. I knew enough not to wear it on the streets of Walla Walla; but I wore it in doing my house work and cutting wood. Eventually, it needed washing. I thought I ought to "boil" it, and did; in fact, I boiled it good and plenty with such garments as light underwear, white shirts, white handkerchiefs, and so on. The color of the shirt "ran," — indeed, it ran like a scared wolf. All the clothes came out a sort of reddish pink. So the rest of the winter I wore pinkish socks, pinkish shirts, and pinkish underwear. No wonder the beautiful teacher of commercial law, spelling and arithmetic, thought I was a "boob"—though I am only guessing at what she thought. Really, as I now look back, it is quite clear that she sympathized with me because I was so bashful.

Life in Walla Walla that winter was not very pleasant. In school I was afraid to move lest I should be looked at. "Sky" Williams, later famous in the intercollegiate baseball conference of the Pacific northwest, sat opposite me at the desk. He chewed "sen sen" gum, parted his hair in the middle, and slopped ink on the desk. Sky was anything but green in the ways of city life; nevertheless, I got a clear impression that the beautiful teacher of us both didn't like him any better, if as well, as me. I thought it must be because he chewed sen sen and parted his hair in the middle.

Plus Sky's chewing gum and parted hair, I had from my window an uninspiring view of the saloon rears, and sooty, flat-topped roofs. I longed for my Big Bend hills and bunchgrass, and was so homesick at times that I nearly went wild.

But there were a few pleasures. I saw that winter, my first "show." It was Mansfield in "A Gentleman of France." Before the curtain raised, the orchestra played music of a new brand so far as I was concerned. In the Big Bend I had heard "fiddling" at the dances; in fact, had learned to fiddle by "ear," and could scrape off about a hundred tunes, several being my own composition, or, rather, I imagined I had composed them.

But they had a fiddler in the orchestra pit who outfiddled any and all other fiddlers I had previously seen or heard. That night I returned home to Malones, and fiddled till midnight, playing by ear as nearly as I could, the tunes played by the violinist of the orchestra.

When the curtain went up I gasped. Down on the stage were many trees. Some of them seemed to be a mile away, others seemed close up, yet I knew that all were on the brightly lighted stage. The actors were talking. They were costumed in the Louis XV. period, I think—though then I did not know, of course. Each wore a bright sword.

Presently the "Gentleman of France" strolled out from among the trees—apparently—reading an important communication from the king, or somebody. This finished, he called down a rakish fellow for talking fresh to a pretty girl. I was glad he did. The rake talked back; presently they whipped out their swords and made for each other. I nearly fell out of my seat, in my excitement. It was a great sight and a great night, and to this day I remember lines of the play.

Towards spring my money began to get low. I saw I would have to quit. I stayed till I had 10 50 cent pieces; then, realizing the emergency was at hand, I walked out to Stanfields, caught my pony, who had spent the winter running loose in a wheat field, saddled up, and started for home, 170 miles away. It was rather stormy, and the road was wet and slippery, but storm or shine I had to get home before my last 50-cent piece was gone.

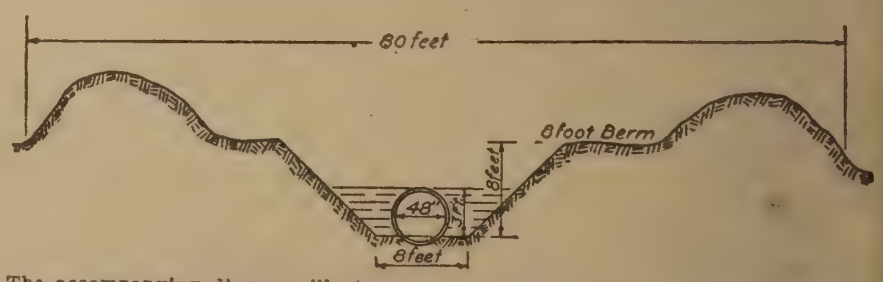
The first night I made Lyons Ferry on the Snake. Twenty-five cents went to feed my horse, a dollar went for my bed, breakfast and supper, and 50 cents more got me across Snake river which was high. I made a killing ride that day, getting into Ritzville late at night. My tough buckskin cayuse was about done up. The next night I made it to Urquhart's, on Crab creek—hard riding, surely. The following night I reached home, coming in late in a heavy rain. I had made the 170 miles in four days in the saddle.

One of our two horses, "Old Prince," had died during the winter. I began working and trading, and somehow, I do not recall just in what way, acquired possession of a chunky, slender-legged, bull-necked broncho named Rover—a horse with a history, and who made some more history in my possession.

The pioneers of eastern Washington were often visited by Indians, who came singly or in bands of 20 to 40. In the next chapter the Bunchgrass Boy tells some interesting incidents connected with their visits at his home in the early days.

Ye Have Heard That It Was Said by Them of Old Time

THE 10TH COMMANDMENT.



"Thou shalt not covet Thy neighbor's house; thou shalt not covet thy neighbor's wife, nor his manservant, nor his maidservant, nor his ox, nor his ass, nor anything that is thy neighbor's."—Exodus 20:17.

To us it seems that the commandments impose on human beings first their duty toward God, then their duty toward other men and, last of all, their duty toward themselves. For coveting your neighbor's house does not hurt your neighbor, but it does hurt you.

This spirit of envy provokes discontent and laziness at the same time. Furthermore, it leads to desire of ownership without the title that comes from earning. And this, in turn, leads to the petty, sneaking crimes as well as the crimes of violence.

Covetousness well deserves a place among the 10 great commandments. H. H. B.

Replacing Open Ditch With Pipe

The accompanying diagram illustrates how a concrete pipe 48 inches in diameter can be made to replace an open ditch that keeps out of cultivation a strip of land approximately 80 feet wide. Nor is it certain that such an open ditch will always confine its patch to a strip of the width mentioned. Large quantities falling during heavy rain storms may wash soil away. Every year the washing and soil erosion make the open ditch less effective and more of a nuisance and expense. An 80-foot strip means an acre of land every 544 feet. If this strip is occupied by a ditch running 80 rods through one farm, 2.43 acres are lost. Concrete pipe and tile have been used in land drainage for many years. Concrete tile drains may be laid to steeper grades than open ditch water ways because a pipe line furnishes a permanent channel that prevents water from washing away the soil.

Woman Runs Tractor and Plows

A demonstration of what can be done with a light tractor was witnessed recently at the O. A. C. experiment station near Union, Ore., when Mrs. R. King demonstrated the running of a tractor in plowing. Mrs. King handled the machine with perfect ease, and turned over nearly an acre of ground in an hour. The tractor pulls three plows, and has four speed, three ahead and one back. Regular pulling is on direct drive, thus eliminating wear and tear on gears.

Sidelights

Cause for Happiness.

"Why is your wife looking so happy?"

"She's got something to worry about again."—Puck.

This Is a Joke.

Mistress—Bridget, does this lamp smoke?

Bridget—No, mam. It don't smoke or drink, but it goes out nights.

Scientific Language.

Pat—The doctors say O'Brien is afflicted with "rheumatical arthritis," whatever that may be.

Mike—Oh that's Latin for "Mrs. O'Brien," I imagine.

Too Slow.

Teacher—I am teaching your son "first aid."

Father of dullest boy in class—Better teach him "second aid" instead, ma'am; he's so durn slow he'd never get there in time to use the first.—Life.

Some Consolation.

"It's tough when you have to pay 40 cents a pound for beefsteak," grumbled the head of the house. "Yes, but it's tougher, dad, when you pay 18," returned the pride of the family.

The Cat Came Back.

Mr. Penn.—They say the streets in Boston are frightfully crooked.

Mr. Hubb—They are. Why, do you know, when I first went there I could hardly find my way around. The first week I was there I wanted to get rid of an old cat we had, and my wife got me to take it to the river a mile away. I never would have found my way home if I hadn't followed the cat.

How She Felt.

Mrs. Higgins—And so you have secured your divorce, I hear?

Mrs. Wiggins—Yes, I'm glad to say that I have.

Mrs. Higgins—How did you feel when you heard the judge's decision?

Mrs. Higgins—Well, I felt sort of unmanned, as it were.

Sam's Attraction.

Miss Jackson—Dey say dat Sue Beasley is aftah Sam Coopah's heart.

Miss Brown—Yaas; she dun heard dat Sam is chicken-hearted.

A Careful Young Man.

"You want to marry my daughter?"

"I'm not certain, but I'd like to take an option on her hand, sir."

All the World's a Stage, and All the Men and Women Merely Players

Prince Alexander Is Earl.

In the photograph above is shown Prince Alexander of Teck, who recently had the title of earl conferred upon him by the king of England.

Young Americans Preparing for Navy

Copyrighted by International.

A remarkable view of the Great Lakes training station at Lake Bluff, Ill., where several thousand young Americans are being prepared for active service in the United States navy. Other training stations for United States sailors are located at Newport, R. I.; Yerba Buena, Cal., and at North Chicago, Ill. Since the beginning of the war, 56,248 men have enlisted in the navy. The total now is 120,923.

Sims in High Command.

Vice Admiral William S. Sims of the United States navy has been appointed to command the allied naval forces in Irish waters during the absence of the commander of that district.

The Face That Came Back

By Enos Emory

Cautiously the sick man raised himself on one elbow and listened. The gentle, regular breathing at the foot of the bed told him Elise was in the deep sleep which comes from many broken nights.

Slowly and painfully he dragged himself from his bed to the easel, which stood in a corner of the room, and with the cunning born of a distraught mind turned up the gas by degrees.

The weak fingers tremulously grasped the well-known brush, and with a sigh of satisfaction he started feverishly to work. A new-born force seemed to thrill his being, and his hand responded in obedience to its influence.

The hours of darkness passed until the gray dawn filtering through the faded blinds found the artist still painting and the sleeper still sleeping.

The tired brain was beginning to play queer tricks. The colors danced before the aching eyes; the figures on the painted canvas assumed grotesque and fantastic proportions, and at times a wave of blood-red hue swept over the picture, obliterating all else.

His temples throbbed with the noise of some giant engine, and an unknown force compelled him to paint to the time of the quick throb-throb.

Fresh figures—creatures of delirium—leaped to the canvas, laughing and mocking at him with hideous and derisive faces.

"Curse you, curse you" he muttered, savagely, and a big splodge of color marred the left-hand corner. The strength of the thrust overbalanced the easel, which fell to the ground with a crash, carrying the picture with it.

"Maurice! Maurice! What are you doing?"

In the garish mixture of gaslight and dawn she saw the overturned picture and easel, and her husband sitting with uplifted brush and eyes strangely glittering.

"They did it—they did it," he kept on muttering, incoherently.

In soft, persuasive tones she prevailed upon him to get back to bed.

He was still babbling, childlike, when the doctor arrived.

"Anxiety, weakness and want of sleep are responsible for this. I will send around a draft for him, and on no account must he be disturbed. And no more of that picture," he added with emphasis. "His reason and life are worth more than all the pictures in the world. Tomorrow may find him normal again."

In the afternoon Elise left the sick-room and went out for fresh air. As she walked along, her mind, naturally buoyant and optimistic, descended into the lowest depths of despair.

The picture—the candidate for the Grand Prix of 25,000 francs at the International Art Exhibition—had to be finished and sent off the next day. And what a great deal depended on its final success. There were full two months arrears for board and lodging due to the indulgent Mother Guerin.

In addition there was the doctor, M. Vidal, who had been in almost daily attendance for the last three months. He was kind, too, and forbore pressing his claim. The interest which his patient's case aroused within him somewhat qualified the absence of monetary receipts.

He watched the slow growth of the picture with the keenest attention, and in his medical mind wondered which would finish the race first—the brush or those microscopical organisms which were attacking so voraciously the poor artist's lungs.

Sitting down on a seat nearby, Elsie allowed her thoughts to run on despondently. Where were the things she so fondly hoped to realize when she married Maurice?

To her youthful imagination he had painted life in the rosiest of colors. He would do this, he would do that: his pictures would take the world by storm; he would enroll his name on that immortal list of great masters; a beautiful house, wealth, success—all should be theirs, and so glorious had been the vista of possibilities which he had opened out to her that her ingenious mind had been dazzled and hypnotized by it.

They had settled down and Maurice had started in grim earnest to establish his fame as an artist. But in reality fortune seemed to have dealt her worst cards to this ambitious clamorer for her best favors.

True, he had sold some of his pictures; but very few, and for a poor price; necessity must strike hard bargains.

The pictures were very good, original and clever, portraying the artist in every line; but they lacked that indefinable something which captivates men's minds.

Never before had the future loomed so dark and hopeless. Her child, a gay little fellow of five, had been sent away to friends; even one mouth less is something—what was to become of him?

Two bright tears slowly rolled down the pale, pinched cheeks and splashed on to the time-worn dress.

She was too upset to notice the approach of a quietly dressed stranger who, seeing her distress, stopped and looked at her in pity for some moments.

"Madame is in trouble," he remarked gently, sitting down beside her.

Elise started and looked up. The kind, fatherly gaze, the sympathetic voice, invited confidence and before she had quite realized the situation her tale was told in a few broken sentences.

"And this picture must be finished and sent off by tomorrow," he repeated. "Take me to it my child, and we will see what can be done."

Elise felt too weak and miserable to raise any objection, and a few minutes' walk brought them to the humble lodging.

From behind the screen, which shut off the bed from the rest of the room, the quiet breathing of the invalid showed that the doctor's prescription had taken effect.

The stranger approached the window and gazed long and earnestly at the painting. Silently he took up a brush and painted swiftly.

Awestruck and wondering, Elise watched the growth and transformation of the picture under the magic power of his hand.

The hours crept on and still the unknown one painted. At last just before midnight he heaved a deep sigh and put down the brush.

"My child," said he, "I can do no more.'

"O, monsieur!" exclaimed Elise, clasping his hand impulsively, "how can I ever repay you for what you have done? Let me know your name that I may live to always thank and pray for you."

"My little one," he replied with tenderness. "It is quite impossible for me to give you my name. Your thanks and prayers will be reward enough to one who has been only too pleased to benefit those in distress with the gift kind heaven has bestowed on him. I leave the town early tomorrow, so farewell, as I doubt we shall ever meet again."

Stooping, he kissed her lightly on the forehead and was gone. With tears in her eyes Elise remained in front of the easel.

What man was this who in a few hours could so transform a picture? With wonder—nay, almost fear—she stared fixedly at the canvas.

In truth the picture was the same, yet different. A vague something had crept into it—a something which defied analysis and yet proved its presence; the picture seemed to breathe forth the influence of a mighty soul.

The next day Elise packed and sent off the picture. Maurice's attack of delirium would afford him little chance of recollecting the state of his picture when he last worked at it, and Elise felt confident that if success were gained he would in his innocence accept the work as of his entire creation, never suspecting the true state of affairs.

"I don't remember finishing it," he remarked a few days later, on hearing that his work had been sent off. "I only hope its all right."

Three weeks passed—three weeks of nerve-torturing suspense and uncertainty, and still no news came from the committee.

Then early one morning the doctor rushed in, excitedly waving a newspaper.

"There! Your picture!" he shouted. "Didn't I always say so? Listen. "Some time back the committee of the International Art Exhibition offered the munificent sum of 25,000 francs for what was considered the best original painting. A very large number of entries was received, and finally after much consideration from the best critics, Mr. Maurice Natier's picture, 'Vale,' has been awarded the prize.

"This work of a hitherto unknown artist is undoubtedly a chef d'oeuvre, and the whole world of art will unite in congratulating and thanking Mr. Natier for having produced such a highly qualified work of genius. The picture is one which will work an era in the age of art, and we predict a brilliant future for the artist.'"

The greatest interest had been aroused in the competition, and the massive hall in which the exhibits were shown was thronged with people all anxious to see the picture which had carried off the coveted prize.

As Maurice gazed on his work, placed so conspicuously and to the full advantage of the light bearing down from the glass dome overhead, his heart was filled with a sudden rush of awe and feeling.

"Good heavens! Elise," he said in a hoarse whisper, "what an inspiration I had when I painted that!"

At the public presentation of the Grand Prix Maurice received a tremendous ovation, and amid wild cheering he stepped forward to receive the much contested check.

All the dark past with its gloom and despair had given way to a future rosy and bright with new-found aims and hope. Elise alone felt sad with a strange weight gripping at her heart. She wondered whether among that vast throng there was one who was looking on with mingled feelings of pride and pity.

Many years afterward Elise was casually glancing through a book of portraits when her attention was arrested by a face which seemed strangely familiar to her.

Where had she seen that sympathetic, fatherly gaze? Suddenly the dim memories of bygone days quickened to life, and she recognized the face as that of the unknown painter, who had saved them in their hour of need.

At that moment there entered an old friend who was a frequent visitor to the beautiful art studio in Paris, which Maurice had opened to receive pupils; better living and renewed interest in his life and work had done much to conquer his malady and bring him back health and strength.

"Monsieur, do you know who that is?" asked Elise, showing the portrait.

"What! don't you know?" "That's Malheau, the greatest painter of his age. Surely you saw the obituary notice and account of his life about three months ago. Good old Malheau! A kinder, better heart never beat."

Pumpkins in Corn

Pumpkins planted in corn furnish a cheap, appetizing stock feed. They should be planted by the latter part of June, putting a pumpkin seed in every sixth hill and in every missing corn hill. Pumpkins will affect but slightly the stand of corn and a large amount of fine stock feed can be raised.

Pumpkins are relished by cattle and hogs. Fed, uncooked and with the seeds, they act as an appetizer and corrective of digestive troubles. Two and one-half tons of uncooked pumpkins are equal to one ton of corn silage to cattle. It has been found that 273 pounds of grain and 376 pounds of pumpkins produced 100 pounds of pork, the pumpkins saving 100 to 150 pounds of grain. The low cost of growing, ease of keeping, large yields, and the tonic qualities of a succulent feed available when succulent hog feeds are scarce make pumpkins well worth while.

Butter Production of South Africa.

In answering certain inquiries in the British parliament it was stated that if the season is favorable 15,000,000 to 16,000,000 pounds of butter will be produced in the Union of South Africa in 1917. The production in 1915 was 13,407,000 pounds, while there were over 2,000,000 pounds imported in 1915.

Figures for 1916 are not yet available.

Canning Peas and Beans

What is the most helpful thing you have learned during the last year in your experience in housekeeping? Let us pass it along to other housekeepers.

To the Editor: The most satisfactory thing I have learned the last year is canning peas and beans in jars: Sterilize jars, fill with peas or beans, add one teaspoon salt, fill with boiling water, place sterilized cover on jar, do not tighten. Set jar in oven on asbestos mat; one mat will hold three jars; and 12 quart jars can be put into a moderate sized oven. Cook three or four hours. If water boils off too much add more. It takes very little fire after it once begins to cook. When thoroughly done, fill in boiling water until jar is full, add rubber, screw down cover. This is very successful and little trouble.

I would also like to tell of the easy way of making cornmeal mush. Moisten cornmeal with cold water before adding the boiling water. You can soon learn amounts of each for the amount of mush you wish. It saves time and does away with lumpy mush.

For a toothsome dip for cottage pudding add half cup mashed, sweetened loganberries to whipped cream.

MRS. CLARA GATES.

Albany, Ore.

Plain Food Recipes

Sweet potato biscuits are made by taking one cupful flour, one-half teaspoon salt, two teaspoonfuls baking powder. Mix and rub in four tablespoonfuls of shortening, then add one cupful of mashed sweet potatoes and enough milk to form a stiff dough. Roll or pat, then cut and bake in hot oven for fifteen minutes.

Eggs and Macaroni.

One cupful cooked macaroni, one-half cup tomato sauce, one-half teaspoon salt, one-half teaspoon onion sauce, one teaspoonful chopped parsley, four eggs. Put the macaroni in a baking dish, then poach the eggs and put them on top of the macaroni. Cover with sauce and seasoning, then put in hot oven and cook for five minutes.

Stuffed Prune Salad.

One-half cup stoned prunes, two tablespoonfuls cheese, one orange. Fill cavities of prunes with the cheese. Slice the orange and cut each slice in half, then line a bowl with lettuce leaves, lay in the slices of orange, then the prunes cut in half and garnished with strips of pimentoes. Serve with fruit dressing.

Broiled Mutton Chops.

English mutton chops with the bones removed, then rolled tightly and held with a skiver, are delicious broiled or grilled over a hot fire.

Crochet and Tatting Designs

By WINIFRED WORTH

MALTESE PUFF AND HAIR RECEIVER.

These ideal accessories for the boudoir dressing table are always acceptable and appropriate gifts.

Back-Powder Puff.

One lamb's wool insole. Cover leather part. One ball No. 15. Maltese crochet, 3 yds. Ch. 3, catch in 3 L. of Maltese, ch. 3, catch in 3 L. on opposite side. Continue until Maltese covers sole.

For pocket, one piece Maltese joined in center with 3 ch. finish with shell border. 5 dt. 1 dc. 5 dt. 1 dc., across top of pocket. 1½ yds. ribbon.

Hair Receiver.

One ball No. 5. 1 hoop. 2½ yds. Maltese lace. Join lace together by ch. of 3.

To join lace in center take 2 L. of Maltese on needle ch. 1 to tighten. Ch. 20, catch to 2 L. of opposite side. Ch. 5 catch in 5th st. of ch. of 20. Repeat 3 times. Take up 2 L., continue joining. Handle is double chain.

Secrets of Health and Happiness

By DR. LEONARD KEENE HIRSHBERG.

A. B., M. A., M. D. (Johns Hopkins University).

Cereals and Milk Better Than Meat

The reason that "a man hath often more trouble to get food than to digest it" depends upon the weakness of his flesh for tasty dishes flavored with sometimes ulcer-forming condiments and hyper-acid-making seasoning. All meat is not the same in every man's mouth, although "God sendeth and giveth both the mouth and the meat." Men, above all others, believe that "you canna' fare well, but you cry roast meat."

Dr. Hirshberg.

As a matter of scientific as well as living fact, cereals are often sent to limbo for the tang which meat gives, rather than the life and health it is expected to sustain.

Cornmeal, oatmeal, whole wheat or rice are composed of albuminous—protein—flesh-building elements equivalent practically to those in good, lean meat. Moreover, there are six times more food units or calories in cereals than in meat.

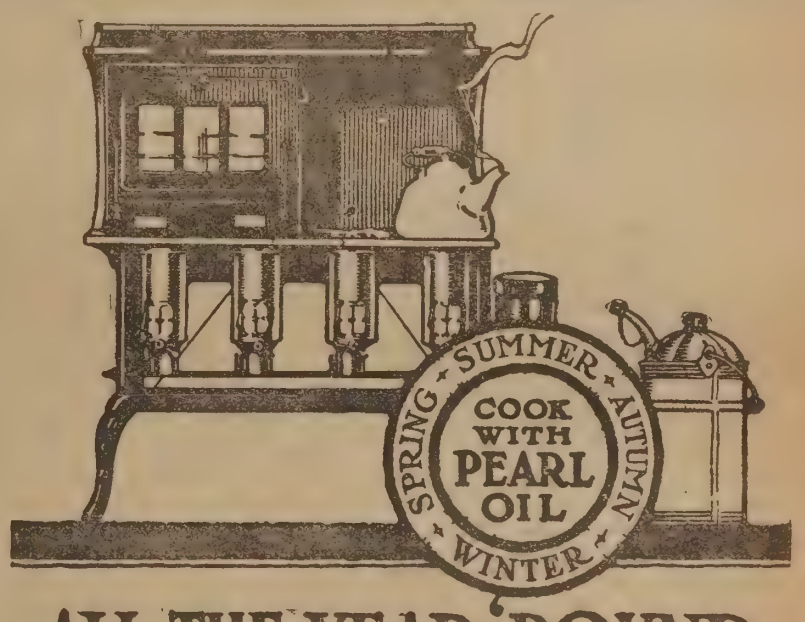
Consider our ways, extravagant mites that we are! We go to market to buy a fat pig, a lean roast or tenderloin at least 30 cents a pound, whereas a ceral such as oatmeal gives almost as much protein flesh substance for a "jit" or 5 cents. These figures more than speak for themselves; they cry aloud in vain like the prophet in the wilderness.

Not only are the despised old-time breakfast foods six times as cheap for the same amount of pabulum, but oatmeal has 10 times as much lime and human fertilizer in it as prime ribs of beef, steak, lamb chops and other meats.

So important a bone, brain and brawn stuff as phosphorus is digested from oatmeal more easily and in three times the amount which a corresponding weight of beef would give. As for iron, that mineral food of the red blood corpuscle, all the "beef, wine and iron" your could drink as a dose of medicine would not give you as much available iron as a bowl of oatmeal. Meat contains only five-sixths as much.

There is enough lime in a pound of oatmeal in the form of calcium to last a human creature a full 24 hours. This cereal contains decidedly more phosphoric acid than you can use and also a very liberal day's supply of iron.

But oatmeal is almost always eaten with sugar and cream or milk. The sugar yields nothing but fuel. Milk is the cheapest form of calcium, and it is also rich in protein and phosphorus. Oatmeal porridge is a better all-round food than beefsteak. If we would recognize that fact we would not be complaining about the high price of potatoes, the scarcity of eggs or the wickedness of the "beef barons."



Saving Vanilla.

Vanilla is one of the most expensive flavorings and should never be cooked in the mixture or added while the mixture is hot, for it is thus evaporated.

Live while you live, the epicure would say,
And seize the pleasures of the present day;
Live while you live, the sacred preacher cries,
And give to God each moment as it flies.
Lord, in my views, let both united be:
I live in pleasure when I live to thee.

—Philip Doddridge.

ALL THE YEAR ROUND

Cooler cooking in summer—better and more economical cooking all the year 'round.

A good oil stove will cook anything that any wood or coal range will cook, and do it better because of the steady, evenly-distributed heat.

All the convenience of gas. Meals in a jiffy, and a cool kitchen in summer.

The long blue chimneys prevent all smoke and smell.

BE SURE TO GIVE NUMBER AND SIZE.

Should Begin With Monopolists.

To the Editor of The Washington Farmer: I am strictly opposed to government regulation of the farmers' products unless the price of everything that the farmers have to buy is fixed by the government. It would be a very unjust thing for the government to fix the price of the farmers' wheat and do nothing to lower the price of the things the farmer has to buy. If Uncle Sam is going into the price fixing business he should commence on the monopolists and food manipulators instead of commencing on the under dog, the farmer. The farmers are the backbone of the country, but some people seem to think he is to blame for the high cost of living and everything else. There is one thing certain, if the government fixes the price on the farmers' wheat in order to cheapen bread and leaves everything else go unchanged there will be a lot of farmers who will have to quit. Then production will be less and things will be in a worse fix than ever.

"A Loaf of Bread Talks," by Selena.

Dear Aunt Nellie: I promised you a story and here it is, "A Loaf of Bread Talks." When I was a tiny grain I was put in the ground and stayed there for what I thought was a long time. Soon green sprouts shot up and I could see the world again. I was very happy. I grew tall and waxed in the hot summer days. Before long I was cut down and put into a bundle with many other grains and hauled to the barn, where I went through the threshing machine and was put in a sack. I shall never forget my travel to the mill. I was hauled about 10 miles to the mill, where I became very miserable. Once in the mill I thought my trouble over, but I had to be crushed, sifted, made into flour and sacked. I was then taken to the warehouse to be sold. I soon found myself being loaded into a truck. Then we reached the bakery, where I was unloaded at the back door. I became acquainted with the baker. He put me in a sifter, then he sifted me into a pan and made me into bread, which was bought by a little girl who took me home to her mother, who cut me into slices and put me on the table. Then I was eaten. Now that I have finished my story I will finish my letter. I am 12 years old. I live on a farm seven and a half miles west of Spokane. I go to Normandy school and walk one and a half miles.—Selena Elizabeth Dero, Spokane, Wash., R. F. D. No. 1.

A Little Garden of His Own.

Dear Aunt Nellie: I am 7 years old. My birthday is February 7. We have an incubator and two hens sitting. We have set the incubator twice. I have a little garden of my own. I have two brothers and one sister. My brothers' names are Melvin and Kenneth. My sister's name is Marie. We have a cow that gives five gallons of milk a day. Her name is Bessie. We live on a 640-acre ranch. It is eight miles to the nearest town. I go to school. I am in the first grade. My brothers and my sister and I drive five and a half miles to school. We drive a horse named Babe. We have lots of chickens. We have Plymouth Rocks and White Leghorns. We have two cherry trees and a peach tree. We have lots of locust and willow trees. My mama reads the letters in the Children's Corner. My sister has written to the Children's Corner before. We had a picnic May the 18th, the last day of school.—Stanley Stewart, Waitsburg, R. F. D. 3.

Two Flower Showers for Teacher.

Dear Aunt Nellie: This will be my second letter to the Farmer. I am a girl of 12. My birthday was the fourth of September, the day our school began. There are many flowers in bloom here now, such as bird bills, lady slippers, violets and many other kinds. We have had two flower showers on our teacher already. We had the last one on the first of May. School was closed three weeks and two days here on account of measles. I had them too. Our school didn't get out as early as it would have because we had to make up some days for having so much vacation. My subject this time is "My Favorite Book." The name of it is "The Children's Book." It has many fairy tales and funny stories in it. There are also many poems and pictures in this book. I got it for Christmas from mama. Mama has gone to Centralia today and papa is out so I am in all alone. I made a cake this forenoon but it didn't turn out very good.—Agnes Lund, age 12, Route 1, Rochester, Wash.

Cherry and Plum Trees in Bloom.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and am in the fourth grade. I live on a 140-acre farm. I have a pet dog, his name is Sport. We have 30 cows, but I do not know all their names. I have six pet calves, their names are: Beauty, Jeannette, Dolly, Browny, Chubby and Sweetheart. I have lots of fun on the farm. In summer I make a raft and go up and down the creek that flows by our place. I am going fishing tomorrow if it is a good day. Our cherry trees are in bloom and our plum trees are in bloom, too.—Henry E. Crabtree, R. F. D. 1, Lynden, Wash.

A Goose and Gander on Their Farm.

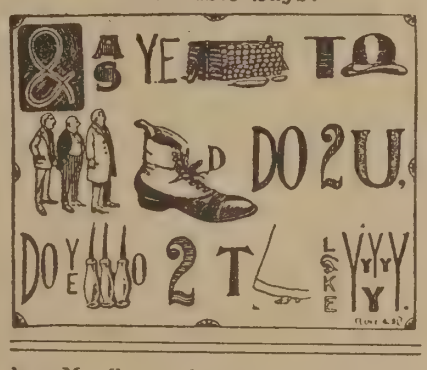
Dear Aunt Nellie: I have been reading the Corner and I like it very much. I thought I would write too. We have two dogs and two cats. Papa has eight horses and mama has nine cows and eight calves. We live on a 160-acre farm. We have a goose and a gander and the goose lays eggs every other day. We have 90 chickens. I am seven years old. My birthday is September 14.—Harry Wegele, Wilson Creek, Wash.

A Picnic the Last Day of School.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am a little girl. I was 7 years old the 16th of May. I have two brothers. Their names are Cecil and Heston. Cecil is 9 years old. Heston was 5 on Christmas day. This is my first year at school and I haven't been absent or tardy this year. My teacher's name is Miss Picket. I like her fine. There were six of us in the first grade. Their names are Norman, Mildred, Runar, Roy, Emmett and myself. Our school let out on the 29th of May. We had a picnic the last day of school. I live on a 40-acre farm. We have 11 cows, two horses named Polly and Dolly and two colts. Their names are Pride and Chief. We have two pigs and some chickens. My brother and I like to read the letters in the Children's Corner.—Beulah Weyrich, age 7, Mt. Vernon, Wash.

Naomi's Pets on the Farm.

Dear Aunt Nellie: I am 11 years old. My birthday was April 23. I was born in the year of 1907. We have two cats, one is named Billy and the other is Smut. Billy is an angora cat and I do not know what Smut is. We have two dogs. One we call Tige and the other is Smoke. I have one white calf. I call it Snowball. We have 260 acres on our farm. We have a six-room house. I have two brothers and one sister. She is married. I have one little nephew. His name is Harold. My sister's name is Mabel. She is 19 years old. My oldest brother's name is Philip. He is 17 years old. My youngest brother's name is Harry. He is 15 years old. I am in the fifth grade at school. We have a piano. I am going to take music lessons.—Naomi Belle Miller, Wauconda, Wash.



Elsie's First Letter to Our Corner.

Dear Aunt Nellie: I have not written to the Children's Corner before. I read one of Alice Clinesmith's letters about when she was 6 years old. I thought it was a quite good way of earning money. I am in the fourth grade and am 12 years old. My birthday is the 7th of November. I have three brothers and four sisters. One of my sisters is married. We live on a 106-acre farm. We have nine head of horses and 12 cows.—Elsie Sanford, Warden, Wash.

Little Baby Is Mama's Mayflower.

Dear Aunt Nellie: Lots of things have happened since I wrote to you. I am 9 years old. Best of all, I have a little baby brother. His name is Louis Amos Stannard. He is six days old. We all tell mama he is her Mayflower because he came on May day. My brother, Lloyd, is 5 years old now. Gerald and Lloyd are writing to you. The violets, buttercups, crocuses and arkindales are in bloom. They look very pretty mixed in with the green grass. The snow is all gone here, but it is not on the mountains. I wish some of the cousins would write to me. Also would you and the cousins please help me find Alice Josephine Stauch's address. I wrote about two months ago, but she has never answered yet.—Lola Stannard, Three Forks, Wash.

The Bible Says:

Fun in the School Wagon.

Dear Aunt Nellie: I live on a 170-acre farm three miles from Menlo. We have 14 cows, four yearling calves and 90 chickens and get about 60 eggs a day. I go to school at Menlo. I walk one-half mile then get in a school wagon. There are about 26 children in the bus. We have lots of fun in the wagon. There are six rooms in the schoolhouse and an auditorium and a gymnasium. We have steam heat. There are 112 pupils going to school. In the fall and winter my sister and I go salmon fishing. My sister and I get impatient for the Farmer because we are reading "The Ups and Down of the Bunch Grass Boy." There are five people in our family, father, mother, Bruce, May and myself. Our little baby died March 6, 1917.—Basil Milam, Menlo, Wash.

Plays Tag With Theresa.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and in the fourth grade. I like to go to school. My teacher's name is Mrs. Rice. I have two brothers and one sister. I have a pet pig. It is white and about five months old. My birthday is December 12. Have I a twin? I am going to plant a garden this summer: I like to read the letters in the Corner. Theresa is my playmate. We play tag and other games.—Margaret Kessell, Grays Harbor, Wash.

Miss the Fun if You Live in Town.

Dear Aunt Nellie: I never wrote for a long time and thought I would write again. I like it when it is spring. I can work out in the flower garden. We have some flowers blooming now. I like summer the best. I would hate to live in the city in summer. I would miss all the fun. The cherry trees are blooming now. I wish it wouldn't hail any more because it would take all the blossoms off the trees and we wouldn't have any cherries. I like the country better than the city because you see in the country you can see nice green fields, but in the city you just see lots of houses and pavement.—Marie Anderson, Kalama, Wash., R. F. D. 1, box 31.

Hear From Albert for First Time.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My father has taken the Farmer for four or five years, and I always enjoy the letters. I am 10 years old and in the fifth grade at school. We have a schoolhouse with four big rooms. We have high school, grammar school and primary grades. We have a library and a basement in our school. The basement is our playroom in bad weather, all but one end, and that is a manual training room. We had four teachers last year, but our school is out. It let out the 11th of May. We had a program. I have eight brothers and two sisters.—Albert Needham, Wilcox, Wash.

The Five Little Peppers Series.

Dear Aunt Nellie: This is the second time I have written to the Corner. We have a little pet lamb. His name is Billy. He is my sister's and brother's and mine. We have a colt named Bess, which is my brother's and sister's and mine. The subject I have chosen is "My Favorite Book." My favorite book is Five Little Peppers series. They are good books. I have read two of them and am reading the third. Some of their names are: Bird-hills, baby faces, yellow-bells, bluebells, buttercups, Johnnie-jump-ups, salt and pepper and negro heads. I was 10 years old the 26th of February.—Daisy Alberta Laird, Macall, Wash.

Mae Passed Into the Seventh Grade.

Dear Aunt Nellie: I hope I will win one of the prizes. I live on a 160-acre farm and have one dog and two cats, named Bertha and Bettie. We have three horses named Nellie, Fannie and Kittie. The dog's name is Flash. We have eight cows, two of them are milch cows. The cows' names are Florence, Bossy, Nigger, Scabs, Bessie, Eva, Maggie, Mae, John and Hazzy. Our school was out the 27th of April. We had a good teacher. Her name is Miss Hewitt. I am 15 years old. My birthday is the 10th of September. I am in the seventh grade at school. I passed this year—Mae Lenderman, Colville, Wash.

Another Letter From Cousin May.

Dear Aunt Nellie: My papa takes The Washington Farmer. He thinks it is the best paper that is going. I have written to the Children's Corner once before. My subject is about the farm. There are 170 acres on this farm. We have about 90 chickens and get from 50 to 60 eggs a dag. We have 14 cows and three horses, one named Carl and the others Prince and Queen. My brother has one pig. He is in the pig club. My brother and I go to school at Menlo. There are seven rooms and five teachers besides Mr. Murdock. I like my teacher fine.—May Milam, Menlo, Wash.

Linda's First Corner Letter.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I was 8 years old March 24. I am in the second grade at school for two weeks. I like to read the Corner. My subject is "My Best Friend." I have two sisters and one brother. My sister's names are Blanch and Laila. My brother's name is Lee. My teacher's name is Miss Bachman. I like her fine. There are 33 in our room. There are 71 in the whole school.—Linda W. Haquist, Independence, Wash.

A White and a Gray Rabbit.

Dear Aunt Nellie: I will be 10 years old the 23d of June. I have one brother and his name is Arnold. I live on a 120-acre farm. We have several pets, a cat, a dog and two rabbits, one white and one gray. We have about 100 chickens and some little ones. We have about 20 head of cattle, four calves and five horses and a black colt.—Harriet Johnston, Hunter, Wash.

A Little Calf Named Snooksey.

Dear Aunt Nellie: We have five hens sitting now. We have a little calf named Snooksey. We have three dozen hens. We have 29 rabbits. The green grass is up here. Each old hen has 13 eggs under her. One of the old hens is Lola's and two of them are mine, the other two belong to papa and mama. —Gerald Moody Stannard, Three Forks, Wash.

Welcome to Another New Cousin.

Dear Aunt Nellie: I like to go to school very much. I am in the third grade. My teacher's name is Mrs. Garrison. I like her very much. I have gone to school to her three yeas. There are nine scholars in our grade and about 35 in school. I am nine years old. I have four sisters and four brothers.—Stella Shaw, R. F. D. No. 1, Box 53. Pateros, Wash.

Lloyd Has a Little Garden.

Dear Aunt Nellie: We have some garden planted. I have a little garden. Papa set out some strawberry plants yesterday. Papa planted some beets, radishes, turnips and Swiss chard. I weigh 64 pounds. Our horses, Old Ted and Babe, were sick. Old Ted was sicker than Babe though.—Lloyd Elwin Stannard, Three Forks, Wash.

Aunt Nellis is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Delma Fouts, Lillian Wotton, Helen Mehl, Lois Barnhart, Julian Yoss, Josephine Prouty, Melvin Franks, Thelma Hinkle, Mary Heot, Alice Miller, Buster Miller, Ruth Matthies, Annie Hutsell, Harvey Norris, Eva Bond, Ina Stewart, Ruth Hagen.

To Get a Flag Write Soon

With the declaration of a state of war our first supply of flags was quickly exhausted and we have had great difficulty in securing more.

We have at last secured a limited number of flags which we offer on the following terms:

OFFER NO. 1

3x5 flag together with The Washington Farmer for three years. Both for $2.50.

OFFER NO 2.

4x6 flag together with The Washington Farmer for three years. Both for $3.00.

We would suggest prompt action; orders will be filled as received.

The Washington Farmer, Review Bldg., Spokane.

Enclosed find $.... (your personal check, stamps or money order), for which send me American flag, as advertised, and The Washington Farmer for 3 years.

In answering advertisements don't fail to mention this paper.

You Can Make Sun Drier at Home

By JESSIE M. HOOVER, Professor of Home Economics, University of Idaho.

A year ago the writer visited 400 farm homes in southern Idaho. Before the home visits were made the women of each community or neighborhood were assembled at a central meeting place and were asked to consider the best labor-saving device they possessed, and, if possible, show it to the visitor when she called at their home. Pictures were taken of many of the best devices, and this drier was one of the devices which seemed especially interesting. Judging by the results sampled the efficiency of the drier can not be questioned.

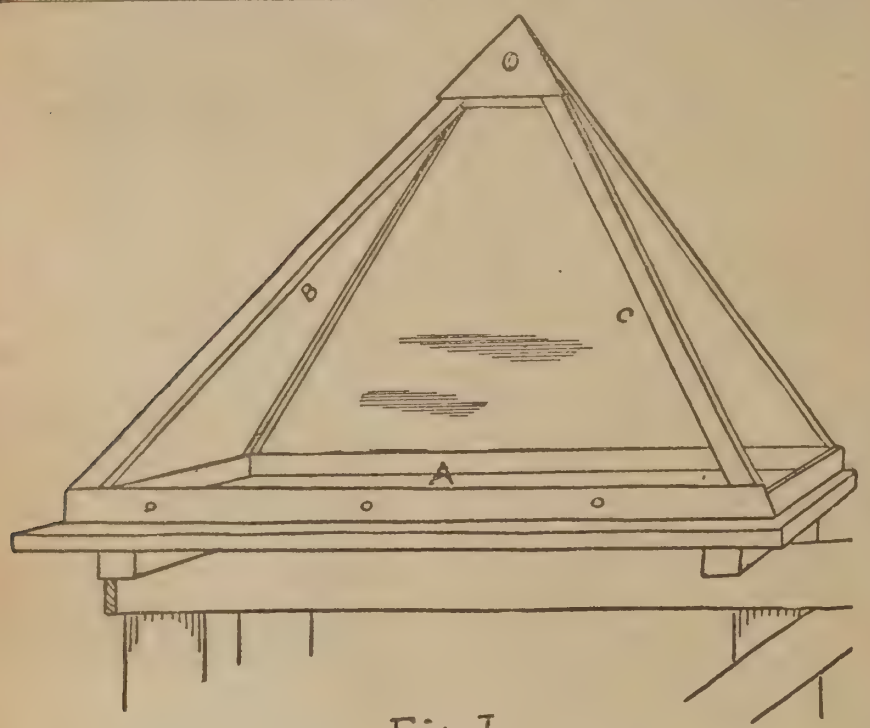

Fig I

Fig. I. shows the completed drier, with ventilating holes at the base and apex.

Two panes of glass, 36 by 36 inches each, are required. Fig. II. shows one of these glasses cut diagonally so as to form two right-angled triangles. Fig. III. shows the second glass cut so as to form a triangle with two equal sides. In Fig. III. there is a waste of the two upper corners of the glass.

These three triangles are cased with wood in much the same way as a window sash.

For the base of the drier build a square wooden platform of the same dimensions as the base of the cased glass. This should be placed on a table or substantial frame in the dooryard, where it will have a good exposure to the sun, i. e., place the triangle ABC on the south side of the base, as shown in Fig. I. On the east and west sides of the wooden base place the two triangles shown in Fig. II., A' and A" in each case being placed on the wooden base. The edge C' is joined to the edge C. The edge B' is joined to the edge B. The edges B' and C' will be slightly longer than the edges of B and C, but these can be extended up into the wooden apex. The back of this drier may be made of tightly matched boards, hinged along the north side of the base; or it may be made of the wire gauze screening. Where dust storms or sudden showers are likely to occur the wooden back is preferable. The door is fastened to the apex of the drier with a suitable catch. A removable frame of wooden slats or heavy wire, elevated an inch or two above the base, will furnish a free circulation of air from beneath, and the food spread on it will dry more quickly. The air enters the small holes at the base, and, accompanied by the moisture from the evaporating fruit, passes out at the inch hole in the apex.

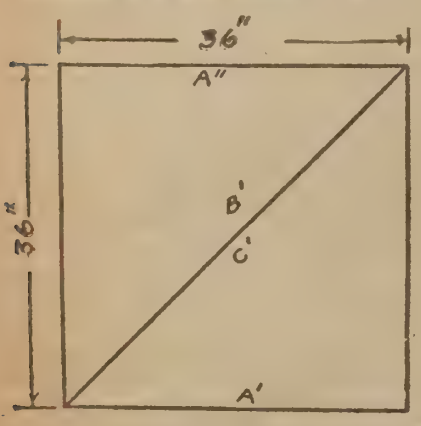

Fig. II

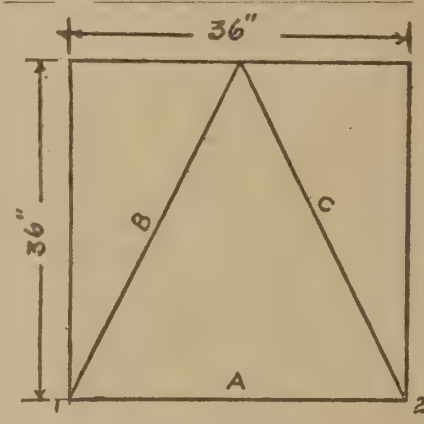

Fig. III

To save steps the drier might be placed against a south window, and could thus be filled and emptied without going outside. For protection in winter the drier can be set under a shed. The owner of this drier reports that it cost her $6 complete. The position of the glass aids in concentrating the sun's rays and increasing the heat. The enclosure prevents the entrance of dust and insects.

Buys 68-Acre Tract.

J. W. Haines of the Yeo district, near Pullman, Wash., has purchased a 68-acre tract from the Woods sisters. The consideration was $6800, or $100 an acre. The place is well improved and is close to the state college, and will be occupied by Mr. Haines as a home while educating his children.

Sheep—Spring lambs, $15 to $15.50; yearlings, $1.50 to $12; aged wethers, $1 to $11.50; ewes, $8.75 to $9.50.

At Portland.

PORTLAND, Ore., June 23.—Hogs stronger; receipts, 92. Prime heavies, $15.15@15.25; light butchers and packing, $14.85@15.10; bulk of sales, $14.75@15; rough heavies, $13.90@14.25; pigs and skips, $12@12.50; stock hogs, $11@12.50.

Cattle—Steady; receipts, 33. Steers, 25 to 50 cents higher; receipts, 754. Steers, prime light, $9.50@10.25; prime heavy, $9.50@10; good, $8.75@9.25; cows, choice, $8@8.50; medium to good, $7.50@8; ordinary to fair, $7@7.50; heifers, $5@9; bulls, $5@7.75; calves, $7@8.50.

Sheep weaker; receipts, 318. Spring lambs, $12.75@13; spring lambs culls, $11@12; best shorn wethers, $9@9.50; heavy shorn ewes, $7.50@8.50; best shorn yearlings, $8@9.50.

At Chicago.

CHICAGO, June 23.—Hogs—Receipts, 10,000; weak, 10 to 15c below yesterday's average. Bulk, $15@15.70; light, $14.50@15.35; mixed, $14.65@15.90; heavy, $14.70@16; rough, $14.70@14.95; pigs, $11@14.40.

Cattle—Receipts, 1000; steady. Native beef cattle, $8.50@13.80; stockers and feeders, $6.90@10; cows and heifers, $5.75@11.75; calves, $11@15.75.

Sheep—Receipts, 10,000; weak. Wethers, $9.15@12; lambs, $11@16.75; springs, $14.50@19.

At Seattle.

SEATTLE, June 23.—Market steady.

Hogs—Prime light, $15.45@15.60; medium to choice, $15.20@15.30; smooth heavies, $14.70@15.10; rough heavies, $14.20@14.60; pigs, $13.40@14.40.

Cattle—Best steers, $8.50@10.25; medium to choice steers, $8@9; common to good cows and heifers, $6@8; best bulls, $4@8.75; calves, $6.50@11.50.

Sheep—Prime lambs, $13@13.50; good lambs, $12.50@12.75; wethers, $11@12.50; cows, $10@11.

Spokane Stock Yards Saturday.

Hogs—Receipts 137; market steady. Prime heavy packing, $15.25@15.50; prime light packing, $15@15.25; smooth heavies, $14@14.50; pigs, $12.75@14.25; stockers, $12.25@13.50.

Cattle—Receipts, 197. Prime steers and cows steady; poorer grades weaker. Prime light steers, $9.75@10; prime heavy steers, $10@10.25; good steers, $8.50@9; prime cows, $8.50@9; good cows, $7.50@8; common cows, $6.25@7.25; bulls, $6@8; calves, $7.25@8.75; stockers and feeders, $5.75@8.

Sheep—Receipts 3; market steady. Prime light lambs, $13@13.50; prime shorn wethers, $10@11; prime shorn yearlings, $10.25@11.25; prime shorn ewes, $9@10.

Seattle Market.

SEATTLE, Wash., June 23.—Feelers on the new local potato crop have been put out by wholesalers. Kennewick shippers believe they will get out first small lots early in July. According to best information obtainable the yield this year will be a big one. In both buying and selling divisions low prices are expected this year and prominent dealers today forecasted that first quotations for field stock at Yakima will not be over $15, and that considerable stock will move before $20 is passed.

The run of poultry has been so heavy this week that jobbers will make no change in the buying levels beginning Monday. All week the arrivals of broilers and small hens has been heavy.

It is believed that cheese will decline a shade or two before it hits bottom. Prices are out of alignment with the cost of butterfat and the quotations to the trade are too high for a healthy demand.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transaction by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 31@32c per dozen.

Poultry—Live hens, fat, over 4 lbs., 19c per lb.; 3 lbs. and under, 17c; old roosters, 12c per lb.; springs, 22c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 14c per lb.; broilers, live, 15@19c per lb.

Butter fat—32c per lb.; dairy butter, 30@31c per lb.

Beef—Buying price: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.

Hogs—Light, 13@17c per lb.; do heavy, 12@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 32c per lb.; salted calf, 30c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 30c per lb.; dry calf (under 6 lbs.), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry butcher full wool sheep pelts, 30@33c per lb.

SELLING PRICES.

Citiy Prices—Team Lots.

Aples—Winesaps, $2.25@2.75 a box; cooking, $1.50 a box; Newtowns, $2.25@2.50 a box.

Asparagus—Local, ...

Cherries—Local Early Black, 8c lb.

Feed—Scratch feed, $74 per ton; all grain chop, $57.10 per ton; oats, $53 per ton; rolled oats, $53 per ton; rolled or ground barley, $50 per ton; clipped barley, $53 per ton; wneat, $86 per ton; bran, $33 per ton; shorts, $36 per ton; soya bean meal, $51 per ton; whole corn, $71 per ton; cracked corn, $72 per ton.

Hay—Eastern Washington timothy, $32 per ton; alfalfa, $23 per ton; double compressed, $35 per ton; wheat hay, $[illegible] per ton; Puget sound, $22 per ton; straw, $15.

Potatoes—Local, $90 per ton; Yakima Gems, $100 per ton.

Rutabagas—$3 sack.

Strawberries — Olallas, $2.25@2.50 crate; Marshalls, $3 crate.

Butter—Washington creamery extras, cubes, 38c per lb.; do bricks, 39c per lb.; creamery firsts, cubes, 37c lb.; do bricks, 38c per lb.

Eggs—Fresh ranch, 36c.

Portland Market.

PORTLAND, Ore., June 25.—There is so little wheat left to sell in this territory that the Merchants' exchange has suspended its regular daily sessions until new crop wheat is available. An occasional carload is being disposed of in the open market at generally firm prices. Bluestem is quoted at $2.35@2.40, club and fortyfold at $2.30@2.35 and red Russian at $2.25@2.30.

Oats are steady at $45@46, with only a light demand. Nothing is doing in barley.

The flour market is firm at ruling quotations.

There is a strong 60-cent wool market in the eastern counties. Since the big Pilot Rock sale last week there has not been much doing in the open market, although an occasional clip has been picked up at around the 60-cent mark. An interesting feature of wool now is the fact that all grease wools are on about the same basis. Early in the season coarse wool brought a premium of 5 cents or more over fine, as it did last year, but now wool is wool.

Two important sales are scheduled for this week, at Heppner on June 28 and at Condon on June 29. Shaniko will hold its annual wool sale on July 6.

The butter market was firmer at the close of the week, with extras freely taken at 36 1-2 cents.

The Coos Bay Cheese association cut its cheese price three-fourths of a cent to 23 cents f. o. b. Myrtle Point, but the Tillamook factories are maintaining their old price.

Eggs are holding steady at the 30-cent basis for case count. The demand has fallen off and receipts are also lighter.

With the heavy egg-laying season drawing to a close hens are being marketed in larger numbers and poultry prices are weakening. Country dressed meats are about steady.

Strawberries are getting down to summer prices, the market closing at $1.25@1.75 for close-in grown fruit. Local cherries are also more plentiful and selling at 8 to 10 cents a pound. Local green vegetables are replacing many California lines.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—$3.50 cwt; new potatoes, $4.50 cwt.

Apples—Washington apples, cooking, 75c box; Rome Beauties, $1 box; N. Y. Pippins, $2.25 box; Ben Davis, $1.25 box.

Butter—Blanchard cartons, 40c lb; Medo-Maid, 40c lb; Cascade, 40c lb; Gold Leaf, 40c lb; Better Butter, 40c lb; Attalia, 40c lb; Diadem, 40c lb; Hazelwood, 40c lb; Solid Pack, 38c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 25½c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 29c lb; domestic Swiss, 35c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $10 case.

Live Poultry—Hens, 19c lb; old roosters, 10c; ducks, 13@14c; geese, 11c; turkeys, 20@25c.

Dress Poultry—Hens, 22c lb; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

Wool.

BOSTON, June 22.—The Commercial Bulletin will say tomorrow:

Wool markets in the east have been comparatively quiet this week with a fair demand in spots. Values tended steadily higher, although the actual advance has not been very marked. The situation in the west is really keener than at the seaboard markets, prices for fine and medium wools having shown an advance both in the bright wool and territory sections.

Manufacturers are fairly well engaged on old contracts. Reports to the National Association of Woolen Manufacturers indicate that about 90 per cent of the machinery occupied on clothing is in operation.

scoured basis:

Texas—Fine, 12 months, $1.65@1.70; fine, eight months, $1.45@1.50.

California—Northern, $1.65@1.70; middle counties, $1.35@1.40; southern, $1.15@1.20.

Oregon—Eastern, No. 1 staple, $1.70@1.72; eastern clothing, $1.45@1.50; valley No. 1, $1.45@1.50.

Territory—Fine staple, $1.72@1.75; half blood, combing, $1.45@1.50; three-eighths blood, combing, $1.30@1.35; fine clothing, $1.45@1.55; fine medium clothing, $1.24@1.35.

Pulled—Extra, $1.75@1.80; AA, $1.65@1.75; A supers, $1.45@1.50.

Higher Than Niagara.

The falls of Iguaza in South America are 50 feet higher than Niagara and twice as wide.

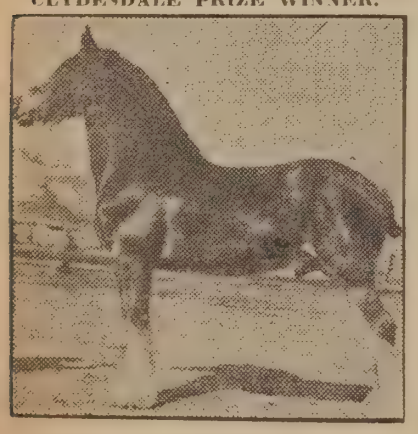
NEWS FOR BREEDERS



John Slone of Lucile, Idaho, has recently purchased two very fine Hereford bulls from N. B. Pettibone of Grangeville. He expects to use them on high-grade Shorthorn cows. He believes a cross of the two breeds is better than either one for range purposes. He runs his cattle on the Salmon river. Until the last two years he has never fed before January 1 and was able to turn out on the range in March. The last two years he has had to feed about twice as long.

The Idaho Poland-China futurity, which has been so successfully held at the Idaho state fair at Caldwell the last two years, will this season be held at the state fair of Idaho at Boise. The Boise fair was recognized by the last legislature and a state appropriation given and owing to the destruction of the grandstand and considerable more of the equipment of the Caldwell fair by fire it was decided to make the change. Another long entry list and a great Poland-China show is assured.

C. H. Kirkpatrick of Parma, Idaho, considers the outlook for the hog business encouraging for the next few years at least. He finds the demands for Durocs good. Last fall Mr. Kirkpatrick exhibited at Ontario, Ore., and Caldwell and Boise, Idaho, winning a large share of premiums at each place. In the Duroc Futurity he won first on boar, first, second and fourth on sows, first on litter and the silver cup for premier futurity winner. He will, of course, show at the state fair of Idaho at Boise this fall.

August Schroeder of Cottonwood, Idaho, has for a long time been in the cattle business. He started with a very inferior quality of range stock, but for the last nine years he has used nothing but registered Hereford bulls in his herd, with the result that he now owns one of the best grade Hereford herds in the state. Three years ago he decided to move into town to educate his family. For a man who had been so active all his life he soon found he had made a mistake—town was a prison for him. As a compromise he purchased 160 acres near Cottonwood where the children could go to school and he could still be on the farm. He purchased a few registered Hereford cattle, more for his own pleasure than for profit. His herd has grown to 40 head and will soon outgrow his present quarters. This fall he must either close out his registered stock or his grade herd. He knows there is more money in the registered herd but to part with his grade herd that he has built up to such a high state of perfection is like parting with old friends who have helped you out in adversity.

CLYDESDALE PRIZE WINNER.

The above is a photo of the Clydesdale stallion, Decoration 14,355, recently purchased by J. E. Reynolds of La Grande, Ore., through Ledbetter & McKennon of Alicel, Ore. In his 2-year-old form Decoration won first in American bred class, bred and owned by exhibitor, second in American bred class and fourth in open class at the great horse show at the Chicago International. He still has exceptional quality and looks younger than he is. He will be exhibited at the Union Stock show in June and probably at the Oregon state fair this fall. Mr. Reynolds now has an even dozen registered Clydesdales. They include Bonnie, that as a yearling won grand championship at the Oregon state fair in a class of 32 of all ages; also her dam, Lady Glen and Lady Glen's dam, Lady Jane, all three generations being prize winners, and the older ones proven great brood mares.—H. A.

Shorthorn Congress

Secretary F. W. Harding of the American Shorthorn Breeders' association made the announcement at the recent Chicago sales of a Shorthorn congress to be held at Chicago the third week of February next. This event is to be nation-wide in its scope. It is the purpose to hold shows each forenoon, sales in the afternoon and Shorthorn meetings, conferences, banquets, etc., each evening. The fourth day will be devoted entirely to the milking Shorthorn interests.

Three hundred and fifty to 400 cattle to be selected on the basis of individual excellence, will be offered in the sales and the show entries limited to these animals.

The purpose is to make the standard of merit and the number of Shorthorns assembled second only to the international Shorthorn offering. Cash prizes approximating $8000 will be provided by the American Shorthorn Breeders' association and the event is intended to be the most far-reaching in its effect of any that has ever occurred within Shorthorn circles.

It is designed to make an outlet for all breeders of high-class cattle, and in order that the small breeders may be given full recognition the entries from individual herds will be limited to 15 head.

The series of Shorthorn sales held at and near Chicago recently made an average on the entire number, nearly 300 head, of $1125—a record that has never been approached in a series of sales of any breed heretofore.

Hogs in Fine Shape.

To the Editor: The hogs are coming in fine shape now; the late, cold spring has kept them back some, but think from now on they will make up for lost time.

My sows are all farrowed; from seven sows we got 58 pigs and our losses were small and we are raising most of them—a very promising bunch. These were sired by Ike Knox and Coal Black,, the latter boar one of my own breeding that was first prize junior boar and senior champion at the Oregon State fair last year, but was beaten for champion by Ike Knox. The remarkable thing about this crop of pigs is that every one of these sows and boars was fitted and shown last fall; so it does not hurt the prolificy of pigs to fit them for show, and many of the old breeders remarked that they were all very highly fitted. Besides four sows of my own breeding in the neighborhood were farrowed 34 pigs, and of these the men are raising 33 pigs, one being lost out of a litter of 10. Three of these were gilts their first litters and one sow of second litter.

I just shipped two sons of Ike Knox —one to W. F. Craig, Enterprise, Ore., and to P. T. Peterson, Parker, Ore., to head their herds. I also sold a good son of Ike Knox to Fred Lau, Lyons, Ore., to head his herd of sows recently purchased from N. O. Neibert, Stayton, Ore. I am shipping to George W. Buck, Oregon City, Ore., one of the best pigs from Miss Defender by Big Expanso, the gilt with which I topped the sale of Gerlick & Barker, Mankato, Minn., last winter. He is from a litter of nine, and they look like herd headers to me. I also shipped a fine sow pig to Edward Shearer, Estacada, Ore., for his boy in the pig club.

I am fitting a show herd for the fall fairs and will make the circuit if all goes well, visiting the largest shows in the northwest.

Every one here is doing his best to raise more hogs. The high price of feed is a little discouraging just at present, but I think those things will adjust themselves in a short time. I can not see anything but prosperity ahead for those who have stood with the good, big, old sows and kept them breeding, and especially those with purebreds, as surely this is no time to be feeding a scrub hog of any kind. The demand is getting better every day for good hogs.

Lyons, Ore. RAY J. FOX.

WEIGHS 1220 AT YEAR OLD.

Carl Whitmore, of Joseph Ore., one of the progressive farmers of the Wallowa valley and president of the county fair, has a grade Percheron colt that at 12 months and four days old weighed 1220 pounds. The colt has good bone and is symmetrical. His sire, Olbert, was bred in the Wallowa valley, by Sam Wade and is now owned jointly by Messrs. Wade, Whitmore, J. M. Fruitts and Burrell Kooch. He is a grand individual and is proving a great sire. Mr. Whitmore has a fine little flock of registered Hampshire sheep, from Butterfield flock foundation. He also has a few Berkshires with a boar that was shown by Barrows and Davenport on the North Pacific circuit when under a year and never defeated. H. A.

A PROOF OF LONGEVITY.

G. G. Taal of La Grande, Ore., is the owner of a Shorthorn bull, Orange Jr., that is now 10 years old and is yet a vigorous and sure breeder. Mr. Taal has used him regularly, but rather lightly, for the five years he has owned him and has recently sold him for delivery a little later for $25 more than he paid for the animal five years ago. The bull originally came from the noted herd of W. O. Minor of Heppner, Ore., and Mr. Taal is thoroughly convinced of the longevity and usefulness of the Shorthorn.

Malinda Glenwood's Second Record.

Word comes from the American Guernsey Cattle club that Malinda Glenwood 33892 A. R. 2318 has just completed her second record with 17025.6 pounds of milk and 811.67 pounds of butter fat at 8 years of age. She was bred by E. C. Anderson of Kane, Penn., and purchased by Frank Thomson, Brookmead farm, Devon, Penn. This cow comes honestly by her great producing powers. She is a Glenwood cow from the well-known Glenwood families.

THE WASHINGTON FARMER

SUCCESSOR TO THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. NO. 27. JULY 5, 1917. ** WEEKLY.

State Council of Defense Attacks Gigantic Tasks

Industrial Life of State Must Be Coordinated for Wartime Efficiency

Washington state's council of defense, consisting of 15 members, recently appointed by Governor Lister to cooperate with the national council of defense, has organized and undertaken the vital and tremendous task of coordinating every industry and interest in this state into a unit of maximum efficiency for wartime service.

The organization was effected at Olympia, when President

President Henry Suzzallo, who will direct work of state council of defense.

Henry Suzzallo of the University of Washington was chosen chairman and director of the council and authorized to establish headquarters at the state capital.

Women Will Play Big Part.

Governor Lister recognized the enormous part women must play in the greatest of all preparedness problems (food conservation), and named Mrs. J. S. McKee of Hoquiam a member of the council. At the meeting in Olympia Mrs. McKee was designated to work with Charles Hebberd of Spokane on the food problem, and together, with the advice of the other members and of prominent men and women throughout the state, they are now undertaking the first steps in a great state-wide movement for practical education along the lines of food saving and conservation.

Wide Field of Activity.

The scope of the work to be done by the council is indicated by the divisions of duty assigned to them by the governor, which are as follows:

Director Suzzallo — Coordination of societies and educational institutions.

Charles Hebberd of Spokane—Food supply and food conservation work.

E. P. Marsh of Everett—Labor organizations.

A. L. Rogers of Waterville—The farm labor movement.

C. J. Lord of Olympia—The ship building industry.

George Donald of North Yakima—Transportation activities.

Everett P. Griggs of Tacoma—The lumber industry.

Mrs. J. S. McKee, the woman member of the council of defense, who will direct the movement for woman's activity in the state's war problems.

W. A. Peters of Seattle—Home defense organizations.

J. T. Heffernan of Seattle—Manufacturing industries.

W. A. Lowman of Anacortes—The fishing industry.

Mrs. J. S. McKee of Hoquiam—Women's work.

W. E. Boeing of Seattle—Aviation.

Ernest C. Wheeler of Tacoma—Sanitation and medicine.

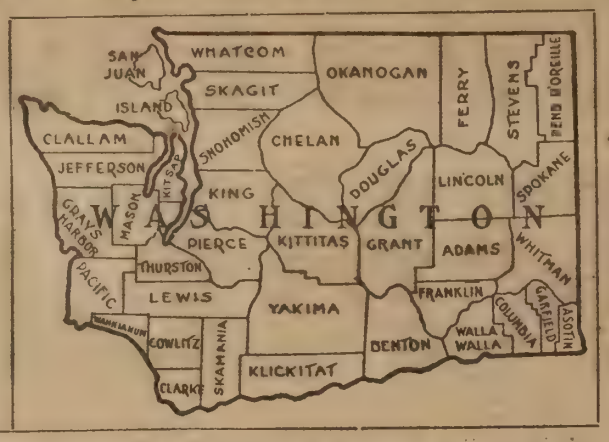
E. S. McCord of Seattle—Legal

Charles Hebberd, who will supervise defense council's work for food preparedness.

and financial problems of the council.

J. G. Kelly of Walla Walla—General publicity.

Many Leaders Take Part.



While the members of this council will act as a sort of cabinet for the governor, much as the national cabinet does for the president, one of the first essentials to their success in bringing about the desired coordination of forces throughout the state is the alignment with them of scores of local and state-wide leaders. This

Western Washington Dairymen Are Organizing for Aggressive War on Low Returns. Read Report in This Issue. Watch for Others

Can Raise Sheep on Waste Lands

Small Flock of Sheep Is Much To Be Desired for Every Farm; Rye Pasture Is Advocated As Easy Way To Feed Hogs

BOSSBURG, Stevens County, Wash., June 25.—The number of cattle in this part of the county is increasing faster than ever and there are none for sale. There is a shortage of hogs in our community, caused by the high price of grain the last year, and now there is a good demand for pigs, but there are none for sale at any price. We believe the best and quickest way to increase the meat supply would be for every farmer or one that has a small tract of land to keep a brood sow, taking good care of pigs and rush them through for the market as there is no danger of an over supply for the next two years. As to raising pigs, a small patch of rye sown now will keep a sow and a litter of spring pigs from August first until snow comes, with very little other feed. Alfalfa is better if one has it. Here is what one of our men is doing with his pigs now. He cuts the alfalfa and feeds the pigs all they will eat up clean, twice a day, and gives them very little oats, and he has the best bunch of pigs in the community. It has taken less than one-half acre to keep a sow and six pigs. The next quickest way I know of to help out with the meat supply is for all those who can to keep a small bunch of sheep. We can raise a few sheep where we can raise nothing else. Give them a small pasture on a rough rocky side hill, brush patch or any waste land where there is grass and weeds and they do well all summer, and a good warm shed and a little good feed will keep them through the winter. There is certainly great need of increasing the meat supply and we should not forget the lesson we have had the last year. That is the reason for grain going higher and meat higher. Then the farmer should not be afraid to raise poultry, even if grain is high. The poultry men over on the Coast have not quit because of the high price of feed and they have to buy all their feed, which is mostly all raised by farmers of eastern Washington. All should take an interest along these lines. W. W. PALMER.

Increasing Number of Sheep.

YAKIMA, Yakima County, Wash., June 22.—There is less live stock in the Yakima valley than last year. I have talked to a number of men who are very good authorities on the subject and they estimate the number to be at least 15 per cent less than one year ago. This applies more particularly to cattle and hogs. Within the last couple of months there seems to be a tendency to increase the number of sheep, owing to the high prices of wool and mutton. I also think that dairy cattle are beginning to increase, as I know of a number of herds which are coming into the valley from outside points. The increase in dairy cattle is due to the anticipated high price for butter and cheese and also the better price which is being paid for market milk. I think it is very necessary that we increase the meat supply in the country. This can be done, of course, more quickly through pork production and a campaign could be carried on through our agricultural papers for the saving of all brood sows which are fit for breeding purposes. Another method of increasing the meat supply quickly is the encouragement of small flocks of sheep on the general farm. The keeping of Belgian hares and the increasing of the size of poultry flocks are methods to be advocated by persons who wish to increase the meat supply.

LEE W. FLUHARTY.

Labor Problem Is Serious.

NEPPEL, Grant County, Wash., June 20.—The building of a cheese factory has had a tendency to improve the class of dairy stock and the improvement is noticeable this year. There is probably 40 per cent more stock this year. The meat supply is a serious question here as not any attention is being paid that line in a special way. I would suggest that the silo is the quickest way to produce beef, with the help of a root crop, making a cheaper home product, than grain for finishing stall feed. Beef is not profitable at present prices of grain feed. The labor situation here is assuming a serious aspect as it is impossible to secure help to harvest the alfalfa crops, while fancy prices are being paid to mere children to help with the crops.

MARTIN PENHALLICK.

Rains Do Damage.

FERNDALE, Whatcom County, Washington, June 18.—The recent heavy rains have done much damage to the crops planted on poorly drained soils. In some spots the grain has been entirely drowned out and in other spots it looks poor and sickly. Potatoes have also drowned out and rotted in the ground in some places, and farmers that have seed are planting some of their fields over. The first local strawberries are on the market and a good crop is assured providing the weather is good during ripening and picking. On the upland haying has started but on the river bottom it will not start for some time yet as the farmers there pasture their meadows longer in the spring.

The principal crops grown for hay on the upland are clover and timothy, mixed. The seed is sown in the spring with oats, usually. If the meadow is not plowed up within three or four years, the field usually becomes full of foreign grasess and consequently the yield and quality of the hay decreases. The soil responds best when the meadow is plowed up and kept open, planted to cultivated crops, for two years before it is seeded down to grass again. There are only a few farmers that have silos. Those that do not have them plant a considerable amount of cow kale and mangels which supplies the cows and poultry with green feed during the winter. The majority of the farms are 10, 20 and 40 acre tracts, and are run without the aid of outside help except for a few days, when the crops are harvested. CARL J. MENZE.

Not Increasing Live Stock.

PROSSER, Benton County, Wash., June 24.—The weather is fine and wheat looks good, but it wants rain. The first crop of alfalfa hay is half in the stack. We have about the same number of live stock in this community as a year ago, that is, hogs and cattle. We have more sheep. The farmers are not keeping any more hogs or cattle than they can raise feed for. The farmers are not trying to increase their herds for a larger meat supply in this county. I would suggest that the best and quickest way would be for the meat packers to pay the farmer a price he can afford to raise them for. The farmer will not increase his stock at a loss, for if the grain they feed to hogs is worth more than the hay is, then the grain will be sold.

G. W. WILGUS.

Pigs Can Increase Meat Supply.

TACOMA, Pierce County, Wash., June 22.—Dairymen are selling off some of their cows. The decrease will not be large. In this county we need more brood sows. Pigs will be the quickest method of increasing the meat supply. Rabbits and chickens are good for the family supply of meat.

CHARLES A. COLE.

Crops Very Late.

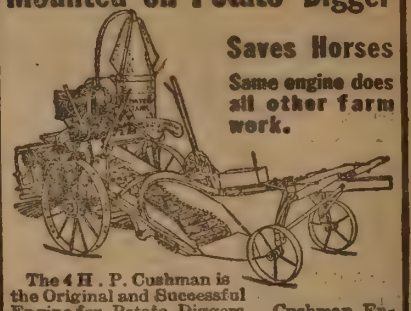
CHEHALIS, Lewis County, Wash., June 22.—Most all the crops are several weeks late, scarcely covering the ground yet. The largest acreage of potatoes, beans and gardens ever planted are in but scarcely large enough to cultivate yet. The ground dried too fast. A general shower today is extra welcome to all except those having early hay cut. It has been the longest winter to feed stock ever known here. Hay was shipped in and hauled out into the country well into June. Butter fat is 40 cents at the Lewis County Cooperative creamery which is doing a large business. Milk is $2.50 per 100 pounds at the Condensery, over 165,000 pounds a day coming in. Big yields and big prices are needed to make the grass pay for last winter losses in feeding. Eggs are 35 cents but feed is so high most of the hens and many chickens are sold at low prices to stop costs. Buyers are again looking for good horses which are very scarce. There is not nearly enough pork and mutton raised for local use. Many thousands of cattle have been sold and shipped the last two years which will make a living market in the near future for what are left.

L. K. COGSWELL.

Need Pasture for Pigs.

HIBBARD, Rosebud County, Montana, June 17.—The number of live stock for this season is about the same as last year. Everybody, however, is endeavoring to increse his herds. I would suggest that raising hogs would be the quickest means of increasing the meat supply. Since pastures, such as alfalfa, rye, oats or barley make an abundance of feed for the summer's growth of pigs, this will greatly eliminate the high cost of feed until the time when they are ready to be prepared for market when ground grain should be fed to get quickest returns.

J. R. KLUNDTS.



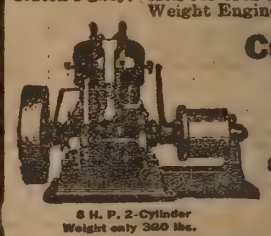
Meat Demand to Be Met.

LEAHY, Douglas County, Wash., June 19.—There is not much stock changing hands at present. There is more cattle and hogs than a year ago, however. I think every one is trying to increase his herd. Some disposed of their stock last fall and some increased it. I would suggest raising hogs as the quickest way to increase the meat supply, if handled right. They will make meat in six or eight months. I think the demand for meat will be met this fall as usual, as there is no great slump in stock in this neighborhood. W. A. GRAY.

Need More Irrigation.

MEDFORD, Jackson County, Ore., June 25.—The live stock of the county is being increased at a moderate rate, with the possible exception of cattle. Sheep and hogs especially will be increased this year. Dairy cows are also on the increase. In order to materially increase our live stock in this county, it will be necessary to secure more irrigation. However, some new districts are going in this year, and we hope to gradually increase our live stock industry. CLAUDE C. CATE.

4 H. P. Cushman Engine Mounted on Potato Digger



Saves Horses

Same engine does all other farm work.

The 4 H. P. Cushman is the Original and Successful Engine for Potato Diggers. Cushman Engine operates the elevator, shakers and sorter independently. Saves a horse or two and does cleaner and more rapid work. Slipping of traction wheel does not matter—engine does the work. Leaves potatoes clean and on top.

For All Farm Work

Same 4 H. P. Cushman is the All-Purpose Engine. May also be used on Grain Binders and Corn Binders, and for all other work. Cushman Engines are very light in weight and easy to move around from job to job. 4 H. P. weighs only 190 lbs. 8 H. P. 2-cylinder only 320 lbs. 15 H. P. only 780 lbs.—a splendid engine for silo filling, grinding, small threshers and other heavy jobs. Very steady running—no violent explosions or fast and slow speeds like ordinary farm engines. Equipped with Throttle Governor, Schebler Carburetor and Friction Clutch Pulley. Ask for free Book on Light Weight Engines.

8 H. P. 2-Cylinder Weight only 320 lbs.

Cushman Motor Works,

853 N. 21st St., LINCOLN, NEBR.

WANTED Cascara Bark

We buy cascara bark, Oregon grape root and Oregon balsam of fir at the prevailing market. Submit samples and quantity you have for sale.

How Farm Loans May Be Used

Are for Farm Business Only, but May Mean Automobile

A borrower of money from the government through the federal farm land bank may buy an automobile with part of the money if——.

But the bank officials bear down so hard on that word "if" that they take most of the joy out of life for the borrower who might want to equip his farm with a brick garage and a seven-passenger or more touring car.

The farm loan law says that loans may be made for one or all of four purposes: (1) To provide for the purchase of land for agricultural uses; (2) to provide for the purchase of equipment, fertilizers and live stock necessary for the proper and reasonable operation of the land; (3) to provide buildings and for the improvement of the land; and (4) to pay existing debts.

It Was No Oversight.

Had the law provided that loans might be made for paying future debts instead of existing debts only, anything in the auto line from a "road louse" to a limousine might be purchased. But this was no oversight on the part of the framers of the law. If an auto gets in among the legitimate purchases with farm loan money it must get in as equipment for the farm operation. President D. G. O'Shea believes that sometimes it may be so classed.

One applicant for a loan through the Spokane bank included among the things he wished to buy with the money an automobile. He specified that he wanted it to deliver his produce to market and his children to school. President O'Shea holds that both produce and children are proper outputs of the farm, and that the former must go to market and the latter to school. Hence he approved the loan.

The Spirit of the Law.

"If an automobile or truck is so constructed and equipped as to be a piece of farm machinery, and if it is used in such a way as to take the place of some other necessary piece of farm equipment, I believe it comes within the field of legitimate purchases with farm loan money," said President O'Shea in explaining his position to a representative of the Farmer. "An automobile for pleasure or mere convenience in traveling certainly would not be in accord with the spirit of the law, for the law is designed purely as a farm development measure. But when the automobile is in the form of a tractor, or may be readily converted into a tractor, to plow, or seed, or cultivate, or harvest, or when it is hitched to the pump to pump water or to the light plant to generate electricity, or is used as a delivery wagon to get produce to market, it becomes a useful piece of farm equipment and therefore a legitimate purchase.

"However," President O'Shea continued, "no loan will be made for the purchase of an automobile or motor vehicle of any kind unless it is shown to the bank board conclusively that such vehicle is suited to such practical farm uses, and that it is the bona fide intention of the borrower to use it in that way."

Borrowers Should Be Definite.

The law requires that borrowers of money should state definitely what they wish to expend the money borrowed for, and the board of the northwest district bank urges that every applicant make this statement as detailed as possible. "It will greatly expedite the making of loans if the uses for which they are intended are stated fully and clearly," says President O'Shea. "Just a little additional care on the part of the applicant in many cases would save a lot of time and prevent a lot of trouble."

Questions Must Be Answered.

The application blanks required to be filled out by those who wish to borrow money contain a large number of questions. It is absolutely essential that every one of these questions be answered, even though the applicant may be unable to see wherein it affects his proposed loan. Every blank space after a question should contain a definite reply. "Even if the question does seem irrelevant in a particular case, the safe way is to answer it," President O'Shea argues.

New Charters Granted.

The following are new loans approved by the granting of charters to new loan associations, or of additional loans to associations already chartered:

Washington.	
Kennewick, Benton county	$22,500
Oregon.	
Rogue River, Jackson county	22,000
Mayger, Columbia county	23,950
Myrtle Point, Coos county	44,500
Freewater, Umatilla county (additional loans)	68,450
Montana.	
Melstone, Mussellshell county	23,750
Bascombe, Roseberg county	50,600
Additional loans under previous charters	40,900
Idaho.	
No new associations chartered, but additional loans approved totaling	33,550

State Council Begins Task

Industrial Life of State Must Be Unified

(Continued from page one.)

they are already doing, and very soon every locality in the state will have a representative in touch with the work and methods of the council. Leaders in all lines of activity are being consulted, and are offering their services loyally.

Labor Problem Is Vital.

That conservation of the food crops of the state must not be blocked by I. W. W. agitators was the first conclusion reached by the commission at its organization meeting. The problem was discussed at length, and a special committee composed of Charles Hebberd of Spokane, President E. P. Marsh of the State Federation of Labor, and A. L. Rogers of Waterville, was designated to make a special study of the questions at issue and report back to the council.

A committee headed by Attorney Harold Preston, representing the Central Council of Patriotic Defense, appeared before the council and presented a written outline of the need of taking steps to suppress I. W. W. activities, particularly in the farming sections of Washington.

Now Is Time to Act.

Speaking in support of quick and effective action, Judge George Donworth of Seattle said the time had come to stop the activities of this class rather than to wait until disorders occurred. These statements were backed by R. M. McCullough, business agent of the printers' union, and others.

Club Boys Boost Big Industry

Twenty-Six Boys Have 156 Purebred Pigs to Distribute

"If farmers throughout the northwest were doing as much for the hog industry as are the Spokane county pig club members, there would be no scarcity of pork this fall," says O. S. Fletcher, club leader for the county. Mr. Fletcher succeeded W. W. Skuse as club leader when the latter was transferred to Montana.

Last year there were 39 boys and girls in these clubs and they had a total of 48 pigs, Mr. Fletcher says. All the pigs were purebreds, and most of them females. The plan was for the club member to get a sow pig, keep her until she became a brood sow and then raise pigs.

Records were kept of all feed and pasture used. Figuring profits at pork prices only, these club members made a total profit of $378 last year, an average of nearly $10 per member.

However, their actual profits will be much greater for at the present time 26 sows have fine litters of pigs, a total of 156 pigs, all purebred an dsubject to registry. They will sell at from $10 to $15 each. At an average of $12.50 each the 156 pigs would bring a total of $1950. The boys are now offering them for sale.

"One of the chief reasons for these boys making good profits is their recognition of the necessity of cheap forage," says Leader Fletcher. "Each club is growing from one-half acre to an acre of some leguminous crop. Sweet clover is the most popular pasture in this county, at is produces well, stands pasturing and is not easily winter killed.

"The Nelson boys of the Lance Hill (Tyler) pig club planted one acre of sweet clover for their two pigs last season. Before the end of the season the clover was making such a growth that they had to turn the mares and other stock in to help the pigs keep it down. It is coming on fine this season.

"Most of the boys grow peas and feed shelled peas during the winter."

The Boys in the Business.

The following are the boys in the Spokane county clubs who have Duroc Jersey pigs. Each boy plans to keep one or more but each has some to sell.

Leroy Frederick, Hayden Carney, Charles Carney and Harry Hudlow, R. F. D. No. 2, Mead.

Zelenor Young, Forrest Green and Robert Green, Chattaroy.

Edward Fisher, Thomas Darcey, Wallace McDonald, Clarence McDonald and Chester McDonald, R. F. D. 1, Colbert.

Ernest Rogers and John Louthan, Amber.

Don Wilson, Rodna.

Harry Jones and Irvin Owes, R. F. D. 1, Mica.

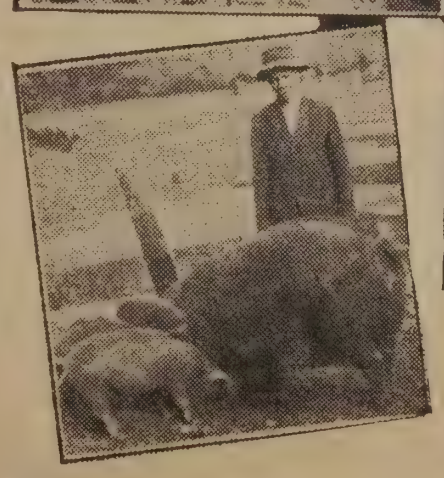
Burton Rubeck, Ellis Womack and Gale Boy, Freeman.

Claude Haller and Mededith Haller, R. F. D. 1, Rockford.

The following boys have Berkshire pigs, several of which are for sale.

Melford Nelson, Lloyd Nelson, Lester Moore and Leslie Mason, Tyler.

Crickets In Grant County.



County Agriculturist H. W. Reaugh reports that he has found it necessary in one or two cases to put up some fences in order to stop the crickets.

They have begun to migrate and it will be necessary in some cases to fence them. The poison has done a great deal of good in reducing the numbers, and will not have nearly the numbers to contead with this year as last year.

The photograph shown at the left above is that of Willis M. Fisher of Colbert, Wash., leader of the Valley Prairie Pig club. Each club is required to have an adult leader to advise with the boys. Below Mr. Fisher is shown Edward Fisher, a member of the Valley Prairie club. At the right above are Melford and Lloyd Nelson of the Lance Hill club, in the clover pasture with their 1916 pigs. The lower left picture is that of Leroy Frederick of Mead, caring for his stock.

Vegetables Can Be Canned at Home

Perfect Sterilization and Sealing Must Be Accomplished for Success

In last week's issue of The Farmer the fundamental principle of successful canning of vegetables and fruit was discussed and what is known as the intermittent sterilization method illustrated. This week the one-period process of canning will be outlined.

The same principles govern all methods of successful canning. The sterilization must be perfect. By sterilization is meant the destroying by heat of all bacteria, or germs, that may be living in the vegetables or fruit, in the water in which they are canned, in the nooks or crevasses in the jar or can, or in the air that may be left in the jar or can when it is sealed.

The sealing of the jar or can must be perfect, also. Sterilization is useless if the slightest opening is left for bacteria or germs to enter through.

The So-Called Cold Pack.

The term "cold pack" refers to the practice of placing the vegetable or fruit in the jar before sterilization, in a wholly raw or partially cooked condition. It is used in both the intermittent and the one-process methods of canning.

How Best to Sterilize.

How to secure perfect sterilization is the first big problem in canning. The second, of course, is how to keep the sterilization perfect.

The so-called intermittent method of sterilization described last week requires that the vegetables or fruit be placed in the cooker (of whatever type used) and kept at boiling temperature for certain lengths of time each day for three days, being allowed to cool between boilings. This method is considered necessary by some expert canners to insure the absolute destruction of all bacteria. Its one great drawback is that it takes three days to complete the canning, and requires much more work and much more fuel than would be necessary if one boiling were sufficient.

The One-Process Method.

The one-process method is held by the majority of canners to be practically safe. It requires that the vegetables be cooked a certain length of time one day only, the length of time depending, of course, on the vegetable. Fruits are seldom canned by the intermittent method, even by those who advocate it for vegetables over the one-process plan. The economy of time, labor and fuel in this method is apparent, and it is recommended by many recognized authorities on canning.

How to Do Canning.

In an Oregon Agricultural college extension bulletin, written by Anna M. Turley, extension specialist, detailed steps in canning are outlined, with explanation of the terms used. The following are the steps which she says lead to success in home canning:

Vegetables—Gather, grade, clean, prepare, blanch, cold-dip, pack, sterilize, seal, store.

Fruits—The same as for vegetables except scald instead of blanch in case of certain special fruits, though most fruits do not require scalding, blanching or cold-dipping.

Meats—The same steps as vegetables except that scalding, blanching and cold-dipping are omitted.

Explanation of Steps.

The following explanation of these steps is taken directly from the bulletin referred to, which has been published only a few weeks:

"Gather. To dig, to pick, or bring together the products to be canned. The work of securing the products involves rush operations, since most vegetables are green and in a tender condition when they spoil very readily. Asparagus, peas, corn and string beans are all seriously injured by standing, and to insure complete success must be canned immediately after gathering.

"Grade. Grade the product into lots according to ripeness, size and quality. This insures:

"1. Uniform cooking.
"2. Better appearance.
"3. Greatest usefulness.

"Clean. By removing all trash, such as leaves, stems, refuse, etc., and by washing all products when necessary.

"Prepare. By stringing beans, removing silk from corn, hulling berries, etc.

"Scald. By placing the product in wire basket or cheesecloth and plunging in boiling water.

"Purpose:
"1. To loosen skins.
"2. To eliminate unnecessary acids.
"3. To start flow of coloring matter.
"4. To reduce the necessary sterilization period.

"Special fruits, such as gooseberries, should be given this step.

"Blanch. By placing the product in a wire basket or cheese cloth bag and boiling quickly for a short time, from two to five minutes, depending upon the product.

"Purpose:
"1. Partly to cook the product.
"2. To loosen skins.
"3. To eliminate objectionable organic acids and flavors.
"4. To reduce bulk.
"5. To start the flow of coloring matter prior to the cold dip.
"6. To kill bacteria, yeasts and molds.

"Cold Dip. By plunging product from the scalding or blanching vat into cold water.

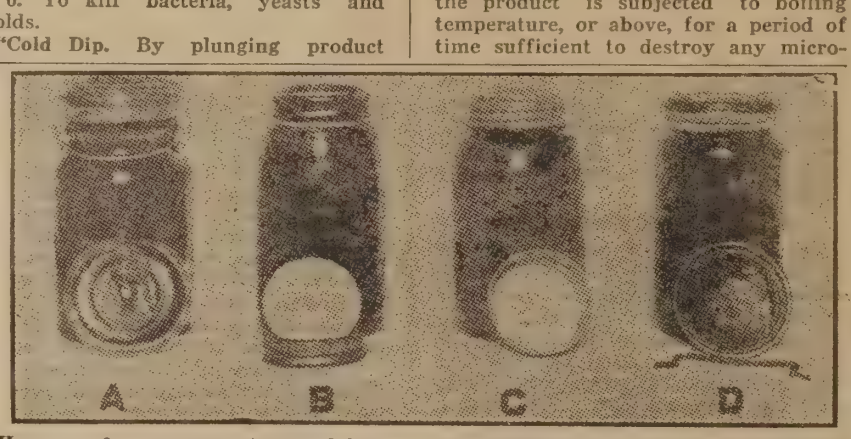
"Purpose:
"1. Make product easy to handle.
"2. To separate pulp and skin.
"3. To set the coloring matter, thus maintaining a good color in the product.
"4. To make the pulp firm, thus maintaining the natural form of the product.

"Pack. The final preparation of the product, such as removing skins, cores, slicing, etc., should be done as soon as possible and the product packed into clean glass jars. Pack closely, to economize in jar space, and as full as possible without crushing the product. Products may be packed whole, in halves, or sliced.

"When the jar is filled, add hot liquid (water for vegetables, syrup for fruits) to fill up small spaces in the jars.

"Place the clean new rubber ring on the jar. Care should be taken to see that the rubbers lie flat and fit close to the neck of the jar.

"Put the covers in place and partly seal.



"In case of screw-top jars screw down the top entirely, then reverse a quarter of a turn. If glass-top jars are used, adjust the top spring only. This allows the air to escape as the sterilization takes place.

"Sterilize. Sterilization means that the product is subjected to boiling temperature, or above, for a period of time sufficient to destroy any micro-organism. The length of time necessary for this differs with the various food products and the temperature. This is one of the most important steps in the canning process. Thorough sterilization is absolutely necessary.

"Seal. After the necessary sterilization period the jars should be removed from the canner and, if they have the glass covers, the second clamp should be fastened down; if they have the screw tops, these should be screwed down as tight as possible. A dry towel or cloth placed over the filled jars after they are removed from the boiler will protect them from draughts of cold air and thus prevent possible breakage from this cause.

"Store. After the jars are cool and perfectly sealed, store them in a cool, dry, dark room. To keep out the light, wrap them in paper and thus keep the good color which has been maintained throughout the process. Light tends to bleach the product."

Next week's Farmer will contain further discussion of canning. It is intended to cover as many phases of canning as possible, including detailed recipes for canning many classes and varieties of vegetables and fruits.

Here are four common types of jars: A, the spring top; B, the improved screw top; C, the old-fashioned screw top; D, the self-sealing clamp top.

Bonds for Warehouses.

Grain warehouses in the state will hereafter furnish bonds for faithful performance based on their capacity and the actual amount of grain handled, according to a rule promulgated by the public service commission. In the past bonds for all warehouses, large and small, have been $2000, says P. J. Sweeney, the new state hay and grain inspector. The basis of circulation under the new rule will be one-half of the sum of the actual capacity of the warehouse in question and the amount of grain handled during the preceding year. or every 50,000 bushels arrived at on this basis a $1000 bond will have to be posted. For instance, if a warehouse has a capacity of 100,000 bushels and handled 50,000 bushels last year, the basis and the bond will be 75,000 bushels and the bond will be about $2000, the sum of $1000 for the first 50,000 bushels and $1000 for each succeeding 50,000 or fraction thereof.

To Raise Pheasants.

Ed Harpole has received two pairs of Chinese pheasants and has taken them out to his Whitman county farm on the Palouse river, where he hopes to raise pheasants in goodly numbers.

Graham Holstein Dispersal Sale

Forty Purebreds Average $213, While the Forty Grades Average $132

By A. C. BALTZER

Instructor Dairy Department, University of Idaho.

Whitman county, Washington, on June 27 witnessed the dispersal of one of the best and largest Holstein herds, composed of registered and grade stock, that the northwest has seen. Buyers from Oregon, Washington and Idaho were present, and with warm sunshine and ideal weather favoring, the J. C. Graham North Slope dairy herd at Palouse, Washington, was quickly sold.

J. C. Graham, breeder of the herd, gave a brief sketch of its beginning, when eight years ago one cow and the faith of a local bank in the future of the dairy industry started him out on the road to success. From this small beginning, the 80 head sold at the sale was but a part of the total that grew up on North Slope farm. With intelligent breeding, good feeding and farm management, careful selection of breeding stock, a herd of uniformly large barrel and udder capacity resulted. The opinion of several breeders was that the herd stood second to none for actual milk production to any in the northwest under ordinary farming conditions. Indeed, the eye of the breeder judged well his cattle.

Dean E. J. Iddings of the College of Agriculture, University of Idaho, emphasized strongly the diversified farming that the Palouse country was gradually taking up. J. P. Duke explained how dairy farming and the banker were always in accord in their views. The auctioneers were George A. Gue, North Yakima, Wash., and Harry C. Cranke, Nez Perce, Idaho.

The average price for the total of 80 head sold was $174. The average price for the pure-bred stock totaling 40 head was $213.25, while the 40 grade cattle averaged $132.50, a difference of $80 in favor of the registered stock.

The top price paid for a cow was $530, by J. L. Smith, Spokane, Wash., for Natsy Sunshine 2d. C. L. Williams of Wilson Creek, Wash., bought a total of 30 head, 16 of which were registered. He paid a total of $6600 for his cattle, and is to be congratulated for the splendid selection that he made. Other buyers were Michael Marugg of Spokane, Wash., who paid $1465 for seven head, and R. H. Gray of Post Falls, Idaho, bought eight cows for $1185.

The buyers of the registered stock were the following: Mr. C. L. Williams, Wilson Creek, Washington.

Cow No. 21, Pinney Pietertje DeKol	$ 160
Cow No. 16, Ivy Pietertje DeKol	160
Cow No. 3, Belle Nudine DeKol	235
Cow No. 2, Liscomb Aaggie of Riverside 2d	365
Cow No. 30, Bessie Aaggie Ormsby DeKol, calf	155

Four grade cows	595

Mr. J. W. Chaddick, Moscow, Idaho.

Five grades	370

It may be noticed that only three of the total number disposed remained in Whitman county, Washington.

West Side Dairymen Band Together

Strong Organizations Unite in Movement to Command Better Prices

By PAUL E. TRIEM

Dairymen owning about 10,000 cows in Skagit and Whatcom counties, the big dairy district of western Washington, are in progress of reorganization on aggressive lines to demand better prices from the big condenseries.

The Skagit County Dairymen's association, which has taken the lead in organizing the West Side counties, was formed by dairymen owning almost half of Skagit county's 16,000 cows. Business is transacted on a capital of $1000, representing 1000 shares of stock with a par value of $1 each. The company is not run to show a profit, and none of the officers receive pay. In the charter and bylaws the widest scope of activity is provided for, so that in case of future need the association may go into any branch of manufacturing or industry necessary to the direct handling and marketing of milk and milk products.

John Kill is president and J. B. Hall secretary of the Skagit county association. They attended a meeting of the Whatcom County Dairymen's association at Lynden June 23 and urged there the importance of reorganization of the Whatcom county association and close cooperation between the two. They described to the assembled dairymen the plan of organization and the experiences met with in Skagit county.

Milk producers owning approximately 1500 cows signed up as favoring the change in organization, which will convert the association from a body practically social in its functions to one constructive and, if necessary, militant in aims and methods. Before adjournment, a committee composed of the officers of the present association—N. P. Sorensen, president; O. P. Brown, vice president; J. L. Parker, secretary; L. J. Siennes and B. C. Crabtree, trustees—was chosen to draft a constitution and bylaws similar to those adopted by the Skagit association. A meeting to consider further action will be held in Lynden Saturday, June 30.

The chief significance of the Lynden meeting lies in the fact that it is but one step in a progressive movement, general throughout western Washington, looking toward the effective coordination of all the dairy farmers.

Mr. Kill told of the indifference of the big dairymen to the organization in its younger days.

"At first, the men who owned 80 or a hundred cows didn't think much about us," he admitted, "but pretty soon they began to take notice. The fact is that we had tied the little herds together, and had made one big herd out of them. If America is to feed the world, that is one of the things we must do—we must learn, as farmers, more about selling what we produce."

No Salary for Officers.

Among the direct recommendations made by President Kill was that no salary should be paid the officers of the association, as a fat salary is apt to attract a type of men who are interested principally in their own financial gain.

"You must put in men who are willing to sacrifice something for the community good," he warned his hearers. "They mustn't be small enough to worry about the gasoline they are burning up, doing their work. And when you get that kind of officers, back them up to the limit! Don't go around behind their backs and try to knife them. Work together. The men who represent you will get kicks enough from the other side. And here is another point: When your members are assembled for a business meeting, lock the doors and see to it that no one who is not interested as a producer is allowed to take part in the proceedings."

Results in Skagit County.

Secretary J. B. Hall went into the details of organization worked out by

(Continued on page thirteen.)

On the left above is a snapshot of John Kill, president of the Skagit County Dairymen's association; below is that of N. P. Sorensen, president of the Whatcom County Dairymen's association.

The silos are on the farm of C. C. Schroeder, Skagit county. Mr. Schroeder is milking about 22 cows and also raises some hogs.

Hislop to Be Judge Again.

Professor Hislop, head of the animal husbandry department of the state college of Washington, has been asked to judge live stock at a number of the important fairs again this fall. He will judge for the third season in the sheep department of the Montana state fair, and for the second year in both the sheep and swine departments of the Utah state fair. In Washington he will judge the sheep at the Spokane interstate fair and the swine at the Washington state fair at North Yakima.

King County Fair.

Two years ago County Agent F. W. Rader was able to get several of the local granges of King county to hold a corn and potato fair with the idea of holding a county grange fair the following season. This plan was successfully carried out in 1916, and the first King county grange fair was held. This fair is now to be an annual event, but instead of being a grange fair it is the plan to make it a county fair, inviting all to take part, whether they are grangers or not.

Wahkiakum Cow Testing.

A cow-testing association for Wahkiakum county has been organized in Skamokawa by County Agricultural Agent A. T. Flagg. Between 650 and 700 cows have already been pledged and the costs are not to exceed $1.50 for each cow tested during the year. It was voted to pay the cow tester a salary of $60 a month, allow him $5 a month for incidental expenses, and if he remains a year with the association and gives satisfaction he is to have a bonus of $5 a month extra. He also boards with the members of the association while testing. The directors are: Messrs. Meserve, Laughlin and Durrah of Grays River, William Lund of Cathlamet and Weister, Dawson and Charles Strom of Skamokawa. The officers of the association are H. L. Wiester, president; C. W. Laughlin, vice president; William Dawson, secretary, and W. N. Meserve, treasurer.

Algona Drainage Project.

The Algona drainage project, which takes up 100 acres in Pierce county and 1400 acres in King county, Washington, is getting well under way, according to County Agriculturist F. W. Rader. From present indications there will be no difficulty in securing the required number of signatures to bring the matter before the court for a hearing.

South Fork Grange.

At the last meeting of the South Fork grange No. 22, reported by the Northport News, Mrs. John Selmer was elected master for ensuing year, and D. O. Westman, delegate for the state convention which is to be held at Wenatchee. A large number were present and John Selmer spoke on the new cooperative store to be started at Northport, its principles and the amount of stock subscribed. Mr. Selmer stated that about $1000 worth of stock had been subscribed by the Deep creek ranchers.

Forest Patrol Law.

The provisions of the new forest patrol act of the state of Washington became effective June 7. This requires owners of timber or forest land who do not permanently reside within one mile thereof to patrol and protect during the season when there is danger of forest fires. The patrol and protection must be adequate and meet with the approval of the state board of forest commissioners. Further information may be obtained from Fred Pape, State Forester, Olympia, Wash.

To Preserve the Quail.

In an attempt to preserve the quail supply of western Washington hunting for any species of this bird is prohibited until October 1, 1919, in San Juan, Clallam, Clarke, Jefferson, Skagit, Snohomish, Skamania and Whatcom counties. It is also made unlawful to hunt Chinese pheasants in Yakima county, the new law making it unlawful to hunt them in Yakima and Kittitas counties.

Wideness of Douglas County.

Empire, Waterville: How many spuds could be raised in Douglas county if all the summer fallow ground was planted? We could certainly feed a big army.

Pasco Opens Its Union Stock Yards

Stock Sales Opening Day Total $15,000; Program Given

By D. G. SUTHERLAND.

With buyers from many points throughout the northwest present, and sales totaling between $15,000 and $16,000, the Pasco Union stockyards at Pasco, Wash., were formally dedicated June 25.

The stock consigned for opening day comprised 246 cattle, 169 hogs and 548 sheep. The bidding of the buyers resulted in the hogs bringing an average of about 15 cents and the sheep, which were mostly 2-year-old wethers and averaged 110 pounds, bringing 11 cents, which was claimed as the top price for like stock on western markets that day.

The cattle were not fit for beef. The consignment consisted of cows and calves and stockers, really stock for the range. There was a dearth of range buyers and only about 50 head were sold, the balance being shipped to Montana for further feeding. The principal buyers were Carstens Packing company, Tacoma, and F. M. Lowden Jr., Walla Walla.

The new stockyards company now owns 22 acres, has a five-year option on 170 acres adjoining, giving one and three-fourths miles of Snake river and Columbia river waterfront. There is ample railroad trackage and unloading pens are so constructed that stock step right off the cars on the level to the pens, sheep can be unloaded two decks at a time. Ten acres are now in actual use.

The office building, with general offices, has private offices for patrons, commission firms and buyers and shower baths for the convenience of customers. It is also equipped with self-registering scales. There are undercover unloading sheds, 100x180, hog sheds 80x240, sheep sheds 66x400. There are 50 pens for stock, a good many are very large and can be subdivided in four each, when necessity demands.

The total cost of the yards to date is $20,000, and the indebtedness of the company is but a small part of this amount.

Banquet Is Held.

An elaborate banquet was spread in the evening at the Pasco hotel, at which 72 were present, nearly every locality

(Continued on page twelve.)

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

A Cat With Nine Lives or More

John Barleycorn clings as tenaciously to his life as the blackest cat that ever crossed the trail of the human race.

About half the states of the Union have voted him into legal exile. All the warring nations of Europe have banished him, at least till after the war. He has proved himself an undesirable citizen at all times, but especially when strenuous business is to be performed. Europe banished him because he interfered with war. Some provinces banish him because he interferes with peace. But he hangs on.

In this country he is making what may be his last fight for life before congress. And he is weakening. If civilization can not win against him, war will. John Barleycorn's epitaph may as well be written now and carved into a slab for his grave: "He lived; he died. For such as him there is no resurrection."

What Would It Mean?

If every family in the United States were to eat one pound (only 16 ounces) less wheat bread a week for one year than they are now doing? A saving of half a million tons of bread for exportation to the army camps in this country and her allies in Europe, where it is needed many times more than here.

If every farmer in the United States could have one pound of foodstuff per acre that would otherwise go to waste? A saving of a quarter of a million tons of foodstuff to be exported or used at home in place of foods more suitable for exportation, and more greatly needed by the stricken people of Europe.

If every home in the United States were to save one pound of food each week for a year that would otherwise be wasted? A saving of half a million tons of food.

If every family in the United States were to use enough perishable or non-staple products, like cabbage, turnips or potatoes, to enable the saving of two ounces of red meat a day for one year? A saving of nearly 450,000 tons of meat for exportation to the soldiers who are fighting the battles of this country and her allies.

If every family in the United States were to save one ounce of butter, lard or other fat each day for a year? A saving of nearly a quarter of a million tons of fats that are so urgently needed in Europe.

If every person in the United States were to contribute one penny a month (12 cents a year) to relief funds? A total of $12,000,000 to care for wounded soldiers, hungry women and children, and all manner of persons stricken with disease or plagues as a result of the devastating war into which this country is drawn.

If every person in the United States were to do his "bit," even to sacrificing something that seems almost like a necessity, in addition to luxuries (including idleness)? An earlier end to the war than will otherwise be possible; fewer soldiers slain; fewer homes wrecked; fewer months of hunger and loneliness and suffering for those at home or homeless in the devastated areas; an earlier triumph of liberty over despotism, humanity over inhumanity, right over wrong.

Are you doing your bit? Are you making some little sacrifice? Are you eating one slice less of wheat bread daily? Are you preventing some little item of waste somewhere? These are the practical tests of your own personal patriotism.

Farmers Will Question Wisdom of Alliance With the I. W. W.

A news item from Fargo, North Dakota, says the announcement is made there by the Nonpartizan league of farmers that its committee appointed recently to confer with the Agricultural Workers' union with a view to having the latter divert a portion of its membership to North Dakota to help care for the harvest, had reached an agreement as to wages, hours of service and working conditions.

The Nonpartizan league will be called upon to ratify this agreement at a convention to be held at Minot, N. D., July 11.

The Agricultural Workers' union is a branch of the I. W. W. and is said to have a membership of more than 20,000.

Many farmers will question the wisdom of this action. They fear there is danger that the I. W. W. is driving an entering wedge that may lead to the splitting of the farmer forces of the northwest; that North Dakota farmers, under this plan, would be bidding against the farmers of Montana, Idaho, Washington and Oregon.

It is probable that the Nonpartizan league may find the present demands of this organization tolerable, but there is danger that, once the I. W. W. got a strong hold on the harvesting of western crops it would push up its demands and paralyze harvesting operations pretty much as lumbering operations are now being paralyzed in Idaho and Washington.

The I. W. W. leaders who are negotiating this alliance with the Nonpartizan league are probably professing a friendly regard for the farmer which their published declaration of principles flatly contradicts. In order that its readers may have no misunderstanding about the aims of the I. W. W. the Farmer quotes the following extracts from the organization's declaration of principles:

"The working class and the employing class have nothing in common.

"Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

"It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown."

The association is avowedly anarchistic and syndicalistic.

The Great Heart of Humanity

In these times when the whole world seems to have lost its equilibrium and hurled itself headlong into a brutal conflict of slaughter and destruction it is encouraging to catch one bright beam from the sun of human kindness. The inventive genius and the full powers of mankind seem dedicated to the destruction of those things that men have struggled centuries to gain.

But in the midst of it there shines a bright light. The American Red Cross!

All over this land women and girls by thousands are studying the problems of first aid to the injured, and are sewing and knitting and giving that sufferers of any nation on any battlefield may be relieved. All over this land men and women are volunteering their services without pay, and are crossing the ocean to submit themselves to gravest dangers while carrying out their rescue work.

A few days ago the Red Cross association issued a call for $100,000,000 to finance its great work, and the people of this country responded with more than that asked for. And contributions are still being received.

Washington Gleanings

Articles of incorporation for the Oakville cheese factory have been filed.

Walla Walla has been selected as the 1918 meeting place for the state grange.

E. C. Cluster of Pomeroy has planted 50 acres to beans this season. She seed cost $117.

More than $2000 in prizes was awarded at the 13th annual horse show held in Waitsburg recently.

Beans are going to be used extensively in eastern Washington in the present effort to increase food production.

George Gunning has just sold a section of wheat land east of Reardan to August Rux of Rockland for $100 per acre.

The latest report of the Jersey Creamery company of Vancouver is that 19,200 pounds of butter are made a month by that firm.

Workmen are busy on the construction of an elevator for the Ritzville Warehouse company. The elevator will be 80 feet in height.

Farmers from all parts of western Washington will come to Puyallup to study the work of the experiment station, according to plans made by the western Washington farm agents.

Work has now commenced on the new permanent highway known as the Pasco-Rattlesnake flat road, which is being built out of Pasco by Franklin county at a cost of about $35,000.

Big food-drying plants have been installed at Wenatchee, Yakima and Spokane, and smaller plants are being erected in various sections of the state, according to E. F. Benson, state agricultural commissioner.

The May report of B. C. Wright, official tester for the Chehalis District Cow-Testing association, shows 113 cows produced on an average over 40 pounds of butterfat. Of these 690 did better than 45 pounds each.

The King county board of agricultural preparedness, after consultation with the Seattle city council, has announced the establishment of a county market for farmers only at Sixth and Westlake avenues at Seattle.

The directors of the Adams County Fair association have fixed dates for the fair to be held this fall as September 12, 13 and 14. This will be just following the Spokane Interstate fair and just prior to the Yakima State fair.

If sufficient tonnage of low-grade and cull potatoes can be secured at prices ranging not above $10 a ton it seems likely that a potato starch factory will be added to the manufacturing industries of Yakima valley within the year.

What Others Say

A quart of canned peaches or tomatoes on the shelf is worth a bushel rotting on the ground.—U. S. Department of Agriculture.

Is this a popular war? Everything points to a unanimous answer to the question—and the answer is not in the negative.—The Dakota Farmer.

This year the farm that is not producing practically all the vegetables, fruits, meats and grains for the need of the owner is not being worked up to the demands of the crisis.—Country Gentleman.

If the farmer could be protected against the tremendous advances in the prices of the things he has to buy, he would do very well; but no one seems to be worrying about this side of his business.—Wallace's Farmer.

Thousands of city folks who have made gardens this year are meeting with some surprises. They had thought that crops "just growed," and they are amazed at the enemies they find on every hand.—National Stockman and Farmer.

Army Lands in France

First Transports Escape Torpedoes

The announcement of the arrival in France of several vessels carrying the first expedition of United States soldiers for participation on the actual field of battle startled the whole world last week. So close had been the secrecy thrown about the plans and movements of the army, that no hint of the expedition had been heard in this country. Just how many soldiers were are in the expedition has not been given out, but it is believed that there are several thousands.

Their arrival was celebrated with joyous demonstrations by the French people.

While no official information is being given out as to the plans of operation for the United States soldiers on the European battle field, it is currently understood that they will go into training under the command of Major General Pershing, who is already in Europe, and be ready for actual service within a short time. Additional expeditions will be made from time to time as rapidly as practical, it is semi-officially admitted, until the representatives of the United States in Europe are numerous enough to make the actual fighting force of this country keenly felt by the German forces.

So far as is known, the transports carrying the soldiers were subjected to no immediate dangers, but their complete escape from submarines in the war zone is accepted as one of the encouraging developments of the nation's participation in the war. Strictest secrecy is maintained as to the times and places of departure of troops in order to prevent informed effort on the part of the submarine commanders to destroy the transports.

Russia Again Aggressive.

The soldiers of new Russia have assumed the aggressive. For the first time since the revolution last March Russian troops have begun an attack on an extensive scale. Along a front of 16 1-2 miles in the region of Brzezany, Galicia, Russian troops have stormed the German positions. Berlin says the Russians suffered heavy losses and were compelled to retire before the German fire. The attack was made in the section southeast of Lemberg, where the artillery firing has been heavy recently. Field Marshal Haig continues to tighten his grip on Lens. On the north bank of the river Souchez British troops have captured German positions on a front of half a mile southwest and west of Lens.

Brazil and Greece Next.

Announcement is expected immediately of definite severance of diplomatic relations and a possible declaration of war on Germany by the republic of Brazil, in South America. For months Brazil has been endeavoring to maintain the position of neutrality, but has withdrawn her formal declaration to that effect.

Greece, from the throne of which King Constantine was recently compelled to abdicate because of his German tendencies, is virtually at war with Germany and her allies (Austria, Bulgaria and Turkey). Former King Constantine's son, a strong anti-Germanist, has succeeded to the throne.

U. S. to Build Airships.

Recognizing the important part airships are playing and will continue to play in the war, this country is planning on spending huge sums of money building airships and training men to operate them. It is definitely stated that 3500 such fliers will be built as soon as possible, and that 6000 men will be trained to operate them by the time they are ready for use.

Wilson Controls Exports.

One clause of the espionage bill recently passed by congress gives President Wilson power to control the exportation of foodstuffs and munitions of war. The president has appointed an export council to assume charge of the work in this regard, with his supervision and consent. Explaining the intentions of the council and himself, President Wilson said:

"There will, of course, be no prohibition of exports. The normal course of trade will be interfered with as little as possible, and, so far as possible, only its abnormal course directed. The whole object will be to direct exports in such a way that they will go first, and by preference, where they are most needed and most immediately needed, and temporarily to withhold them, if necessary, where they can best be spared.

"Our primary duty in the matter of foodstuffs and like necessaries is to see to it that the peoples associated with us in the war get as generous a proportion as possible of our surplus, but it will also be our wish and purpose to supply the neutral nations whose peoples depend upon us for such supplies as nearly in proportion to their need as the amount to be divided permits.

"There will thus be little check put upon the volume of exports, and the prices obtained for them will not be affected by this regulation."

Increased Rates Denied.

The interstate commerce commission denies the plea of the railroads of the United States for a horizontal increase of 13 per cent in freight rates. The commission found, as a result of extended hearing that the carriers generally show a substantial and increasing financial prosperity and that they have ample resources with which to conduct transportation In its decision the commission indicated its willingness to increase class rates in the eastern district. This decision lifts a weight of anxiety from two basic industries of the Pacific northwest, that of orchard owners and lumbermen.

Bone Dry States.

Twenty-three states became bone dry at midnight on June 30, the effective hour of the Reed amendment prohibiting shipment of liquor into any territory where its sale or manufacture was prohibited. The law bars from prohibition areas all mail matter containing liquor advertisements. Eleven other states are partially affected by the legislation. The bone dry states include Idaho, Washington and Oregon.

Food Control.

The food control measure as redrafted by the senate committee on agriculture is a distinct improvement on the bill passed by the house. It is much fairer to the agricultural interests of the nation.

The house bill gave the president authority to declare maximum and minimum prices on foods, feeds and fuel.

The senate committee has adopted amendments to give the president authority to control iron, steel, copper and their products, farm implements and machinery, fertilizers and binding twine materials.

Other important amendments would authorize the government to take over and operate factories, packing houses, oil wells and mines, regulating the wages of their employes, and to commandeer supplies of any kinds when needed for the army and navy, "or any other public use connected with the public defense."

These amendments are declared by senators who have been opposing, as well as by those supporting control legislation, to improve the bill and remove almost all opposition except upon prohibition.

But lamentably the prohibition issue threatens an indefinite deadlock in congress. The fight now is over beer. The house bill absolutely prohibits the use of any and all food materials in the manufacture of intoxicating beverages.

The bill as redrafted by the senate committee carries absolute prohibition of the manufacture of distilled spirits and malt liquors, but gives the president authority either to prohibit or license the manufacture of wines.

The brewery interests will not give up without a long and determined struggle, and senate leaders agree that the fight will be one of the most strenuous in the senate's history, with the alignment extremely close on the question of stopping the manufacture of beer.

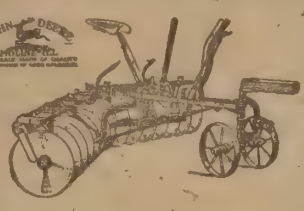
To the Farmer it looks as though the breweries are putting business above patriotism, and their supporters in and out of congress will be largely an element that believes in putting its glass of beer above country.

Buys Good Sheep Range.

David Rosenburg has completed the negotiations for the purchase by himself and his brother Harry of the big Hargadine ranch of 5000 acres, east of Ashland, Ore. The Rosenburg brothers will use the ranch in connection with their extensive sheep raising industry, and expect to soon have a large herd of sheep roaming over the land. The property was purchased from Ben Selling and Joseph Simon of Portland. The purchase price is not given out.

Thoroughly Disc Before and After Plowing

After the grain has been cut from your fields and before the hot August and Septembersun has cracked the ground, allowing the subsoil moisture to escape, use the



John Deere Model B Disc Harrow

Noted for Thorough Disking

It produces a fine dirt surface mulch *pulverized through* and *through*—no trash that *stops evaporation* of moisture and bunches—no clods—no air spaces—*seed bed catches and holds rainfall.*

Mixes stubble, trash and weeds thoroughly into the soil. *Checks weed growth. Pulverizes surface thoroughly—ground is kept mellow—plowing is made easier.*

Using the Model B after plowing completes a seed bed that is *thoroughly fits the subsoil perfectly.*

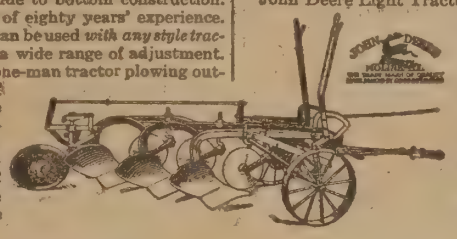
The Model B is *exceptionally flexible*—that is why it disks so thoroughly. The spring pressure third lever assures uniform penetration regardless of dead furrows or ridges.

Write now for free booklet on this profitable disc harrow.

The Bottom Is the Heart of the Plow

The right kind of plow bottom lays the foundation for the right kind of seed bed. Crop yield is increased The plow lasts longer and pulls lighter—a saving in actual cost, power, trouble.

John Deere Tractor Plows



Have the Famous John Deere Plow Bottoms

The bottom on every John Deere plow is correctly designed—John Deere plow success is largely due to bottom construction. It is the result of eighty years' experience.

These plows can be used *with any style tractor.* Hitch has a wide range of adjustment.

They make one-man tractor plowing outfits. A pull of the rope by the man on the tractor lowers or raises the bottoms *high and level,* and the tractor does the work. The bottoms do not gather trash in turning or when plow is being transported.

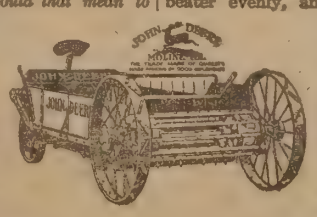
John Deere Light Tractor Plows *can be backed up*—they have a stiff hitch.

Equipped with John Deere Quick Detachable Shares—*save eight to thirty minutes changing each share.*

Write for free booklet.

A Bigger Yield From the Same Field

Manure well shredded and spread evenly gets the best results. It goes farther. Plant roots get all of its plant food. On any field that you have been manuring by hand you get approximately a 25 per cent increase in crops by using

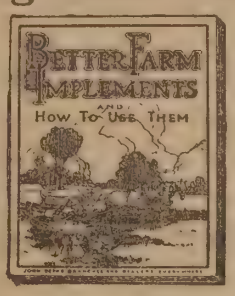


The John Deere Spreader

The Spreader With the Beater On the Axle

Ask any farmer who uses a John Deere Spreader. *How much would that mean to you in these years of high crop prices?* And you'll find there is a saving of 50 per cent in time and labor.

Beater on the Axle is found only on John Deere Spreaders. Does away with chains, clutches and half the castings otherwise necessary. *Means better spreading, fewer repairs.*



Revolving Rake which feeds manure to beater evenly, and Ball Bearing Apron Drive, securing frictionless apron travel with no racing, are other exclusive features.

Spreader only hip-high—easy to load. Big drive wheels—light draft. Easy to operate—only two levers—a boy can run it.

Write for free booklet on the John Deere Spreader.

Big Book Free

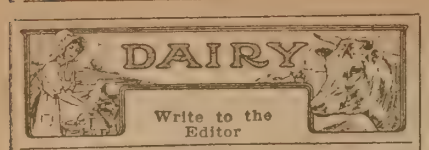
Better Farm Implements and How to Use Them

America must produce more food. Labor-saving implements will play an important part in increased crop production.

This book tells all about a full line of labor-saving farming implements. Tells how to adjust and operate many of them. A practical farm implement encyclopedia. Worth dollars. Illustrates and describes the following machines: Walking and Riding Plows, Tractor Plows, Disc Plows, Disc Harrows, Spring Tooth and Spike Tooth Harrows, Corn and Cotton Planters and Drills, Listers, Alfalfa and Beet Tools, Grain Drills and Seeders, Riding and Walking Cultivators, Lister Cultivators, Mowers, Side Rakes, Loaders, Sweep Rakes and Stackers, Hay Presses, Grain and Corn Binders, Corn Cutters, Stalk Cutters, Kaffir Headers, Manure Spreaders, Portable and Inside Cup Elevators, Corn Shellers, Wagons, Farm Trucks and Buggies. This big book will be sent *FREE* if you state the implements in which you are interested and ask for Package X—1670.

John Deere Said

in reviewing his career, that he felt most pride in the consciousness that he never produced an implement of poor quality.



The same pride that John Deere felt is the pride of the makers of John Deere implements today. It is a powerful incentive to the maintenance of the high standard to which John Deere tools have been kept for eighty years.

Milk Production Cost

Should Interest Be Figured?

How shall a dairy farmer calculate the cost of producing milk? Should he figure in interest on the value of his cows and the money invested in barns and other equipment?

These questions came up at a public meeting in Spokane, where dairymen and dealers were testifying before a commission of 15 citizens that is investigating the high cost of living.

A. A. Newbery, former owner of a dairy near Spokane, while questioning the manager of the Broadview dairy, objected to a charge for barn rent which he discovered in the printed statement of dairymen and distributors. Barns and cows, he argued, were capital, and production costs should not include interest or rent on captial.

N. W. Durham, another member of the investigating commission, differed from Mr. Newbery. Mr. Newbery's point of view is given in the following communication:

To the Editor; During the milk hearing at the city hall Thursday night I contended that the items of interest on money invested in cows and barn rent were not proper charges in estimating cost of production. Both Mr. Flood and Mr. Durham insisted I was wrong in my contention.

I stated at the time that the government authorities would not permit these charges to be figured in income tax returns and the United states internal revenue office in this city informs me that I was right in my position.

I know that this question of interest on capital investment and rent being included in estimating cost of any given article of manufacture has long been a subject of discussion among expert accountants and that volumes have been written on this subject, but the government has decided against the fallacy of including interest and it is a significant fact that no manufacturer has attempted to test this decision in court.

A. A. NEWBEARY.

Mr. Newbery's argument that the government authorities do not permit such charges to be figured in income tax returns is not to the point. That is an entirely different matter.

The government rightly excludes interest on capital because the object of the income tax is to require the citizen to pay a tax on the income from his capital.

Such items as interest on plant, herd, etc., must be considered, if the producer is to stay with the industry and not to go broke. If they are not added to the items of basic cost, they must be weighed later. if we are to arrive at the dependable figure at which the producer can sell his milk without loss.

An illustration may make this plainer. Take the case of a farmer just starting a dairy. He owns his land, but must borrow money to buy cows, build barns, etc. He must pay interest on that borrowed money, and practically that interest is as clearly a cost charge as his labor or the money he pays out for feed for his herd.

Suppose that when he was building his barns he also provides sufficient capital to lay in a supply of feed to run his herd for two, three or five years, and then eliminated feed items from his tabulation of cost and sold his products on that basis. Where would that farmer wind up?

The capital that is required by the dairy farmer must have its fair return.

Produce Over 50 Pounds Butterfat in One Month

The following table gives the names and records of the cows in the Linn County (Oregon) Cow Testing association, which have produced more than 50 pounds of butterfat during the period of 30 days ended May 29, according to the report of E. W. Bartroff, tester:

Owner of cow.	Name. of cow.	Breed (years.)	Age	When fresh.	Lbs. milk.	Per cent of fat.	Lbs. B. fat.
R. L. Patterson	Monte	G. J.	8	Oct.	942	6.0	56.52
Thomas Spillman	30 ..	G. J.	6	Feb. 7	822	6.2	50.86
Thomas Spillman	18 ..	G. J.	8	Mar. 18	954	5.4	51.52
Henry Stuart	Lass ..	G. J.	2	Apr. 10	954	5.3	50.56

Dept. Animal Industry. DETROIT, MICH.

Cow Testing Results.

Records of the Pierce County Testing association in Washington for May show a larger number of high producing cows than ever before. Twenty-one cows produced over 60 pounds of butterfat in the month, while out of 607 cows in the association 132 produced over 40 pounds, most of them getting no other feed than pasture. The three highest herds, those of J. J. Miller, John Snell and C. W. Orton, averaged 41.5 pounds of butterfat per cow, while the three lowest herds averaged 22.2 pounds per cow. J. J. Miller's herd of 67 cows produced an average of 48.1 pounds of butterfat each. The average per cow for the whole association was 817.5 pounds of milk and 32.8 pounds of butterfat.

In the Roy district the best showing was made by the herd of Mrs. A. A. Pike, a new member, whose herd of grade Jerseys contained nine cows producing over 40 pounds of butterfat. Mrs. Pike has raised nearly all of her cows and now has an exceptionally fine Jersey bull at the head of the herd.

In addition to the cows over the 60-pound mark the following herds showed up well:

J. J. Miller, 15 cows over 50 pounds.

John Snell, seven cows over 50 pounds.

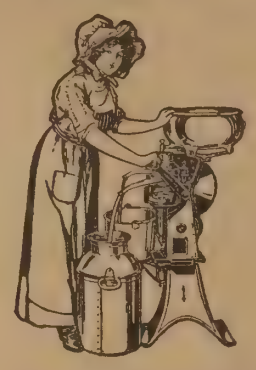
C. W. Orton, two cows over 50 pounds.

J. Schuler, one cow over 50 pounds.

Pierce County farm, one cow over 50 pounds.

Dr. Robert Wilson, three cows over 50 pounds.

Walter Spinning, two cows over 50 pounds.



C. C. Schrengohot, one cow over 50 pounds.

W. Strafford, one cow over 50 pounds.

Snohomish Valley Cow Testing.

A Snohomish valley cow-testing association in western Washington has begun its second year's work, with V. R. Riley, from Wisconsin, as tester, with over 500 cows, is the report made by County Agriculturist C. C. Farr.

HOT WEATHER

the season when a DE LAVAL SEPARATOR saves most over any other separator or skimming system

IT'S A GREAT MISTAKE for any dairy farmer without a separator or using an inferior machine to put off the purchase of a New De Laval Cream Separator in the summer months, especially with butter-fat at the present unusually high price.

Great as are the advantages of the New De Laval over all other separators, as well as over any gravity setting system, at every season of the year, they are even greater during the mid-summer season than at any other time.

This is because hot weather conditions occasion greater butter-fat losses with gravity setting and render it most difficult to maintain quality of product with any gravity system or unsanitary separator, while, moreover, the quantity of milk is usually greatest, and any loss in either quantity or quality of product means more.

Then there is the great saving in time and labor with the simple, easy running, easily cleaned, large capacity New De Laval machines over all other methods or separators, which naturally counts for more at this time of the year.

Hence the great mistake of putting off the purchase of a New De Laval Cream Separator in summer, whether you already have a poor machine or none at all, and every dairy farmer should keep in mind not only that a De Laval will pay for itself in a few months, but may, if desired, be bought on such liberal terms as to actually save its own cost while being paid for.

Every claim thus made is subject to easy demonstration, and every De Laval local agent is glad of the opportunity to prove these claims to you, in your own dairy, without cost or obligation on your part.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for new catalog or any desired information.

Every New De Laval is equipped with a Bell Speed - Indicator.

DE LAVAL DAIRY SUPPLY CO.

War Horse Situation

By E. L. POTTER.

The war horse situation still retains its air of uncertainty. The U. S. government has announced its intention of buying large numbers of horses for army purposes, but dealers are still up in the air as to the proper move to make. The heaviest demand will probably be for draft horses, or gunners, as they are called. The U. S. specifications allow for three grades which together takes weights from 1100 to 1700 pounds and heights from 15 1-2 to 17 hands. These specifications are rigid. The European buyers would accept horses a little over or a little under the specifications if otherwise a good animal, but U. S. inspectors put the standard on all of them and they must come within the specifications. The horses must also be geldings of hard colors. Dark grays, however, will be accepted.

What the prices will be and how many can be bought no one knows. The available supply has of course been gone over again and again, yet every buyer seems to get a few more and prices do not improve materially. Two months ago there seemed to be considerable demand outside of the war trade, but it has since disappeared except in isolated spots, and it is hard to sell any kind of horse that is not suitable for war. Many people are knocking the horse and advocating tractors in spite of the well known fact that tractors are only in the experimental stage. No one familiar with the capacity of American inventors can doubt the bright future of the tractor, but on the other hand, every one who has given attention to the mechanical phase of tractor construction realizes that there are serious problems to be solved before the tractor is a universal success. In the meantime it seems to be the fad to make the horse the goat and the breeder and dealer pay the penalty.

Veterinary

Dr. S. B. Nelson

Ailing Pigs—I have a pig that is sick. He refuses to eat for several days, then he eats greedily and stands and grits his teeth. I just killed its mate, and it had worms in large quantities, some 10 inches long.—J. W., Vancouver, Wash.

Answer—Starve your pigs over night by not giving them any supper. The next morning give five grains of santonin in the feed. At noon give from one to two ounces of castor oil on the feed. Repeat the treatment in a week if necessary.

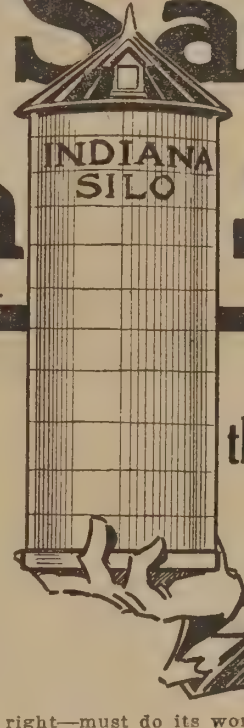
May Be Rupture.—I have a cow that was fresh a week ago and she is discharging blood. It does not look like the ordinary discharge after calving.—S. L., Port Stanley, Wash.

Answer.—It is difficult to say just where the discharge of blood comes from. If it comes from the womb there must be a rupture in the womb, or one of the cocyledons to which the afterbirth attaches is torn. You might try giving one ounce of fluid extract of ergot in one pint of water; repeat in 12 hours. Do not give over two doses to the cow.

For Common Diarrhea.—To the Editor: I have seen many inquiries about a cure for white scours in calves. I will give a remedy that has proved successful every time, or nearly so, for myself and also for my father. As soon as you see the scours begin give one fresh hen-egg every two hours until cured, and in addition give as soon as noticed one tablespoonful of gloss starch, dissolved in one quart of luke warm water. I use for drenching calves an old cow's horn, dry, with the pith taken out. Clean up and disinfect the stable. Reduce calf's ration of milk one-half. JOHN F. HUTESON.
Eastsound, Wash.

Referring to the above Dr. S. B. Nelson says:

The contents of Mr. Huteson's letter is a remedy that has been used for the common diarrhea of calves for a long, long time, and is sometimes proved a very good remedy. However, it has not been satisfactory in the disease known at white scours, which is of bacterial origin, and yields only with difficulty even to the very best disinfectant given internally. For the common form of diarrhea, the treatment recommended, as I said before, has often given good results.



Sores on Udder.—I have a cow that was fresh last September and has always been in perfect health, but about three weeks ago her udder and teats became covered with little watery sores, forming a scab, which falls off leaving the spot well, seemingly, but new spots are coming all the time.—V. B. D., Clayton, Wash.

Answer.—The disease that you referred to follows very closely with the disease cowpox in cattle. The symptoms which you described are quite similar to those of cowpox. I would advise you to wash the udder with a 2 per cent solution of Lysol, prior to milking. Wash the udder again carefully after milking. Then apply to the little pimples or sores, a little zinc-oxide ointment after each milking. Milk this cow last, after you have finished the rest of the cows. It would not be a bad thing for you to disinfect the udders of all of your cows, and it possibly may keep the disease from spreading. It does not cause any great loss, but it is quite troublesome in character.

Blood Clots in Milk—I have a 2-year-old heifer which was fresh March 15. Two months later she began giving bloody milk from the right front teat. There is no fever in her udder, and she eaats hearty and appears to be in good condition.—R. W. H., North Yakima, Wash.

Answer—The matter of blood clots in the milk is due to a number of causes. Where the milk is only tinged with blood, or slightly blooded, the treatment given in the column above, that of administering a teaspoonful of hyposulphite of soda in a quart of water morning and evening for a week or ten days sometimes helps, but where there are real blood clots it is questionable if this treatment is of any value, and in such a case I think that the cause ought to demand the personal services of one of the veterinarians in your locality, because there may be any one of several pathological conditions which cause the bleeding, and I am sure that it would take a close personal observation and study of the case to determine which is the cause of it so that a proper remedial treatment may be prescribed.

Uncle Sam Says: Own a Silo!

YOUR "bit," Mr. Farmer, is to give the Nation the greatest supply of foodstuffs ever produced. You will do this through increased acreage and more efficient farming methods generally. But you must also remember that **food conservation** is equally as **important** as increased production.

Conserve the Nation's Crops

It is here that the silo fits in better than any other farm equipment. It utilizes the full food value of corn, hay and grain crops. It produces low feed costs because of the greater tonnage per acre in the yield of silo crops.

But to do all this your silo must be right—must do its work properly—must be reliable. The

INDIANA SILO

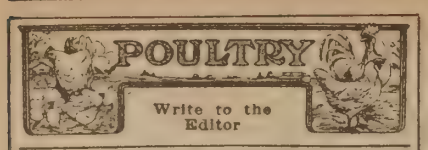
fills all the requirements of a good silo in the best possible way. Built from clear, kiln-dried Oregon fir and bound together with the best steel and malleables, it offers exceptional strength and durability. Fifteen years devoted exclusively to the building of silos has given its designers (the Indiana Silo Co.) a construction plan that guarantees efficiency as well as simplicity and convenience in handling. Its use on 60,000 America farms has proven its reliability. **The Spaulding Guarantee,** backed by millions of resources, assures you **satisfaction.**

Your money invested in an Indiana Silo, **known and used in every state in the Union,** must be more safely invested than it could be in any of the unproven types of silos found everywhere.

Buy Now—Pay Later

An offer which shows the way in which we "do our bit." BUY YOUR SILO NOW. Fill it with a grain or hay crop and use it this Summer or if you have no crop, erect it at your convenience during the Summer—have it ready before the rush of Fall work. Then, in September, pay us and receive your **full cash discount.** Or, if you want terms, start your payments then. No interest will be charged until after that time.

DOESN'T THIS PROPOSITION APPEAL TO YOU MORE THAN WAITING UNTIL LATE BEFORE PURCHASING? THERE HAS BEEN NO RAISE IN OUR PRICES THIS SEASON AS YET.



Our Silo Book and Monthly Silo Bulletin will tell you why Indiana Silos are reliable Silos—GOOD Silos. Why they make their owners 100 per cent on their investment—Why SPAULDING'S SILO SERVICE SATISFIES. Your free copies will be sent you on request. **Won't you investigate our prices and terms?** See just what our offer means to you. THANK YOU.

ADDRESS ALL INQUIRIES TO SALEM OFFICE.

The Feed Problem

An egg, according to the chemist, is so much water, so much ash, so much protein and so much fat. According to the poultryman an egg is so much wheat, so much corn and oats, so much meat or milk, so much grit and shell and green food. After the chemist has studied a little of practical poultry keeping and the poultryman has studied a little science—just a little—the two discover that there is not much difference if any between them, only a difference of words or terms. Wheat and corn are made up of protein, ash, fat, etc., and so is the egg, only in differing proportions. It is the business of the scientific feeder to find out what those proportions are. Knowing the composition of feeds he is able to feed not only the most effective ration or feeds, but also, and what is important at this time, to change or adjust his feeding rations to feed with the greatest economy or profit. Good feeding is not so much a question of wheat as it is of protein and protein is found in other grains as well as wheat. Can this protein be secured without feeding wheat?

The following gives the per cent of protein in the principal grains:

Wheat, 11.9; corn, 10.5; kaffir corn, 9.9; oats, 11.2; peas, 20.2; barley, 12.4.

This shows that wheat, corn, oats and barley, the principal grains fed, have about the same amount of protein.

Protein is the most valuable constituent of feed, and usually feeds are high or low in price in proportion as the protein content is high or low. So that, judging from this standard, we can reduce the feed bill considerably at present prices of grains by feeding oats or barley, or both, as well as corn, instead of wheat. There would be a considerable reduction in the ration by cutting out wheat altogether, and so far as the amount of protein is concerned we should get equally as good results.

But there are other points to consider. There are some other constituents of the foods, some of which add to their value. A certain percentage of the foods is fiber, and the more of it they contain the less value the food has, because fiber lacks in digestibility; it is almost totally indigestible. The fowls get no good from it, or very little. Wheat, corn and barley do not vary very much, barley having slightly the most, but oats have more than four times as much, and peas six or seven times as much fiber. Again, the nitrogen-free extract, another constituent that adds to the food value, is the highest in wheat, corn and barley and lowest in peas and oats. Another constituent which has food value is fat. Corn and oats have the highest percentage of fat and peas and barley the lowest.

As a whole, the differences in composition of the principal grains is not so great as to make it impossible to substitute one for the other and get good results.

There is another question, however, that the scientific feeder will look into and that is digestibility. All feeds are not equally well digested. It has been found, for example, that an animal digests a certain percentage of the protein in certain grains. With fowls the digestion experiments that have been made show that the protein in the corn is more fully digested than the protein of wheat. So that to get an accurate basis for judging of the relative values of the different grains we should know how well they are digested. But we don't know enough yet about the digestibility of feeds when fed to fowls, and that we have to do some guessing or leave the question of digestibility out of consideration.

There is yet another point to consider which is outside of the jurisdiction of the chemist, that is palatability. The poultryman himself is both judge and jury here. The chemist's analysis doesn't explain why a hen will eat more of one grain than another even though they may have the same chemical composition. The feeder alone can tell which foods the hen likes best, which are the most palatable. We must feed palatable foods to get good results in egg yield. The laying hen must be a good eater in order to manufacture the eggs. He knows that oats and barley are not as palatable as wheat and corn and that the hen does not like rye. Good feeding is largely a question of palatability.

If the hen has access to a sufficient variety of foods she will usually balance her own ration, if with it she can have exercise. We need not trouble then much about protein and other things. The success that has followed hopper feeding is evidence of this fact. Some practice feeding all the food in hoppers, others only part of it. At the Oregon station partial hopper feeding is used. The grain foods, both whole grain and mash, are fed at stated times, but a hopper of meat scrap is kept before the fowls all the time and as meat scrap is very rich in protein the hen balances her ration by eating much or little meat scrap as she needs it. It has been found that there is no danger in feeding an unlimited amount if the supply never runs out. If the hoppers are empty for a few days and then filled the hen will eat so much as to put her out of condition and laying will cease.

Where the fowls are running at liberty on the farm hopper feeding all the feed may be safely followed. Where they are confined in houses or yards I think it better to feed the grain, at least the whole grain, in a deep litter of straw at stated times in order to induce exercise.

Chemistry has done wonders for the feeder. It will yet do more and greater wonders. Chemists are working quietly but diligently on problems of nutrition with the idea of discovering the true functions of various elements of feeds. There is much, however, that they can not tell us. For instance, they can not yet tell us why the protein in the grains can not take the place of the protein of meats and milk for poultry, but the poultryman has found by experience a wide difference in the results, and he is compelled to feed high-priced meat scraps to fet the protein which is found in grains at less than half price usually. When we can eliminate the buying of meat for poultry and substitute vegetable protein in some form it will be a great saving to the poultryman. Whether it can be done or not remains to be seen. The evidence at present is altogether in favor of animal protein for poultry.

J. D.

The Early Laying Pullets.

This year's pullets will be starting to lay from now on. The earliest hatches will be starting soon, if not already started. Pullets should not be forced to lay early. The early laying pullet under forced feeding will lay small eggs. The pullet that lays at four months of age will not lay as many eggs in 12 months as she would if not forced and brought to laying maturity at five or six months. This does not mean, however, that the early-laying pullet is not a good layer; she is the best layer, but the best layer can be made to lay at four months or six months just as the feeder chooses. To retard laying, reduce or cut out meat fods, or other foods rich in protein.

J. D.

All-Northwest Laying Contest.

The 20 pens making highest records from October 15, 1916, to May 31, 1917, in the all-northwest egg laying contest follow, the number indicating eggs laid:

J. R. McRae, Milwaukee, Ore., White Leghorns, 530 eggs.
J. A. Hanson, Corvallis, Ore., White Leghorns, 526 eggs.
A. Unsworth, Sardis, B. C., White Leghorns, 491 eggs.
P. W. Harries, Seattle, Wash., White Leghorns, 490 eggs.
Auburn Poultry farm, Auburn, Wash., R. I. Reds, 479 eggs.
Bliss & Bliss, Southworth, Wash., Barred Rocks, 459 eggs.
C. Daniels, Hoquiam, Wash., White Rocks, 453 eggs.
J. D. Balmat, Spokane, Wash., White Leghorns, 451 eggs.
B. O. Longsdorf, Labanon, Ore., White Minorcas, 441.
Oregon Agricultural college, Corvallis, Ore., 436 eggs.
W. J. Loveland, Roy, Wash., White Leghorns, 431 eggs.
Valley farm, Boerne, Texas, White Leghorns, 430 eggs.
L. F. Solly, Westholme, B. C., White Leghorns, 429 eggs.
Martin Brothers, Dolphin, Wash., Golden Wyandottes, 426 eggs.
C. C. Coolidge, La Grande, Ore., White Leghorns, 425 eggs.
G. M. Brown, Los Angeles, Cal., R. I. Reds, 425 eggs.
D. Tancred, Kent, Wash., White Leghorns, 419 eggs.
K. Hammerbacher, Grants Pass, White Leghorns, 419 eggs.
Oregon Agricultural college, Corvallis, Ore., Barred Rocks, 418 eggs.
Carl O. Engel, Seattle, Wash., White Leghorns, 414 eggs.
Charles Hudson, Escandido, Cal., White Leghorns, 414 eggs.
W. C. Thurlow, Fairview, Ore., White Leghorns, 414 eggs.
Mrs. T. M. Dennis, Wenatchee, Wash., Sal. Faverolles, 414 eggs.

The highest individual record to date was made by a Rhode Island hen owned by Abercrombie & Witbeck, Victoria, B. C., 142 eggs; second, Paul B. Towne, Tekoa, 141; third, P. W. Harries, Seattle, Wash., 130; fourth, J. R. McRae, 129 eggs.

Caponize the Surplus Cockerels

A farmer's wife in Nebraska, according to T. E. Quinsenberry, has been clearing about $1000 a year on capons. There may be, or at any rate there should be, many others doing as well. It is really a business that can best be done on the general farm where there is plenty of range for the fowls and food is compartively cheap. The special poultryman on limited ground, who has to buy all his feed, usually hatches his chickens early and sells the cockerels as broilers early in the spring when broiler prices are high. That is the best plan for him. But on the farm there are usually many late hatched chickens, too late for the early broiler market, and with the cost of keeping them comparatively cheap, a good way of handling the surplus cockerels is to caponize them and keep them till winter and sell them as capons at a good price.

The great bulk of cockerels are marketed in the fall. They have then attained marketable size and they are rushed to market before cold weather comes to save housing room and to save feed. As a result there is a yearly slump in the price of chickens, and the farmers make little or nothing on them. Packers and storage men take advantage of the situation and fatten and store great numbers and hold them for higher prices, or until the farmer has no more to sell. It will not pay to keep them longer on the farm, because the price on cockerels does not rise. After he is a mature bird his meat is not good, not as good as the cold storage bird, because the cold stored article was put up when it was called spring chicken and the meat was as good as a broiler. The packer maintains this quality by storage and when the chicken is put on the market it has the spring chicken quality, possibly not as good, but better than the mature male that is then sold as a stag at a price per pound no higher than he could have been sold for in the fall as a "spring." The cockerel does not increase in price as he matures in the winter, but the capon does.

There is as much difference in quality of meat in a capon and an old rooster as between a prime beef animal and the uncastrated animal.

The farmer can beat the packer at furnishing good poultry meat in the winter by caponizing the cockerels. He doesn't need any cold storage house. He needs a cheap shed and some feed, and as they put on weight the capons will also increase in price. The capon will be much larger and will sell at a fancy price in the winter. This is one good way of preserving the food supply.

The operation of caponizing is simple. A few neighboring farmers who have surplus cockerels can join together and get a set of caponizing tools for two or three dollars and have a caponizing day. They can work together in marketing the capons in the winter and get the most out of them.

The caponizing is done when the cockerels are two or three pounds in weight, or before they begin to grow or develop combs. Any breed may be used, but it will hardly pay to caponize the Leghorns or other small breeds.

Under certain conditions the poultry department of the Oregon Agricultural college will give free demonstrations, showing how the operation is performed. Other states will also furnish necessary information about the work.

Let us have more real chicken meat—capons.

J. D.

88 Bu. Oats Per Acre

Mr. A. Taylor writes: "I had 315 acres in oats that averaged 88 bushels an acre, 30 acres in wheat that averaged 50 bushels an acre, 20 acres in barley that averaged 50 bushels an acre." This is only one of thousands of good reports from Western Canada. Yet nowhere can you buy good farm land at such low cost as along the Canadian Northern Ry.

BEST FARM LANDS at $15 to $20 per acre

Here you can buy specially selected, centrally located lands close to the railway, that will produce crops that can only be equaled on farms costing $150 to $200 the acre in a more densely settled community. This includes the best grain land, land also adapted to dairy and mixed farming. Here the man with limited cash can become the owner of one of these fertile farms through the liberal installment payment plan.

Low Fares Low round-trip home-seekers' fares to Western Canada are in effect every Tuesday, to November 27th inclusive.

Free Homesteads

If you have not the capital to buy land you can still get one of the recently surveyed 160 acre fertile Homesteads along the Canadian Northern Railway, the newest transcontinental railroad, "The Road to Opportunity."

Free Book Be sure to write today for a free copy of the "Home-Seekers' and Settlers' Guide," full of complete and authentic information. A fortune is waiting for you.

A Home Fruit Drier

Inquiry is made by H. R. Roberson, Centralia, Wash., about a fruit drier. Mr. Roberson says, "There is promise of a big fruit crop, and as sugar is so high and fruit jars going up the thought came to me, why not dry it? Then, the question of a drier presented itself and I will ask you for plans for a small family drier. I have an old sheetiron box heater that I could use for the heating. Will you kindly furnish plans and an estimate of the material needed for its construction?"

It is difficult to suit a particular kind of drier to a certain style of heater, without first seeing the heater. But from the description given I would say build a galvanized iron drier all around the heater, except immediately in front where the fuel is put in and the ashes taken out. My reason for this is to get as much heat radiated from the heater as possible, and in order to do this, all the radiating surface possible should be utilized. Perhaps I should except also the pipe for the escape of the smoke; but it is possible even to utilize the heat from the pipe.

The drier then, as I think I would build it, is a square galvanized iron box, into which is set a sheet iron heater. The legfis of the stove stand on the bottom of the drier. The bottom of the stove radiates heat, which is reflected back into the drying space. By this means all the fuel used is utilized, and all the heat conserved, except the little lost through the smoke escape, and that at the front end where the wood is put in. On either side of the stove and between that and the walls of the drier, is a space of several inches, say one foot. If your stove is two feet wide, your drier would in that case be four feet wide.

Equipment Needed.

The next thing is a system of several trays, the first one far enough above the stove, so that the fruit will not burn. Then the trays are set one above another until you have as many trays as you desire, or until the top one is as high as it is convenient for one who is standing on the ground to reach. These trays are made of wire, placed in square frames, the size of the inside of the drier. The wire should be strong enough, and closely enough woven to hold the apples, at the same time to admit a circulation of air. There should be an opening at the top, for an escape of air. It could be regulated by a thermostat, similar to that used on egg incubators, but larger, which, when the mercury reaches a certain temperature, would raise a valve, but when a cooler temperature is reached, will allow it to despend until it rests on the top of the drier. This is a useful, simple device, and not expensive.

The main equipments, after the heating and drying apparatus are provided, are a paring table, hand parer and slicer. G. L.

In a Class by Itself.

By T. O. GREENE, Juliaetta, Idaho.

How long will a Delicious apple keep —and still be delicious to the taste?

On June 4—just one month before the Fourth of July—the writer had in his cellar at Juliaetta, Idaho, several perfect specimens of Delicious apples that are in excellent condition still — in shape, firmness and favor. The week before this sketch was written a dozen of these apples were distributed among my friends, each of whom declared they were "perfectly delicious."

When a boy, living in the Ozark country—made famous a few years ago by Harold Bell Wright in his matchless story, "The Shepherd of the Hills" —I saw a peck of large, luscious, juicy peaches that had been awarded first prize at a local fair put up and sold at public auction to the highest bidder—the proceeds going to charitable purposes—specimens of which sold as high as $1.60 each!

I should like to see a box of Delicious apples—like those I now have in my cellar—put up and sold by auction to the highest bidder at some big Fourth of July celebration, the proceeds to be given to the Red Cross work.

After one has eaten a thoroughly matured, sun-kissed Delicious apple, with its spicy, aromatic flavor that leaves in the mouth a lingering longing for more—one can scarcely blame Eve for having been tempted by the apples of the "forbidden tree" that grew in the garden of Eden.

Grimes Golden Pippin is indeed a "pippin"; the Seek-No-Further is good enough; the Yellow Bell Flower, with its clinging juiciness, is enough to make the most pronounced epicure turn green with envy—but the Delicious apple is in a class by itself—it is unique.

Idaho Apple Orchards

By E. F. STEPHENS, Nampa, Idaho.

Apple orchards now coming into full bloom illustrate very forcibly the merits and demerits of different methods of pruning. Some orchardists prune in vase form, opening out the center of tree and removing the lower outside branches. Advocates of this system are likely to remove cross branches and interior twigs, fearing the fruit borne thereby may lack color. Heavy laden branches bend outward. Interior of trees in our sunny climate get plenty of sunlight. Many pruners remove lower limbs because they interfere somewhat with cultivation.

The Stephens Orchard company desires the largest possible returns the first 12 years. It planned for fruit from the sixth season on and expects to double the crop, having planted 16x28 feet—96 trees per acre, instead of 48.

Fruit as a result is expected on the lower limbs and the interior small branches and the fruit spurs will carry on main branches.

On seven-year trees standing 12 to 15 feet in height three-quarters of the apples at picking time will be in reach of the pickers standing on the ground. As an illustration I may mention that in 1915 from one Stayman Winesap tree, planted seven years and six months, 1800 orchard run boxes of apples were picked. The same season from one Winesap tree, five years and six months planted, 10 boxes of orchard run apples were picked.

Apple orchards are in Idaho now coming into full bloom. It is easy now to judge of the merits of different methods of pruning. The Stephens Orchard company plan to secure two and one-half times the fruit grown in many orchards of similar age.

The public is invited to visit and view the Stephens orchards of Nampa, Idaho.

Control of Aphis.

Frank H. Lathrop of South Carolina has been appointed research assistant in entomology at the Oregon Agricultural college experiment station.

Mr. Lathrop will work toward a more effective control of aphis in Oregon orchards. He graduated from the Clemson Agricultural college, South Carolina, and took the master's degree at the Ohio state university, where he served as graduate assistant and research fellow in entomology and zoology, and also at the South Carolina and New York experiment stations.

Lacks Development

A letter from J. Kocar, Hingham, Montana, says: "Will you kindly tell me why my rhubarb plants bloom almost immediately after the leaves come up and the leaves are very short. What should I do for them?"

I could not tell with certainty without seeing the plants. Even then I might fail to find the real cause. However, I have a suspicion that the plant for some reason is starving. The cause of lack of food may be any one of several things.

First—Some insect may be destroying the root feeders. This is not probable, inasmuch as rhubarb is not much subject to attack from insects.

Second—There may be unfavorable soil conditions, such as too much alkali; but this is not probable, because in that case the leaves would be yellow.

Third—The probability is that the plants need manure. Rhubarb is a very heavy feeder; it requires more manure for its best development than almost any other plant, except asparagus.

At this distance, I could only say loosen up the soil about it, put on a heavy coating of manure, and repeat the process every year. If that does not work, I would transplant to another place, for there may be a soil condition unfavorable. It may be what is called "scab," or it may be "adobe" or alkali. G. L.

5½-Ton Mack Truck With 2½-Ton Tory Trailer, Hauling Inland Empire Wheat.

MACK TRUCKS

FOR THE BIG LOADS

TO mistake—it takes a Mack Truck to haul the heavy loads of wheat or other grain and "stand the gaff" day after day and month after month.

Mack Trucks are built to last—to meet every requirement—to give you service. You don't have to be "considerate" of Mack Trucks; they don't expect it; they ask no odds or favors.

Your neighbors are buying Mack Trucks and are finding they do all and more than we claim for them. Coming in all sizes—from one to 7 1-2 tons—you can select just the one to meet your requirements. Tell us what you want a truck for and we will offer you a suggestion as to the best-suited type.

A truck is too important an item of farm equipment to buy without looking a long way ahead. It's the ultimate wear—two, three, five years hence—that counts. That's why you want a Mack.

Use the coupon TODAY and get our latest literature; it's interesting, and to the point.

Pasco Opens Its Union Stock Yards

(Continued from page five.)

within 100 miles being represented. There were also some present from Montana.

E. F. Benson of Olympia acted as toastmaster. He gave a short history of the enterprise and their hopes for the future, emphasizing the necessity of raising more live stock. Though some were advocating passing a law prohibiting the killing of female stock under certain age, he considered such a law too radical, as there were many cows, not fit for breeders, which, if kept, would be kept at a loss and be a detriment to the breed. All such should be slaughtered, but all good females should be kept.

F. M. Lowden Jr. of Walla Walla extended congratulations of Walla Walla to Pasco.

Samuel Glasgow of Spokane commended the activity of Manager Hale and Secretary Cox in pushing the stockyards enterprise to a finish.

Spokane Yards Lend a Hand.

John H. Roberts of the Union stockyards of Spokane said he had come down to learn, and to extend a glad hand. He recommended working up community shipments, having two or three growers make up a carload and all thereby secure the advantages of carload rates and service.

$2.50 per acre, on 10 years' time. It was cheaper than homesteading. You could now transport freight on an average one ton a mile for 1 cent, for less than you could write a letter of inquiry about it.

The railroads were a bureau of information. He said he had received a letter of inquiry as to where a man could purchase a load of timothy hay, and 50 other transportation agents had received the same letter. It was their business to serve and they would do it to the best of their ability. He concluded with the admonition: "Keep your eye on Pasco."

Mrs. J. B. Crain of Pasco congratulated the men of Pasco on their new enterprise. Her earlier life she had spent in Omaha, Neb., and she described the first stockyards there, their struggles at first, how the packers one after another came in and the wonderful change it brought about. She considered the stockyards one of the big milestones in Pasco's success.

Commission Man's Side.

G. G. Barton of Barton Brothers, Seattle, spoke on the commission broker, he considered him a necessity. He spoke of their trouble having to consider the seller, the buyer and themselves.

He believed to get the most out of live stock with the shortest delay and least expense, the commission man

Some of the sheep offered at Pasco opening day.

Thomas Carstens of Tacoma said he took a great deal of interest in the stockyards because he thought it would increase the live stock business in the northwest. He said if he could he would like to buy all his live stock from the four northwest states, but lately he was compelled to go to California for some. He had shipped in 15 cars and had 19 cars on the way. Out of a shipment of 250 head, 50 had been condemned on account of tuberculosis, while on cattle bought in the northwest, the percentage of affected cattle had not exceeded one-half of 1 per cent.

He considered this the most profitable time to get into the stock business. He said that when the war is over the price of grain will drop and demand for stock will be greater than ever.

The Railroad Viewpoint.

S. B. Calderhead, Northern Pacific district agent, of Walla Walla, said even the railroad man had his troubles. He believed the railroad people had done more to build up the country than any other class, and that they were more abused and less understood. He spoke of a time when all live stock was slaughtered in the east, 60,000 head being loaded at one small town in Kansas, all bound for Chicago, the market was glutted and everybody lost money. He spoke of the first transcontinental line, built to the Coast. At the time it was believed to be the only line that would ever be built, that the country would never support more than one such line; now there were nine transcontinental lines. The railroads built the lines, then built up the country to support the lines. The railroads sold land at

should be a good judge of stock, keep well posted on all outside markets, know the kind of stock that went to the particular buyer, know his capacity for handling, and his supply on hand. If he were an honest, wide-awake man, he could place stock to make the seller more money than it would be possible for a stranger to get, or a man who was on the market only once in two or three months.

W. H. Kirkman of Walla Walla said that bees always go where the honey is; that Pasco has the alfalfa, the stock and the place of exchange, and need not worry about the buyers, for they would come.

E. M. Dy of Kennewick considered the stockyards a great benefit to Kennewick. He believed stimulating the live stock industry in that section would make alfalfa on an average worth $3 per ton more than without it. He said his firm alone had sold 10 tons of alfalfa seed this spring, which, when it is considered that it only takes from 10 to 15 pounds to plant an acre, indicates an immense acreage.

F. J. Pingry of Burbank, Wash., said the Burbank people would have at least 3000 tons of alfalfa hay this year. He said he considered the stockyards a great thing for their community.

Mrs. V. B. Cox of Pasco said Mr. Benson was too modest to take any of the credit for their success. She described Pasco as a great big octopus, reaching out in every direction and grabbing every good man they could get and putting him to work. She spoke of Mr. Benson and a number of others who had been drafted and they had all made good.

Every Sack of Wheat a Soldier of Defense.

DON'T LET FIRE Rob You of Your Grain

A HUNGRY world is looking this way for food. Here in the northwest we produce one-twelfth of the wheat of the United States.

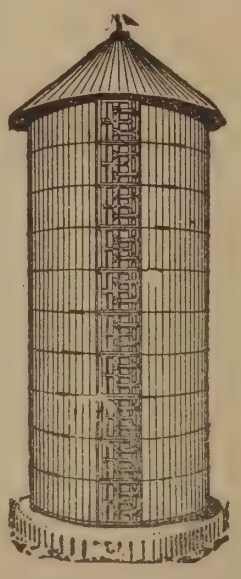
In our great national crisis it is a hundred times more essential than ever before that every pound of grain be delivered for food.

Fire is one of the greatest enemies of the wheat grower. Hundreds of thousands of bushels of wheat have gone up in smoke in the Inland Empire. For the sake of starving people it must not be so this year.

Protect Your Wheat

It is a patriotic duty to America—it is in the interest of world-wide humanity.

You need insurance against fire—of course. That is your personal protection. But insurance will not feed the hundreds of thousands that are awaiting bread from your wheat fields. Your insurance will not save the lives of those dependent upon America for food.



Take every precaution to battle fire in your own fields and warehouses. Let us help you. Write us today for our latest literature on the prevention of Grain Fires. This may save your wheat, your property. It points the way to **safety.**

The Northwestern Mutual is taking the lead in fighting the fire loss. It means saving foodstuffs, protecting property, conserving our national resources—and for YOU the movement means LOWER INSURANCE. Write us a postal saying you want to know more about Northwestern Service.

West Side Dairymen Band Together

Strong Organizations Forming to Command Better Prices

(Continued from page five.)

the Skagit association, and read and explained the contract in force with its members. One of the first tangible results of the organizing of the milk producers, according to Mr. Hall, was a reduction in hauling prices. These had been 8, 10 and 12 cents, according to the distance from the condensery. They were speedily reduced to 5, 8 and 10 cents. The condensery people offered, moreover, to let the association choose its own testers and weighers, while continuing to pay them their salaries as before. The biggest victory of all, however, according to Secretary Hall, was the securing of a price of $2.50 a hundred to be paid at Mount Vernon by at least one of the condenseries, beginning Monday, June 25. This Mr. Hall believed to be the direct result of associated effort.

The main features of the Skagit contract, as described by the secretary, are the clauses binding all members to market through the association during the period of their membership, or pay a forfeit of $10 for each cow signed up with the organization. If a dairyman owns two farms, he can run one under the wing of the association and maintain the other as an independent plant, if he so desires. Contracts can be canceled on the 1st of February, any year, by giving 30 days' notice. Unless so canceled, the contract is continuous and runs on from year to year.

According to the best legal opinion obtainable, this Skagit contract is without a flaw. During the recent session of the state grange at Wenatchee it was given the official endorsement of that body.

Mr. Hall concluded by stating that the establishment of the new federal condensery at Mount Vernon, securing to dairymen in that territory the benefits of competitive buying of milk, was largely due to the organization of the big association.

By a rising vote, taken just before adjournment and after the departure of the Skagit county men, the Whatcom county organization went on record as favoring reorganization along lines similar to those adopted in the county to the south, so that the linking up of the two associations, which is foreseen as a necessary step in securing a state-wide producing and selling body, will be as simple as possible.

Look at Prices Now and Before.

John Leander of Skagit county is a member of the association and one of its enthusiastic supporters.

"Look at the price we're getting for milk now and compare it with what we got before our association was organized," says Mr. Leander. "That tells me all I want to know. No, there hasn't been any money in dairy farming until recently. We have an 83-ton silo, which we filled last year from six acres of vetch and oats. The cold spring this year has held the pasture back, and lately we've had to cut green feed to help out with."

Mr. Leander was in the live stock business in Kansas until he came to Washington. He believes there is more money in his former line than in the kind of farming he is now doing, or at any rate that farming here on the Coast must be conducted on entirely different principles than in the central west.

Always Sold Milk Through Same Plant

Thomas A. Lockhart of Mount Vernon is proud of his record as one of the old patrons of the "big condensery." The number which he was first given has never been changed, for he has always sold milk through the same plant. Mr. Lockhart is frankly waiting for more light on the matter of the dairymen's association.

"I don't know just how it will work out," he confesses. "It ought to be a good thing—a lot of men ought to be able to work together better than one man can work by himself. Yes, I think the new condensery is a good thing for all of us. The people back of these concerns are only human, and they need plenty of competition in order to make them consider the other fellow."

Mr. Lockhart's principal point of doubt as to the working of the association is suggested by the fact that there is a limit beyond which prices for raw milk can not be forced.

"It's a different matter from supplying the needs of a big city, for instance," he points out. "The city must be supplied from a territory within a certain distance of its borders, while the market for canned milk can be supplied by milk produced anywhere—once it is put up in cans, it can be shipped around the earth. There hasn't been much profit in dairy farming for a long time past, but the increase will have to come from more than one direction. Silage will help—I have a 45-foot silo on my farm, and have tried out vetch, oats and clover, in addition to corn."

Does Not See Wholesale Remedy.

John Kamb of Skagit county belongs to both the Skagit County Dairymen's association and the local testing association. In spite of this fact, however, he is not convinced that to the associations belongs all the credit of somewhat improved marketing conditions.

"Prices are higher, all the way around," Mr. Kamb points out. "The test of the value of the association is still to come. One thing is certain—there has been no money in dairy farming for a long time past. If a man hires his milking done, as I do, he can't much more than come out even at the end of the year. Home-raised feed? Sure, we raise everything we feed right here on the place. But how does that help? If I sold the feed I'd get the market price for it, wouldn't I? And if I can make as much and perhaps more by selling my hay and grain, what is the use of my keeping cows? No, I've got no quarrel with the condensers; they've done something for this country—but at the same time, the farmers of this country have done a lot for the condensers. It's a big problem, and I don't believe any remedy will be found that will correct all of our troubles all at once."

Association Is Vital Factor.

E. Maupin of Whatcom county believes the dairymen's association is a vital factor in profitable dairy farming. Marketing rather than production, in Mr. Maupin's opinion, is the keynote to better farming conditions. He illustrates this by citing his experience in selling potatoes this season.

"I sold lots of them at $50 a ton," he comments, "but I can't tell you why they should have brought any such price. Yes, a minimum price guaranteed by the government would certainly help the farmer, and probably the consumer; there would be a good profit in potatoes at $25 a ton or even less, and if the producer could be sure he would receive at least this much, there would probably be plenty of potatoes raised every year."

Mr. Maupin is one of the well-informed men in his community. He spends upward of $25 a year for periodical reading matter and keeps track not only of straight farming articles, but of such things as the speeches and activities of our new food "dictator," Hoover.

Washington State Fair

According to the premium list of the Washington state fair which will be held at North Yakima September 17-22 inclusive, arrangements have been perfected with the railroad companies of the country whereby all live stock (except race horses) and articles for exhibition which have paid full tariff rates to the fair will be returned to the point of origin free. This arrangement is national in its scope and holds good on any railroad line

Where full tariff rates have been paid one way on articles of a perishable nature, such as green fruit, vegetables, etc., the amount so paid will be refunded upon presentation of and surrender to the railroad agent of the original expense bill and a certificate from the secretary that such goods have become useless and unsalable.

Passenger rates to the Washington state fair will be one and one-third fare for the round trip and by special agreement this year, both the Oregon-Washington Railroad & Navigation company and the Northern Pacific Railway company, the two lines entering North Yakima, will open the sale of these special tickets Saturday preceding the fair, instead of Sunday, as formerly.

Entries may be made with the secretary either by mail or in person any time after July 1. They should be made on regular entry blanks furnished free on application to the Washington state fair, and sent in as early as possible so that space may be allotted and tags made ready for exhibitor.

3. Entries close as follows:

Monday, September 3, for live stock department.

Thursday, September 13, for poultry department.

Saturday, September 15, for all other departments.

Information regarding the state fair will be gladly furnished by Frank Meredith, secretary and manager, North Yakima, Wash.

Read Your History As It Happens

Do you realize that the days we are living through now are among the most momentous in the history of the world? Our country is making preparations for war on such a gigantic scale that the effects are felt in every home throughout the land. Our sons and brothers will soon be marching in the military encampments. In a few months they may be fighting a ruthless foe in foreign trenches, while our sisters and daughters are nursing wounded soldiers of France, Belgium, England and America. It is your duty, it is your opportunity to keep yourself and your family thoroughly in touch with these world-quaking, home-shaking events. Do not stop your ears to the call of the bugle. Do not shut your eyes to the glare of the campfire. The whole panorama of our modern history as it unfolds is faithfully reported by

The Twice-a-Week Spokesman-Review

This is a splendid semi-weekly home newspaper which brings you every Tuesday and Friday a complete, accurate, condensed review of local, national and world events.. It gives you a reliable narrative of history in the making. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from every far-flung battle line where the history of our day is being set down in ink and blood.

A Timely Offer

We are very glad to be in a position to offer THE TWICE-A-WEEK SPOKESMAN-REVIEW at a worth-while saving when taken in combination with THE WASHINGTON FARMER. It is a paper especially appropriate for our subscribers because it is a paper primarily designed for busy readers. It is a paper particularly welcome just at this time.

WORTH WHILE SAVING

Northwest Stock Show

Promises to Be Biggest Ever at Lewiston

The following is an official notice in part, sent out by Secretary Paul Clagstone of the Northwest Live Stock Show:

Stockmen of the Northwset: Our annual show has now obtained the backing of the state of Idaho, not only financially, but from an official standpoint.

On April 15 Governor Alexander said, in part: "The live stock interests of the northwest will probably be represented at Lewiston as never before in the intermountain country * * * I also suggest that you take up the matter of special train service between Lewiston and Boise, so that the people of this section will be enabled to go north and see the finest exhibit of live stock that could be assembled at any one point."

This support, and other factors, will undoubtedly make the coming show the greatest ever held in the northwest.

There are many promising things for the exhibitor in the revised premium list of the association. More money is offered than ever before, the carload lots have been restored and strengthened as compared with former years. In horses, cattle, sheep and swine there have been revisions, additions and new and attractive classifications that will make the show a much better one for every exhibitor, will distribute the money more widely and more evenly and will make it easier to handle the judging of the various classes. To illustrate the various changes a number of the more important will be cited in connection with each kind of live stock.

Horses.

For several years the horsemen have desired a stronger classification for draft horses. There has been no lot for 4-year-old stallions, and the 3-year-old horses, both stallions and mares, have had to show against the older and more mature horses at a decided disadvantage. The new classification provides for both 3 and 4 year old and older classes for both stallions and mares.

In the 1916 premium list there were awards for junior champion and senior champion stallions and mares. This year the additional awards of grand champion will be made. Instead of the award for what was called the best showing, the new premium list will carry awards for get of sire and for produce of dam. The northwestern states are breeding good horses and will breed more in future years. The prizes for get of sire and for produce of dam, therefore, look to efficiency in breeding and encourage a feature that is most important of all.

All of the above changes will apply to the Percherons, Shires, Clydesdales and Belgians. In the grade horses a new prize award is for mare with colt under 1 year, the colt to count 75 per cent and the mare 25 per cent. This prize is aimed to encourage the breeding of grade horses of the finest possible type.

Beef Cattle.

The beef cattle classification was standardized two years ago, or in other words made the same as is carried in the premium list of the Western National at Denver, the International at Chicago and other old and well established live stock exhibitions. There will be two announcements in the new premium list that will please beef cattle men. The first one is that for the first time a full classification is offered for the Aberdeen Angus breed, one of the really great beef breeds of cattle. This announcement will, it is thought, insure a splendid showing of black cattle at Lewiston next November. The Hereford Breeders' association is not only adding heavily to the premium money, as usual, but is preparing to officially conduct a sale during the show. The same is true of the Shorthorn association. As always, the Northwest Live Stock association will hold a series of great auction sales during the latter days of the show.

Dairy Cattle.

The dairy classification has been quite strong and remains the same for the coming year.

Swine.

Exhibitors of swine have always had to contend with a limited classification which compelled them to show aged and yearling boars and aged and yearling sows in the same lots. It was unsatisfactory for the exhibitor and hard for the judge to render a decision satisfactory to himself and the exhibitor. This situation has been met by adding four additional lots to each breed classification. The new lots will be for aged boar or boar two years and older, senior yearling boar, aged sow and senior yearling sow. In each case four awards, or first, second, third and fourth, will be made.

Sheep.

The provision for the sheepmen includes a classification the same as offered at the International at Chicago. The prizes are, of course, not so many nor quite so large, but even in amount the comparison is more favorable than one might think.

The classification has been standardized and the entire list of prizes strengthened by the following changes: A prize for year-old ewe is no longer offered, since the most progressive shows have eliminated this division, holding that the place for the 2-year-old ewe is at home as an active member of the breeding flock. The old prize list made no provision for flocks. The new list will take care of flock, offering the same classification in this respect as is offered at the International. There will be two groups prizes, one for flock to consist of one ram 1 year old or over, two yearling ewes and two ewe lambs. The other group is for four lambs of either sex bred by the exhibitor.

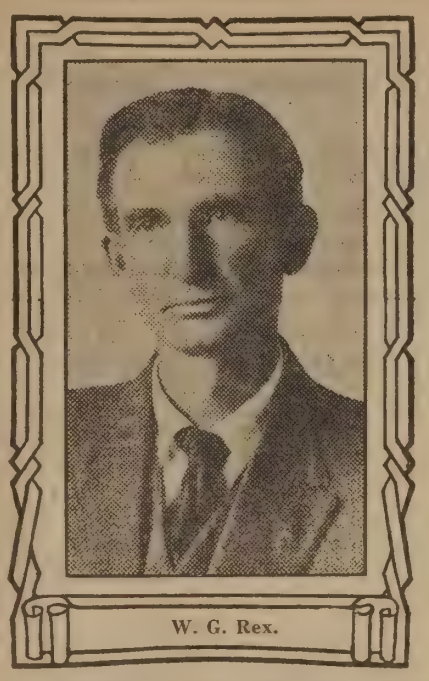
These changes will be made for each breed and the following six breeds will be recognized: Shropshire, Hamspsire, Oxford, Lincoln, Cotswold and Rambouillet.

Utility Classes.

Farmers and feeders can make big money this year by exhibiting carlots of cattle, sheep or hogs, as the premiums run into many hundreds in these classes, and winners sell at auction for fancy prices.

Yours for the best show ever held in the west,

PAUL CLAGSTONE, Secretary.



To Irrigate 2600 Acres.

The Cline irrigation district election, which was held June 23, carried by a large majority. This district, which is being formed and organized under the provisions of the state laws regarding agricultural improvement districts, and proposes to irrigate about 2600 acres on what is known as the Old Town prairie at Dungeness, Wash. Most of this land is already under cultivation, but its producing power will be almost doubled by irrigation.

John Knoph, W. H. Cline and E. Peterson were elected directors.

County Agricultural Agent McWhorter has been actively assisting the farmers with the organization of the district.

Washington Portraits No. 22.

W. G. Rex.

On the 7th of July, 1886, there arrived in Sheltonville (now Shelton, Wash.) a dusty and road-worn young man with 10 cents in the pocket of his frayed trousers, a straw hat on his head, and a few carpenter's tools in his suitcase. His name was Rex, and after his triumphant entry into Shelton the newcomer worked at various occupations, from carpentry to logging, until he had accumulated a modest bank account. Now, after 10 years of pioneer farming and the building up of a modern home in the country, Mr. Rex admits the bank account is somewhat reduced; but he declares that the pioneer spirit which led him to leave the sandhills of his native New York and cross the continent has not lost its edge.

Speaking of his successes, Mr. Rex continues:

"I have been fairly successful in the chicken business and in raising potatoes, wheat, rye, oats, barley and vetch, and I think I have had a little more than ordinary success in raising corn. I am enthusiastic about the possibilities of corn in the Puget Sound country. My advice to both young and old is, if you have suitable land, raise corn. One little point which I have not seen published is about the seed corn patch. I raise Minnesota No. 13 and plant my seed patch separate from the main field, the hills two feet apart, thinning to two stalks to the hill, the rows three feet six inches apart. Before planting I broadcast and harrow in about 200 pounds per acre of superphosphate, testing not less than 15 per cent available phosphoric acid; also about 150 pounds dropped beside the hills at the first hoeing. As soon as the pollen begins to form on the tassels and the silks begin to appear, I go through the patch and remove all barren stalks and all weak ones. You can not afford to breed from scrub stock in cattle, so why do it with corn? I have raised good mature seed corn for the last three years, and have improved on the iriginal seed obtained from the Pullman Agricultural college."

The next in the series of Washington portraits will be that of F. Z. Flowers of Fairfield, and will be given in next week's issue of The Washington Farmer.

As to Harvest Labor.

To the Editor of thee Washington Farmer: I have read three of your papers and they all say a scarcity of labor, when it is not so. There are all kinds of men in all the towns, and the wheat section of the state can get them if they will treat them right and pay them the same wages that they get at other work for the same amount of work. But we want a decent place to sleep, not on the bare ground or out in the back yord with the dog or in the lot with the hogs. Now everything we use is 60 per cent higher and wages are only 10 to 25 per cent higher. The wheat farmer pays $35 to $45 per month for driving six or eight horses and the lumberman pays $75 to $125 per month for driving six or eight horses. If the wheat farmer would buy some modern machinery and use it he could make money. But let anybody with eyes go there and inspect the work on the average farm and you will find the ground half plowed, and the grain about half threshed, for I have seen whole heads hardly touched and about one third of the threshed grain in the chaff where a combine was used. You won't find floors in half of the barns, and only wheat chaff to feed the work stock on. I am a threshing machine expert myself and know what I am talking about. I am willing to go anywhere I can get fair wages and treatment, but under the same conditions that I have worked before it is the woods for me. It is a Godsend to all the laboring class that the state went dry. That is all the secret there is to the help problem. We save our money and are independent instead of slaves.

Anacortes, Wash.

R. D. FITZGERALD.

Steers Bring $100.15.

Two 3-year-old steers were sold by G. L. Moore, living two miles east of Bend, Ore., to O'Donnell Bros., for $100.15 each. The animals tipped the beam at practically the same weight, each shading 1450 pounds. They are of a mixed Shorthorn strain.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XVII.

When the Indians Visited the Pioneers' Homes.

The farm my father selected in pioneer eastern Washington was close by the old Indian trails, which in early history were traveled by bands of redskins en route from the Columbia country north to the land of the Yakima tribes, 100 miles southwest.

The trails paralleled each other at intervals of a yard or so, and were more than a dozen in number. Where one curved they all curved. Uphill and down they went, direction being the only apparent consideration. The white man who lays out a road may go around a hill, instead of over it, finding it easier. But the Indian, as a rule, cares nothing about this, and many a white settler, pulling into the country for the first time has halted his tired team and called the Indians fools for running their blamed trails up the side of a near precipice, instead of going a mile or so around and keeping to the level.

You who have seen wild west shows, or have "followed the hounds" over high fences and other places requiring surefooted horses and a daring rider, may think you have mastered the scientific points of riding. Maybe you have. But the Indians of the bunchgrass plains can go you one better, and until you have seen such an Indian on a horse you are short in your conception of what it is to ride easily, gracefully, as if you were "grown to the saddle." "Grown to the saddle," or "riding like a centaur," are figures of speech so far as the white men are concerned—any white man, Buffalo Bill, Wild Goose Bill, all the other Bills, and any cowboy that ever lived. The white man simply can't do it. He hasn't it in his human frame to ride like an Indian, turn his hair to Indian hair, make his cheek bones high or his complexion coppery brown. These are Indian traits.

The Indians who rode by our home in the earlty days were old, middle-aged, youthful and on down to nursing babies, strapped to boards which swung by a buckskin loop to the cross pieces of a packsaddle. Occasionally they would come by arguing about something. The whole band would be talking, each at the top of his or her voice, and gesticulating. Most people have the idea that the Indian stalks around silently and full of meditation all the time. That is not exactly a correct notion. I have been in their camps when they were making more noise than a lot of crazy rooters at a ball game. They laugh, talk, sing songs of an unmusical, cackling kind, and play tricks on one another. At other times they are silent and uncommunicative, and never so much so as when a white man is trying to "pump" them for information about their family affairs, religion, traditions and so on.

Often they stopped singly or in bands of 20 to 40 at our place. When they did they almost invariably asked for one or more of three things—food, water or information concerning the road they were traveling. It was interesting to have them ask about the road, when the only road that led any place where they wanted to go was their own trails, which they and their ancestors had traveled long before Columbus crossed the Atlantic. When a white man runs out of something to talk about he resorts to the weather. An Indian resorts to the road.

Very often the squaws had moccasins, hair ropes and watermelons to sell. Young rattlesnakes with one rattle and a "button" were fairly numerous in the bunchgrass, and my mother feared to have me go barefooted, so she bought moccasins of the Indian women. These baby rattlers, by the way, were feared by the pioneers even more than the big ones. One rattle on the end of a snake's tail means it is a year old and a well developed "button" means it is beginning its second year. A rattle and a button do not make much noise, hence one might tread barefooted on the young rattler in spite of its warning. Again, their length was so short that they could easily conceal themselves in a bunch of grass, so I expect mother's fear that my bare feet might some day tread too close to a baby rattler was well founded. I doubt, however, if the moccasins would have been much protection, for they were quite thin.

A thing of beauty is a joy forever;
Its loveliness increases; it will never
Pass into nothingness.

—Keats.

We came to know one of the squaws quite well, and every spring when the weather began to warm up and Indians came riding by we would watch for her and her moccasins. She was huge and strong, weighing not less than 200, I think. She would come by, sell us some moccasins, ask for a drink, inquire about the road and then linger around wistfully. Mother knew she was hungry and would ask her to eat. The squaw ate whatever we had left over from the last meal—cold, fried bacon or ham or eggs or beef; cold boiled potatoes with their "jackets" on, in which case they were eaten jackets and all; left over pies, biscuits and canned or dried fruit. Once mother set before the squaw a big cocoanut cake that had been a failure; that is, it had "fell." It fell again, rapidly and to the last crumb when the big squaw got to it. I remember yet how her eyes shone when she waded into the cake.

Another time, we warmed up a pot half full of coffee, and the squaw drank it all, cup after cup, leaving only a little which she poured into a flask of the flat, circular bodied kind which were then used as containers of "Injun" whiskey. Could she have a little milk and sugar? Mother gave her some. What in the world was she going to do with a mixture of that kind? Replying by actions, instead of words, the squaw mixed the milk with the coffee and sugar, shook the flask, corked it, and slipped it inside her waist next to her ample bosom. This done, she informed us by signs, words, gutteral grunts and contortions of her big face that fast to the packsaddle and on a cream colored old pony which was sleepily eating bunchgrass down by the trails, was a papoose. Papoose heap hungry by and by! She would keep the milk, coffee and sugar in the ex-whisky bottle till it was warmed by contact with her breast, then feed the heap hungry papoose.

"How many papooses have you?" mother wanted to know.

The big squaw began counting on her fingers. At the seventh she stopped with look of puzzlement. Her numbers went no further.

An idea dawned. She held her huge, coppery palm within 12 or 18 inches of the floor and pointed to the old cream cayuse down by the trails. That was Papoose Number 1—counting them backward, of course. She held her hand six inches higher—Papoose Number 2! And so on, till with a proud smile she held her hand level with her own head, then six inches above, and a foot above it. Now you understand. Her papooses began with the one out by the trails and were about six inches apart to a height of one foot above her own head—a dozen or so, perhaps. She was a very proud mother!

Mother wanted to know about her husband; we had seen her year after year, always with no male escort. The squaw was puzzled. "Halo cumtux (no understand)," said she. Mother didn't know the Indian word for "husband." She tried "Boston man." The squaw shook her head very decidedly. Boston man meant nothing but "white man" to her. Mother had made a mistake. But finally the meaning of mother's questioning dawned upon her. She laughed till her huge sides shook.

"Cultus Injun," she explained cheerfully. "Heap no good—much firewater—see?" She showed the flat bodied flask which she was warming against her breast.

Now you have it. Her husband, or whatever such a man is called in the Siwash language, was a drunkard; and the nursing bottle for her latest offspring was one of his old "empties."

One day a handsome young Indian "buck" came by accompanied by a young squaw. The squaw, not out of her teens, I think, wore a brightly colored calica dress, which I suspect had been bartered for, ready-made, at a trading store. Her hair, of which she had a great quality, hung in two big braids down her back. On her head was a red silk handkerchief, and her ears were adorned with big copper rings. Her moccasins, richly beaded, followed the contour of an unusually small and shapely Indian foot inside.

The "Buck"—the pioneer's name for young Indian men—was mandsomely dressed according to the Indian standard. Beads done in artful designs were on his moccasins and buckskin trousers. His hat of the sombrero type was stiff, new and banded with a rattlesnake skin. He had a large, red silk handkerchief about his neck which was the counterpart of the handkerchief worn by the young woman.

They were in high spirits. Mother thought they were on a honeymoon; and since all the world loves lovers, she felt more cordially inclined than usual, and asked them into eat at our table.

They ate heartily and indiscriminately, chattering, giggling, and snickering at one another which corroborated our "newlywed" theory, but as it came to pass, we were somewhat mistaken.

Several days later one lone Indian came by, stopped, asked for food, water, inquired about the road—and wanted to know if other Indians had passed by! Mother told him of the young couple, and he was noticaeably interested.

This Indian was beaded, painted, and otherwise decorated; but he was old; and the general effect of his attempts at personal adornment was that of sticking an old rose with the petals falling into fresh water. One of our bachelor neighbors used to say, "Old age raises hell with good looks." Old age certainly had raised that very thing so far as the looks of this particular Indian were concerned. He was about the homeliest, most wrinkled up old Siwash I have ever seen, and to make matters worse he had a thin, stingy beard. He was the only Indian I had ever seen with whiskers. He wore a peaked black felt hat adorned in the peak with a long, curling feather which I am sure had at one time decorated the tail of a Plymouth Rock rooster. He wore the hat while he ate; and while he ate, the big, curling feather moved languidly back and forth, keeping motion with his slowly moving jaws.

He was hungry. The threshermen had just left us to move several miles across the prairie to the next "setting," so mother had an unusually large variety and quantity of leftovers, all of which she set before the aged Indian with the remark: "I'm just going to see if I can fill that old thing up."

The aged Indian ate slowly, appreciatively, stopping once to assure mother that she was a "heap skookum squaw" for feeding him so well. He ate a lot of cold cornmeal mush, a lot of leftover potatoes, half of a dried prune pie rather the worse for age and some baking powder biscuit. With the biscuits and potatoes he consumed a large quantity of butter so rancid that mother did not care to cook with it, but which the aged buck insisted was "skookum."

The worst was a pitcher half full of syrup which I set out for him, not noticing many flies had gotten into the pitcher, whose lid had been left ajar. Mother would have taken it away, but the Indian objected with many reproachful grunts, assuring mother that the syrup, as well as the butter, was "heap skookum."

He did not eat the flies. I watched him. He carefully pushed each one out of the syrup, being careful to waste no syrup as he did this; and when he was through with the syrup, flies lined one side of his plate at intervals of half an inch to an inch.

The Indian finally consumed the small end of a cold boiled ham, cleaning it to the very bone by gnawing it while he held the hambone in his hands. Finally, when the hambone was fairly polished with his gnawing, and two hours and a half of mastication and occasional rests had elapsed.

Low Heels Cause Flat Feet

By DR. LEONARD KEENE HIRSHBERG,
A. B., M. A., M. D. (Johns Hopkins University).

The ban against high heels must be lifted. Recent discoveries and observations bear witness to the goodness, usefulness and good character of the much-maligned high heel, for it has been proved that flat feet or fallen arches are the result of a change in the center of gravity of the sufferer. That is to say, instead of the plumb-line of balance falling somewhere between the toes and the ball of the foot, as it should do, the center of equilibrium is shifted to the heels.

Dr. Hirshberg.

Why, then, do some persons, such as nurses, policemen, lettercarriers, soldiers and housekeepers become flat-footed in such numbers? The answer is to be found in the carriage, posture, indifference and relaxed attention to proper pose. This allows the weight of the body to fall upon the heels instead of the forward part of the foot near the toes.

Wherever the force of gravity pulls downward through the heels it tends to eliminate at least two of the natural arches of the foot. The sole of the foot becomes increasingly flat instead of like the architectural keystone or engineer's span.

Carelessness of Posture.

You can picture to yourself what the consequences might be if the spans of a cantilever bridge lost its arches. When the bow is relaxed after the arrow has sped on its way you have much the same spent power.

Flat feet or fallen arches evidently are caused by carelessness in carrying your own body weight as well as wearing low-heeled shoes. Obviously, they exert an influence to force the weight and center of gravity backward instead of forward toward the toes, where it belongs.

The lesson learned from these researches have already born fruit in many instances. By so simple a procedure as "walking on tip-toes" in going about your work and your walks, laughable as it may appear, you have a very ready means whereby this sometimes painful affection may be eliminated.

High Heels Aid.

High-heeled shoes play a most valuable role in this drama—tragedy to some—of flat-footedness. Since you can not literally, either in tip-toeing or toe-dancing, actually stand on your toes, it is really the groove or jointline just behind your toes which should receive the weight of your anatomy. Force exerted downward at this point will gradually, if maintained for several months, form new arches and spans across the "last breadth" and "size length" of the feet.

High-heeled shoes do this very thing; whereas flat, low-heeled shoes tend to the contrary, namely, to produce fallen arches.

When the muscles of the front of the legs are inclined to be relaxed, as they are when the heel is low and weight is pressed netherward through the heel, the tendons which aid in support of the arches gradually lose their grip. On the other hand, when the force and weight go through or near the toes, these tendons are made taut and strengthened. This improves the arches.

The old-time school teachers, who, to preserve silence, commanded their charges "to walk on tip-toes" or "to toe the mark," unwittingly prevented many fallen arches.

Any sensation of suffocation has to do with the lungs and breathing, not with the stomach. The burning sensation may come from excess of the natural acids that are present in healthy individuals, or to immobility of the stomach, high blood pressure and other things. It is not a characteristic symptom of any one particular disease.

All the World's a Stage, and All the Men and Women Merely Players

Like Headpiece of Old-Time Fighters

Copyrighted by International.

Showing the new French trench helmet. With the added advantage of the visor down the soldier is protected from shrapnel and grenade fragments which it is hoped will cut down the casualties to a small percentage. Since the adoption of the steel helmet, few soldiers are disabled from head wounds.

Composer Dictating to His Arranger

Copyrighted by International.

Showing the unconventional manner in which Earl Carroll (at piano), America's leading composer, works on the whistleable melodies for which the young Pittsburger is noted. He is shown with his arranger, Al Matthews, at work on his very latest musical comedy which will be shown on Broadway next season. Carroll is one of the few who can write the book, the lyrics and the music of a comedy.

Spanish Lose Constitutional Guarantees

Copyrighted by International.

The Spanish government has decided to suspend the constitutional guarantees. Premier Dato took to the palace the decree authorizing the suspension to obtain the king's signature. Dispatches from Madrid give no special reason for this action. The picture shows Dato and King Alfonso.

Women to Mobilize

Twenty Million to Do Service

This week and next, throughout the entire country, the national council of defense is conducting a campaign for the enlistment of an army of 20,000,000 women. The army is known as the United States food administration, and the enemy which it is being mobilized to attack is food waste. Every housewife in America is urged to enlist by signing the pledge that is being sent out, the wording of which is given on this page.

"Since food will decide the war, each American woman can do a real national service by protecting the food supply of the nation," says Herbert C. Hoover, national food controller, in issuing the council of defense's call for the great enrolment. "Ninety per cent of the food consumed in America passes through the hands of the women. In no other field do small things, when multiplied by our 100,000,000 people, count for so much.

Though not minimizing the necessity of curbing the activities of the food speculator and preventing hoarding of foodstuffs, both of which the government is determined to do, Controller Hoover lays stress on the actual shortage of food materials. He says:

"This is not alone a war question. The high prices which are being so hard on the poor and the more moderate wage-earners in this country are partially due to the shortage of supplies in the world's market and the saving in consumption and waste which can be made will lessen the prices to those of our own people which must be our first solicitude. In all of the arrangements which we plan to make during the forthcoming year for the supploy of our allies we will bear the first regard to our own people, that they shall have plenty, provided that they eat wisely and without waste."

Wants Complete Statistics.

Relative to the registration of the housewives of the country, Controller Hoover says in a formal statement:

"We not only want the name and address, but we want the number of persons in the household, we want to know whether the household employs a cook, whether it has a garden, and we want to know the occupation of the breadwinner. There are no fees or dues to be paid. The food administration wishes now to have as members all of those actually handling food in the home.

"On receipt of the pledge, we will send out preliminary instructions and a household tag to be hung in the window. The insignia of the food administration will consist of the national shield, surrounded by heads of wheat, and we hope to have the shield displayed on every home in the United States.

"With the assistance of various trained women in the country we are formulating committees on domestic economy, and from leaders on the subject of nutrition we are arranging committees on food conservation and utilization and we propose, with their advice, to furnish information from time to time to the members of the administration as to the manner in which they can best serve the national interests in food conservation. We have six general principles of instruction.

"First—To save the wheat. If we eat as usual from our harvest this year we will have little more than enough for our own supply, but we can divide with our allies if each individual makes some sacrifice; by eating at least one wheatless meal a day, substituting corn bread or other cereals.

Buy Less Meat—No Waste.

"Second—We want to save the meat, for our cattle and hogs are decreasing and we must send to our allies, so we wish every householder to buy less, to serve smaller portions and to allow no waste.

"Third—We wish to save the fats. We consume three times the fats that are necessary for nutrition and we need them now for war. We wish no butter used in cooking. We want less butter served on the table; we want less lard, bacon and other pork products used.

"Fourth—Any deficiencies in food supply, by economy along the above lines, can be amply covered by increasing the use of fish, potatoes, beans, peas, turnips, cabbages and vegetables generally, corn, buckwheat, rye and rice, which we will have in abundance this harvest.

Buy Home-Raised Products.

"Fifth—We want to save transportation. Our railways are unable to meet the war pressure for munitions, men and coal, so that we wish every one to consume products of local origin as far as possible, to buy from the local miller, the local packer, buy and eat vegetables grown near home.

"Sixth—We preach and want every one to preach the gospel of the 'clean plate,' to buy less foodstuffs; to serve smaller portions and to see that nothing of value goes into the garbage can.

"Aside from eating an increased proportion of these commodities in order to save on the staples it is extremely important that any surplus of these commodities shall be preserved or well stored for winter use."

The Pledge of Household Economy.

I am glad to join in the service of food conservation for our nation, and I hereby accept membership in the United States food administration, pledging myself to carry out the directions and the advice of the food administrator in the conduct of my household insofar as my circumstances permit.

To Clarify Fat.

Any uncooked fat, such as suet, the fat from chickens, and all superfluous beef fat, should be saved and clarified, according to the Kansas City Star. Cut the fat into small pieces, cover with cold water, and cook over a slow fire until the fat has melted and the water nearly evaporated. Then strain and press all the fat from the scraps. When cool remove the cake of hard fat, or, if soft, draw it to one side and let the water underneath run off. You may put with this fat any additional fat from soupstock, corned beef, dripping from roast beef, veal, fresh pork, or chicken; in fact, anything except the fat from mutton, turkey and smoked meat. If there is any sediment adhering add a little cold water, and after stirring well pour the water off, or skim the fat from the water. Place the fat in a pan over the fire, and when melted add one small raw potato cut into thin slices. Let it stand on the top of the stove or in the oven till it has stopped bubbling, and the brown and crisp scraps rise to the top. Strain through a fine strainer and keep in a cool place.

Boiling the fat causes the water in it to evaporate and the organic matters or impurities to be decomposed and deposited as sediment; the potato, owing to the power of absorption (being mostly starch and carbon), absorbs any odors or gases, collects the sediment, and thus cleanses the fat, very much as charcoal purifies water.

Crochet Boudoir Cap

By WINIFRED WORTH.

Every woman will appreciate this beautiful pattern. Makes an ideal gift for the young bride.

One ball pale blue No. 5

Eight medallions

1st row—Large medallions 2 ch. join. 27 t. in ring, join

2nd row—9 clusters with 5 ch. between.

3d row—7 ch. 1 dt. over ch. p. (4 ch. sl. st. to top of ch. 5 ch. sl. st. in same space 4 ch. sl. st.). 9 ch. 1 dc. over cluster of 2 in row. Repeat. Second medallion same as first. 7 ch. 1 t. in place of 9 ch. 1 dt. Small medallion same. Use 5 ch. 1 t. in last row.

Boudoir Cap.

Edge—1 dt. 3 ch. half t. catch on back of dt., repeat 3 times. 1 dc. in net. Repeat.

Use 1-4 yard fancy net for crown of cap.

What boudoir is without its slippers? This pattern would make a most acceptable gift for a bridal shower.

Use size 5 perle cotton.

Ch. 6 9 dt. in 1 ch. turn. 9 dt. in 1 of 9 dt. in st. Now catch with 1 dc. in 5 st. 9 dt (shells), in last st. turn. Add 1 shell to each row. Now continue until 9 shells are made in one row. Finish with p. edge. For draw strings make a ch. desired length. To make ball., ch. 5 join 7 t. in ring, join 14 dt. join and sl. st. all together.

Boudoir Slipper.

Canned Goods are High Priced!

PUT UP YOUR OWN!

Indications are that canned foods will be still higher. We have a machine which will enable you to easily and cheaply put up your own supply of canned goods in your own kitchen. Use what you need, and sell the rest at Retail Prices.

BURPEE HOME CAN SEALER

A well constructed, low priced, practical machine for sealing the sanitary tin. No dangerous acid nor solder used. Seals can absolutely air-tight. Cans easily obtained from our distributing stations throughout the country.

Fruits and vegetables put up in the home with this machine keep just as well as factory goods—and you know what goes into the can—it's clean and wholesome.

Free recipe book with each machine. We guarantee your success. Write today.

BE SURE TO GIVE NUMBER AND SIZE.

Some Simple Dishes

To make Canadian war cake, take two cups of brown sugar, two cups hot water, two tablespoons lard, one package seedless raisins cut once, one tablespoon salt, one teaspoon cinnamon, one teaspoon cloves. Boil all these ingredients five minutes after they begin to bubble. When cold add one teaspoon soda, dissolved in one teaspoon hot water. Three cups flour. Bake forty-five minutes in a slow oven. This cake is better at the end of a week or even longer. It ripens as does all fruit cake.

Health Plum Pudding.

Two cupfuls graham flour mixed with a half teaspoon salt, half a teaspoon baking powder. Add a cupful broken nut meats of any kind, a cup full raisins, a cupful milk and a half a cup of molasses. Mix all thoroughly, butter a pudding mold, turn in the butter and boil, surrounding with hot water for three hours. Serve with hard sauce or any hot pudding sauce.

Cheese Muffers for Lunch.

Stale bread, grated cheese, butter, milk, eggs, salt. Butter slices of stale bread and cover with grated cheese. Cut the slices in halves and place in layers in a buttered baking dish. Season each layer with salt and dot with butter. To each pint of milk add too slightly beaten eggs. Pour milk over the bread and bake about one-half hour in a slow oven. This is a delicious luncheon dish.

HERE YOU WILL FIND A NEW ZEST FOR LIFE

in the sweet, salt breezes of the Pacific ocean. Warm sea water and surf bathing, tennis, golfing, etc. Sheltered beach line.

LITTLE COST—ACCOMMODATIONS range from best hotels to cottages and tent-houses. Sea foods abundant. PUREST MOUNTAIN WATER.

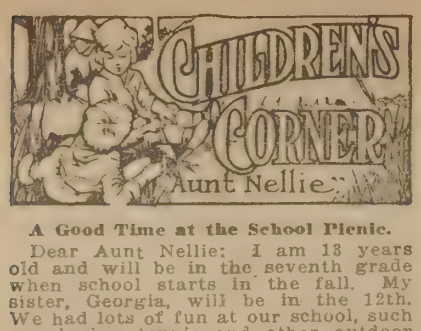
DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent by express prepaid for $1.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

COOLNESS

There's nothing so cool as an oil stove for summer cooking. All the heat is concentrated on the cooking and not radiated about the kitchen.

Cooks everything any wood or coal range will cook, and cooks it better, because of the steady, evenly-distributed heat.



Use it all the year 'round—more convenient than a wood or coal stove, and more economical.

The long blue chimneys prevent all smoke and smell.

In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

A Good Time at the School Picnic.

Dear Aunt Nellie: I am 13 years old and will be in the seventh grade when school starts in the fall. My sister, Georgia, will be in the 12th. We had lots of fun at our school, such as playing tennis and other outdoor games. The boys have a gymnasium to play basket ball in winter time. The high school gives a play almost every year and the seventh, eighth, ninth, 10th and 11th and 12th grades are included in the chorus. My best friend's name is Vera Stambaugh. We have lots of fun together. A week before school was out the fifth, sixth, seventh and eighth grades had a picnic at Orange Blossom. Vera's father has the dray and took a load down in his truck. The first thing most of them did after they got there was to fish. The rest climbed hills. Edna, Vera, Nettie and I climbed the hills. We had bushels of fun and before we got back some more girls came up and we were going to run a race going down to see what bunch got to the road first. Some of us had bad luck. Edna, Nettie and I fell down, the other girls got down all right and beat us to the road. We had all kinds of good things for dinner. Coming back we sang songs on our way to town. As we went down through Main street we sang, too. The police looked at us cross, but it didn't affect us in the least. We were all very tired and were glad to get home.—Violet Cronn, Creston, Wash.

Sisters Come Home for the Summer.

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I am 11 years old and my eyes are blue. My hair is real dark. I am in the sixth grade. Miss Parker is my teacher. There are two girls in my class, another girl and myself. My subject is "On the Farm." I like the farm very well and would not trade with any city girl. I live on a farm of 320 acres. My father owns two farms. We live on the biggest one. The other one has 200 acres. The one we live on is called the Cumberland farm and the other is Paskaroo farm. We have lots of cows, horses, sheep and pigs. We have two dogs and two cats. My youngest brother has lots of pet rabbits. We put in a big vegetable garden every year. I have six sisters and three brothers. My two oldest sisters are married. I have two nephews. One is 5 and the other is 17 months old. Their names are Philip and Joe. My sisters come home and stay during the summer.—Nettie L. Johnson, Friday Harbor, Wash.

Florence Belongs to the Garden Club.

Dear Aunt Nellie: I thought I would write to you for the first time, after reading your letters in The Washington Farmer many times and enjoying them very much. Our school was out the 18th of May this year. My teacher's name was Miss Ada English. I like her very much. I was in the fourth grade, but I passed into the fifth grade. Our teacher's name next year is Miss Hilda Ham. I think she is very nice. Our school is Tualco district No. 7. We are out for a three and a half month vacation. I have joined the garden club and have planted my garden. I live on a farm of about 60 acres. We live three miles from Monroe. We raised sheep, cows, horses and chickens. We have two dogs, one brown and one black. My father is going to get an automobile. I take music lessons. My music teacher is Mrs. Donald Smith. I am 10 years old. My birthday is January 5. My brother, Theodore, had a birthday June 4.—Florence Frohning, box 16, R. F. D. 1, Monroe, Wash.

Blue Eyes and Light Brown Hair.

Dear Aunt Nellie: I have read almost all the letters and enjoy them very much. My sister, Mabel, wrote to the Corner, so I thought I would write, as her letter was in print. Our school was out May 17 and we had a program in the morning and then went to Jump-Off Lake. I am 12 years old and in the sixth grade at school. My birthday was September 23. I am five feet three inches tall and have blue eyes and light brown hair. Eva Wies of Cheney is as old as I and in the same grade at school. I am just one inch taller than she. I have 11 little chickens and a large flower garden and one calf. Papa gave me the calf for milking last summer. I would like to correspond with any of the cousins.—Lydia Ervin, Valley, Wash.

Cooks Dinner in Her Playhouse.

Dear Aunt Nellie: I am 11 years old and am small for my age. I am in the sixth grade. I have a quarter of a mile to go to school. I liked my teacher. His name is Mr. Watt. Our school was out the 9th of May. When school was out our teacher gave us some little souvenirs with his picture on it. I passed in the sixth grade. We are a great help to father and mother. My oldest sister is 15 and my youngest sister is 7. Minnie, my oldest sister, plays the fiddle and the guitar. I can make dinner, make the beds, clean house and bake. I can comb my own hair. My brother helps father with the horses. My youngest sister does many little things, such as carry in the wood, and she helps me a little, too. I have a little playhouse about 30 yards away from the house. I have a little stove in it to cook on. My brother and sister help me in the playhouse so I can get dinner. I can make a cake in the stove, too. The house has two rooms in it. Minnie helps mother cook when I am playing. We milk two cows and have three calves. We live on a 400-acre farm. We have an Overland car.—Gertrude Ruchest, Peola, Wash.

A Letter From Deweyville.

Dear Aunt Nellie: I haven't seen any letters from Deweyville, so I thought I would write. I live on a farm of 80 acres. We have six horses and one colt, two cows, eight pigs, 60 chickens and one dog. I have eight brothers and four sisters. My oldest brother is on a mission in Kansas. I am 11 years old. I will be 12 on the 17th of July. The other day my papa went out to the automobile shed; when he opened the door he saw a pine hen. He shut the door and caught it. We put it in a pen and in two days it laid an egg. We set the egg under a hen. We are going to see if it will hatch. I like to go to school. I am in the sixth grade. I hope to see my letter in the Corner.—Arlen Dewey, Deweyville, Utah.

Always Glad to Hear From Myrtle.

Dear Aunt Nellie: I like to read in the Children's Corner and have written to it many times before, but thought I would write again. I am 13 years old. My birthday is on the 11th of September. I live on a 480-acre farm, but we have some rented and altogether it makes 640 acres. There is a girl by the name of Josie Read that writes to the Children's Corner and she is just one year older than I. She didn't say what grade she was in, but I am in the eighth. Our school was just out last Friday. I don't know whether I got my diploma or not and will not know till about three weeks. I wish that Josie Read would write to me because I think she would be a very nice girl. I am also a country girl, living one and a half miles from Johnson. I have to milk a cow and sometimes two of them. I am going to put out my traps in about two or three days. I get 2 cents for every squirrel I catch.—Myrtle Sodorff, Box 62, Johnson, Wash.

Passed Into the Eighth Grade.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the children's letters. I live on a 40-acre farm and I am 11 years old and will be 12 August third. School ended May 18 over here, and I passed into the eighth grade. The school I attend is called Riverside. We have eight cows, two calves and two horses and about 40 chickens. We have three cats and their names are Mary, Lizzie and Johnny. The horses' names are Eva and Molly.—Blanche Haquist, Independence, Wash.

Cecelia Can Play on Her Violin.

Dear Aunt Nellie: My father takes The Washington Farmer. Every Thursday I go to the mail box to see if it is there. I enjoy reading the letters, and I think they are very nice. I have a flower garden. I planted bachelor buttons, poppies, pinks, sweet williams and calliopsis. I have a little violin and I can play on it a little bit. I am 13 years old. I wish some of the girls would write to me.—Cecelia Foy, 611 North Eighth street, North Yakima, Wash.

One of the Colts Is Alexander's.

Dear Aunt Nellie: I have never written to the Corner before. I am 13 years old and am in the seventh grade. My teacher's name is Mrs. Longfellow. We have 24 pupils in our room. We live on a 520-acre farm. We have 15 horses and five colts. One of the colts is mine. I also have six pet ducks. We have four cows and two calves. We have 150 spring chickens and 11 pigs.—Alexander Weitz, Box 51, Endicott, Wash.

Likes to Crochet and Tat.

Dear Aunt Nellie: I am a little girl 9 years old. I enjoy reading the Children's Corner and like the letters very much. I passed into the fifth grade. I can crochet, tat and I like to do them. —Laila Haquist, Independence, Wash.

Little Pet Pig's Name Is Dick.

Dear Aunt Nellie: I read the Children's Corner. I am 11 years old. My birthday is the 8th of April. I have a little pet pig. His name is Dick. Our school is closed for this season. We have 12 horses and six cows. I have no sisters or brothers. I have a pony named Bolly. I like to ride horseback. My best girl chums are Eunice Sweet, Arnetta Pittman and Ella Jarvis. We have a car, and it does not take us so long to go to town as it did before. —Rebecca Gullixson, R. F. D. 1, Tekoa, Wash.

Promoted to the Fifth Grade.

Dear Aunt Nellie: This is the first time I have written the Children's Corner. I am 9 years old and will be 10 years old in June. We have to go four miles to school. I was promoted to the fifth grade. I have five sisters. Their names are Marian, Lola, Carrie, Vivian and Della. My brother's name is Harry. We live on a 640-acre farm. There is 300 acres in crop. Our crop looks fine and the rest of our land is in pasture. We have one sweet little colt.—Hazel Covert, Delrio, Wash.

Lucelle Has Never Written Before.

Dear Aunt Nellie: I have never written to the Children's Corner before. I like to read the Children's Corner. I have two sisters and one brother and their names are Carmel, Lenora and Vern. I was 9 years old the 16th of last November. We have two cows and 25 hens. My name is Lucelle and I am in the fifth grade at school. My teacher's name is Mrs. Kelley. She is very nice. We live a half a mile from the schoolhouse.—Lucelle Pompella, Husum, Wash.

Hopes She Has Another Twin.

Dear Aunt Nellie: I read my first letter in the Corner and was glad to see it. I can crochet, tat and embroider. My birthday is August 25. I am 13 years old. Have I a twin? I have one twin who writes to me, and hope I have another one. We take The Washington Farmer, and I like to read the letters. We have a car now. Our school let out about one month. I would like for some of the other girls to write to me.—Ellen Purcell, Box 238, Pomeroy, Wash.

Jeannette Has Found Her Twin.

Dear Aunt Nellie: I enjoy reading the letters. I have found a twin. Her name is Pearl Smith. I am 11 years old and my birthday is the 19th of February. My health is poor so I have not been to school for a long time. I take music lessons and I am also learning to tat. I think spring is the nicest time of the year. I like to pick flowers and make gardens. I wish Pearl Smith would write to me.—Jeannette Van Dyk, Box 201, Oak Harbor, Wash.

Planted Lots of Things in His Garden.

Dear Aunt Nellie: I am 11 years old. I am in the sixth grade. I like to go to school. My teacher's name is Miss St. Clair. I like her very much. I have a garden of my own; I planted beans, cabbage, carrots, radishes and lettuce. I have three sisters and one brother. My sisters' names are Maxine, Martha and Dorothy. My brother's name is Albert. I live near Northport, Wash.—Cassius Franklin Orr, Northport, Wash.

Little Cousin Margarette Is Seven.

Dear Aunt Nellie: I am 7 years old. I am in the first grade. I have a pet pig. Her name is May. We have four calves. I have a sister and her name is Myra. She is 5 years old. We have 26 little chickens. We have apple blossoms on our trees. We have 12 horses. My best friends are Mary Fencetmacker and Eunice Sweet. My teacher's name is Miss Keinholz.—Margarette Gullixson, Tekoa, Wash.

Likes Arithmetic the Best of All.

Dear Aunt Nellie: We have taken The Washington Farmer for a long time. I like to read the Children's Corner. I am 14 years old and my birthday is on the 15th of February. Have I a twin? I am in the seventh grade at school. I like to work arithmetic better than any of my studies. Sometimes I help papa keep his bills. I would like to have Esther Carslin of Olalla write to me. I lived in Olalla when I was a baby, but I don't remember anybody there. We have a Ford automobile, in which we took a trip to Oregon last summer, which I will tell you about some time.—Rub Prather, Freeland, Wash.

Nina's First Letter to the Corner.

Dear Aunt Nellie: This is the firs time I have ever written to the Ch dren's Corner. I have thought of wri ing lots of times, but always forgot. am 12 years old and in the sixth grad at school. I like my teacher ver much. Her name is Miss Sumarlidaso I go to the Bush school on Bush pra rie. I live on a 149-acre farm. I hav two cats whose names are Tommy an Jimmy. I have one sister whose nam is Ruby. She is 11 years old and in the eighth grade at school. W have five cows and four calves an two horses and one colt. We have a auto and a piano. Ups and Downs of a Bunch Grass Boy

(Continued from page sixteen.)

He arose to go, at peace with the world.

Sociably inclined after the huge meal, he lingered and talked. We learned why he was casually interested in the young squaw and the handsome young buck. The young woman was his wife! She was running away with a young Indian! The old Indian was on the trail.

"Heap ketch 'em,' he grunted contentedly.

"What will you do when you ketch em?" asked mother.

"Kick 'em!" was his placed response. "Heap-kick 'em."

Then he departed, assuring and reassuring mother that she was a heap skookum squaw.

It was three or four weeks later when the old Indian came by on the home trail, the rooster feather still in his hat. He was hungry again. His runaway wife was with him and she too was hungry. Mother asked them in and began to get out her leftovers.

"Is that your runaway squaw?" she asked the old Indian, desiring to start conversation.

The old fellow didn't know what "runaway squaw" meant, apparently. He shook his head sadly and bit deeply into a huge slice of bread dripping with sirup—in which no flies were present, this time.

But the young squaw knew the meaning of "runaway" all right. She giggled and showed her white teeth.

"Heap runaway—head ketched now—goin' back," she explained.

Mother eyed the wrinkled old Siwash in disgust. She couldn't get over the spoiled butter and sirup with flies in it.

"I don't blame you," she said. "Why don't you run away again?"

The handsome young squaw giggled again; then slyly confidentially, in a half whisper with a bright eye on her aged spouse whose face was buried in his plate, she said:

"Goin' to—heap runaway—no ketched next time."

Wild friends and wild foes visited the Bunchgrass boy and his mother that summer they were alone in their pioneer home. Next chapter tells of a thrilling experience with a mountain lion, which cost the life of their beloved big dog.

Giving the Bees Room

Many beekeepers make a serious mistake in failing to give their bees enough storage room on time. The addition of this room at just the right time for the storage of the season's crop of honey requires good judgment and an intimate knowledge of the nectar resources of the particular locality and season. Very few people realize that in many localities the entire season's crop of surplus honey is gathered and stored within a period of a few weeks. It is exceedingly important during these few weeks that the progress of the work in the supers be watched closely and additional room be given as rapidly as the bees can use it.

The usual procedure by the inexperienced beekeeper is to put on a super of 25 to 50 lbs. capacity during early spring and give the subject no further thought until late summer or autumn. If the super is found to be full of honey at that time it is removed and probably an empty one put in its place. In many cases this empty super is given long after there is any possibility of any further storage of honey during the season, and if comb-honey is being produced the sections and foundations are ruined for further use by being on the hives during a time when no honey is being stored.

During a poor season a single super for each colony may furnish an abundance of room for the storage of the entire crop of honey, but during a good season, if additional supers are not given as needed, the major portion of the crop is lost to the beekeeper simply from lack of storage space.

In comb-honey production the standard supers contain when filled only about 25 pounds of honey. During a rapid honey flow such as occurs some seasons, especially in the northern states, sufficient progress is frequently made in each newly added super to justify the addition of another every three or four days.

With such a honey flow several supers may be completely filled with honey before any of it is ripened and sealed, and the hive may have, therefore, as many as five or six supers at one time. Under such conditions, if the bees are compelled to ripen and seal the honey in the first super before a second one is given most of the possible honey crop is lost to the beekeeper, the bees being compelled either to swarm or to loaf during the height of the storing season. Such an abundant honey flow does not by any means occur every year, but when it does occur the beekeeper should be prepared to take full advantage of the opportunity.

Bees need so little attention during the greater portion of the year that it is difficult for the inexperienced beekeeper to realize that for the best results almost daily attention is needed during the few days or weeks known among beekeepers as the honey flow. A more complete discussion of this subject is given in Farmers' Bulletin No. 503, Comb Honey, which may be obtained on request from the United States departmnt of agriculture.

Mold Poisons Horses.

A. R. Hunter, the Percheron breeder of Island City, Ore., had the misfortune recently to lose seven head of his registered fillies and seven head of high grade horses. The pure brds are valued at an average of $500 each and the grades at about $125 each, so that Mr. Hunter suffered a loss of over $4000. Besides these he had 12 others sick, that were saved and now show no bad effects of the sickness. The trouble is pronounced by veterinarians to be a poison from eating a mold that was in the grass and stubble on which the horses were pastured.

H. A.

Grain Crop of Germany.

News comes from Germany that from the moment of the first ripening the entire grain crop will be requisitioned by the government and that only from one-quarter to one-third of the crop will be left to the farmer.

To Get a Flag Write Soon

With the declaration of a state of war our first supply of flags was quickly exhausted and we have had great difficulty in securing more.

We have at last secured a limited number of flags which we offer on the following terms:

OFFER NO. 1

3x5 flag together with The Washington Farmer for three years. Both for $2.50.

OFFER NO 2.

4x6 flag together with The Washington Farmer for three years. Both for $3.00.

We would suggest prompt action; orders will be filled as received.

The Washington Farmer, Review Bldg., Spokane.

Enclosed find $.... (your personal check, stamps or money order), for which send me American flag, as advertised, and The Washington Farmer for 3 years.

Worth While Offers

In the want ads of this paper you will find frequent attractive offers.

Grain and Produce Markets

Chicago Market.

CHICAGO, June 30.—Urgent demand today for corn for immediate delivery brought about the highest prices ever reached in the corn market here, No. 2 yellow, a regular contract grade, commanding $1.76 a bushel. The market closed unsettled at gains of 1-2c to 1 1-2c. Wheat showed an advance of 1-2c to 1c net, with July at $2.02 and September at $1.82. Oats finished up 1-8c to 5-8c higher. In provisions the outcome ranged from 25c decline to a rise of 5c.

Wheat and oats hardened in sympathy with corn. Wheat bears had an advantage in the early trading, though, on account of announcements that the first new wheat this season had arrived at the Atlantic seaboard ready for shipment to Europe.

Cash Quotations.

Wheat—Nos. 2 and 3 red and 2 and 3 hard, nominal.

Corn—No. 2 yellow, $1.75@1.76; No. 3 yellow, $1.75@1.75 1-2; No. 4 yellow, nominal.

Oats—No. 3 white, 70@70 3-4c; standard, 70 1-4@71c.

Rye—Nominal.

Barley—$1.10@1.40.

Timothy—$4@7.75.

Clover—$12@17.

Pacific Northwest Grain.

TACOMA, June 30.—Wheat—No quotations.

Car receipts—Wheat 12, oats 3, hay 1.

SEATTLE, June 30.—No grain quotations.

Yesterday's car receipts—Wheat 1, oats 1, barley 1, flour 4.

PORTLAND, Ore., June 30.—Wheat—No quotations.

Today's car receipts—Wheat 7, barley 1, flour 3, oats 1, hay 3.

San Francisco Grain.

SAN FRANCISCO, June 30.—Barley, $1.94⅞; May, $2.04; July, new, $1.97⅜@2.02½.

Minneapolis Grain.

MINNEAPOLIS, Minn., June 30.—Wheat prices weakened today, and July finished 4½c down. September closed strong.

Wheat—Receipts 157 cars, compared with 268 a year ago.

July opened $2.17; high, $2.17; low, $2.09; close, $2.12½.

September opened $1.71; high, $1.72; low, $1.69; closed, $1.72.

Cash—No. 1 hard, $2.32½@2.37½; No. 1 northern, $2.32½@2.33½; No. 2 northern, $2.17½@2.22½; No. 3 wheat, $1.87½@2.12½. No. 2 hard Montana, $2.17½@2.20½.

Corn—No. 3 yellow, $1.69¾@1.70¾.

Oats—No. 3 white, 68@68½c.

Flax, $2.81½@2.87½.

Flour—Fancy patents, 25c lower; quoted at $12.50; first clears, 25c lower; quoted at $10.50; second clears, 50c lower; quoted at $7. Shipments, 35,676 barrels.

Barley, 88c@$1.25.

Rye, $2.20@2.22.

Bran, $27.50@29.

Portland Market.

PORTLAND, Ore., July 2.—The grain year came to a close with the wheat market at an absolute standstill. There is still a little wheat lying around at scattered points, but there is no demand from any quarter and the dealers are making no effort to connect up with business. It is probable that nothing will be done in this line until new wheat begins to move. Nominal quotations are: Bluestem, $2.20; club and fortyfold, $2.15; red Russian, $2.10.

Oats are a little easier, as shown by a sale here at $44. There is no interest in barley.

Millers have made another 40-cent cut in flour prices, which puts patents at $11.40. Mill feed prices are holding steady with a light demand.

Bids were submitted to the government by local dealers on 2800 barrels of flour and 3800 tons of oats for use at American Lake, but the awards have not yet been made.

At the Condon wool sale over 500,000 pounds were offered, but only three clips were disposed of, as most of the growers thought the bids were too low. The prices paid ranged from 52 3-4 to 61 1-2 cents. Subsequently at private sale as high as 65 cents was paid for a small clip grown at Fossil. Other lots went at 52 3-4 to 61 cents. In the valley as high as 72 1-2 cents has been paid.

With the Coast storages now well filled, cheese prices are easing off. A week ago the Coos Bay association cut its price and on Saturday the Tillamook people announced a decline of a cent.

Butter is holding steady with the supply and demand nearly equal. Eggs are also unchanged and dealers look for a steady market during the summer.

Poultry receipts are liberal and but for shipping orders the market would be blocked. Country dressed meats are ruling about steady.

The strawberry season is now practically ended with only a week of good receipts from nearby points. Prices closed firmer at $1.65@2.25.

A few new Oregon potatoes are coming in, but the trade will depend on carlot shipments from California for a week or two yet. There is little call for old potatoes.

Hop growers are more encouraged over the prohibition situation at Washington, but no business is expected until the matter is definitely settled. There will be half a crop in this state and it is being well cultivated.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to prodcers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $44 per ton.

Corn—Whole, $72; cracked, $73 per ton.

Millstuffs—Bran, $35 per ton; shorts, $38.

Barley—No. 1 feed, $42; brewing, nominal; rolled, $49.

Hay—Buying prices: Timothy, eastern Oregon, $28@30; alfalfa, $18; grain, $18.

Eggs—Oregon ranch, case counts, 30@31c per dozen; candled, 32c.

Poultry—Hens, 14@16c; ducks, 15@20c; turkeys, alive, 20c; geese, 10@22c; turkeys, alive, 20c; geese, 10@12c.

Butter—City creamery, prints, 38@39c per pound; cubes, 36c.

Cheese—Tillamook triplets, 23c; young Americas, 24c.

Dressed meats—Veal, 14 1-2@15c; pork, 19@19 1-2c.

Hops—Nominal.

Potatoes — Oregon jobbing price, $3.25@3.50.

Seattle Wheat.

SEATTLE, Wash., June 30.—Country bids on the 1916 wheat reached $2.30 for bluestem and $2.25 for the red wheats. Farmer holders were not obdurate at this level, expressing a willingness to shade it a nickel on occasion. Puget Sound wheat operators are willing to concede $1.50 per bushel farm price for new bluestem and would probably be willing to take a chance on a few contracts at that figure, but they are unable to see their way clearly and pay any more.

Seattle grain dealers believe they have had at least a glimpse of what new Washington wheat will bring in the opening quotations on Oklahoma and Kansas No. 2 red wheats this week. Wheat grown there bears a close resemblance to the Washington club and red Russian.

The car situation is practically normal. All transcontinental lines report ability to deliver cars immediately. Relief has come rather late to be of service to the wheat export trade.

The conditions of the flour trade were amplified this week in relation to wheat in the fact that Montana hard wheat flour sold under Washington soft wheat flour by 15c. Unless there is a spread between the two of at least $1.50 per barrel Puget Sound millers have always held that they were out of the market. There are still many buyers who will take hard wheat in preference to soft wheat flour at the same or a less price. Millers admit demoralization in the flour market due to oversupply, dull trade and reselling by bakers who bought on the early low market.

Seattle Market.

SEATTLE, Wash., June 30.—The proportion of good quality eggs coming to the Seattle market is diminishing, and jobbers are more inclined to strengthen quotations. There was some prospect of a 37-cent market next week, with seconds maintaining their level at 33c. Bid prices in the country have not exceeded 32c, but if there is an advance in the selling price more money to the producer is believed to be the natural outcome of competition for stock. The percentage of soft eggs is increasing, indicating to jobbers that the lay is on the verge of a sharp reduction.

Butter is steady, but whether the undertone is to be maintained is a question. It was reported along the street today that condensaries are preparing to bid $2.60 per cwt. for milk for the first two weeks in July. This will touch a number of the cream supply stations at a vital point, and a minority of city creamery men are asserting that it will be necessary to advance the buying price of butterfat to meet the competition and keep the raw material coming.

Grave foreboding of a sharp falling off in cream do not square with the results to date. Unseasonable rains, during a time when grass feed is drying up, have prolonged the life of the meadow feed, and receipts of cream have been more than enough to keep city creameries operating at full capacity and a consequently easy market.

Receipts of heavy hens have been heavy and jobbers are quoting a cent lower next week, at 18c on the buying side. Broilers are also lower, at 15@18c.

Cheese is weak. Jobbers will not buy any heavy stocks at the present level, contending that it will not sell.

All jobbing houses along Western avenue were amply supplied with receipts of cherries today from eastern Washington, Wenatchee, Yakima and Hanford districts contributing principally to the offerings. Due to something of an overstock and in part to a desire to clean up over Sunday, jobbers cut prices on Bings to 14@15c and Anns to 8c.

Strawberries were strong, Marshall moving at $1.50 on best grades, some of the differential that has all along favored Clark Seedlings being wiped out. Clarks brought $2 on the average, although an occasional sale at 25c higher was reported.

The future of potatoes hinges largely on opening prices for Kennewicks, the first of which will be due about July 10. The market for Californias is weak and the expected break may be near at hand.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transaction by jobbers.

The following prices are offered to tre producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 32c per dozen.

Poultry—Live hens, fat, over 4 lbs., 18c per lb.; 3 lbs. and under, 15c; old roosters, 12c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 14c per lb.; broilers, live, 15@18c per lb.

Butterfat, 32c per lb.; dairy butter, 27@30c.

Beef—Buying price: Prime beef steers, 7@8c per lb; cows, fat, 7@8c per lb.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 13@14½c per lb.; do heavy, 12@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salter calf, 30c pe rlb.; green hides, 16c per lb; salted bulls, 15c per lb; dry hides (short trim), 38c per lb.; dry calf (under 6 lbs.), 40c per lb; bull and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry butcher full wool sheep pelts, 30@33c per lb.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., June 30.—Hogs—Receipts, 6800; steady to stronger. Heavy, $14.85@15.25; mixed, $14.75@15; light, $14.50@15; pigs, $12.50@14.50; bulk, $14.70@15.

Cattle—Receipts, 100; steady. Native steers, $9.50@13.50; cows and heifers, $8.50@11.50; western steers, $9.50@11.75; Texas steers, $9@10.50; cows and heifers, $8@10; canners, $6@8; stockers and feeders, $6.50@10.50; calves, $10@14.50; bulls, $6.75@10.75.

At Chicago.

CHICAGO, June 30.—Hogs—Receipts, 7000; slow, 5c to 10c under yesterday's average. Bulk, $14.40@15.30; light, $13.85@15.05; mixed, $14.20@15.50; heavy, $14.10@15.60; rough, $14.10@14.40; pigs, $10.75@13.85.

Cattle—Receipts, 2000; weak. Native beef cattle, $8.60@13.60; stockers and feeders, $8.50@9.75; cows and heifers, $5.60@11.80; calves, $10.50@15.25.

Sheep—Receipts, 9000; weak. Wethers, $8@10.85; lambs, $9.75@14.50; springs, $12@17.50.

At Portland.

PORTLAND, Ore., June 30.—Hogs—Steady; receipts, 121.

Cattle—Steady; receipts, 909.

Sheep—Steady; receipts, 1033.

At Seattle.

SEATTLE, June 30.—No receipts; market steady on cattle, sheep and hogs at yesterday's quotations.

Spokane Stockyards Saturday.

Hogs—Receipts, none; market steady. Prime heavy packing, $15.25@15.50; prime light packing, $15@15.25; smooth heavies, $14@14.50; pigs, $12.75@14.25; stockers, $12.25@13.50

Cattle—Receipts, 124; market slow. Prime light steers, $9.75@10; prime heavy steers, $10@10.25; good steers, $8@8.75; ordinary to fair, $7@8; prime cows, $8.50@9; good cows, $7.25@7.75; common cows, $6.25@7; bulls, $6@8; calves, $7.25@8.75; stockers and feeders, $5.75@7.75.

Sheep—Receipts, none; market steady. Prime spring lambs, $12.50@13; prime shorn wethers, $9@10; prime shorn yearlings, $10.25@11; prime shorn ewes, $8.50@9.50.

At Salt Lake.

SALT LAKE, June 29.—Cattle—Receipts, 87. Choice fed steers, $9.50@10.50; fair to good steers, $8.50@9.50; grassers, $8@9; choice cows and heavy heifers, $7.75@8.50; fair to good cows and heifers, $7@7.75; cutters, $6@7.

206 3d Ave. So., SEATTLE, WASH.

NEWS FOR BREEDERS

Paddock Bros. of Union, Ore., have recently purchased from the Brickett farm of Utah two fine spring gilts by Brickett Farm Illustrator, son of the great boar Illustrator and out of a daughter of Defender. Their herd boar, Johnson XVII., is a big hog of fine quality and they have other well-bred individuals.

Three years ago I. H. Jorgens of Nezperce, Idaho, invested $3250 in a registered Shorthorn bull and 15 females. Since then he has sold from his herd $4250 worth of stock and has 37 head left, which, at a very conservative valuation, is worth $6000. He says even considering the present high cost of hay and grain his Shorthorn investment is one of the best he ever made.

W. E. Boulton of Caldwell, Idaho, believes in official work for dairy cows and has eight official records in his Jersey herd. Mr. Boulton has been dairying at Caldwell for 15 years and for many years made and sold dairy butter in Caldwell. He had some pure bred Jerseys from the start and now has 39 head, including calves. They are mostly of the Melia Ann and Brown Bessie strains. His present herd bull, Pioneer's Eminent Lad, is a grandson on the sire's side of Noble of Oaklands and on the dam's side of the equally great bull Eminent. He is a fine, showy individual. Lina's Pedro Princess, Mr. Boulton's heaviest producer, has 664 pounds of butter and 1211 pounds of milk in a year to her credit, but only half the year is official, owing to the tester's moving away. Boulton Farm Bessie has an official record of 511 pounds of butter in a year.

Mr. Boulton has 15 acres of blue grass pasture. He considers a soiling crop the most preferable way of feeding dairy cows, but on account of labor conditions that is out of the question.

H. A.

That Biggest Holstein Sale

Telling Details Given in the Official Report

The following details and comments on the great record-breaking Holstein sale at Worcester, Mass., are taken from the official report sent out by F. L. Houghton, secretary of the Holstein-Friesian Association of America:

It is doubtful if there has ever been seen such a display of enthusiasm at a cattle sale as that which occurred at the wonderful, record-breaking sale of Holsteins at the fairgrounds, Worcester, Mass., on June 7 and 8, under the management of Harvey A. Moyer. Before the sale commenced it was thought by many breeders that the high-water mark of prices for dairy cattle at auction had been reached at Detroit last year, when 143 head of Holsteins sold for $156,710, or an average of $1096 each.

On the other hand, one could find men who were confident that Detroit would be beaten hollow! It was useless trying to form an opinion. Last year Mr. Moyer got together some of the finest samples of Holsteins that could be found in the country. This year—well, he got something more than that, as the list of prices paid for a number of the choicely bred individuals at Worcester will show.

The arena was filled with breeders from 20 states and Canada when the first animal was led into the ring, and in the first hour Colonel Perry had to produce many of his long stock of jokes, etc., to "get 'em a-going." The first 10 cattle that were sold averaged $386 each, the highest price paid being $675 for a 19-lb. daughter of King Pontiac Artis Canada, a son of King of the Pontiacs out of a 31-lb. daughter of Henverveld De Kol. The next 10 brought the average up and, when the 20th cow had been sold, an average price of $580 was shown. Gardiner Hall Jr. & Co. of South Willington, Conn., paid $2500 for a 5-months-old daughter of King Model (who sold for $10,400 at the Stevens' sale a few weeks ago), and out of a 33-lb. dam. J. T. Shanahan of Buffalo, N. Y., made his initial purchase at the sale by securing K K S V Aagie Maid, a 6-months-old daughter of King Korndyke Sadie Vale and out of a 25-lb. dam, for $1000.

King Ormsby Jane Rag Apple 208883.

The average was maintained and improved upon when No. 30 on the catalogue, a double granddaughter of Colantha Johanna Lad, sired by a son of the former world's champion, Aaggie Cornucopia Pauline, the first 34-lb. cow, and out of a 28-lb. daughter of a 41-lb. cow, fetched $1825. This yearling heifer was secured by H. E. and K. E. Aitken of Waukesha, Wis.

Exciting scenes were to follow the sale of this well-bred young heifer. Everybody was on tip-toe and all eyes were at once focused on the beautiful King Ormsby Jane Rag Apple, the 5-months-old son of Rag Apple Korndyke 8th and Ormsby Jane Segis Aaggie, the wonderful twice 40-lb cow and world's champion for 30-day butter production. "A peerless combination" of breeding is shown in this handsome creature's pedigree. Mr. Cabana made a short talk calling attention to the wonderful future which he believed was in store for Rag Apple Korndyke 8th and for the splendid animals sired by this fine bull, out of some of the greatest cows of the breed, and also mentioned that Ormsby Jane Segis Aaggie was now milking 100 lbs. a day and was in absolutely perfect condition.

The first bid for this regal youngster was $10,000 and like a flash came another bid for $15,000. Three men competed for possession, John Arfmann quitting at $30,000, leaving J. T. Shanahan and D. W. Field to "carry on." Amid intense excitement these two men answered the calls from the auctioneers and eventually $50,000 was bid by Mr. Field. Still Mr. Shanahan kept things moving, but at $53,000 he gracefully retired and Mr. Field was acclaimed the purchaser of King Ormsby Jane Rag Apple at the world's record price of $53,200.

The insistent demands of the big crowd of breeders present for a speech, compelled Mr. Field to say that he wanted the best bull in the world and believed he had secured it in King Ormsby Jane Rag Apple. Mr. Cabana called for cheers for Mr. Field and also for Mr. Shanahan, which were given in a demonstrative way. Mr. Arfmann told the breeders that he wanted to buy the youngster and the only reason he did not was because Mr. Field's pocket was a great deal deeper than his.

The price of $18,000 paid for Glen Alex Queen De Kol was the highest ever paid for a dairy cow in the auction ring, and speculation was keen among the breeders in attendance the second day, as to whether Wandermeere Belle Hengerveld, the world's champion junior 4-year-old, would beat this record. Mr. Pelletier's cow achieved that honor by topping the sale at $18,300! Mr. Shanahan bought her, and it was stated that he received an offer of several thousand dollars for his bargain after the close of the sale. Mr. Pelletier made an offer of $10,000 for the calf that "Wandermeere" is carrying, delivered to him at six weeks old, (bull or heifer). Mr. Cabana offered a free service to Rag Apple Korndyke, 8th, and if "Wandermeere" fetched $20,000, a free service to son of Segis Fayne Johanna, the 50-lb. cow. Other offers were made by Bernhard Meyer, Finderne, N. J., of a free service to King Valdessa; Quentin McAdam, free service to King Korndyke Sadie Vale; Fred F. Field, to King Segis Pontias Konigen, the $35,000 bull, and F. M. Jones, Clinton, N. Y., to Spring Farm King, with and offer of $12,000 for the calf, either sex.

CUTTER'S
BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills	$1.00
50 dose pkge. Single pills	4.00
10 dose pkge. Double Pills	1.50
50 dose pkge. Double Pills	6.00
Cutter's Pill Injector....	1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

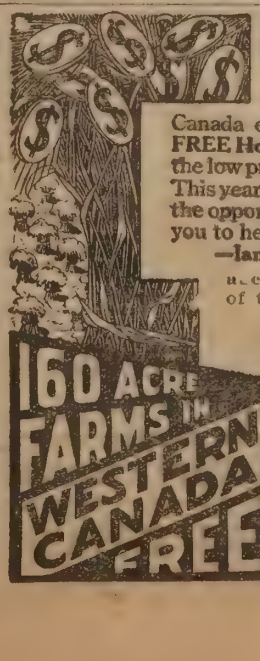
AUCTIONEERS



AUCTIONEER

Special attention given to live stock sales. BEN T. SUDTELL. Albany, Ore.

IT'S worth your while to get what good tobacco judges say about W-B CUT, and to notice the way men are changing over to it. Talk it over with some one who chews W-B CUT—there's something sound and fundamental about the tobacco. It's not gummy with syrup; just tobacco through and through—and mighty rich, *sappy* leaf at that—shredded and lightly salted to bring out the good *tobacco* taste.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City

Raise High Priced Wheat on Fertile Canadian Soil

Canada extends to you a hearty invitation to settle on her FREE Homestead lands of 160 acres each or secure some of the low priced lands in Manitoba, Saskatchewan and Alberta. This year wheat is higher but Canadian land just as cheap, so the opportunity is more attractive than ever. Canada wants you to help feed the world by tilling some of her fertile soil—land similar to that which during many years has averaged 20 to 45 bushels of wheat to the acre. Think of the money you can make with wheat at over $2 per bushel and land so easy to get. Wonderful yields also of Oats, Barley and Flax. Mixed farming in Western Canada is as profitable an industry as grain growing.

The government this year is asking farmers to put increased acreage into grain. There is now a great demand for farm laborers to replace the many young men who have volunteered for service in the war. The climate is healthful and agreeable, railway facilities excellent, good schools and churches convenient. Write for literature as to reduced railway rates to Supt. of Immigration, Ottawa, Canada or to J. N. Grieve, 1st and Post St., Spokane Wash., Canadian government agent ....

DUROC-JERSEY SWINE

DUROC PIGS, PAIRS AND TRIOS.

I have a choice lot of the best bred weanling pigs, will sell singly or in pairs or trios; not related. Matings will be made with special reference to best results, both in blood lines and conformation.

C. G. SPRONG, Grandview, Wash.

Prolific, Profitable Durocs

Pigs from Champion Sow, bred by Exhibitor of the State of Washington, and other blue-ribbon sows, headed by the great 900-lb. boar, Red Dandy, 159453. Choice boars and gilts for sale from these prize-winning sows.

JNO. B. PETERSON, Montbourne, Wash.

PREMIUM HERD

Spring pigs from champion and first prize sows at Ontario, Ore., and Gem State and Idaho State fairs.

C. H. KIRKPATRICK, Parma, Ida.

U. S. Makes Marvelous Speed Going to War

In Three Months' Time Great Deeds Have Been Written Into the World's History

If there is a tendency on the part of any one to feel that the United States is slow in throwing the strength of its resources effectively into the war, such person should look at the record of his country's accomplishments since congress, at the request of President Wilson, declared that a state of war existed between this country and Germany. It was April 3 that President Wilson asked congress for that declaration. Stupendous deeds have been written into American and world history since that time.

Staggering Finance.

The United States has floated the largest single war bond issue in the history of the world, the famous Liberty loan of $2,000,000,000. This is all the greater accomplishment in view of the fact that the people applied to buy a total of nearly $3,000,000,000 of such bonds, nearly 50 per cent more than the total issue.

This country has loaned to England, France and her other allies a total of more than $1,000,000,000.

She has registered nearly 10,000,000 young men for selection in the formation of the first great American army unit of 500,000, and that without a serious disturbance of any kind.

Great Army Is Ready.

She has built up her trained fighting force of men, including the navy and marines, the machine gun corps, the national guard and the regular army from less than 300,000 to more than 660,000.

She has placed an expedition of her soldiers on French soil under the command of Major General John J. Pershing, a force, though comparatively small, soon ready to join the enemies of Germany in actual warfare on the battle front.

She has selected 50,000 men for special training for officers' service in training and commanding the armies to be formed or now in process of formation.

Navy Rushes Aid.

She placed in European waters a flotilla of anti-submarine craft to assist the allied navies in their war against the undersea depredations. This was done within a bare few weeks after the declaration of the existence of a state of war. So well equipped and manned was this flotilla that its commander, Vice Admiral Sims, was placed in charge of all the allied anti-submarine operations in one great portion of the war zone.

She has taken effective steps to mobilize medical and engineering corps for special service.

She has outlined a plan of ship construction on a gigantic scale, not only of merchant vessels to replace the tonnage destroyed by submarines, but of transports, submarine chasers and destroyers and other forms of craft for particular service in prosecuting the many phases of the war.

An Aerial Army.

She has put into motion a plan for the construction and manning of an enormous fleet of airships, necessitating an appropriation of more than $600,000,000.

She has armed scores of merchant vessels to enable them to drive off attacking submarines. Continued on page three

The photograph shown above at the left is that of Secretary William G. McAdoo of the United States treasury department, prominent figure in this country's war finance. At the right is Colonel George Goethals, Panama canal builder and now in charge of the country's ship building program. In the center is American Vice Admiral Sims, commanding the flotilla of anti-submarine craft in the war zone.

Watch Each Week for The Farmer's Message From the State Council of Defense

Garford MOTOR TRUCKS

This big three and a half ton Garford is economically hauling grain and bales of hay for the Spokane Grain Company.

Garford Trucks Are "Doing Their Bit"

Out on the farms of the great Northwest, Garford Motor Trucks are "doing their bit" for the nation.

Hauling grain, hay, garden truck, fruit, and livestock—working almost ceaselessly—Garfords are helping to a tremendous degree in the fast distribution of the nation's food.

And they are increasing profits for the *farmer* at the same time that they are fighting high food costs for the *consumer*.

They are relieving congestion on railways, by handling hundreds of short freight hauls.

They have increased the efficiency of both the *farm* and the *farmer*.

Intensive farming must be backed by the *intensive transportation* of the farm products.

That's where Garford motor trucks step in.

Working out in the fields—all day—often all night—they are economically, dependably and profitably solving the problems of war time food distribution.

Their economic value has been firmly established for all time.

And they will play an increasingly important part in the future.

You cannot afford to farm without a truck—preferably a Garford motor truck.

Your neighbors by the hundreds are using them. Their problems are similar to *yours*.

Help the country—*and help yourself at the same time*—by putting a Garford motor truck at work on *your farm now*.

Any style body—any capacity from one to six tons.

Raise for Milk

Producers Now Demand 24 Cents

After an all-day session at the Spokane Chamber of Commerce Saturday 200 members of the Inland Empire Dairy Producers' association adopted a resolution demanding a 25 per cent increase in the price paid the farmer for milk, the new scale to take effect July 15.

Regarding milk prices the resolution says:

"Whereas, We can no longer continue to meet the requirements as to proper temperature to insure a low bacterial count at the price of 20 cents a gallon; and

"Whereas, We will prefer to go out of business rather than furnish milk at a lesser standard than we are now supplying;

"Resolved, That we ask 24 cents per gallon from the distributors for 3.6 per cent milk, with one-third of a cent for each one-tenth per cent above 3.6 per cent and the same deduction for milk testing below 3.6 per cent, this increase giving the producer 25 1-3 cents per gallon for 4 per cent milk. This price is asked instead of 26 cents a gallon, which is the actual cost to produce milk this fall if all items of labor and interest on investment are consideration."

"Resolved, That if the distributors in Spokane do not grant us this price, which it is absolutely necessary for us to obtain in order to stop the sale of our cows to the butcher, we will take such steps as are necessary to distribute a pure and wholesome supply of milk produced by our members until such time as the distributors can agree to give us a justified price."

A Red Cross Calf

Louise Winger, daughter of Mr. and Mrs. C. C. Winger of Grandview, Wash., and her registered Jersey heifer calf, "Red Cross Minnie." This calf is to be included in C. C. Winger's dispersal sale July 25, 1917. The proceeds goes to the Red Cross society.

Vrooman Coming

Agricultural Efficiency Is Desire

Announcement has been made that Carl Vrooman, assistant secretary of agriculture, will be in the northwest for a brief time during the week beginning July 23. His mission is the furtherance of the nationwide campaign for agriculturaal efficiency and food production and conservation.

The only official announcement of his northwestern program so far is that he will arrive in Spokane July 23, where three meetings will be held, one a private luncheon at noon, one an afternoon massmeeting for women on household food saving subjects, and the other an evening massmeeting for all.

That morning he will be taken to Coeur d'Alene, Idaho, where he will address a massmeeting.

Strenuous efforts are being made to advertise his coming widely in order that as large a number of persons from all the territory tributary to Spokane and Coeur d'Alene as possible may hear him.

A Word to Fruitgrowers.

Addressing the people of Chelan county, P. S. Darlington, district horticulturist, declares that "beyond caring for the fruit crop our problem becomes one largely of making ourselves self-sustaining."

Every Little Bit Added to Every Body's Little Bit Makes a Mighty Big Bit

By RUTH KARR M'KEE, Member Washington State Council of Defense.

ECONOMY of food will entail expenditure of time and labor, for gain in one direction is compensated by loss in another. But America needs food now; time and labor can both be properly expended in saving it. This may be the one great service that Washington women can give toward winning the war, and this is within the reach of all.

All scraps of bread should be dried, ground and placed in a covered jar to be used as flour substitute in desserts and as potato substitute in hash or croquets.

Every particle of fat should be saved, tried out and used to save butter wherever possible.

If rice or cereals stick to the dish, fill with clear, cold water; when the food is loosened drain, mold and brown or use with meat fragments as above. Even a tablespoonful of cereal is worth the trouble it takes to save it now. There are 20,000,000 homes in America. Twenty million tablespoonfuls of good food daily means a big saving.

Remember that other women are saving, too.

Every little bit added to everybody's little bit makes a mighty big bit.

Use corn flour wherever possible. Cultivate a taste for corn bread instead of wheat bread. Wheat bread can be carried in a soldier's knapsack, corn bread can't. Let's save the wheat for the soldier boys.

A Good Corn Pone.

This recipe for corn pone comes from Mrs. Overton G. Ellis, wife of Chief Justice Ellis. It is simple, economical and delicious:

Take equal parts of corn meal and boiling water, salted. Stir together, being sure that the water is actually boiling. Let the mixture cool until it can be handled. Shape into cakes and bake 40 minutes.

Bake this on wash day or ironing day or some time when you have a fire for other purposes.

Green Apple Sauce.

If you have access to apple trees, take the green apples, peel and core and can the green apple sauce. It is delicious, far superior to apple sauce made from mature apples in the winter time.

To the peelings and cores add water enough to cook well. Drain and make a jelly of the juice. Or add this juice to the fruit for a combination jelly.

Apples that are used for thinning purposes or that are inferior in grade can be used this way. If you have time, Mrs. Farmer's Wife, just remember that there is nothing that will be more appreciated by the soldier boys than apple sauce in cans, jelly or apple butter, which Uncle Sam will not supply. These soldiers are all boys beneath the khaki. Goodies from home, anybody's home, will taste good. Care must be used in the kinds, so that they be suited for shipping. It will be the business of the state council of defense to get authentic information on these subjects and devise ways and means for sending the things that will supplement the government ration. So when you can fruit or vegetables, remember the soldiers. This is to be our way of serving.

We should stap eating lamb and veal, but especially lamb. When an animal has weathered the first year of life it ought to be allowed to go on to maturity, to provide as much food value as possible. With lamb is added the extra wool crop. Wool is high and very necessary to give warm clothing for the men on ships and in the trenches.

These are just a few ideas from a housekeeper who isn't so very much of a housekeeper after all.

Follow Straight Lines, Says Loan Bank

When farm loan associations under the federal act select the districts in which they wish to do business they should follow definite boundary lines and make the description of the district as simple as possible, says President D. G. O'Shea of the northwestern district.

There is no danger of making a district too large under the provisions of the law, unless by so doing it would cross a state line. Districts may lap over each other without violating the requirements of the loan bank. Therefore, it is not advisable that boundaries be made to follow irregular lines like creek bottoms or valleys or hill contours, but they should follow definite, straight lines in all ordinary cases.

To be entitled to a charter an association must have not fewer than 10 members and desire to borrow a total of at least $20,000.

Two new appraisers have been added to the list in order to rush the work of approving loans asked for. The new men are Richard Burke of Moscow, Idaho, and C. N. Mansur of Polson, Mont.

The following new associations have been chartered:

Idaho.

Palouse (Wash.), Latah county (Idaho)	$ 35,600
Carey, Blaine county	31,250

Washington.

Yacolt, Clarke county	27,000
Kennewick (Horse Heaven Assn.), Benton county	26,850
Prosser, Benton county	27,600

Oregon.

Madras, Jefferson county	25,150
Astoria, Clatsop county	50,400

Montana.

Billings, Yellowstone county	118,100
Rithiemay, Musselshell county	49,300
Plevna, Fallon county	48,600
Foster, Big Horn county	42,300

Agriculturist Pro Tem.

Under an agreement reached between the committee on agricultural preparedness, County Superintendent Ackley and the county commissioners at North Yakima, Mr. Ackley has been appointed county agriculturist pro tem. to have active charge of organizing and systematizing the effort to get a maximum production of food crops in Yakima county.

Pickers' Pay to Advance.

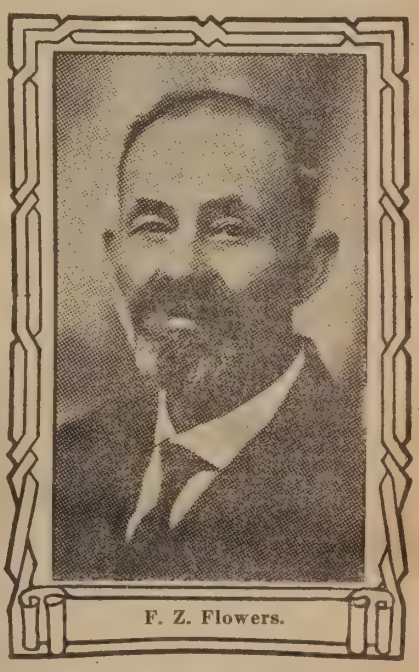
Berry pickers in the Puyallup valley are practically assured a wage increase of 33 1-3 per cent for this season, according to W. H. Paulhamus, manager of the Puyallup and Sumner Fruit Growers' association. The price in former years has been 30 cents a crate for berries. Mr. Paulhamus will recommend to association directors that pickers be paid 40 cents a crate.

U. S. Makes Speed

Great Deeds Done in Short Time

(Continued from page one.)

She has formed a national food commission looking toward the maximum efficiency possible in food production and food conservation.



She has enacted an espionage measure putting into operation a great secret service machine for the detection and punishment of spying by enemies and of unpatriotic acts by American citizens.

She has practically completed a program for regulation of food and industrial materials with a view to the utmost conservation of all things needful in the prosecution of the war to a successful conclusion.

All these things and more have been accomplished within a few days more than three months. Never before, it is safe to say, were the resources of a great nation so quickly mobilized for service in war. And it has been done with a minimum of industrial disturbance. The basic industries are operated comparatively normally, except that each is crowded to its limit for increasing production.

America may have been slow to grasp the necessity for preparedness, but once decision was made it has been carried out with remarkable speed.

Washington Portraits No. 23.

F. Z. Flowers.

F. Z. Flowers of Fairfield made his mark by raising potatoes on the summer fallow. At present he is growing peas instead of potatoes and is very successful with them.

The next in the series of Washington portraits will be that of C. C. Brown of Castlerock and will be given in next week's issue of The Washington Farmer.

Cattle Census of State.

The state of Washington is going to take a census of all its cattle. It will also include the owners of the cattle and the amount of milk, butter, butter fat and other dairy products these cattle are capable of produoing. Dr. R. J. Donohue, assistant commissioner of agriculture, who announced the department's plans to take the census, said it would help in keeping a closer check on shipments of cattle and in preventing the spread of disaese.

Others Have Learned.

Bee-Nugget, Chehalis: The great problem for the American people to learn now is thrift and economy, the kind that has long ago been learned in older countries.

Farmers Are Urged to Stop Big Waste

Fertilizers From Barns and Feed Lots Would Pay Half Liberty Loan

Every year the farmers and stockmen of this country waste natural fertilizer valued at more than one billion dollars, says Carl Vrooman, assistant secretary of the United States department of agriculture, who is conducting a nation wide campaign in the interst of agricultural efficiency.

This means a loss of more than the value of the entire wheat ccrop that is being produced this year. It means half of the Liberty loan recently subscribed, the most gigantic war loan in the history of the United States. It means 10 times the amount of money raised two weeks ago in the nation wide Red Cross campaign when the people of this country responded to the call of humanity with more than $100,000,000.

Greatest Single Waste.

Says Assistant Secretary Vrooman: "Without making any comparisons, and subject to corrections if it can be shown that the facts are otherwise, I dare aver that our billion dollar manure waste is the world's greatest single economic leak—the prize waste of the champion wasters. This great war has brought home to us Americans, as it has never been emphasized before, the fact that we are the world's champion wasters."

The figures quoted by Mr. Vrooman are those arrived at through seemingly accurate calculation, the values being based on the cost of commercial fertilizers, and on the preventable losses from the stables and feeding lots of the farms of the country.

Not only are these losses unpardonable under normal conditions, he argues, but they are especially so at this period when increased production of agricultural crops is so essential, and when commercial fertilizers are scarce and in some cases almost unobtainable.

The department of agriculture is laying nation wide stress on the urgent need of utilizing every possible element for building up the soil and replenishing its lost fertility for next year's crops, but Mr. Vrooman is looking still further ahead in his campaign.

"It is work that will pay tremendous dividends, not only as a war measure, but conceivably for all time," he says, urging the necessity of developing the habit of soil conservation in this country as the peoples of other nations have been compelled to do through sheer necessity.

World Faces Famine.

"The solemn duty of saving the world from famine devolves directly upon us," says Mr. Vrooman, emphasizing the vital need for conservation of every element that will tend to increase production. "It is a job for the American farmer worthy of his utmost effort in keeping with the spirit of America in this critical hour."

The department of agriculture calculates that each horse or mule produces annually $27 worth of manure (as compared with commercial fertilizers); each head of cattle $20 worth; each hog $8 worth. Calculating from the 1910 census figures for number of animals on farms—62,000,000 cattle, 24,000,000 horses and mules, 58,000,000 swine and 54,500,000 sheep and goats—the total value of manure produced is found to be about $2,461,000,000.

"Recent investigations by the department of agriculture indicate that at least half of this great wealth of fertilizing material is sheer waste," says Mr. Vrooman. "In some good general farming sections not more than 15 per cent of the manure produced is used. Even in the most intensive dairy regions, where cows are largely stall fed and comparatively great care taken with the manure, the loss seems to be approximately 25 per cent.

"The cheapest and best way to handle manure, where convenient, is to haul it to the field and spread it daily, or at least every two or three days. In this way, if plenty of bedding be used, practically all the valuable constituents are saved. In this way, too, loss through heating, or "firefanging," is avoided.

"Many farmers, however, are not so situated as to make it profitable for them to handle manure in this way. For such farmers the concrete pit offers a solution. Such a pit need not entail great expense. A pit three feet deep, 12 feet long and 6 feet wide, with walls and floors five inches thick, will serve the needs of the average farm.

"Another good way to save manure, especially in the case of hogs or of beef cattle, is to have a floored feed lot, preferably under a shed roof. Where the farmer can not afford a paved floor, a cheap open feeding shed may be made to serve the purpose very well, if abundant bedding is used to absorb the valuable liquid manure."

Finds No Easy Way

By PAUL E. TRIEM.

C. Sorensen of Wahkiakum county, considers himself a real "old timer" on the Coast. Mr. Sorensen has been in his present location 42 years and has been farming or preparing to farm most of that time.

"Down in our part of the state you don't just stick a plow into the ground and start to break the sod," says Mr. Sorensen. "First, you've got to clear away the big trees, and that is no child's play. No, char-pitting does not amount to much with us. The stumps are too big—I've taken them out where the cavity left by stumps and roots measured 50 feet across. There isn't any easy way to do it."

Mr. Sorensen is a dairy farmers and reports a remarkable development of dairying in his locality. He does not consider Wahkiaum county a silo country, and says that the majority of his neighbors depend on roots, clover hay and oats.

"Oats and peas are said to make good silage," he comments, "but when it comes to corn we can't count on maturing it sufficiently for good silage. It's only the exceptional year when we can secure the right kind of a corn crop."

Favors Food Control.

At a recent meeting of Finley Grange No. 414, at Finley, Wash., a resolution was passed in favor of congress taking definite and immediate action in the control of prices and distribution of food stuffs.

Canning the Earlier Vegetables

No Garden Crop Should Be Allowed to Pass Uncanned

This is the third article in The Farmer's series on food preservation. For the benefit of those who have overlooked the first articles, a brief repetition of the principles of canning and the main features of the methods used is given. Recipes from recognized authorities are given for canning some of the earlier vegetables, and other recipes will be given from time to time as the season progresses. Also, the subject of drying vegetables and fruits will be treated in the course of the series.

The principles underlying successful canning can not be repeated too often. The vegetable or fruit must be perfectly sterilized and perfectly sealed. This is the two-fold principle of canning. Sterilization means the destruction of all bacteria or germs in the jar, in the fruit or vegetable, or in the water or juice used in canning.

The application of heat is the recognized method of destroying these bacteria or germs, and the most practical way of applying it, as previously outlined, is by prolonged boiling or steaming in the jars. In the average farm home the practical outfit consists of a wash boiler or other container having a well-fitting cover, and a false bottom made of wire netting or strips of wood to keep the jars from standing flat on the bottom. Commercial outfits are also in use successfully, especially the steam pressure outfit, by which the temperature may be greatly increased over boiling temperature.

The method most common, and satisfactory, is what is known as the one-process method. The vegetable or fruit is prepared and packed into the jars cold and only partially cooked if not entirely uncooked. The jars are placed in the cooking outfit, in which water (warm but not hot) is deep enough to cover the lower two-thirds of the jars. The tops should be on loosely. The heat should be applied to bring the water to the boiling point, at which it should be held for one period, the time depending on the vegetable or fruit being canned. These periods will be indicated in the different recipes given hereafter. The co-called intermittent method requires at least one repetition of the one-process method.

The Steam Pressure Outfit.

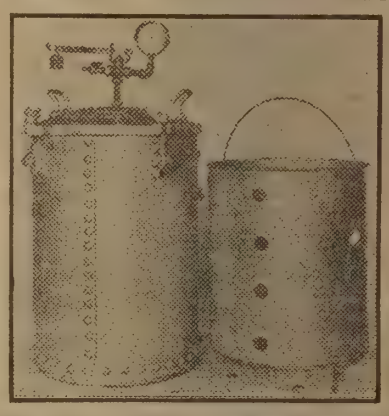
The principle involved in canning with a steam pressure outfit is not different from that of the common wash boiler devices. The pressure outfit, illustrated by the accompanying sketch, has a top securely bolted on, a steam gauge and a safety valve to prevent possible explosion. The jars are placed inside the same as in the home-made outfit, but when subjected to the pressure a temperature much higher than the boiling point may be maintained, and thereby the time required for sterilization may be reduced.

Definition of Terms.

The following definitions of terms used in canning recipes was given last week, but are repeated to make the recipes given herewith perfectly clear:

Scald—Plunging of fruit or vegetable in boiling water for a few seconds.

Blanch—Placing of fruit or vegetable in boiling water for a few minutes.



Cold Dip—Plunging the fruit or vegetable directly from the scalding or blanching water into cold water.

Sterilize—Subjecting the fruit or vegetable to high temperature by boiling or steam pressure method after having been packed cold into the jars.

Recipes for a Few Vegetables.

The following recipes are prepared from the advices of recognized authorities on canning. They are for the common canner, not under pressure.

Greens—Blanch 15 to 20 minutes. Cold dip after draining in the blanching vessel. Pack well into jars. Add one teaspoonful of salt to a quart of greens. Fill jars with liquid in which greens were blanched. Adjust the tops loosely, being sure rubbers are new and well fitted. Place jars in canner. Bring to a boil. Boil for 90 to 120 minutes, the latter to be positive the sterilization is complete. Remove from canner. Seal perfectly. Wrap with cloth or paper to prevent breakage by too rapid cooling. Store away where contents will be shielded from bright light.

The above shows a steam pressure canning outfit as used by many persons successfully in place of common kitchen boiler outfit.

Beans—Blanch five to eight minutes. Cold dip. Pack tightly in jars. Fill jars with liquid from blanching vessel. Add one teaspoon salt to each quart of beans. Adjust tops loosely. Place in canner and boil for two hours. Remove. Seal perfectly. Wrap in cloth or paper to prevent breakage from cooling. Store where contents will be shielded from bright light.

Beets—Beets may be kept without preserving, but if canning is desired, the following recipe is practicable: Use only small, young beets. Blanch five or six minutes without removing the roots and with an inch of the top still unremoved. Cold dip. Remove roots, tops and skins. Pack in jars. Fill jars with hot water. Add a teaspoon salt to each quart of beets. Adjust tops loosely. Place in canner. Sterilize for two hours. Remove. Seal perfectly. Wrap with paper or cloth to prevent breakage in cooling. Store where shielded from bright light.

Peas—Follow the same directions as for beans, given above.

Pioneer Ginseng Man Dies.

The death is reported from Anacortes of Andrew J. Anderson, who planted the first crop of ginseng ever raised in Skagit county some 10 years ago. The Anacortes ginseng gardens consist of two and one-fourth acres under cover.

Is It a Patron Saint or an Octopus?

The "big condensery" is one of the features in Skagit county. By its friends it is described as the patron saint of the community, while its enemies call it an octopus, a malignant trust.

Urges Less Wheat Be Cut for Hay

By E. E. ELLIOTT

The great staple article of human food among our people is wheat. We may utilize certain substitutes, but the real method of substitution, especially here in the west, is to absolutely conserve the wheat supply by using the other cereals for animal maintenance. Perhaps the old practice will still be retained and thousands of tons of wheat hay will be cut for feed which should be allowed to mature its grain for the sack. I confess that after nearly 20 years of familiarity I can not become accustomed to the use of wheat in any form as a stock food, not even for chickens, and under present conditions it appeals to me as an economic waste. In the rendition of the great national chorus it is time for the live stock producers to begin to sing fortissimo.

Councils of Defense

To Be Organized in Each County

National and state councils of defense are now well organized, and the next important step is county organization. State councils of defense cooperate with the national council, and county councils cooperate with the state council.

The state council has named the following citizens to organize the county councils in Washington:

Spokane county—N. W. Durham, Spokane.
Whatcom county—F. F. Handchey, Bellingham.
Skagit—M. J. Molstad, Mt. Vernon.
Snohomish—W. Howarth, Everett.
King—Harold Preston, Seattle.
Pierce—J. L. Carman, Tacoma.
Thurston—C. J. Lord, Olympia.
Lewis—N. B. Coffman, Chehalis.
Cowlitz—Stewart, Kelso.
Clarke—Adams, a banker, of Vancouver.
Skamania—Christiansen, a banker, of Stevenson.
Wahkiakum—Girard, no postoffice.
Pacific—L. L. Darling, South Bend.
Grays Harbor—W. H. Abel, Aberdeen.
Mason—Mark Reed, Shelton.
Island—J. M. Wanamaker, Coupville.
San Juan—Robert Morna, East Sound.
Jefferson—Clarence Wanamaker, Port Townsend.
Clallam—Tom Trumbull, Port Angeles.
Whitman—Charles L. MacKenzie, Colfax.
Grant—Davis, Ephrata.
Franklin—V. H. Cox, Pasco.
Walla Walla—A. J. Gillis, Walla Walla.
Columbia—H. H. Hadley, Dayton.
Asotin—Elmer E. Halsey, Clarkston.
Yakima—W. W. Robertson, North Yakima.
Benton—No selection.
Kittitas—J. C. Hubbell, Ellensburg.
Klickitat—C. F. Brooks.
Garfield—E. V. Kuykendall, Pomeroy.
Adams—D. C. Scott.
Lincoln—E. L. Farnsworth, Wilbur.
Pend Oreille—Fred Wolff, Newport.
Stevens—G. W. Peddycord.
Ferry—A. L. Bradley.
Okanogan—Clay Foote.
Chelan—John A. Gellatly, Wenatchee.
Douglas—E. W. Fawley, Waterville.

The first official act of Director Suzzallo was to send notice to all of the men to organize the county council. These councils are to have heads of food supply, labor, industrial and farming, manufacturing, ship building, lumber, transportation, home defense, women's work, medicine, morals, finance, legal, sanitation, and publicity if practical. The councils are to be flexible and number from 10 to 15 members and handle the special activities of the county.

These councils are to coordinate the county activities and to have them work in harmony with the state council, or, as the instructions read: "These auxiliaries should be made the centers of patriotic feeling, national loyalty and war service. It is a method by which every loyal citizen who does not go to the battle front may enlist for service in this great war for the safety of democracy."

The county councils are advised to look to the prosecuting attorneys for advice and the sheriffs for the local preservation of law and order.

It is proposed to take a census of the home guard organizations of the state as soon as possible. On this subject the bulletin of the council reads:

"The organization and control of home guards should be directed by the county councils of patriotic service under the special supervision of the member in charge of home defense. The home guards have no legal status and can only be used as a voluntary organization from which a large body of deputy sheriffs may be recruited. Be sure that all men suggested to the sheriff are persons worthy to be sworn as deputy sheriffs and are responsible representatives of every patriotic class of citizens in the community. Other local peace officers should cooperate with the sheriff, who should be the responsible officer to whom the county council should look for the enforcement of law."

Letters to Soldiers

How to Address Mail for Army

According to the instructions of the post office department, the correct manner of addressing such letters would be as follows:

Return to
Mrs. John Smith,
Blank Street,
New York City.

JOHN SMITH, JR.,
Co. X ——— Infantry,
American Expeditionary Forces.

Under no circumstances should the sender of mail matter to a member of the expeditionary forces attempt to designate on the addressed envelope the location of the unit.

Postmasters have been informed that letters, post cards, and printed matter originating in the United States or any of its possessions for transmission to the United States expeditionary forces in Europe are subject to the United States domestic classification, conditions, and rates of postage.

Postmasters are directed to forward all matter addressed "American Expeditionary Forces" to New York.

Money in Poultry

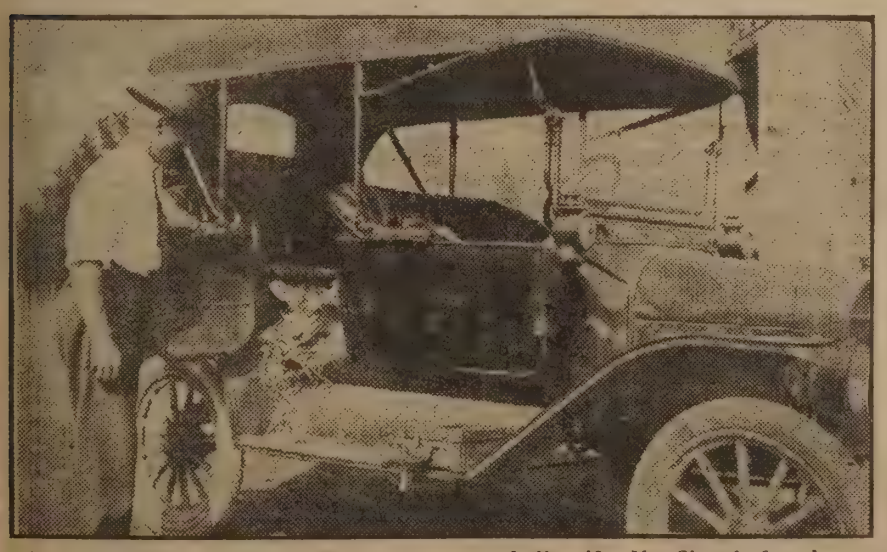
Mt. Vernon Man Shows His Faith

H. L. Willis, a poultryman, of Mount Vernon, is building a new laying house, 450x24 feet in size. At a time when many poultrymen are complaining that there is no money in the business, this is suggestive. The fact is that Mr. Willis does not view the situation in quite the same light as the kickers.

"Of course, I believe there is money to be made in the poultry business," he comments, "or I wouldn't be adding to my plant. I don't believe there is a living profit in poultry at the present time for the man who conducts his operations on a small scale—the margin between production costs and selling prices is too narrow. But if you understand the business, and if you keep track in a practical way of all the details, I know that there is money in chickens."

To illustrate just what he means by keeping track of details in a practical way the Mount Vernon man tells something about his present feeding methods.

"Corn is my cheapest grain food," he says. "Of course, I bought well—paid $37 a ton, in carload lots last fall. I couldn't have bought to anywhere near as good advantage, by the way, if I had had only a hundred or so hens. But corn, even when it can be obtained at bargain prices, is a food rich in heating and energy value—in carbohydrates. That means that if you use corn as your principle grain food you must find some way of balancing the ration. I do this by feeding a high protein mash and lots of curded buttermilk—I am using 16 cans a day of the latter.



"Do I do my own incubating? No—I can't afford to. There are many distinct branches to the poultry business—building up a high laying strain of breeders is one; hatching is another—is a business in itself; raising the newly hatched chick to maturity is a third; and handling the layers, the branch of the business to which I confine myself, is separate and distinct from all the rest. I don't know how to handle a breeding flock, or how to run an incubator, or how to care for a young chick. I can't afford to do these things, when I can buy from men who have mastered these branches of the business all the three-months-old pullets I need. I don't pretend to understand any part of the poultry business except producing eggs from matured layers."

Mr. Willis has been in the poultry business six or seven years. His original plant consists of three wings, each 160x16 feet, joined at their "hub" by a granary 20x60 feet. The three wings of this plant have been built a year or two apart, as the business expanded. There is also a silo and cow barn on the place, but Mr. Willis has practically gone out of the dairy business—not necessarily because there is no money in it, but because the need of specialization has forced him to choose between cows and chickens.

Part of H. L. Willis' poultry plant just outside of Mount Vernon. There is a third wing at the right like the two extending toward the front. Each wing is 160x16 feet.

Purebred Calf Delivered in an Automobile

One way that a county agriculturist may make himself useful to the farmers of his district was demonstrated recently by County Agent M. S. Shrock of Yamhill county, Oregon. A Yamhill county farmer wanted a purebred Jersey bull calf. Mr. Shrock found one across the mountains in Tillamook county, 70 miles away. He loaded the little aristocrat into the back part of his five-passenger auto and gave him a ride across the mountains to his new home.

Car of Cherries Brings $4300.

The Spokane Fruit Growers' company has received returns from a carload of Bing and Royal Ann cherries shipped to Chicago from the Kennewick district and sold at auction. The Bings brought about 20 cents a pound and the Royal Anns better than 15 cents, the carload bringing $4300.

I. W. W. Principles

Some of Their Admitted Methods

A committee of the state council of defense, holding hearings in the Yakima valley, where I. W. W. strikers are menacing various agricultural industries, questioned six members of that organization regarding their principles and methods.

The committee had I. W. W. publications before it, and asked the witnesses if these were the doctrines of the I. W. W., to which they invariably responded in the affirmative. Some of these declarations are:

> We are not satisfied with a fair day's wage for a fair day's work. Such a thing is impossible. Labor produces all wealth. Labor is, therefore, entitled to all wealth. We are going to do away with capitalism by taking possession of the land and the machinery of production. We do not intend to buy them, either. The capitalist class took them because it has the power to control the muscle and brain of the working industry. Organized, we, the working class, will have the power. With that power we will take back that which has been stolen from us. We will demand more and more wages from our employers. We will demand shorter and shorter hours. If we gain these demands we are diminishing the profits of the boss. We are taking away his power. We are gaining that power ourselves. All the time we become more disciplined. We become self-reliant. We realize that without our labor power no wealth can be produced. We fold our arms, the mills close, industry is at a standstill. We then make our proposition to our former masters.
>
> It is this: We, the workers, have labored long enough to support idlers. From now on he who does not toil, neither shall he eat. (From page 14, the Revolutionary I. W. W.)
>
> On page 24 of "The I. W. W.: Its History, Structure and Methods" is the statement: "The future belongs to the I. W. W. The day of the skilled worker is past."
>
> From page 10 of the same publication was taken the following statement:
>
> "There is but one bargain that the I. W. W. will make with the employing classes—complete surrender of all control of industries to organized workers."
>
> Other extracts from the same publication submitted to the defense council were:
>
> "The tactics used are determined by the power of organization to make good in their use. The question of right and wrong does not concern us. No terms made with an employer are final. All peace, so long as the wage system lasts, is but an armed truce."
>
> "No part of the organization is allowed to enter into time contracts with the employers."
>
> "The I. W. W. maintains that nothing will be conceded by the employers except what we have power to take and hold by the strength of our organization. Therefore, we seek no agreements with the employer. Failing to force concessions from the employers by strike, work will be resumed and sabotage used to force the employers to cede the demands of the workers."
>
> "We are looking forward to the time when the organized proletariat will meet in union the world over and decide how long they will work and how much of the wealth they produce they will give to the boss."

So capital is to be annihilated, intelligent directing service is to be destroyed, skilled labor is to be cast out and the earth and all industry turned over to drifting, unskilled elements who would work six hours daily or less, if they worked at all, and go on vacation a large part of the year.

Every I. W. W. agitator who is intimidating a willing worker should be dealt with by the law.

Every I. W. W. agitator who is counseling violence is engaged in a conspiracy against the public peace.

Others are defying the sedition and espionage laws of the U. S. government.

The right course lies plain before the people of the Pacific northwest. Every sheriff should do his duty. He has ample and unquestioned authority and power to swear in large bodies of citizens as special deputies.

The governor has authority, and it will be his duty if the sheriffs can not deal with the situation, to call on the U. S. government for troops.

United States marshals, U. S. district attorneys and U. S. courts can enforce the laws of the United States.

The law is on the side of order, industry and protection of individual rights. Assist the law. We hope no community will make the grave mistake of combatting lawlessness with lawlessness.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Idle Men Should Go Hungry

No more pressing and important problem confronts the state of Washington and the state council of defense than the labor problem. It is of extreme importance that the crops be harvested without loss; that production go forward in the lumber camps, and that the fisheries and coal mining be kept free from the intimidating influences of lawless and defiant men who are lacking in patriotism and have no proper conception of the rights of American citizens.

If the I. W. W. agitators want to idle away their time in a crisis that is quickening the heart beats of every true citizen of the United States, no appeal to duty, decency and patriotism can reach them. But they should be made to understand that they can not safely defy the law. The flag stands for protection for industrious and patriotic men who want to work, and the power and authority of the state and national governments must protect them in their rights.

One effective means of dealing with idlers is at the command of the general public. Work awaits every able-bodied man who wants it. Able-bodied men who will not work should be made to go hungry. Housewives should deny them handouts at the kitchen door. Vagrancy should be viewed with cold suspicion, though discriminating care should be taken not to deny relief to any worthy applicant.

A patient and indulgent public has long been tolerant with the I. W. W. element. There have been periods when employment was scarce and sympathy was properly extended to the wandering element. But those conditions have vanished. The nation is at war and work goes begging. The agitators should find that they can not safely trifle with the present-hour serious purposes of the people of the Pacific northwest.

Raise More Poultry, Official Says

State Commissioner of Agriculture Benson imparts good counsel when he urges the people of Washington to raise poultry as quickly as possible. He well says that the general raising of chickens will do much to relieve the danger of food shortage, and points out that chickens can be turned into meat inside of three months and can be fed on much material that is now waste.

The end to be sought is a widespread extension of the poultry industry on a small individual basis of production rather than on an extensive commercial scale. A few chickens can be fed with wholesome refuse from any kitchen and table and the feed costs be reduced to the minimum, as against high feed costs, where one engages in the industry on an extensive scale.

The same is true of keeping a family cow or growing a pig for the family larder.

There is no question about these facts. Throughout the United States are millions of men and women of middle age who owe their rugged strength to the fact that their parents were enabled by these aids to give them an abundance of nourishing food, though possessed of very limited incomes.

Money to Make the Farm "Mare" Go

The Farmer has received this pointed comment from one of its readers concerning the matter of financing farm operation:

> "We can not produce lamb, pig, calf or colt without the 'mare.' Thousands to push the Liberty loan, but too few to push the plow. There are plenty to push private loan interests, but nobody to hitch the best security to forty years future."

In other words, in the view of this correspondent, it requires money to conduct the farming industry successfully, and money lenders are backward about placing their capital out on farm land security at low rates of interest.

He is right. It does take money to make the mare go, and capital has not made all the concessions that it should have to this basic of all industries, farming.

For this reason the United States government some time ago began the gigantic task of establishing a federal farm loan system. That system is gradually becoming operative. The organization and machinery necessary to be perfected before loans could be made are virtually complete. Small totals of actual money have been put into the hands of the farmers, not at 8 per cent interest, as has all too generally been the case in loans by private individuals or concerns on farm security, but at five per cent interest. The mortgages taken by the federal farm loan bank as security for the loans do not expire in 90 days or a year or three years, but in 10, 20 or even 40 years, according to the desire of the borrower. The lender (in this case the government) is not calculating to make a profit on the loan, but to meet only the actual cost of making the loans. If the borrower pays his interest and a small fraction of the principal with each interest payment, he needs never fear foreclosure. And best of all, when the mortgage actually becomes due, it isn't due at all, but has all been paid. To illustrate:

A farmer may secure a loan of $1000 on the 20-year basis. Each year for twenty years he will be required to pay $80.24. This, for the first year, includes $50 interest (on $1000 at 5%) and $30.24 reduction on the principal. Each year a smaller portion of the $80.24 covers the interest and a correspondingly larger portion the principal reduction. At the end of the 20 years he will have paid out a total of $1604.89, and his debt will be wiped out completely. If, however, he had borrowed the money from private lenders at 8 per cent interest, had the mortgage renewed from time to time, to run the entire 20 years, he would have paid out $1600 in interest and would have to pay the principal of $1000 on top of it.

The federal farm loan bank has not jumped into existence in a day, and it has not been able to organize and go to making loans without some time. But it is daily increasing its effectiveness and the field of its operation. In the four northwestern states it now has on hand applications for more than $20,000,000 in loans. It has a few hundred thousand dollars actually distributed among the farmers who are taking out loans. It has approved the loans sought to a total exceeding $2,000,000. And it is working hard to meet the demands being made upon it.

Uncle Sam, the United States of America, is "hitching the best security to forty years future." Uncle Sam is "pushing the plow." He is undertaking the stupendous task of providing the money to make the farm "mare" go, and he is succeeding.

Boys and Girls and the Red Cross

The boys and girls are doing their bit for the work of the Red Cross in relieving suffering and preventing loss of life from injuries on the battlefields of Europe. Pennies and nickels are being contributed, and, though they seem small, they increase the total enough to carry aid to many wounded men. A thousand pennies makes $10.

One way the country boys and girls are helping in some localities is by giving the proceeds from a garden patch, the sale of a pig or a calf or the sale of eggs from poultry grown and cared for.

Such contributions are a real aid to the great humanitarian work of the Red Cross, but they are of still greater value to the boy or the girl who makes them, for they stimulate a healthful sympathy and a willingness to make sacrifice for others. They tend to eliminate selfishness, the great destructive thing in the character of so many.

Washington Gleanings

A total of 85.2 per cent of Lewis county's total, 1917 tax levy, was paid before June 1.

With seasonable weather from now on prospects for a big wheat crop in the Spokane territory will be excellent.

County Agricultural Agent C. H. Bergstrom of Thurston county has issued a statement regarding the keeping of farm accounts.

The attendance at the 29th annual session of the state grange held in Wenatchee recently was the largest in the history of the organization.

Professor Lynn S. Keyes, science teacher in the Kelso high school the past year, has been appointed county agricultural agent of Cowlitz county.

The final transfer of the Hanson telephone line to the possession of the West Crescent Farmers' Cooperative Telephone company, has been made.

At the annual meeting of stockholders of the Cooperative Creamery, Chehalis, a 6 per cent dividend was declared. The concern bought during the year 154,092 pounds of butter fat, paying the farmers $53,030.86. The sale of butter for the year amounted to $65,036.36. Total sales were $68,588.81.

Harry F. Giles, deputy to Secretary of State I. M. Howell and commissioner of the state bureau of statistics and immigration, has been in Cashmere securing data on resources and possibilities for manufacturing. This is to be compiled into literature, for state exploitation, which will be sent out to attract eastern capital.

An auxiliary of the Washington State Harvesters' league has been organized for active cooperative service in Burlington. The primary object of the local league is to secure as many volunteer harvest workers as possible to provide against a shortage of labor in the fruit orchards, hop fields, and grain fields this season.

Farm loan associations to the number of 14 have been formed in Snohomish county, the latest to organize being at Trafton. This association starts with 15 members who call for $35,000. The entire 14 are asking for $800,000. In this section of the country where logged-off lands are the great problem, there was some disapproval of the law in that it required a farmer to have his farm paid for and then would loan only 50 per cent of the estimated value.

What Others Say

Keep your eye on a sheep, and if possible, get your hands on a few.—The Farmers' Review.

The last sacrifice a warring nation should make would be its breeding stock.—Breeders' Gazette.

There wouldn't be any labor shortage if the supply of labor were as great as the supply of theories on the subject.—National Stockman and Farmer.

Five per cent of the eggs in cold storage spoil because of careless handling, and 5 per cent is even better than the Liberty bonds draw.—California Cultivator.

Be selfish enough to save, and later on you can afford to be unselfish enough to serve. A man is not worth much to himself if he can not save a part of what he earns, and he will never be worth much to any one else unless he has some money saved.—Utah Farmer.

Will Regulate Exports

Government Takes Complete Control

On and after July 15 no staple product shall be exported from the United States without direct and specific consent from the government. This was officially announced by President Wilson in a proclamation just issued, following out the provisions of the recently enacted law empowering the president to regulate exportation. Under the president's proclamation the following articles can not longer be shipped out of this country without authority having first been secured from the secretary of commerce:

Coal, coke, fuel oils, kerosene and gasoline, including bunkers; food grains, flour and meal therefrom, fodder and feeds, meats and fats; pig iron, steel billets, ship plates and structural shapes, scrap iron and scrap steel; ferro manganese; fertilizers: arms, ammunition and explosives.

In his proclamation the president explains the purposes of the regulations in the following language:

"In controlling by license the export of certain indispensable commodities from the United States the government has first and chiefly in view the amelioration of the food conditions which have arisen, or are likely to arise, in our own country before new crops are harvested. Not only is the conservation of our prime food and fodder supplies a matter which vitally concerns our own people, but the retention of an adequate supply of raw materials is essential to our program of military and naval construction and the continuance of our necessary domestic activities. We shall, therefore, similarly safeguard all our fundamental supplies.

"It is obviously the duty of the United States in liberating any surplus products over and above our own domestic needs, to consider first the necessities of all the nations engaged in war against the central empires. As to neutral nations, however, we also recognize our duty. The government does not wish to hamper them. On the contrary, it wishes, and intends, by all fair and equitable means to cooperate with them in their difficult task of adding from our available surpluses to their own domestic supply and of meeting their pressing necessities or deficits. In considering the deficits of food supplies, the government means only to fulfil its obvious obligation to assure itself that neutrals are husbanding their own resources, and that our supplies will not become available, either directly or indirectly, to feed the enemy."

China Is In Toils.

With the advantage swinging back and forth between the advocates of a republican form of government and the old monarchical form, China has been for several months in the toils of revolution. For several years a so-called republican form of government has been in force, but a vigorous and nearly successful movement has been under way to restore the old Manchu dynasty to the throne. At the present time the friends of the republican government appear to have the advantage, with the probabilities growing that popular government will yet prove winner in the Chinese empire.

More for Ship Building.

A movement is on foot in congress for the appropriation of a second half billion dollars for the ship building program of this country. It is stated that the first $500,000,000 appropriation is well nigh exhausted, and that the additional appropriation is needed to complete the construction under way and to add additional tonnage needed.

Russians Are Reviving.

Significant in the conduct of the war is the return to activity of the Russian forces along the southeastern front of the conflict. Vigorous fighting has been reported, with the Russians gaining ground against the German forces. The attack is being centered along a 30-mile front before the city of Lemberg, the capital of Galicia, which the Germans are strenuously defending.

To Make Draft Selections.

Announcement has been made by the government war department that all men registered under the selective conscription law June 5 must hold themselves in readiness to appear on short notice before examination boards if their names are called in the first 500,000 to be drawn very soon. There are local boards for the purpose of examining the men for physical fitness. If they pass this examination and wish to ask exemption, they will be given 10 days to file proof of their right to exemption. The machinery for making the selections is said to be well constructed and organized, and no difficulty is anticipated in securing the first army unit and have it ready for training by early fall.

Is Submarine Failing?

The official report issued July 4 of the sinkings of merchant ships for the week that had just ended seemed to indicate a falling off in the damage being wrought by the undersea craft. The report showed that 2740 merchant ships had entered British ports during the week, and that 2846 had sailed from them. The submarine report reads:

British merchant ships sunk by mine or submarine over 1600 tons, 15; under 1600 tons, five.

British merchant ships unsuccessfully attacked, 16. British fishing vessels sunk, 11.

Federal Farm Loans.

An offocial statement from the federal farm loan bank board at Washington, D. C., says that the 12 district farm loan banks have applications before them asking for a total of nearly $100,000,000 in loans. So far, in the entire country, some 250 local loan associations have been chartered, the members of which are asking for nearly $12,000,000 in loans. These loans are being made on first mortgages against the farms. According to the report from Washington, D. C., the amounts of the loans approved by the northwestern district board at Spokane totaled on July 1, $1,912,535, distributed as follows: Washington, $720,135; Oregon, $330,750; Montana, $496,540; and Idaho, $365,200. The loans are being actually made under these approvals as rapidly as the detail of the business can be carried out. The determination of the bank board to see that titles to the land mortgaged is absolutely sound causes delay in many cases where the titles are involved.

League to Enforce Peace

Evidence That Farmers Are in Hearty Sympathy

Evidence that the farmers as a class are in hearty sympathy with the League to Enforce Peace has accumulated impressively since the United States entered the war, says the League Bulletin. Since April 6 the league has laid its plan, and its proposition that the fulfilment of such a plan is the fundamental purpose of the war, before leading agriculturists in every state of the Union. Forty of these men already have expressed their approval and offered their services. Not one has disagreed or protested.

Cooperation has come to the league from no less than 20 heads of agricultural colleges, from 11 state commissioners of agriculture or secretaries of state agricultural boards, from masters of state granges, directors of state experiment stations and others in close touch with the agricultural activities of the country.

The league regards these expressions as unusually significant because they go further than mere approval. They tell of definite work done or planned to help spread the principles of this organization in the rural community. For example, Charles E. Patton, secretary of agriculture of the state of Pennsylvania, has distributed the league's literature among the 1100 employes of his department. C. N. McIlvaine, secretary of the State Fair and Exposition of South Dakota, is putting folders printed by the league in every one of the 15,000 premium lists mailed this month to the farmers of his state.

The league attributes this enthusiasm for its work to the fact that the agricultural leaders have been quick to see its definite and immediate value in stimulating the patriotism of the country. This the league is doing by keeping before the American people the fundamental fact that the war is a war of liberty, to free the world from the menace of autocracy and militarism, and to establish a lasting world peace.

President Wilson has placed this ideal before the world as America's purpose in the war; and the league considers that it can not be too often repeated:

Proclamation to People
April 15, 1917.

We are fighting for what we believe and wish to be the rights of mankind and for the future peace and security of the world.

Statement to Press,
April 6, 1917.

The hope of the world is that when the European war is over arrangements will have been made composing many of the questions which have hitherto seemed to require the arming of the nations, and that in some ordered and just way the peace of the world may be maintained by such cooperation of force among the great nations as may be necessary to maintain peace and freedom throughout the world.

Message to Congress,
April 2, 1917.

We shall fight for the things which we have always carried nearest our hearts—for democracy, for the right of those who submit to authority to have a voice in their own government, for the rights and liberties of small nations, for a universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free.

Address to Senate,
January 22, 1917.

In every discussion of the peace that must end this war it is taken for granted that that peace must be followed by some definite concert of power which will make it virtually impsible that any such catastrophe should ever overwhelm us again. Every lover of mankind, every sane and thoughtful man, must take that for granted.

Address to Senate,
January 22, 1917.

It is right that . . . this government should frankly formulate the conditions upon which it would feel justified in asking our people to approve its formal and solemn adherence to a league for peace. . . . If the peace presently to be made is to endure, it must be a peace made secure by the organized major force of mankind.

Address to Senate
January 22, 1917.

There is no entangling alliance in a concert of power. When all unite to act in the same sense and wth the same purpose, all act in the common interest and are free to live their own lives under a common protection.

Message to Congress
April 2, 1917.

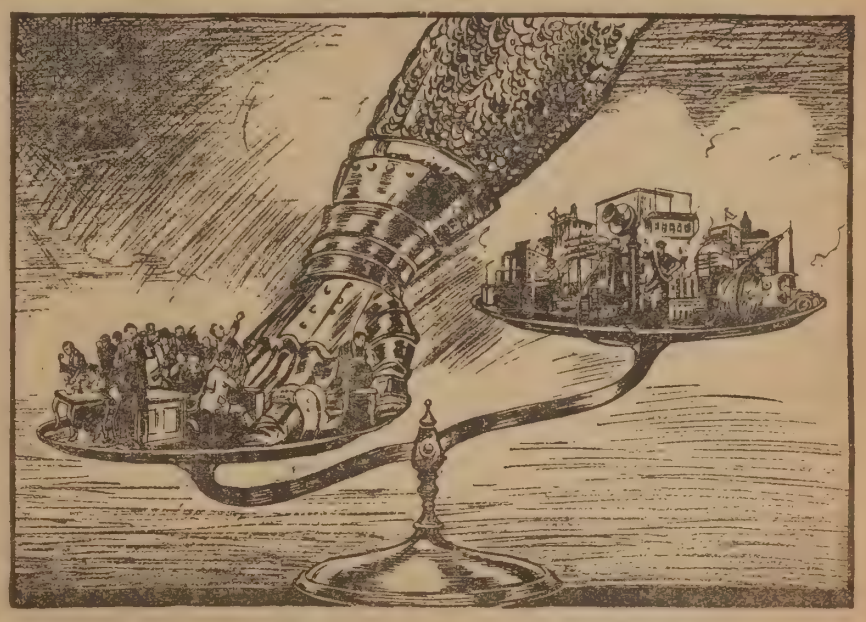
A steadfast concert for peace can never be maintaned except by a partnership of democratic nations . . . . a league of honor.

The above in substance, is the program formulated and adopted by the League to Enforce Peace, at Independence hall, Philadelphia, June 17, 1915.

New Engineering Project.

A new project of American engineers is a giant canal 250 miles long to connect the Arctic ocean with the Baltic sea, extending from Kandalaska on the White sea to Tornea, near the Swedish frontier on the Gulf of Finland. The cost is estimated at $150,000,000.

Kill All Flies! They Spread Disease



Placed anywhere, Daisy Fly Killer attracts and kills all flies. Neat, clean, ornamental, convenient, and cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Ask for

Daisy Fly Killer

Sold by dealers, or 6 sent by express, prepaid, $1.00.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

The Weight of War

The heavy hand of war has disturbed the balance between supply and demand the world over. Our problem of serving the public has all at once assumed a new and weightier aspect.

Extraordinary demands on telephone service by the Government have been made and are being met. Equipment must be provided for the great training camps, the coast-defense stations must be linked together by means of communication, and the facilities perfected to put the Government in touch with the entire country at a moment's notice.

In planning for additions to the plant of the Bell System for 1917, one hundred and thirty millions of dollars were apportioned. This is by far the largest program ever undertaken.

But the cost of raw materials has doubled in a year. Adequate supplies of copper, lead, wire, steel and other essentials of new equipment are becoming harder to get at any price, for the demands of war must be met.

Under the pressure of business incident to the war, the telephone-using public must co-operate in order that our new plans to meet the extraordinary growth in telephone stations and traffic may be made adequate.

The elimination of unnecessary telephone calls is a patriotic duty just as is the elimination of all waste at such a time. Your Government must have a "clear talk track."

Hit With Boomerang

Spokane Milk Distributors.

Spokane milk distributors know how it feels to be hit with a boomerang.

Some time ago Mayor Fleming appointed a commission of 15 citizens to investigate and report on the high cost of living. A sub-committee of three members is inquiring particularly into dairy products, and the Spokane distributors went before this subcommittee with an elaborate printed statement of the costs of producing and distributing milk.

One tabulation in their statement calculated the cost of production, for 50 gallon dairies in the outskirts of Spokane, at 26 1-3 cents per gallon.

The Inland Empire Dairy Producers' association has seized on that calculation and is on the point of demanding 26 1-3 cents a gallon for milk testing 4 per cent butterfat.

The distributors are now paying only 20 cents a gallon, or 6 1-3 cents less than their own figures of cost.

A resolution fixing the price at 26 1-3 cents came up at a meeting of the association in Spokane June 23, but action went over to a meeting to be held two weeks later.

The motion provided that after July 15 the members of the producers' association demand the higher price and it was provided that in case the distributors refused to pay it the producers would separate their milk themselves and sell to creameries, which are butter makers exclusively and do no retail trade in milk.

The membership of the Inland Empire Dairy Producers' association, according to its officers, includes 250 farmers owning more than 2500 cows and supplying at least half of the milk consumed in Spokane.

The big distributors, buying 4 per cent milk at 20 cents a gallon, are retailing at 11 cents a quart. An advance of 6 1-3 cents a gallon in the cost to the distributors would amount to 1 7-12 cents a quart.

The producers' association will meet again in the assembly room of the chamber of commerce Saturday, July 7, to take action.

Although the resolution to demand the higher price was not passed, the consensus of opinion of the producers was expressed in a resolution, which was passed, declaring that it costs 26 cents a gallon to produce 3.6 per cent milk.

The secretary was authorized to levy an assessment of 10 cents a month per cow for three months as subscription to the Inland Empire Dairy Journal and to defray expenses of the organization.

Jersey Registration Fees.

The amendments to the bylaws submitted on May 15 to the members of the American Jersey Cattle club for a vote have resulted in the adoption of a new schedule of fees covering the registration of domestic-bred Jerseys. The new fees will go into effect on September 17, 1917, and will be as follows:

Females, 1 year old or under—To members, $1 each; to nonmembers, $2 each.

Females, over 1 year old and not more than 2—To members, $2 each; to nonmembers, $3 each.

Females, over 2 years old—To members or nonmembers, $10 each.

Males, 1 year old or under—To members, $2 each; to nonmembers, $3 each.

Males, over 1 year old and not more than 2—To members, $3 each; to nonmembers, $5 each.

Males, over 2 years old—To members or nonmembers, $10 each.

Dairy Shorthorns.

A new record for prices on dairy Shorthorns was made at the Glenside herd sale of L. D. May at Granville Center, Pa., May 29, when 39 head went through the ring for a total of $39,312, or an average of $1008 per head. White Queen, an imported cow, brought top price of $3000, going to C. A. Otis of Willoughby, Ohio, a well known dairy Shorthorn breeder. A North Dakota firm bought several head, but none came to the Coast.

H. A.

Invents Aluminum Alloy.

An aluminum alloy has been invented by an Australian that is said to be as hard as steel, to be non-corrosive and which can be brazed and soldered.

Figures From Clallam County.

The Clallam County Cow Testing association finished the month of May with an average of 28.89 lbs. butterfat and 615.63 lbs. milk for 487 cows that were milking during the month, according to the report of E. W. Soper, tester. Of this number 21 produced over 50 lbs. butterfat each and 68 stood above the 40 lb. mark.

The high cow for the month, a grade Jersey, owned by George Dickinson, produced 1158.0 lbs. milk (test 5.4 per cent), 62.53 lbs. butterfat.

The scarcity of mill feeds puts a grain supplement to pasture out of reach of most of the dairymen. Although when grain is fed the results show plainly in nearly every case, but good pasture and no grain seems to give better results than a short pasture and bran or shorts.

The following cows have produced 50 lbs. or over of butterfat: Geo. Dickinson, 5; Homer J. Hart, 1; Edwin Pettit, 5; E. F. Gierin, 3; Thos. Laurenson, 1; Bert Simdars, 2; Orin H. Babcock, 1; Roy Stone, 1; R. F. Fasola, 1; Frank P. Holland, 1; Willis Chambers, 1.

The following have cows above 40 lbs. of butterfat: Orin H. Babcock, 3; P. S. Govan, 2; Ben Ridgway, 5; Bob Ridgway, 1; Fred Edgington, 1; Mark Gibson, 1; A. F. Fasola, 5; C. E. Blake, 1; Bert Simdars, 6; Thos. Laurenson, 1; P. A. McNamara, 1; E. F. Gierin, 14; Roy Stone, 8; W. S. Brown, 1; Frank Holland, 3; Edwin Pettit, 8; Geo. Dickinson, 9; Homer J. Hart, 9; Sam Kilby, 2; Willis Chambers, 1.

The following herds averaged over 30 per cent butterfat: George Dickinson, 16 cows, produced 851.14 pounds of milk, containing 42.395 pounds of butterfat. Edwin Pettit, 14 cows, produced 782.37 pounds milk, containing 41.806 pounds butterfat. Homer J. Hart, 25 cows, produced 792.76 pounds milk, containing 37.117 pounds butterfat. E. F. Gierin, 52 cows, produced 809.22 pounds of milk, containing 30.93 pounds butterfat. A. F. Fasola, 39 cows, produced 653.01 pounds milk, containing 30.71 pounds butterfat. Frank P. Holland, 30 cows, produced 684.98 pounds milk, containing 31.37 pounds butterfat. Bert Simdars, 20 cows, produced 603.07 pounds milk, containing 32.05 pounds butterfat. Roy Stone, 25 cows, produced 725.13 pounds milk, containing 35.78 pounds butterfat. A. A. Evans, 20 cows, produced 608 pounds milk, containing 30.53 pounds butterfat. P. S. Govan, 10 cows, produced 854.96 pounds milk, containing 31.49 pounds butterfat. Ben Ridgway, 15 cows, produced 752.8 pounds milk, containing 34.23 pounds butterfat. Orin H. Babcock, 15 cows, produced 653.8 pounds milk, containing 32.39 pounds butterfat. Fred Edgington, eight cows, produced 827.62 pounds milk, containing 33.57 pounds butterfat. George S. Willis, four cows, produced 864 pounds of milk, containing 33.49 pounds butterfat.

Less Swiss Milk.

The scarcity of stock food caused a great decrease in production of milk in Switzerland during the month of April, such as has not been experienced since the production statistics have been kept. According to the provisional results the average receipts of 461 milk-collecting concerns were about 37 per cent less than during the same period of last year. Compared with April, 1914, the receipts were 48.7 per cent less.

Grain for Skim Milk Calf.

Whole milk is nature's balanced ration for the calf and it should be fed during the first two weeks of the calf's life. Whole milk, however, is too expensive for prolonged calf feeding because the fat it contains is worth approximately 40 cents a pound.

In view of this price it is advisable to sell the fat and feed skim milk with a substitute for butter fat. The chief office of fat in the calf ration is to supply heat to the body. When the fat is removed and skim milk is fed the energy can be supplied more economically in the form of grain.

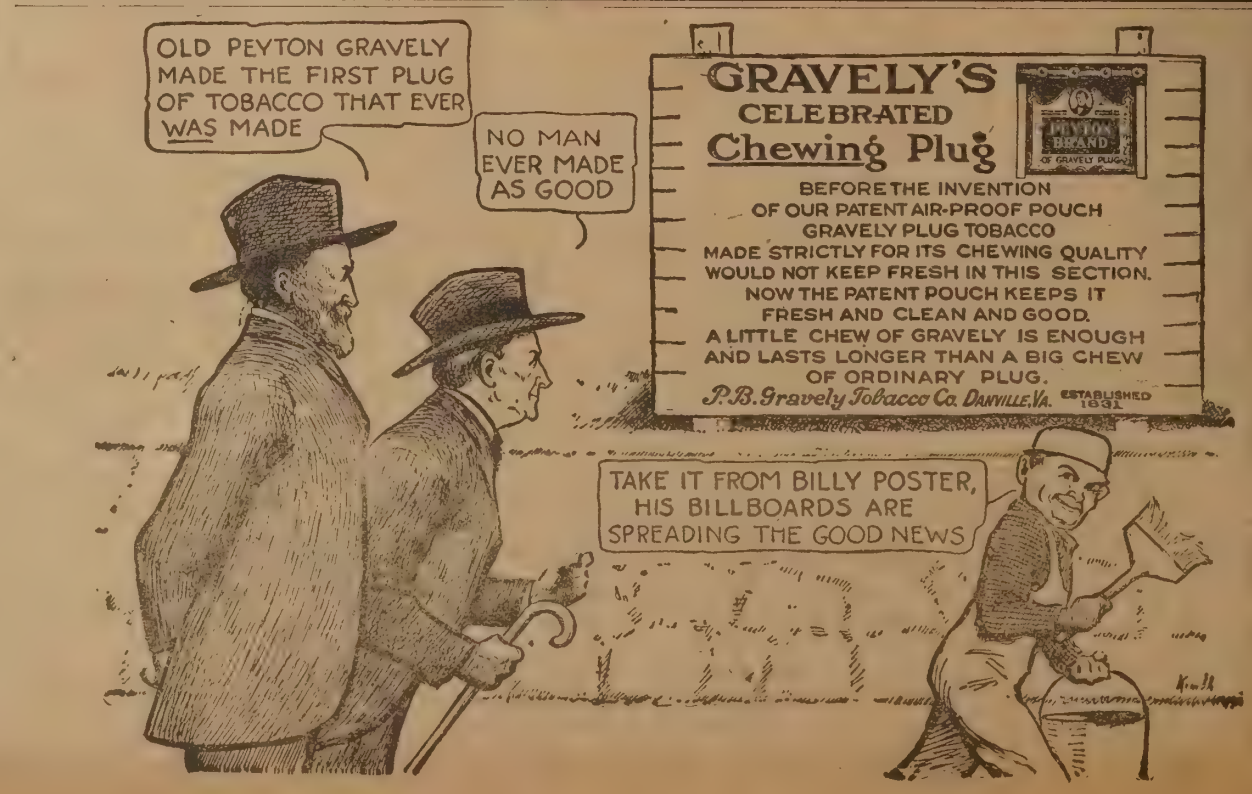
Protein is also expensive, but absolutely essential to development of the calf's body. None of the growth producing proteins is removed by skimming the milk.

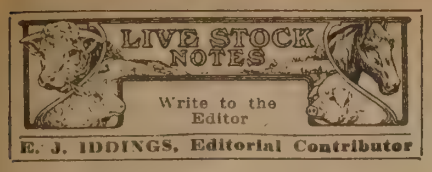
When a calf is about two weeks old it may be taught to eat grain. If it is with older calves it will take grain without any special attention. Otherwise it may be started to eating by rubbing a small amount of corn meal or bran on its nose. In licking its muzzle the calf will develop an appetite for the grain. The grain may be kept constantly before the calf for a few days. W. W. Swett of the Missouri college of agriculture offers the following grain mixture for calves: Three parts cracked corn or corn meal and one part wheat bran. To this one part oats may be added if desired. Linseed meal or blood meal may also be added in small quantities, but neither is necessary.

The grain should be given in the dry form after the skim milk has been fed. After the calf is old enough to eat grain freely it should be fed at regular intervals. During the first two months the grain taken will be less than one pound a day. This should be gradually increased so that at the age of six months, when the calf is weaned, about two pounds will be taken daily.

When only a few days of age the calves will begin to nibble hay if it is within reach. It is preferable to feed timothy for the first two or three months after which alfalfa or clover hay will give better satisfaction.

Warranted to Give Satisfaction.
Gombault's
Caustic Balsam





Has Imitators But No Competitors.
A Safe, Speedy and Positive Cure for
Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.
As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable.
Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

Purebred Registered HOLSTEIN CATTLE
To the open minded farmer or dairyman, the results of actual comparative tests of Holsteins with other breeds are striking object lessons of economic investment. The ten largest records of Holstein cows average 1007 pounds of butterfat and 25,887 pounds of milk in a year. A like number of cows of the nearest competitive breed produced 974 pounds of butterfat, and 18,120 pounds of milk. One good Holstein cow will produce as much as two ordinary cows at a saving in feed and care. There's big money in the big "Black and White" Holsteins.

Stock Loss Heavy

Prices Are Likely to Remain High

In a circular letter issued by the American National Live Stock association and signed by I. T. Pryor president as well as by T. W. Tomlinson, secretary, there is the following summary of the losses of live stock during the past winter, as well as a statement of the exports of meat food products for the nine months ending March 31 of the last three years:

The last winter has been unusually severe on live stock. In many sections it has been the hardest season for more than 25 years. Drouth in some districts, and long-continued snow and cold in other localities, have resulted in very heavy losses, and the present condition of range stock is much below normal. Ranchmen have been compelled to feed all their own hay, and to buy large supplies of cottonseed products, corn, hay and other forage at abnormally high prices. The extra expense for feed, together with the large losses of live stock, when distributed on the remaining stock will show a very large increase in cost of production, and it will require high prices to offset this increase in cost.

Indications point to the continuance for some time of substantially the present level of prices for live stock. There is an undoubted world shortage, and the total supply of meat-food animals in this country is below the average of recent years. Even the speedy ending of the present world war ought not markedly to change the present basis of prices until a normal world supply is raised. The new revenue bill provides for an import duty of 10 per cent at ad valorem on all articles now on the free list. This will measurably serve to protect us from the products of live stock of other surplus countries where land and labor are cheaper. Had congress seen fit to retain an import duty on live stock, meat products, hides and wool, instead of putting them on the free list, our domestic production would have been greater than it is.

Exports of Meat Food Products.

Below is a statement of meat food products exported for the nine months ending March 31 of this year indicated. Please note that, while the total number of pounds exported is substantially the same for the two periods, 1917 as compared with 1916, the value is $54,038,607 greater in 1917 than in 1916:

Years	1917	1916	1915
BEEF PRODUCTS—			
Pounds	272,472,669	320,325,259	219,997,495
Value	$39,540,668	$39,292,993	$27,217,896
HOG PRODUCTS—			
Pounds	1,168,124,506	1,098,859,716	832,045,944
Value	$189,109,771	$135,378,841	$101,544,179
GRAND TOTAL—			
Pounds	1,440,607,175	1,419,184,975	1,052,043,439
Value	$228,650,439	$174,611,834	$128,762,075

Shorthorn Sales.

Five sales of Shorthorns held recently in Missouri and Pennsylvania included on an average of over 500 head at slightly more than $900.

Only once in the entire two weeks' sales did a single animal approach a spectacular price. In that case an imported yearling bull brought $7000. American-bred cattle throughout the series commanded prices on a level with the imported offerings.

Fixes Live Stock Prices.

The Italian government has fixed the maximum price to be paid for cattle requisitioned for army use. Live weight for oxen is about $1.10 a hundred.

SAVE BREEDING EWES.

Utah Sheepmen Look to Future.

The Utah Wool Growers' association has taken official action asking their members and other sheepmen of the state to make special effort to conserve female sheep for another year, and not allow them to be sacrificed on the block because of high mutton prices and high cost of feeds.

This is indicative of the nationwide movement looking toward the conservation of breeding stock of all kinds with a view of building up the well nigh depleted herds and flocks of the country.

Buy 240 Acres Near Palouse.

F. H. English and A. L. Hill have purchased the George Harper farm of 240 acres, three miles northwest of Palouse, Wash., on the Colfax road, paying $18,500. The land was bought as an investment. Mr. Harper owned the place for a number of years. He recently bought a section of land in Alberta, for which he paid $27,000, and will move to that place.

Vaccinating for Blackleg.

County Agriculturist B. W. Cooney of Klickitat county reports vaccinating 88 head of cattle for blackleg. He reports that this disease seems to be more prevalent this year than ordinarily, and that it caused quite a loss in certain districts. County Agriculturist M. J. Newhouse of Pend Oreille county also reports helping to vaccinate about 100 head of young stock for blackleg.

A NOTED Pacific Coast sportsman who has hunted everything from snipe to black bear, said recently: "The waterproofing feature now offered sportsmen in Remington UMC 'Arrow' and 'Nitro Club' Wetproof Shotshells, is the most important improvement made in the shotshell field in over a decade. The men who perfected the Wetproof system certainly know shotgun shooting and its requirements from field, duck blind and traps, as well as from the scientific angle."

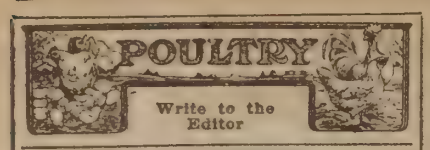
Here is something that every man who lives in a wet climate or does his shooting in the stormy seasons ought to know about.

These are the first *completely* wetproof shotshells —a new and exclusive feature of the Remington UMC "Arrow" and "Nitro Club" Shotshells.

This is a process that took three years to perfect.

It involved a deeper study of wet-proofing materials than has ever been conducted outside of the Remington UMC laboratories.

It means special paper for the shells; a special formula for the wet-proofing; new equipment invented to apply the wet-proofing compound. Virtually a new type of shell—adding to the shooting qualities of "Arrow" and "Nitro Club" the hitherto unknown quality of perfect resistance to wet.



It produces a shell that can be soaked in water for hours without swelling, and without softening the crimp—a shell that is as bone dry inside after soaking as before—a shell that works perfectly through the gun in all climates, and can be depended upon for sure fire, speed, pattern and penetration, *wet days* as well as *dry*.

A shell that you ought to know.

Early Laying.

To the Editor: We have 40 Barred Plymouth Rock pullets hatched February 3, 1917, and we found a few were laying on the 24th of May. I would like to know if this is not unusual for Barred Rocks to lay so early. They have not had any kind of meat.—M. W. Greenlee, Seattle, Wash.

This is very early laying, and I do not know of any report of earlier laying for Barred Rocks. I have known them to lay between four and five months, and I have known Leghorns to lay in less than four months. It would be interesting to have a statement from Mr. Greenlee as to how he fed these pullets, and how they were brooded and cared for. J. D.

Overcrowding the Pullets.

It is about this time of the year that the young pullets for next year's laying often receive a setback due to overcrowding. Very often 50 pullets are kept all summer in a house that is large enough for only 25. The house may be large enough for the newly hatched chicks, but not large enough for half matured pullets. If more roomy quarters can not be provided half the pullets had better be killed off or marketed. Twenty-five good pullets will pay more profit than 50 stunted ones when it comes to laying.

The number of chicks hatched should be in proportion to the facilities for taking care of them when hatched. The effort seems to be often to hatch as many chicks as possible, with little thought given as to how they shall be raised. The result is many of them die, and many of them that live do not develop properly and are not profitable layers. Allowing too many to crowd together in small roosting quarters is one reason for the shortage of eggs in fall and winter. A very simple rule is to allow four to six inches of space per bird on the perches and keep the perches 12 inches apart, or 16 or 18 inches when the pullets approach maturity. This will give them sufficient room to develop.

But this is not all. The house must be well ventilated. It must be high enough to allow sufficient air space. A height of four or five feet at the rear and about six feet at the front is high enough to give the necessary air space and high enough for the convenience of the attendant.

The third point has to do not with the floor space nor the air space, but with the rapidity with which the air changes. The air must change often. Foul air must go out and fresh air enter often enough, otherwise the chickens will not grow and develop as they should because of a lack of fresh air. The best rule as to fresh air is to leave one side of the house entirely open all the time.

These are the three essential conditions in the housing of growing pullets —sufficient roost space, sufficient air space and sufficient ventilation, the primary essential of all three being fresh air. J. D.

Chicks Confined Too Closely.

A great many reports have been received of losses in chicks from five to eight weeks of age in brooder houses. In a large majority of cases it has been found that the chicks were kept shut in and never out of the brooder house up to a month and even two months of age. They have died without any apparent cause. They become droopy, hang their wings, lose appetite, are listless and move about little. Growth ceases and at eight weeks of age they may be no larger than they were at four weeks. It is a case of arrested development and finally death. They may have been well fed and the brooder temperature may have been all right and the poultryman may have worked hard to rear them, but nothing would save them.

One thing would have saved them, and that it for the poultryman to have worked less and let the chicks work more. Chickens can't be treated like hothouse plants. Let the chickens do the work. Of course the poultryman must not neglect them, but it is not necessary for him to sit up half the night and watch them 12 hours a day beside to see whether they are going to live or die. The remedy is to get the chicks out on the ground just as soon as possible or within a few days after they are hatched. The ground, of course, must be clean or sanitary. Let them scratch in the soil, eat the soil if they want to, chase after bugs, scratch out the neighbor's garden (pay the neighbor for the damage)—let them run and let the poultryman sit down and enjoy himself occasionally while the chickens are enjoying the pure, fresh air. The mother earth and the labor is life. The outdoors will not hurt the chicks. If the outdoors appears to injure them it is because the indoors were not kept under good conditions of temperature and ventilation. J. D.

Feeding Hens Pepper.

To the Editor: Owing to the extremely cold weather in this locality, I have used a warm wet mash in the morning, in which I mixed a teaspoonful of poultry pepper; my idea being to warm up the hens for the day's feeding and laying. Will you kindly advise if this method is proper for maximum egg production?
H. F. W., North Powder, Ore.

In practice I do not use nor advise the use of pepper. The high egg records at the Oregon station were secured without the use of pepper or other condiments. Though we have made no actual experimental test of it, I think our results have shown that it is unnecessary. There may, however, be grounds for the belief that pepper will stimulate production for a time at least. I know that prominent and successful poultrymen at Petaluma use pepper rather heavily at certain seasons, usually, I believe, about August, in order to get the maximum production when egg prices are good, and after the breeding season is over. But it is very probably true, as in the case of humans taking stimulants, that this artificial stimulation may make them feel good for a while; afterward there is a reaction.

There is no very strong experimental evidence, one way or the other, but my advice would be to put pepper in the medicine chest rather than in the food hopper. It is more for the sick hen than the laying hen. The proper stimulation for egg production is good food, fresh air and exercise. By the way, fresh air is a better egg producer than red pepper or other condimental foods. J. D.

Hereford Sells for $27,500.

At the Harris Brothers' sale June 28 of purebred Hereford cattle at Harris, Mo., in the last two days, 34 head of cattle were sold for $412,384. Repeater VII. sold for $27,500 and Gay Lad XVI. brought $20,000.

Market Gardening by Women

The present emergency for greater food production in the British isles leads Charles W. Macara to write a letter to the Irish Homestead on the pressing need for women's help in cultivating the land. He says:

Market gardening, of all work on the land, is not only a most healthful occupation, but the implements used in the work are not nearly so heavy as those employed in general agricultural work, and if women are put under a trained instructress it is remarkable how quickly they become proficient in their use.

The great need at the present time is to establish training centers with fully qualified women at their head. Amateurs, however willing they may be, can not be expected to be able to give the instruction that must be given to those who have had no previous experience of agricultural work.

In visiting the United States of America, Egypt and other countries, I have found that their governments are fully alive to the importance of providing agricultural training on scientific lines, and I do not see that what is being done so well in other countries should not be adopted in this, and educational centers established all over the country. At the head of these centers, as I have intimated, should be placed those who have received a thorough training at agricultural and horticultural colleges.

In a letter I addressed to the press in February last, on the organization of women's work, I strongly advocated the use of the National Register, which had been fairly well kept up, and if this thoroughly practical suggestion had been adopted, municipalities, district and rural councils would have little difficulty in ascertaining the number of women of leisure available for work on the land. I am convinced that there are many thousands. I thoroughly disapprove of house-to-house canvassing, with the object of inducing women to give up their present occupations, whether engaged in private service or in national work. What is wanted is to enlist the services of women of leisure, many of whom are anxious to serve their country in this time of grave emergency.

The proposed linking up of electrical power stations and the adaptation of electricity to the cultivation of the land, both as regards driving agricultural machinery and increasing the productivity of the soil, are matters to which considerable attention is at present being directed, and if successful may have enormous beneficial results. What we want, however, without delay, is a large accession to the ranks of women willing to be trained in the cultivation of the soil, and the prompt establishment of centers at which they may receive proper instruction.

The Motor Car
On the Farm

What's a Sleeve Valve?

Sleeve valves are smooth cast iron shells which slide up and down inside the cylinder between the cylinder wall and the piston. Each cylinder has two sleeves, one working within the other. As the sleeves slide up and down openings in each come together, giving passage to fresh gas and expelling dead gas. Connecting rods working on an eccentric shaft raise and lower the sleeves which move only a short distance—less than an inch in most cases. It is said sleeve valves seldom if ever require adjustment. The statement also made for the sleeve valve motor that it is free from carbon deposit, the carbon formed being made to act as a lubricant to the sliding surfaces of the sleeve. The sleeve valve motor may have either battery or magneto ignition and either a thermo-syphon or pump cooling system.

How to Have Clean Valves.

Any car owner can keep the exhaust valves in his engine comparatively free from serious carbon deposit by using kerosene in the following manner about once a week:

Remove spark plug or open priming cocks and pour into each cylinder about half a teacupful of kerosene—enough to wet thoroughly the walls of the combustion chamber. Cut off the ignition and crank the engine, giving the oil a chance to get into every part of the combustion chamber and over the exhaust valves and stems. Do this in the evening, preferably, and let the kerosene remain in over night. When you start your engine next morning you can see particles of carbon in the white smoke that comes from the exhaust. During the night the kerosene has cut loose most of the carbon from the cylinder and cleaned the exhaust valve stems as well. With so simple a method to prevent the annoyance of sticky carbon-clogged valves no one need have this form of trouble.

GOOD NEWS FOR RENTERS AND FARM OWNERS' SONS.

You can get a rich 160-acre farm free this spring, excellent for growing grain and mixed farming. Write for copy of "The Home Seekers' and Settlers' Guide." It gives full facts and tells what others are doing. Address Canadian Northern Railway, A. A. Brostedt, D. F. & P. A., 605 Hastings st., Vancouver, B. C., Canada.—Adv.

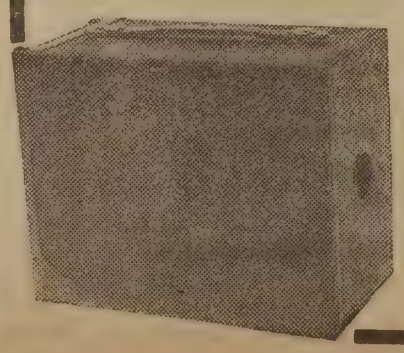
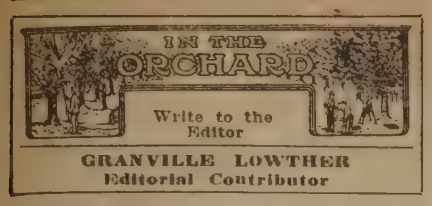
CAMERA FREE *to Boys and Girls*



TAKES PICTURES JUST LIKE THIS.

Don't you want this excellent camera? Just think of the fun it will be to take the pictures of boy and girl friends, of your pets, and of the many, many interesting things you will see this summer!



YOU Can Have It FREE

The way to get it is this: Go to two neighbors and tell them if they will subscribe to THE WASHINGTON FARMER one year they will be helping you get a camera. Ask each of them to give you one dollar for the subscription, and when you have the two dollars send it to us and we will immediately send you the camera. If the first two neighbors you call on are already taking THE WASHINGTON FARMER, try other neighbors until you get the two subscriptions. It won't take but a little bit, and then the camera will be yours, to take pictures with for years to come.

Start out for your two subscriptions today. A renewal subscription counts just the same as a new one. Send the two subscriptions and $2 to

Tomato Diseases.

Some time since we received a letter making inquiry about a form of disease affecting the tomato and supposed to have originated from the use of poison for insects. On receiving the letter I wrote a short reply, which was not satisfactory, because it failed to answer the question, "What is the nature of the trouble?"

I am not yet prepared to answer, because I do not know all the conditions; but, considering that the tomato is destined, on account of the increase of the number of canneries, to become one of the more important crops, and much more important than at present, I have concluded that it is better to write more fully, naming and very briefly describing the diseases to which tomatoes are ordinarily subject, so that tomato growers may form some idea about the nature of diseases and a cure where remedies are known.

Anthracnose.

This is common in widely different localities, is a kind of tomato rot and caused by fungi. Professor G. E. Stone of Massachusetts says it can be cured by spraying with Bordeaux mixture.

Blight.

There are several forms of blight, among which are the following: Bacillus solanacearum. Downy mildew blight, Phytophtora infestans. Leaf blight rust; Cylindrosporum sp. Leaf blight, Septoria sp. Sclerotium blight. Western tomato blight. Winter blight.

The first named has done considerable injury in the south, and the authorities recommend spraying with Bordeaux.

The second named is the same as that of the potato, and has sometimes caused the loss of whole crops. It was this that caused the famine in Ireland in 1845. Spray with Bordeaux.

The third named, leaf blight rust, has given considerable trouble in New York and New Jersey, in greenhouses and where there is not sufficient light and air. It affects the lower leaves, particularly where the plants are crowded. This is not common in this country, especially in irrigated sections. Spray with Bordeaux.

The fourth named occurs mostly in New Jersey, Ohio and the south. Circular spots form first on the lower leaves and then on the upper, finally destroying the leaves and leaving little but the bare steam and small, stunted fruit. Spray with Bordeaux.

Sclerotium blight, the fifth named, occurs mostly in Florida and in greenhouses. However, according to some authorities, it is the same as western tomato blight and requires the same treatment.

The sixth, or western tomato blight, has been the subject of much controversy. It has been claimed to be the same as the Sclerotium blight and to have affected the crops of California and Oregon. Again this has been disputed, and it has been claimed to be peculiar to the northwest, especially the Inland Empire. It has been claimed to have been caused by a bacterium, and then this is disputed by apparently good authority. In fact, I am judging by the bulletins sent out from our experiment stations, that opinion is changing as to whether it is caused by a soil condition or a bacterium. The symptoms are a gradual yellowing and a curling of the foliage. As the leaf tissues turn yellow the veins take on a puurplish color. The plants are dwarfed and fail to mature fruit. The stem of the affected plant is thickly covered with glandular hairs. The small lateral roots are at first discolored, then die back, and where a root is killed several more start at its base to replace it, so that a mat of small laterals are formed rather than long feeding roots.

Professor Humphrey, formerly of Washington State college, recommended "doing away with the seed bed." This I have tried and found it efficient, but not sufficient. That is, the plants would blight, but not so badly as where they were transplanted from the bed to the field. I tried sowing the seed in hills where I wanted the plants to grow, and thinning to the desired number. This did not prevent blight, but they did not blight so badly.

Noting that greenhouse men generally grow their tomatoes under lath to prevent blight, I conceived the idea of excluding in part, the sunlight by planting in the shade of fruit trees, where they would be protected from the sun at least a part of every day. This I found to be helpful.

I have never known a case of blight where the soil was good, properly irrigated and properly shaded.

By a good soil I mean a rich soil, not overcharged with alkili. By proper irrigation I mean, irrigate as nearly as possible to the plants, rather than by making the irrigating laterals midway between the rows. This drives the alkali from the plant, whereas if you make the ditches midway between the rows, the water percolating through the soil will drive the alkali toward the plant, and blight results. Then, too, the plants should be irrigated in the evening, allowing the water to run during the night, rather than in the morning and during the day: The reason for this is that if the water is turned on in the evening by morning the plants are sappy and turgid, and stand the rapid evaporation from their porous stalks, therefore become blight resistant, whereas if the other method is followed, they dry up and wilt. I have no controversy with those who claim that blight is due to a bacterium, for there are conditions of soil and climate where this species of bacterium is always present. What I claim is that partial shading and proper irrigation in a soil adapted to the growing of tomatoes are conditions unfavorable for the multiplication of that species of bacterium. Therefore the bacterium need not be taken into account if you have the right kind of soil and give it the proper treatment.

The winter blight occurs on late shipping stock and early spring plants. Spray with Bordeaux.

There are other diseases, but they mostly affect work in greenhouses. This article would be too long if I treated every disease minutely, but having given the principal diseases affecting the field industry, especially in the northwest, I presume I have done the best I can under the circumstances. A northern slope is better than a southern, because it is slightly protected from the sun; the less alkali the better in our volcanic ash soil; a heavy coating of well rotted barnyard maneur is good; plant the seed where you want the plants; irrigate the center; irrigate in the evening. G. L.

Big Cherry Problem

But for the benevolent rascality of the nurserymen, E. Bowles, of Prosser, Wash., would have failed in the cherry business. Mr. Bowles himself admits it.

"My first tree order was a solid one for Bings," he explains, "but the usual thing happened, and in the shipment were a scattering of Gov. Woods. Ordinarily this kind of thing doesn't please the buyer any too well, but the mixture of Gov. Woods, an inferior market cherry, is all that saved me. Why? Well, simply because the Bing is a failure when it comes to self fertilizing. I used to lay all my failures to late frosts, but I have come to see that pollenization is the biggest problem confronting cherry growers in the northwest. When you get a fine showing of blossoms and a poor stand of fruit don't charge the failure up to frost till you have investigated. Remember that an unfertilized blossom drops off just as a frosted one does. And remember, also, that the Bing, although a fine market cherry, is practically incapable of self fertilization on a big scale."

Mr. Bowles has planted four or five Gov. Woods to the acre, but is inclined to think this is hardly enough. He states that the county agent is experimenting with Black Tartarian, and that up to this time results have been promising. This variety is a better market cherry than the Governor Wood, and if it proves to be capable of taking the place of the latter as a pollenizer the financial saving will be considerable. P. E. T.

Important Grain Country.

Rumania is an important grain producing country. Its average exports of corn from 1911 to 1913 ranked second only to those of the Argentine, while its wheat exports stood sixth among all countries and its oats exports fifth. The country has a somewhat smaller area than the state of Arkansas. Rumania also has rich oil wells operated to a considerable extent by the Standard Oil company.

Nature Adopts Poison Gas.

Most people think that the use of poison gas in warfare is a purely human or perhaps one should say inhuman idea. Yet the plan has been adopted by nature. Certain kinds of beetles, known as bombardiers, and called by scientists brachinus, make free use of poisonous fumes to keep their enemies at bay.

"Nothing but praise"

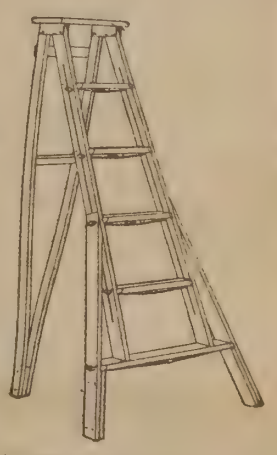
HUDSON—H. O. Harrison Co., San Francisco—
"Many owners of Hudson Super-six cars use Zerolene. We hear nothing but praise for it."
FORD—Fahy-Atterbury Sales Co., Los Angeles—
"we recommend Zerolene for the lubrication of Ford cars."
MAXWELL—J. C. Phelan, Fresno—
"Zerolene is giving us the best of satisfaction."
HUPMOBILE—Manley Auto Co., Portland—
"we are convinced that Zerolene is giving uniformly satisfactory results."

ZEROLENE
The Standard Oil for Motor Cars
Endorsed by Leading Car Distributors

—because the records of their service departments show that Zerolene, correctly refined from California asphalt-base crude, gives perfect lubrication—less wear, more power, least carbon deposit.

Dealers everywhere and at our service stations

STANDARD OIL COMPANY
(California)



For tractors, Zerolene Heavy-Duty is especially recommended

Orchard Ladders and Picking Pails

THE BERNETT PICKING PAIL
especially adapted for cherries, pears, peaches and plums. Mailing weight 4 lbs. Price $1.75.

Clear spruce, broad base, rigid ladders in 6, 8, 8, 10, 12 and 14 foot sizes. Per ft., 40c.

Spokane Seed Co., Spokane, Wash.

Why Experiment?

There's more at stake than just the cost of your silo! If a silo full of ensilage blows down or goes to pieces, there's hundreds of dollars in feeding-value lost.

Don't experiment with a "home-made" —or with any silo that cannot point to a successful record.

SIMPLEX
THE DAIRYMANS SILO

A *sucessful silo*, made by a successful concern. The Crisell patent tangent-top construction (*exclusive Simplex feature*) keeps the silo in absolutely true circle. A guarantee bond to this effect with every silo sold.

A Simplex will *insure* your dairy profits this year and the years to come. The man who owns a Simplex doesn't worry about high feed prices.

Is It Wasteful to Eat Meat Now?

Writer Says Grains Make Better Food Than the Meat That Can Be Produced by Feeding Them To the Stock

KELSO, Cowlitz County, Wash., June 26.—Live stock has not materially increased nor is disposal widespread, though here and there a few are being cut out. Meat is in reality a wasteful food and I think you will find that the same amount of corn, wheat, etc., will go much farther as human food than the meat which it produces. As population increases and the food supply endangered, the resort must be made to meat produced only after the roughage unfit for human food. Eat grain rather than meat.

L. S. KELSO.

Rains Insure Heavy Crops.

CHIMACUM, Jefferson County, Wash., June 29.—At this date, the last of June, we find the season about three weeks late and have had very heavy rains the last three weeks which will insure heavy hay crops and the early potatoes never looked better. Production has increased very much, especially with potatoes and garden truck. There are also abundant pastures on account of the late rains, also the grains on the high lands are going to yield very heavy, but the bottom land crops, such as carrots, mangels, etc., are damaged to some extent on account of the rains. If we have dry weather during the month of July they will come all right.

Labor is a little scarce, but we think that there will be enough to harvest the crops, by working Sundays and evenings during haying.

JOHN VAN TROJEN JR.

Labor Secretary.

PORT ANGELES, Clallam County, Wash., June 29.—While the spring is the latest for many years on the Olympic peninsula it augurs well for abundant root crops and hay. Hay, potatoes and peas will show the largest increase as to yield and the farmers look forward to a ready market and good prices. There will be no change in the method of harvesting. Owing to a large increase of men employed in logging, milling and the erection of new industrial plants, farm labor is scarce in Clallam county and if the situation does not improve in the immediate future it will look bad for our farmers when harvest sets in.

J. P. CHRISTENSEN.

Produce More Silage.

OLYMPIA, Thurston County, Wash., July 3.—I have not as yet been able to make a complete check of the results from the increased crop movement. So far as I have data to the present time the increase is most noticeable in oats, beans and gardens.

A large increase in beans through direct work for that increase is certain. This crop is looking fine and present indications are that yields will be good. Oats, however, as with nearly all spring sown grains, are somewhat backward, due to the spring weather conditions.

We are short on labor and that shortage is particularly noticed now with haying coming on.

With regards to changes in methods of harvesting, the only change will be in the production of more silage. We are expecting a big increase in the number of silos. C. H. BERGSTROM.

Many Silos Being Built.

MONTESANO, Grays Harbor County, Wash., June 30.—As a result of the agitation to increase crop production would estimate that the total crops have been increased approximately 10 per cent. This increase is made up largely in the towns of general garden crops with potatoes predominating. In the country the increase is due to increase of potatoes, peas and small grains. The present prospects are good for large yields providing we have a fairly late fall. Labor, machinery and work stock in this community seem to be adequate for harvest needs, although labor is considerable higher this year than in the past. There has been a noticeable increase in milk and all dairy products this year. A great many silos are being built and it would appear that cattle will be wintered better this year than last.

C. F. MONROE.

Mustard in Fall Wheat.

LA CROSSE, Whitman County, Wash., July 1.—There is not much change in crops in this vacinity, wheat being the main crop. Crop prospects are good considering late season and nearly all spring sowing. Fall wheat is reported very weedy with mustard and will no doubt be hard to harvest in places. Spring wheat is heading nicely and in all, prospects are for a fair crop. There won't be much change in harvesting, heading and threshing being more popular. There are a few binders and combines added this year and a few farmers head and stack and later thresh it out of the stack.

M. E. SCHRECK.

Farmers Disposing of Stock.

PORT ORCHARD, Kitsap County, Wash., June 30.—The farmers of this county are disposing of their stock and reducing their herds, to just what percentage to estimate the reduction I am at a loss to say. The need for increasing or holding the meat supply up to the standard is one of importance and I think a strenuous campaign for the raising of all heifer calves, keeping of brood sows, laying hens, and lambs, will probably have to be instigated. C. B. SPRAGUE.

Work Farms to Full Capacity.

CHEHALIS, Lewis County, Wash., June 29.—There has been a tendency in this community on account of the agitation for increased crop production to add many small patches of land not ordinarily in cultivation and in the country the farms are being worked to their full capacity. In the towns and even about the mill towns many are working gardens and raising patches of potatoes who have not previously done so. I would say, however, that the result of all of this effort would be an increase of not more than 10 per cent in the food supply over normal years. Prospects for yield are excellent. The spring was late, but we are having seasonable rains. There is plenty of machinery and work stock in this community for harvesting and there is plenty of labor, providing enough of the old "has been" farmers and the young dolittles can be pulled out of the towns for a few days during haying. We will harvest the crops but it will be in many cases to the neglect of other work that should be done. The methods of harvesting remain the same here. The ordinary binders and haying machinery are sufficient as the fields are not large enough to justify the elaborate outfits used in some sections. The condensed milk company has stimulated the milk business by paying unusual prices for summer milk and by reaching out into new fields with their milk trucks. The increase in the supply of milk will be far greater in this community than the increase in potatoes, beef or any of the grain crops.

J. C. BUSH.

Use Shattered Peas for Hogs.

FAIRFIELD, Spokane County, Wash., June 28.—The number of live stock is about the same as last year except hogs and there seems to be a shortage, and good prices have been obtained for both pigs and sows. There is no question but that the farmers should increase their stock, especially hogs, but under the present high prices of grain they are loath to do so. The farmers generally sold their grain at $1.50 or under so to feed hogs grain at the price it was this spring was prohibitive. The quickest way to increase the meat supply is by raising more hogs. The pea farmer or grower is the one who will reap quick returns by utilizing the shattered peas after harvest in this way. ROY G. ADAMS.

More Hogs and Chickens.

TWISP, Okanogan County, Wash., June 24.—The number of live stock is as large and very likely larger than last year and the grade is being improved. The farmers are not anxious to sell their stock and the majority are trying to increase their herds. I will suggest more poultry and pigs for increasing the meat supply. If all the farmers and their wives were to raise all the pigs and chickens they could handle within 18 months, there would be an over-supply of meat and eggs. Most of the farmers of this community are making an extra effort to produce more foodstuff than usual.

GEORGE LA RUE.

Logging Camps Take Men.

DARRINGTON, Snohomish County, Wash., June 22.—The weather has been ideal for the last two weeks for the growing crops, but it is yet hard to tell what the hay crop will be, for everything is over a months late in this section. Hay is very backward and it looks as if the crop would be rather light. Cherries are nearly all falling off the trees and it looks as if the fruit will be rather scarce. Hogs are very scarce and selling at 18 cents per pound, dressed; little 6-weeks-old pigs are selling at $4 per head; beef at 13 cents, dressed. There is no decrease in dairy cows; if anything they are increasing in this section, with the Guernseys in the lead. Nearly everybody had to replant their corn and it is now just coming up, as it was very cold and wet in May. Mangels, potatoes and other garden truck is looking fairly good. Farm help is very scarce and the farmers will have a hard time getting any help at all during haying, and that is about the only time most of the farmers need any help. The logging camps are picking up every man that comes along at better wages than the farmers can afford to pay.

C. B. NEIDERPREUN.

Had Million Dollar Rain.

METHOW, Okanogan County, Wash., June 25.—About the same number of live stock is raised this year as formerly unless it is more pigs. Farmers are trying to increase dairy stock herds also. The quickest way to increase the meat supply is to pass a law allowing no cattle to be butchered that won't dress out 400 pounds of meat. The cure that some suggest for meat supply will not work, namely that no sows or cows be butchered. I think that when either of them fail to produce their young once a year there is only one place for them and that is the block, especially for the range cattle. A million dollar rain fell here recently, which will insure good crops.

CHARLES GRANT.

Increasing Purebreds.

COLVILLE, Stevens County, Wash., June 25.—There is no data available by which one could compare the number of animals in the county this year with last year. From all indications there is a shortage of hogs, a small increase in the number of cattle, and a large increase in sheep. As a whole most farmers are increasing their herds. This has been especially noticeable along the pure-bred line.

A. R. HAHNER.

Cherry Crop Is Short.

GRANDVIEW, Yakima County, Wash., June 22.—I don't think there is much difference in the number of cattle, but there are not as many hogs as last year. Farmers here can not raise enough grain to feed hogs profitably. I think if we had more pasture it would help. Haying is more than half done, the hay is of fine quality. The cherries are nearly ripe, but not half a crop is expected.

E. H. FAULKNER.

Should Increase Poultry.

SPOKANE, Spokane County, Wash., June 13.—The farm survey records from this section indicate that on the whole there is a slight increase in live stock, probably the average increase that could be expected in a normal year. There is a decrease in farm horses, although the general quality of these horses is probably better. Farmers are inclined to increase their stock, especially sheep and hogs. More immediate results in increasing the meat supply at this time could be secured with poultry than in any other way. An increase in hogs would also be feasible in helping with the supply of meat, and farmers are, at present, doing everything in their power to do this. This is shown by the fact that there

REAL HOMES at Milan Farms

on Great Northern Railroad, only 25 miles from Spokane, the metropolis of the Inland Empire and live stock, fruitgrowing and grain center of the Pacific Northwest.

Especially adapted to dairying, diversified farming, stock and poultry raising. Free rural delivery daily, excellent schools, splendid roads, long distance telephones and near fine lakes and streams. Soil rich, with ample moisture.

Every acre put on the market last year was sold, indicating attractiveness of our proposition. Additional acreage now ready at prices from $7.50 an acre up, on terms to suit purchaser.

SPECIAL OFFER TO JUNE 1

All purchases to June 1 secure service of man with team, stump puller and carpenter for one week free.

Write for attractive folder giving exact facts about these lands and the best opportunity for securing the most attractive farm home in the northwest.

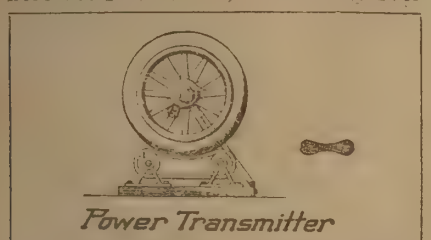
is a greater number of brood sows this year, although the total number of swine is considerably less. Ten pure-bred sow pigs were recently distributed to boys and girls of the county in connection with pig club work. The production of beef is at its maximum in this region at present and can not well increase until there are more silos and facilities for the raising and fattening of cattle. A. R. CHASE.

Government Must Be Heroic.

COLFAX, Whitman County, Wash., June 18.—There is not over 50 per cent of the live stock there was a year ago in Whitman county. Farmers are not much disposed to increasing their herds owing to the high prices of feed. There is only one way to stimulate immediate meat production and that is for the government to guarantee that the prices of meat will not be allowed to become disproportionate to the prices of feed. A year ago the farmers were caught with five cent hogs and $1.25 wheat, and were absolutely at the mercy of the packing houses. Of course they had to unload hence the present shortage. On a basis of 75 cent wheat, hogs should sell for eight cents per pound; on dollar wheat at 10 cents per pound; on $1.50 wheat at 15 cents per pound.



With this guarantee the quickest way to produce meat would be through the medium of hogs. A good brood sow can, in 10 months' time, put on the market 1200 pounds of pork. A suckling pig, if properly handled, can produce the same amount in 18 months. If the meat supply is to be increased in the face of present conditions something heroic must be done, and it is up to the government to be the hero. Farmers will not feed the present high-priced feeds and take chances on low-priced hogs. "A bird in the hand is worth two in the bush." The bacon that the packing houses are now selling at 45 cents per pound was bought last year from the farmers for 5 cents a pound. This is outrageous, not only to the farmers but to the consumers as well. This experience has opened the farmer's eyes. They are in favor of letting the packing houses raise their own meat. E. C. HUNTON.

cross chains which help the car to climb out of the mud and also serve as handles when the device is used as a shovel.

Talks With Farmers

Readers of The Washington Farmer will enjoy a few notes made by Bernard Tormey of Spokane on a horseback trip to British Columbia.

MILAN, Spokane County.—I have had a good day's ride and talked to two very interesting persons. The first was T. H. Judd of Colbert. He has a 40-acre garden tract there and liked to talk.

Mr. Judd, while working on his garden tract in fall and winter, proved up on a homestead in Saskatchewan, Canada, in the summer. He leased his homestead for a good fee as soon as he received his title and preempted another which he also leased. The income from these and his garden tract are now keeping him comfortably. Mr. Judd put his son through the electrical and civil engineering courses at W. S. C. He said his son could get good jobs on his diploma anywhere and has been making good money since he graduated several years ago. He is now with the army engineers' officers reserve corps.

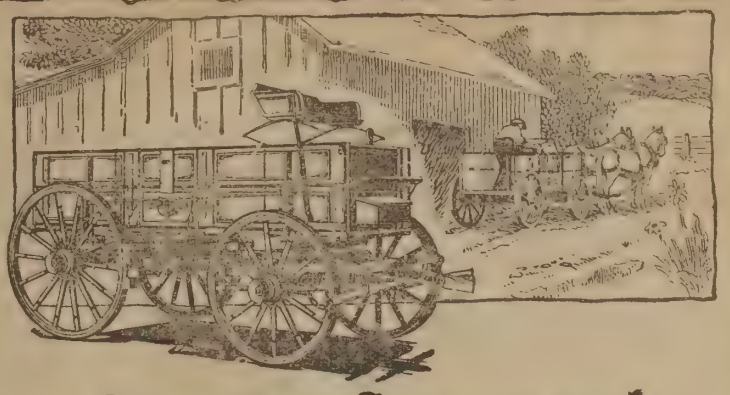
I spent the night at Leo Johnston's home near Milan. Mr. Johnston has 18 head of cattle and is milking six. He has also a quarter section of land. He says that dairying is the big idea at Milan. The country is ideal for it and there are still large patches of good range left.

There is a storm brewing in Milan over the price that producers get for their milk. Right now the dairy men have to sign a year's contract at 17 cents per gallon. A while ago the wholesalers said in the paper that they were paying 20 cents to the producers, which is condemned here as a lie. Milk is selling in town at 11 cents a quart and the producers are getting 4 cents on it.

LACLEDE, Idaho.—I rode from Milan to Priest River yesterday. The country was nothing but logged-off land all the way with only one farm of any interest whatever. This one belonged to a Mr. Mitchell, who has one of the nicest farms I have seen on this trip. It is 160 acres almost entirely cleared and lies in the heart of the wilderness about five miles from Newport. Mr. Mitchell has some mighty fine fields of fall wheat and expects a good crop if the fall is reasonably late to make up for the late start this spring. This farm was the only one on the whole 20 miles from Milan to Newport.

I rode yesterday from Priest River to Sandpoint, Idaho. The trip was delightful from both my viewpoints, the esthetic and practical. I met and talked with two very interesting farmers. The first talked with me about conditions around Laclede. There are quite a few fruit trees around there which are promising a good crop this year in spite of the poor start. Things in general are doing well.

The road from Priest River to Laclede is settled almost entirely by Italians. They have a church of their own and there is a regular little Italy right here in Idaho. Their farms make most of the American farmers' around here look rather poor. A national characteristic of the Italians is supposed to be untidiness, but the farms in the Italian settlement are almost model plants. I saw modern machinery, high class cattle and good buildings on all sides.



A good illustration of the value of both scientific education and of good agricultural papers was given to me by Mr. Shaffer of Kootenai. He told me that the farmers around there had for some time produced almost negligible results from their clover plots. There the two Liszt brothers moved into the vicinity and took up scientific farming on a thorough system. They taught the farmers there the secret of inoculating the clover seed; now the farmers are showing as fine stands of clover as could be seen in many a long day's ride.

Kootenai with backwaters from the floods which have rotted the wheat on

There has been some trouble around some farms.

Clocks Made in 1660.

Capacity Guaranteed

TELL the dealer you want a wagon that the manufacturer will guarantee to carry your biggest load. If he is up to date, he will show you a **Weber** or **Columbus** wagon with its capacity stenciled in plain figures on the rear bolster. That is the new idea for protecting you in your purchase of a wagon.

When you bought by skein size, you could not be sure that you were buying the most economical wagon. Now you can be sure. Every **Weber** and **Columbus** wagon that leaves the factory is guaranteed by the manufacturer to carry a known load over the roads that you have to travel.

Nor is that all you get when you buy a **Weber** or **Columbus** wagon. The folding end gate and link end rods save you a world of time. The fifth wheel, which only **Weber** and **Columbus** wagons have, makes your wagon run easier and last longer. Write us for complete information about these wagons. You'll be surprised at the number of good features they have.

TEACHERS

Trained teachers are in demand—are well paid and enjoy the distinction of belonging to one of the most useful and honorable professions.

LET US TRAIN YOU TO BE A GOOD TEACHER

At Cheney, Washington, only a few minutes' ride from Spokane, we have one of the best, most thoroughly equipped training schools for teachers to be found in the Pacific northwest. Established for 13 years. As the cost for attendance is very small every young man or woman who aspires to become a successful teacher should get our catalog, sent free on request. Write for a copy today without fail.

STATE NORMAL SCHOOL
N. D. Showalter, President
CHENEY, WASH.

Opportunity for Owner of Rig or Automobile

THE publisher of **The Washington Farmer** wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are offering these positions only to farm owners or renters and are paying good salaries to workers who had no experience in this line before accepting our offer. In almost every neighborhood there is an opportunity for building up a successful business. Perhaps this is the very chance you want to earn some extra money.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month, or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

Chapter XVIII.

Looking back to the age of ten or eleven I can see myself in our prairie home in the Big Bend seeking amusement and adventure with the ingenuity of the young—always alone, miles from neighbors and children of my own age.

I began to get acquainted with the prairie animals. There were the squirrels, the perpetual squirrels, too numerous to be amusing. Chipmunks were more entertaining, though harder to find. They were small fellows with striped backs, bright eyes and bushy tails, which they carried erect when running in fright and uttering their peculiar "whir-r-r" as they darted for cover.

The coyotes were numerous, though one never got near one of them. The summer mother and I stayed alone on the claim coyotes often dashed into our small flock of hens and carried away a fowl in broad daylight, with mother waving her broom and calling loudly to frighten the animal. In the evening and morning they howled and wailed in the big gulch south of our house. Often I was awakened at sunup by their short, staccato barking and yelping. They were cowardly, but swift of foot and cunning. When especially hungry they were inclined to boldness, especially if you had no gun; and that summer mother and I had no gun.

But during the summer we acquired a dog. He came into the yard one day, an immense, bony hound, with powerful limbs and massive jaws. He was black from tip to tip and had pleading brown eyes. He was hungry and thirsty and mutely asked for food and water.

Mother and I were lonesome that summer; and both of us welcomed the huge, black hound. We fed and watered him, after which he padded contentedly toward our doorstep, circled thrice, and plumped down with every evidence of being at home.

What kind of a dog he was, to whom he belonged, or how he found his way to our place we never learned. Years afterward I was told that the summer the Central Washington railway built from Spokane to Coulee City nine miles west of our claim—which was the summer the black hound came to us—a Russian of title came through the country from Spokane to Coulee, thence to Waterville and down to the Columbia at Wenatchee, partly for the experience of "roughing it" on the prairie frontier, and partly to see how the American pioneer proceeded in the development of new country—Russia then having immense areas of equally unsettled domain. I was told that the Russian had with him an immense hunting hound, which was one of a pack he had used in hunting big game in Asia; also that he had given the dog to some one while in the Big Bend, and that the dog had subsequently disappeared. The animal was a trained hunting dog that had seen service on the steppes of southern Russia and even in the Asiatic jungles.

How much or how little of this half-legend tale of the titled Russian and his trained hunting dog is true I can not say. I am inclined to credit this story, however, and I often have wondered if the big, black hound that came to our door step was not the Russian's dog.

Certainly the dog had been trained to hunt. Often at night when the coyotes barked and wailed in the big gulch he would rise silently from our doorstep and speed away without a sound, save the beating of his big feet which were almost as audible as the hoofs of a horse. In silence he would return. Once I was sure there was blood on his jaws. I saw him slay a coyote once, and he did it with promptness and finesse which passed unnoticed then, but which now I realize indicated a dog trained to the hunt.

The coyotes of the prairie country did not fear the average dog of the pioneer, which usually was content to stay under the house or very close to it while the animals were prowling about. If an unusually courageous dog did venture out two coyotes often "paired" against the dog in a way that soon sent it back to the house with its tail between its legs. While the dog chased one coyote the other slipped in behind and chased the dog, nipping his heels. The excited dog would whirl and chase the one that had come so close to him and have his heels nipped by the other, now turned pursuer. Two coyotes would play tag with a dog in this way till the dog howled with fright and made for home.

Two coyotes tried a game of this kind on our big, black hound once. A pair of them appeared on the bunchgrass slope a couple of hundred yards east of our cabin. Attracted by our chickens they came nearer, not seeing mother and I watching from inside the house, or the big, black hound curled up on the doorstep. The hound saw them, however, but beyond raising his head slightly he made no sign of interest. We thought he was sleepy and tired from a chase of the night before and did not care to go after the approaching marauders; indeed, we did not realize that there was sufficient speed in his apparently sluggish limbs, or cunning back of his kind, brown eyes to enable him to outrun and outgeneral a coyote. We were to learn better.

When the coyotes had come so near that they were about to dash in for a chicken the huge hound rose leisurely, yawned, shook himself and trotted toward them in a somewhat disinterested way. I realize now that his apparent disinterest at the outset was not due to laziness as we then thought—it was simply coolheaded, deadly, menacing calculation. He moved from the doorstep not as a panic-stricken dog, but as a trained warrior going to battle.

The coyotes loped away from right to left, "spreading" exactly as they do when getting ready to "pair" on a dog. They even yelped defiantly. The black hound went on in a businesslike way, gradually edging out after the coyote to the left which presently he pursued with some show of speed. His utter calmness, however, was aggravating to mother and I who were getting excited. We feared that even yet the lazy hound would let one of the animals into our flock of hens.

The rear coyote closed in behind and nipped the black dog's heels. He stopped short in his tracks, regarding first one, then the other; arrived at a decision, moved gingerly toward the same coyote he had pursued at the out set. Again he had his heels nipped; again he stopped, glanced around at his pursuer in a way indicative of increasing interest; and again he went after the same coyote he had pursued before.

The pursuing coyote closed in for another nip—but this time he missed his nip! When he was within a yard of the hound's heels, the heretofore lethargic animal went into action with the lightening swiftness of a spring uncoiling. He whipped about in his tracks in the instant that the tricky coyote reached for his heels; and I believe he missed the coyote's throat by just about the breadth of one hair.

The coyote bounded sidewise in an astonished way, and darted away. Then the wonders began. The big, clumsy hound had ceased being clumsy. He stayed right at the flying coyote's heels, and in spite of the last link of speed the coyote possessed, he stayed right there. Outclassed in speed, the coyote took to dodging. Time and again the clever animal dodged, evading by a hairsbreadth, an open-mouthed lunge of the big hound. But it was a game at which the coyote quite clearly was new—and the dog experienced! His long, black body at times doubled back on itself like a serpent as he twisted, whirled and darted at the heels of the active coyote.

It was a pretty little game. I am sure the Russian nobleman would have enjoyed it; so would the emperor himself; for each animal displayed a bit of animal science of which we clumsy humans are very poor imitators.

The coyote, in spite of its undoubted shrewdness and endurance, presently

(Continued on page twenty-one)

Secrets of Health and Happiness

What Science Does to Ward Off Hardening of Ear Joints.

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D. (Johns Hopkins University).

The hearing ear is always found close to the speaking tongue," but the poet only stated part of the truth. The poorly hearing ear is situated in the same way. While such old saws as "none so deaf as those who will not hear" are, in a fashion, true, there is more truth in the phrase that "Walls have ears" and "The deaf would hear, but can not."

Dr. Hirshbegg.

One of the material causes of deafness is hardening or sclerosis of the joints between the ossicles. These are miniature bonelets about the size of anise seeds or manna, shaped like a tiny anvil, stirrup and hammer behind the ear drum, facing the inner ear.

Matter, decomposed tissues, putrefaction due to germs and the inflammatory products of sore throats, "colds in the head," pharyngitis, adnoids, tonsilitis, scarlet fever, measles or any bacterial disorder which invades the nose, throat, mouth or ear may express itself finally as an "itis" or inflammation of the ear ossicles.

If this is kept up too long or recurs too often, in the end there will be rigidity or hardening of those bony joints.

"To take the bull by the horns" is, so to speak, the proper method whereby deafness caused by "ossicle-sclerosis" may be warded off. That is to say, if you wish never to be deaf your utmost endeavor must be made to prevent all or any infection or growth of germs in the eustachian tube or its environs.

"Chronic catarrhal deafness" is the old-style name, which is still employed to indicate almost any sort of increasing deafness. Whether it is in origin an infectious malady or whether it is due to or made worse by tobacco, drinking, high blood pressure or what not, the term "catarrhal" should be sent to limbo and a name, indicative of cause, effect and the accurate description of affairs adopted.

When there is too narrow a vent pipe, that is, too constricted an orifice of the eustachian tube, the ear specialist painlessly introduces an instrument into this canal and widens it. This spreads it gradually apart and sometimes helps to restore somewhat the ear's loss of sensibility. An outdoor life and a wide-open nose—obtainable by operation, if not otherwise—all assist the ear to hear better.

Baths, massage, osteopathy, vibration, electricity, inhalation of vapors and a complete change of habits, locality, scenery, air and light, as a long visit at the seashore or sulphur springs, help to better the hearing.

Dr. Beverly Robinson of New York city, who devotes much of his time to auditory disorders, holds that inflation of the eustachian tube with daily vaporization of iodine into the nose and middle ear has often worked near-magic, as it is cleansing, comforting and disinfecting.

The insertion of small-calibered, rubber tube into the vent pipe of the ear to make a free passage for vapors is now a practice among some doctors.

Good results are occasionally to be had by the mechanical vibrator inserted into the outer ear and another into the vent pipe or eustachian canal. Considerable skill is needed to produce the expected improvement. The victim himself can not do much, for special facilities and long continued patience are demanded in this delicate treatment.

American Farmer as a Producer

Much is said about the superior yield per acre of the European farms; how the French, German, English and the Belgian farmers obtain a greater production out of an acre of land than does the American farmer.

While statistics proves this to be true, it remains a fact that—

For every hundred pounds of products the English farmer on the average gets out of his farm the American farmer gets 230 pounds.

For every hundred pounds of products the German and Belgian farmer gets out of his farm the American farmer gets 250 pounds.

For every hundred pounds of products the French farmer gets from his farm the American farmer gets 320 pounds.

For every hundred pounds of products the Hungarian farmer gets out of his farm the American farmer gets 360 pounds.

For every hundred pounds of products the Italian farmer gets from his farm the American farmer gets 650 pounds.

These facts are brought out in the following table prepared by the United States department of agriculture and published in its monthly crop report for May.

EUROPEAN AND UNITED STATES AGRICULTURE.

COUNTRIES.	Year	Persons engaged in agriculture	Approximate area in cultivation	Acres per person engaged in agriculture	Index figure of productivity per acre	Index figure of production per person engaged in agriculture. U. S.—100.	Ratio * of production per man, United States to countries indicated
United Kingdom	1901	2,263,000	16,000,000	7.1	164	43	2.3
France	1901	8,165,000	60,000,000	7.3	114	31	3.2
Germany	1907	9,863,000	70,000,000	7.1	155	41	2.5
Hungary	1900	6,053,000	43,000,000	7.1	105	27	3.6
Belgium	1900	699,000	3,700,000	5.3	205	40	2.5
Italy	1901	9,609,000	45,000,000	4.7	88	15	6.5
United States	1900	10,382,000	280,000,000	27.0	100	100	....

* That is, per person engaged in agricultural pursuits.

Measured by the volume of production credited to each farmer on the average, the American farmer is producing two and three times as much as the European farmer and this fact of itself puts the American farmer on a higher plane of success than the European farmer.

This is not saying that the American farmer is doing his best or doing as well as he might and should do, not only for himself, but at this juncture for his country's needs.

When you can show the American farmer that he can increase his income by increasing his acre yield, he will increase his acre yield.

The mere fact that the Belgian on his five-acre farm or the Frenchman on his seven-acre farm get a larger acre yield than the American farmer on his 27-acre farm, is not sufficiently alluring to induce the American farmer to follow Belgian and French methods of farming.

All the World's a Stage, and All the Men and Women Merely Players

Liverpool Mayor Greets Pershing

The Girl Who Dared

On the virgin slopes of Holbrook Hollow wild oats and mariposas continue to spread their June-time glory in all the undiminished exuberance of the slumberous ages before the padres. There, today, gay bevies of three-winged mariposas tilt their yellow petals and tip-toe their butterfly measures upon a diaphanous summer-day carpet of wild oats that has never been torn open by the plow.

Old Holbrook, in 40 years' occupancy, had cultivated but a scant acre or so along the meager creek which straggles across the northeast corner of his quarter section.

On the hillslope above his shack once stood the cabin of the Widow Enmark, its front south windows shaded by a rude, unpainted veranda.

Emily Enmark and her beau sat there, one afternoon, gazing absently at the familiar shimmer of the wild oats. Emily's hair looked very like them; a dim silver or an evanescent gold, according as the sun fell on it, or the shadow. With a wistful sigh she tucked her cheek down against a certain muscular hollow on the front of Donald's broad shoulder.

"The thing is perfectly all right," Donald argued gently. "Now that the Santa Mercedes Irrigation company has been organized, Holbrook creek is important. Some professional landshark would soon have found out that old Holbrook never proved up on his claim, and would have filed. Lucky I found out first. With me, he can go living here, just as he always has."

"He won't stay!"

Donald raised Emily's woeful face by the chin, and pressed a comforting kiss on each tremulous eyelid. But they insisted on flying open. Her eyes, each with its fine black circle edging the clear hazel iris, gazed pleadingly into his. The pupils had a habit of dilating under excitement. They now were so large that the eyes looked black, and painfully vivid, Donald's eyes, looking down into them, were a strong granitic blue, with pupils that never changed.

"But it was I who told you about it," she mourned. "He told me, and I told you. Then you went to the county seat and filed."

"You couldn't have done him a greater service!"

"But he was going to prove up!"

Her sensitive face quivered. Donald kissed her cheeks, to bring back the dimples. But the dimples would not come. He was astounded. Emily to argue with him, oppose her will to his! Donald had never imagined she possessed a will. There had been moments, perhaps, when he rather wished she possessed one. But today was not one of such moments.

A rhythmic swish-swish grew on the agitated silence. An old man, clad in dun overalls and jumper, rounded the corner of the cabin. His wispy gray locks fringed uncouthly a Stetson so ancient and dejected that it recalled the head-gear of Crusoe on his island. A gray beard of knee length was braided and looped up into his waistband. He hadn't many teeth. What he had were stained like old meerschaum. He stopped abruptly in front of Don and Emily, who straightened up, much embarrassed.

"Thought that mought be the way of hit!" he rasped out in the shrill, high note of senile anger. Then he strode off down the slope.

Although he limped, he covered the ground with astonishing vigor and speed. The wild oats parted with a sharp hiss before the fury of his progress, and swept together in a shuddering silvery wake behind him. Across it the mariposas nodded timorously at one another and fluttered their petal-wings.

"Well, Don," a second voice from the house threshold broke in, "so you're to be our new landlord, be yeh?"

Emily and Don turned to the Widow Enmark; a strong, short woman, as unlike Emily as a scrub oak is unlike a slim young willow sapling.

"So it seems, Mother Enmark," Don replied. "But Holbrook has pulled up my stakes, and sued for an injunction against me."

"Well," crisply, "Holbrook's been an actual settler 40 years. I s'pose he ought to be thankful for that much livin' off of it."

"My owning it will make no difference to him—"

"Except to his feelin's," interpolated the widow, but not too sarcastically. Emily must be taken care of. Emily was like her dead father; infinitely lovable, but lacking in backbone.

"I was wondering, Mother Enmark," Don suggested, "how you and Emily would like a double bungalow about where we are now? Needn't disturb Emily's Marechal Niel." He nodded toward the giant vine whose broad, satin-green leaves and pendant saffron bells garlanded the broken edge of the veranda roof. "Two parallel wings, both facing front," he sketched gusily, "connected by a square, screened-in porch; 'lanai,' they call it, out in the islands. Kind of open-air sitting room. Hammocks and couches and sewing machines and such."

"Guess I'll make out to live by myself," opined the widow, "and go on raising chickens."

"Sure! All by yourself—chicken-run in your back yard. But, connected like this, Emily won't be quite so much alone when I'm away."

"Something in that," admitted the widow.

Emily sat gazing out on the mariposa-dotted wild oats. Their slender heads massed a tarnished silver when the breeze from the wheat lands, lower down, swayed them against the late afternoon sunshine. But when a vagrant breeze from the hollow lifted and flung them eastward they gleamed a pallid gold beneath the aureate swarm of flower butterflies a-wing just above their fragile husks. A rose-wreathed double bungalow visualized itself in the foreground. Her cheeks flushed a subtle pink, with the dimples back in place. Of all Emily's mutable prettiness, those flitting dimples held, for Donald, the one inevitable allure.

"Yeah," the Widow Enmark had once commented on some such remark from Donald, "her father had 'em. They're pretty, but they ain't dependable. But sometimes they surprise you."

"Set still," the widow enjoined, as Emily arose, after Don had gone. Emily obediently sat down again.

"Now, Emily," the widow admonished her daughter, "don't you try to stand up to Don. You can't do it. You're your father's daughter. He couldn't stand up to nobody. Didn't have the backbone. 'T was like yourn—just only gristle. And Don's a mighty hard man—in business—"

"Mother——"

"In business! But he's honest, and all the Andrews are loving to their women folks. Don'll be good to you so long's you do exactly what he wants you should."

"I've always wanted things his way ——"

"Well, keep right on wantin' 'em his way. You're like me in just one thing. You're a one-man woman. Your father was a mighty poor provider, and his backbone was mostly gristle. But he was my one man. Don's your one man. Don't risk losing him. You know what he is—once his mad's up. Once he breaks with anybody there's never any come-back." Emily nodded, wretchedly. "Well, don't lose him. Don't you ever try to stand up to Don."

A week later old Holbrook again materialized among the wild oats in front of the cabin porch, where Emily sat in solitary revery. He ran his eyes over her with morose forbearance.

"Say little gal," he remarked, not unkindly, "quit yer worryin'. This's man's business. Man ain't got no call to talk business with a gal, nohow. I just got my come-uppance. You quit worryin'. I'm tellin' 'em I did prove up, thutty-five year ago, jest befoh that there co't house fire burned up a lot of the records. The paper——" leering down at her, "must o-got burned up, and wa'n't never sent back to Wash'n'ton. 'N'course," slyly complacent, "I was too iggernerant to know I'd oughter git a gov'ment patent sent out to me. All comes of me bein' so iggernerant." He quite licked his lips over his mental deficiency. "My lawyer feller put me onto that. He's smart's they make 'em! It'll jest be your word ag'in mine—so cut loose. Say whut you got to say. Don't take no resk lettin' Don slip the noose. You know hom. Once gone—goodby! I reck'n I kin take keer o' myself 'thout breakin' up a pore little gal's housekeepin' arrangements. Now—you hear me!—don't you go for to stand up to Don. Cain't be done. Leastways you hain't the one kin do hit!"

The hearing in the suit to enjoin Donald Andrews from filing claim on the Holbrook Hollow quarter section was set for an early date. Donald's lawyer had no difficulty in convincing Emily that to withhold her testimony would make her accessory after the fact to a felony. With a comparatively easy conscience she memorized the few short questions and answers that would fall to her. Holbrook had no legal standing, but this particular judge was inclined to look leniently on purely legal discrepancies, when bona fide tenancy and improvements were in evidence.

"THOUGHT THAT MOUGHT BE THE WAY OF HIT."

On the day of the trial Emily—by Don's thoughtfulness—waited alone in the judge's chamber, back of the courtroom. Through a wide crack in the warped door she could hear bits of the preliminary phases of the investigation. They sounded quiet and businesslike; nothing to make anybody nervous; least of all, a girl who had come all this distance simply to tell the truth.

The cracked door opened. The freckle-faced clerk stood smiling encouragement on the threshold. She followed, pale but composed. While she remained standing for him to gabble the oath, she noted Don at the extreme right, with his attorney. Between them and her chair sat old Holbrook and his rat-visaged man of law. Austerely in the background loomed the Widow Enmark.

"S'elp you Gawd?" inquired the freckled one apologetically.

"I do."

That was what she had come to do; to speak the truth, the whole truth, and nothing but the truth. Don's lawyer had drilled her to speak it in the simplest and most effective manner; just the truth; the truth that would assure to her Don and happiness for life—that would secure the old age of her mother. Certainly Emily must speak the truth—although it would beggar that sardonic old man, who, because of his pig-headed obstinacy, would be turned out in the world penniless at 75.

Old Holbrook was swearing to a lie. He had not told the truth. But—what debt of truth did he owe to a government that would take from a man of his age the land he had lived on and improved for 40 years, just because he had neglected some puny regulation they had framed up without his advice or consent? Emily wondered, vaguely, whether the government had proved up on schedule time—and paid taxes—to the original owners, the Indians?

She raised her eyes, calm and serious, to the judge. He looked the sort of man to whom one simply had to speak the truth.

Behind him, oddly, shimmered a hillside of swaying silver; a silver that changed elusively into the lambent gold of over-ripened wild oats, dotted with gold-pionioned mariposas. A double bungalow bloomed out in the foreground, its screened lanai gold-garlanded with pendant Marechal Niels.

She replied mechanically to questions about her name and residence. The hill-slope, awing with mariposas, dissolved into a bleak, gray-plastered wall, backing a stern judicial countenance.

"You discussed with Mr. Holbrook his not having proved up on his claim?" Don's lawyer put the familiar question.

"Yes," obediently.

"He stated to you that he had not proved up on his claim?"

"Yes." It was the truth.

"What reason did he assign?—"

"I object!" vociferated Holbrook's counsel.

"On what ground?" inquired the judge.

"On the ground of hearsay evidence."

The judge pondered. "Objection not sustained."

Holbrook's attorney busily made a note of the ruling. Emily cast one imploring glance at Don.

The steely brightness of his prohibitive gaze contracted her heart. Had he always been this hard, and she not known it? Or—had she always known—and submitted? She looked back at the judge. He was observing her with puzzled interest. Of course, she must tell him the truth. But he could not know, as Don knew, how traitorious a thing the truth, the whole truth, and nothing but the truth could be.

"What reason did Mr. Holbrook assign for not having proved up?" the judge reiterated the question with formality; but Emily sensed a human note beneath his official tones. Her eyes implored him mutely.

"He said," she recited carefully, "it was because it let him out of paying taxes."

"He stated to you that he had not proved up, for the express purpose of avoiding the payment of taxes?"

"Yes."

"We are through with the witness," announced Don's lawyer, satisfied. Holbrook's attorney arose.

"Miss Enmark," he inquired suavely, "are you engaged to marry Mr. Donald Andrews?"

"I object!" yelled Don's attorney. "The question is irrelevant, incompetent, and immaterial!"

"Objection sustained," ruled the judge.

Holbrook's attorney, snugly triumphant, ostentatiously made another note. There ensued a long moment of absolute silence. Emily's fascinated, wide-pupiled gaze clung to the judge's expressionless features. The judge studied her quite as intently.

"Miss Enmark," he abruptly inquired, "what is your opinion? To whom do you think this land, by right, should belong?"

The subtle pink crept into Emily's cheeks. She cast one final, supplicating glance at Don's unyielding countenance. Then her drooping figure straightened. Her voice, when it came, was clear and firm.

"Well, judge," she replied, earnestly, "if it's my opinion you want? * * * the judge nodded encouragement. "I think the land, by rights, belongs to Mr. Holbrook."

"So do I!" the judge concurred, with emphasis.

As Emily made her slow way to the cracked door of the inner room—her eyes very blurred—she unconsciously listened to the judge's decision.

"Miss Enmark's testimony might be

To Make Apple Dumplings.

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

To the Editor: We think this recipe for apple dumplings very good, and, as I have never seen them elsewhere, am sending the directions.

Make a rich biscuit dough and divide into portions about the size of a biscuit. Roll out to about a quarter of an inch in thickness and place in the center of each a pared and sliced apple, with a tablespoonful of sugar and a dash of cinnamon. Moisten edges of crust with cold water and pinch together over apple. When finished place all in a baking dish, being careful not to have them touch. Half cover with boiling water, to which has been added three-fourths of a cup of sugar and a tablespoonful of butter. Bake for three-quarters of an hour in a moderate oven. Baste frequently. Serve with the sauce in which they were baked and cream. See if the family doesn't ask for more.

Fund for Chinese School.

A fund of $100,000 has been raised by a three years' campaign, for erection of new buildings for St. Mary's hall, an Episcopal school for Chinese girls at Shanghai.

Horses Refused to Go

The summer I was 9 years old my brother and I had a novel experience. Papa being away from home, it fell to the lot of my brother, a boy of 14, as man of the family, and me as his constant companion, to take the team, consisting of our saddle pony, a thoroughly spoiled beast, and a large, overgrown colt, the big wagon and two large barrels, and go after water to the lake, two miles away.

It was a very hot day in August, and, of course, the roads were very sandy, as all roads in eastern Washington are at that time of the year. We started early in the morning, expecting to be back by noon.

All went well until we had the water and were starting back, then at the first sandy grade the pony took it into his head not to pull, and of course the colt was quite willing to abide by that decision. Coax and pull and push though we did, they would not budge, so my brother relieved his feelings by pouring the contents of one of the barrels on them, to no avail. I even spied a bunch of hay and tried its powers, but it did no more than the other.

We were completely at our wits end, for there were no near neighbors and few travelers on that road except the men who like ourselves came to the wells for water. We decided to sit and wait for the horses to get ready to go. We crawled beneath the wagon out of the sun and waited with what patience we could, drawing figures in the sand and talking, getting up occasionally to see if the horses were ready to go. When the threshing machine whistles began to blow for noon, for it was harvest time, we began to get hungry and decidedly anxious to be home, but evidently the horses did not, for there they stood. It was not until 1 o'clock that a neighbor came along and pulled us over the first grade that we moved. After the man went on the horses started of their own accord, and we had hopes of getting home, when, about a half mile further on, they stopped again. This time we had to wait only about a half hour before they started.

By this time the folks at home had become anxious about us, and my oldest sister started out on foot to meet us. We met her about a half mile from home and, my! the time we did have relating our experiences to the whole family and the neighbors as well.

A mind not to be chang'd by place or time.
The mind is its own place, and in itself
Can make a heaven of hell, a hell of heaven. —Milton.

The Celtic Race of Japan.

The Ainus, the Celtic race of Japan, live in the island of Yeddo, although the race has become so reduced that there are now not more than 16,000 or 17,000 of them left in the country. The most noticeable peculiarity about Ainu women is that they have tattooed upon their upper and lower lips what resembles a mustache. The women are not considered attractive, and their matrimonial prospects are quite injured without this decoration. The mustache is begun when the girl is quite a child. It is done gradually, a little each year, until it extends partly across the cheek, the material used being the soot from burning birch bark.

Not So Much Guesswork.

We do not guess so much as we used to do. Wise housewives have learned that the few pinches of baking powder saved by scraping off the heap from a spoon, the milk remaining in measuring cups needlessly refilled when a bit of calculation would have indicated a single measurement, all count up and mean saving. When four cups are called for it means a quart; one cup is half a pint, and so on.

Cooks By Steam Pressure
Grandest invention for canning. Fruits and vegetables keep whole. Retain natural delicious flavors. No attention. Simplicity itself. Saves fuel. Saves time and labor. Also cooks meals. Pays for itself in one season. Lasts for years. No. 20—popular size—holds 14 one-quart jars. Copper bottom, $9; solid copper $18.00. 80 page cook book free if you order today. Money back if not satisfied. Descriptive circular, showing other sizes, FREE. Write today.

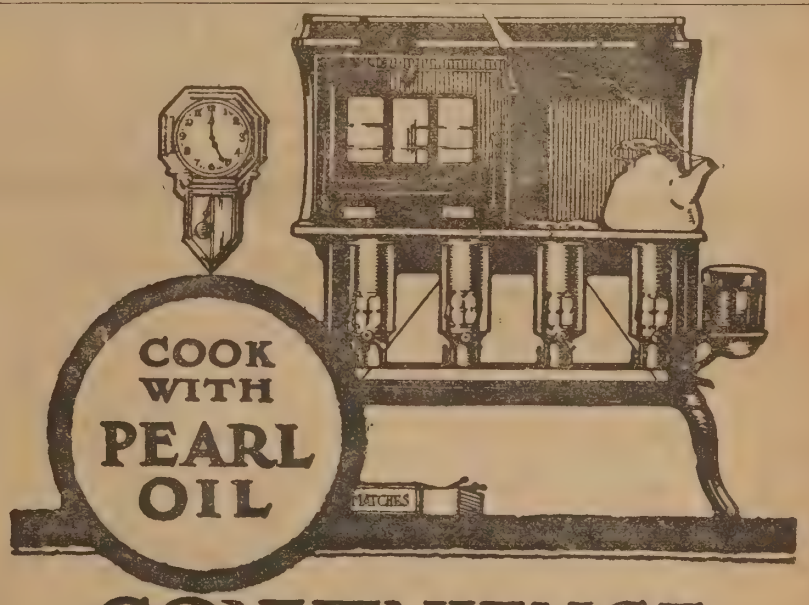
By WINIFRED WORTH

FILET FESTOON YOKE.

Here's something for a child's dress which all mothers will appreciate. Use one ball No. 10 Cordonnet.

1st Row—77 mesh.
2d Row—11 mesh.
3d Row—9 mesh 1 block 1 mesh.
4th Row—2 mesh 1 block 8 mesh.
5th Row—7 mesh 1 block 4 mesh.
6th Row—4 mesh 1 block 6 mesh.
7th Row—5 mesh 1 block 5 mesh.



8th Row—Same as 7th.
9th Row—4 mesh 1 block 6 mesh.
10th Row—5 mesh 2 block 4 mesh.
11th Row—3 mesh 2 block 6 mesh.
12th Row—4 mesh 3 block 4 mesh.
13th Row—2 mesh 2 black 3 mesh 2 black, 2 mesh.
13th Row—2 mesh 2 block 3 mesh 2 block 2 mesh.
14th Row—2 mesh 1 block 5 mesh 1 block 3 mesh.
16th Row—3 mesh 1 block 3 mesh 1 block 5 mesh.
17th Row—6 mesh 1 block 1 mesh I block 4 mesh.
18th Row—5 mesh 1 block 8 mesh.
19th Row—Same as 17th.

Continue pattern by working backward from the 17th row to complete yoke.

FILET FESTOON BAND.

Band for waist of child's dress.
One ball No. 10 Cordonnet.
Make same as the front of above yoke.
Edge for sleeves may be made by reducing width of pattern, as desired, and finishing with picot edge.

CONVENIENCE

All the convenience of gas. No waiting for the fire to burn up. Meals in a jiffy, and a cool kitchen all the time.
Bakes, broils, roasts, toasts. Better cooking because of the steady, evenly-distributed heat. More convenient than a wood or coal stove for all the year 'round cooking—and more economical.
The long blue chimneys prevent all smoke and smell.

In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

NEW PERFECTION OIL COOK-STOVE

STANDARD OIL COMPANY

2116—A set of serviceable caps. The pattern includes the three styles portrayed. Cut in two sizes: Medium and large. No. 1 will require 1 yard; No. 2 will require 7-8 yard; No. 3 will require 7-8 yard of 27-inch material for the medium size. Price 10 cents.

1326—Bathing suit for ladies and Misses. With bloomers and cap. Cut in three sizes: 14, 16 and 18 years, for misses and in five sizes, 36, 38, 40, 42 and 44 inches bust measure for ladies. It will reuire 4 5-8 yards of 36-inch material for a 16-year size for the suit with bloomers, and 5 1-8 yards for a 38-inch size. The cap will require 3-4 yards of 27-inch material for either size. Price 10 cents.

2106—A smart "pocket" dress for the growing girl. Cut in four sizes: 8, 10, 12 and 14 years. It requires 3 5-8 yards of 44-inch material for a 10-year size. Price 10 cents.

2100—Ladies' combination corset cover and drawers. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 7-8 yards of 36-inch material for a 36-inch size. Price 10 cents.

The Girl Who Dared

(Continued from page sixteen.)

classed as hearsay evidence. But such evidence may be valuable in showing the impression made upon the witness at the moment. The fact that taxes were not proffered is not altogether conclusive." A grim humor tinctured his elucidation just here. "I note that the impression made on Miss Enmark at the time was in favor of Mr. Holbrook's essential ownership of the land, although that view—" with a glance at Holbrook's attorney, "may possibly be antagonistic to her personal interest. In consideration of this, corroborated by Mr. Holbrook's actual tenancy and improvements, I grant the injunction for one month." He addressed Donald's attorney. "Application for appeal must be filed within 10 days."

As Emily slipped through the doorway, Donald's frigid tones cut the expectant silence.

"There will be no appeal, your honor."

Emily closed the door behind her. She knew that tone well. All her adoring life she had instinctively feared and avoided it. Now it had come. She stood benumbed. Trivially she recalled an expression of dismayed triumph on the weather-beaten countenance of her mother. Her head felt light and queer. She took off her hat, dropping it just anywhere. Dire physical weakness unnerved her. She could not live without Don—and he would never forgive her! Never forgive this terrible public humiliation. And the expense of it!

Maybe—if she could manage to get her arms about his neck, her cheek against its old familiar resting place—for Don did love her! He had always been so tender about the foolish weakness in her character. Even now he declined to discredit her by entering the appeal that had been planned. Maybe—

Her tears mechanically stopped. Her white, shuddering body drew up, slim and rigid. Her hands clenched in little nobbly white balls straight down at her sides. Don had come into the room. He had closed the door. By the sharp tap of his heels she knew that he was horribly angry. He paused. She did not turn. He walked methodically around and faced her. His features were livid. His blue eyes were coldly scintillant.

Donald and Emily stared at each other in unbelievable hostility.

To her unbounded astonishment, Emily found herself standing firm. Her eyes—the pupils well contracted—met his without a tremor. A strange pride thrilled through the unendurable ache. Her heart was at the breaking point—but she discovered, with a sort of horrified joy, that she could not possibly give in. She could not beg forgiveness. She found herself—standing up to Don!

She pressed her lips together, to still their trembling. The tension brought wan shadows of dimples to her thin cheeks.

Then—she found herself gripped in a rough embrace; her cheek pressed savagely against the firm hollow in front of Don's shoulder. The other cheek flushed hot under his onslaught of angered kisses.

"You darling!" Don stormed, between the kisses, "You darling! You darling!"

Through the crack in the warped door came old Holbrook's nasal intonations.

"Wall, jedge," he shrilled, "seems like Don ain't a-gittin' the land, but <—you hear me!—he's a-gittin' some wife!"

Donald kissed Emily once more, but very tenderly. And this time she could feel that he was laughing—Prize story by Hughes Cornell in Los Angeles Times Illustrated Magazine.

Hilma's Sister Lives in Alaska.

Dear Aunt Nellie: I enjoy reading the Corner very much. Many of my friends have written to the Corner. I live on a 110-acre farm and my father has five horses and a little colt. We have a bay mare and she is the childrens' pet. Her name is Babe. We have 18 cows and one of them is mine. I call her Lyony and she is a Jersey cow and much the shape of a deer. My mother has 53 chickens and my brother has six banties and one of them hurt its leg. I think I would rather live in the city than in the country because I would have more fun going riding in the automobile on the pavement and many other things. I have three sisters and three brothers. Their names are Mary, Ida and Eva, Alexander, Alfred, and Reuben. My sister Mary went to Fairbanks, Alaska, two years ago, March the fourth. I think she will come home in the fall some time and I will be very glad to see her again. I live one mile from my schoolhouse. Our school was out May 18. We had a program and served lunch for the audience. It makes me feel lonesome to think how much fun we used to have playing volley ball at school and lots of other games. I am 13 years old. I would like to correspond with Jessie Moss.—Hilma Engluad, age 13, Box 6, Independence, Wash.

Esther Crochets and Tats.

Dear Aunt Nellie: I am 11 years old and passed to the sixth grade in school. My birthday is the 14th of February. It is on Valentine day. I have one sister and three brothers. Their names are Inga, Olaf, John and Oswald. I saw Carrie Fjerlie's letter in the Corner yesterday. She goes to the same school as I do. I go to the normal school. It is the best school around here. I like to go to school. Our school was out the 24th of May and we had our picnic the 25th. We had a good time. We had an exhibit the same day that we had our picnic. I crocheted a yoke, a doily and some lace for pillow slips. I sold the yoke for 50 cents and the lace for pillow slips for $2. I did not sell the doily. I like to crochet better than I like to tat. My sister does not like to chochet, but she likes to tat. I will write to the Corner again.—Esther Victoria Dale, R. F. D. 1, Box 70, East Stanwood, Wash.

The Country Is Healthy and Free.

Dear Aunt Nellie: I have been very interested in the other childrens' letters and I thought I ought to write also. I stay on a farm with my grandpa and grandma nearly every summer. I like the farm better than any city or town. It is healthy and free. Grandpa has seven horses and two cows and a Holstein heifer. The cows' names are Birdie and Rosy. The heifer's name is Bessy. We have a shepherd dog named Speck. If you tell him to get the cows or horses he will get them in a minute. They have one cat named Snowball. I have two brothers. Their names are William and Homer. Homer is the youngest. He is 10 and in the fourth grade. I am 11 and in the sixth grade. William is 12 and soon will be in the ninth grade. I am helping grandma all I can. In summer when the raspberries are ready to pick I have to pick them and it is great fun. It will keep me busy. Grandma has 50 little chickens and about 60 large ones. I have 25 squirrel traps to look after. I have caught 30. The weather is bad and I don't think I will catch many until it is warmer. Last year I caught 60 squirrels.—Barnetta Bartholomew, Box 85, Tekoa, Wash.

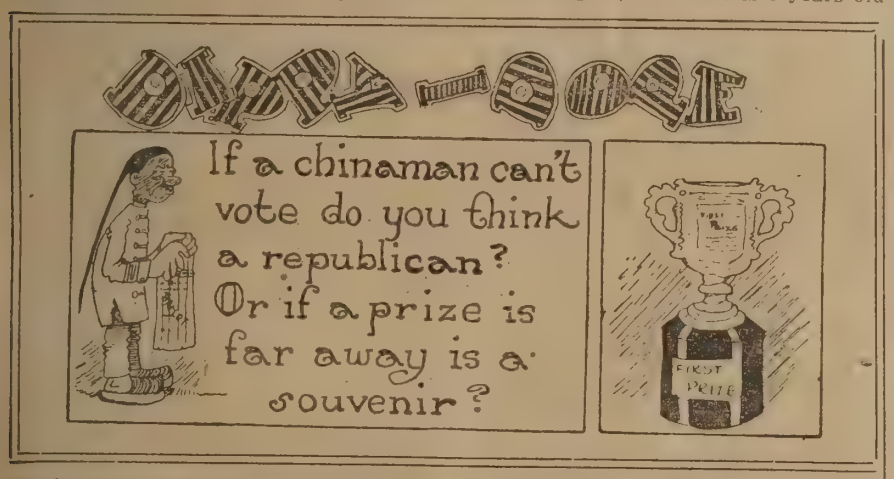
Spends Lots of Time Outdoors.

Dear Aunt Nellie: I am now going to write you a letter. I wrote to you abotu a year ago. The only girl in the Washington Farmer whose birthday was on the same day of the month as mine was a girl by the name of Martha, but she is only 12, and I am 13. I will be 14 the 27th of October. I went to school last winter. I was promoted to the eighth grade. I liked my teacher very much. Her name was Hazel Burnett. She was a very nice teacher. I have four brothers and two sisters. One of my brothers joined the army, and my other three are here at home. I had a pet cat, but he ran away and died, I guess, for I haven't seen a trace of him since he left. We have two dogs and no cat, a canary bird and horses, pigs and chickens. I love to gather flowers and play in the brooks. I spend a great deal of my time out of doors. I do not see as many letters from boys in The Farmer as there are from girls. I hope to see one of your letters to the nieces and nephews soon.—Olive Miller, Peola, Wash.

Ruth Passed Into the Fifth Grade.

Dear Aunt Nellie: I enjoy reading the Children's Corner. We take The Washington Farmer and the Youth's Companion. I like to read the children's page in it. We have about 19 horses. We have three cows and two calves. Our school is out now. We had a picnic Saturday, the 25th of May. Everybody took a lunch. We had ice cream after we ate our lunch. We have one dog and four cats and three kittens. We have four geese; one of them is setting. We have 11 little chickens. I am 11 years old. My birthday is the 27th of October. I passed this year in the fifth grade. My teacher's name is Miss Hendricks. I would like to correspond with Edna McClelland.—Ruth Crabb, Marengo, Wash.

Sammie Is a Farmer Boy.



Dear Aunt Nellie: I am a farmer boy and my father takes The Washington Farmer. I am 14 years old and I am in the eighth grade. My teacher this term will be my sister. Her name is Leone. She is 20 years old. I have one sister and no brothers. My subject is about my father's farm. Our farm consist of about 320 acres. I have 17 pet lambs and seven rabbits and one pony named Lightfoot. We have five cows, which I milk night and morning. We have a Dodge car. I have over a hundred little chickens. I would like to have a twin. My birthday is October 19. I wish some of the nieces and nephews would write to me. I will write again to the Children's Corner.—Sammie Robertson, R. F. D. 1, Box 54, Pomeroy, Wash.

Velma Has Named Her Colt Daisy.

Dear Aunt Nellie: This is the first time I have written to the Corner. The letters are very interesting. I am 10 years old. I am in the fifth grade. I go to the Summitview school. My sister is 9 years old and is in the fourth grade. She goes to the same school as I do. I have a colt almost two months old. Her name is Daisy. She is a bay colt. My sister Freda has a colt, too. His name is Dobbin. They are orphans. We feed them milk, mornings, noons and evenings. Freda and I have to go after them each time. We have a dog named Johnnie and also a white cat we call Snowball. We have 12 horses and 17 head of cattle. I live on a farm of 335 acres, 15 miles from town.—Velma McAttee, Ellensburg, Wash.

The Prettiest Cat Belongs to Nettie.

Dear Aunt Nellie: Our school is just out. We had a picnic. I have had the measles so could not go to it. I have never written to the Children's Corner before. I have two sisters and two brothers. One sister is 10 years old in August, the other is 8 years old in November, one brother is 9 in September, the other is six in September. I will be 12 the 6th of July. I am in the seventh grade. We have four cats. They are all good mousers. The prettiest cat is mine and its name is Snooker. We have a big wolf hound. It is a pup, but it scares some of my playmates. Our farm has 67 acres. We live in quite a pretty country. I just walk five minutes in the right direction to school. I live 300 yards from school. I wonder if I have a twin. If I have I hope they will write to the Children's Corner or to me I usually read the Children's Corner first. If any one's name is Nettie besides mine I hope they will write to me.—Nettie R. Jackson, Sunnyside, Wash.

The Parrot Can Say Everything.

Dear Aunt Nellie: I am in the fifth grade at school. I will be 12 the 25th of December. My mother died, and I made my home with my aunt. She has no children. I am the oldest in our family. I have two sisters and three brothers. Their names are Lambert, Marion and Stanley, and my sisters' names are June and Harriett. Harriett is 17 months old. She is the baby. I live on a 165-acre farm. We have 10 milch cows and three heifers. I have a cow named Topsy. We have three horses and about 80 little chickens. We have a car, and my aunt drives it. We have a parrot, a dog and three cats. The parrot says everything. I am going to take music lessons as soon as we find a teacher. We have a nice bathroom and a windmill. My uncle takes The Farmer. I was reading The Farmer the other night and saw a letter in it from my little friend Beatrice Hett.—Annie Elizabeth Fowler, R. F. D. 1, Box 58, Rochester, Wash.

Call the Cats Topsy and Tipsy.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 12 years old and in the sixth grade at school. I have been reading all of the letters that the other children write and I am very interested in them all. I live three and a half miles from school. We ride in a bus to school. We have one dog and his name is Arrow. We have two cats and their names are Topsy Tipsy. Our schoolhouse has four rooms in it. A friend taught me how to tat and crochet. I made enough tatting to go around a handkerchief. My birthday is the 24th of April. Have I a twin? I joined the sewing club at school.—Louise Tracie Kramer, Kennewick, Wash.

Two Cousins Are Almost Her Twins.

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 11 years old and will be in the seventh grade next year. My birthday is December 15. Have I a twin? Mabel Margret and Ruby Warren are almost my twins. Mabel Margret is just three days younger than I am and Ruby Warren is four days younger. I read the Children's Corner every time the paper comes. I have two sisters, one finished the eighth grade this year and one finished high school. I would like to correspond with any girl of my own age.—Ida Dock, R. F. D., Box 50, Stanwood, Wash.

A Nest With Four Baby Robins.

Dear Aunt Nellie: I have just been reading the Children's Corner and I like it very much. I am 8 years old and will be in the third grade next year. My teacher's name this year was Helen Newstrum. I live just out of town. We have about 60 little chickens and two cows and a calf and two horses and a colt. I did have two kittens, but they both died. There was a little bird's nest in our cherry tree, but the wind blew it down. There is a robin's nest in a tree in our back yard with four baby robins in it.—Bessie Cochran, Sunnyside, Wash.

A Vacation at Sister's House.

Dear Aunt Nellie: This is the first letter I have written to the Corner. My father takes the Washington Farmer. I like to read the Children's Corner. I am 10 years old and in the fifth grade at school. My teacher's name was Miss Martin. Our school closed May the eighteenth, I am having a week's vacation at my sister's. I am having lots of fun. I have three sisters and three brothers. We have a horse, cow and a car. I live in Sunnyside and my father raises asparagus and I help him sometimes. I hope to see my letter in print.—Grace McKibben, Sunnyside, Wash.

Lucile Is a New Corner Cousin.

Dear Aunt Nellie: I am 11 years old and in the seventh grade at school. This is the first time I have written to the Corner. My teacher's name is Miss Harris. I like her very much. I have four sisters and three brothers. I live on a farm 10 miles from Pullman. We have many horses and cattle. We have a pet pig and we call it Jack. I like to read the letters so well in the Children's Corner so I thought I would write. I think I will write again some time.—Lucile Brannan, Pullman, Wash.

The Only Girl in the Family.

Dear Aunt Nellie: I thought I would write a letter to the Children's Corner. I have read the Corner ever since we got the Farmer and I like to read the letters very much. I go to Sunday school every Sunday. I go to school and am in the third grade. My teacher's name is Miss Dolan. There are 15 pupils in our school. I am the only one in my class. I have six brothers and I am the only girl in the family.—Grace Miller, Joyce, Wash.

Ride to Town in the Launch.

Dear Aunt Nellie: I enjoy reading the Childrens' Corner very much. I am eight years old. My birthday is July the ninth. I am in the third grade. When our school closed we had a picnic the last day of school. Two or three days after school was out I went to visit my cousin, Fred. He lives near the Puget Sound. When the tide comes in we go boat riding. My uncle has a gasoline launch and we go to town with his boat. I like to ride in it very much.—Ethel Harriman, R. F. D. 1, Monroe, Wash.

Wrote His Letter on the Typewriter.

Dear Aunt Nellie: I am going to write about my favorite book. My favorite book is Our Country West. I like it because it has so many interesting things to talk about. I am 10 years old and in the fifth grade at school. My birthday is July 20. I have one sister but no brother. I am writing on a typewriter in this letter. I am five feet tall. I live on a 14-acre farm near Montesano.—Kenneth Redman, Melbourne, Wash.

Helen Likes the Farm Very Much.

Dear Aunt Nellie: My grandfather takes The Washington Farmer and I like to read the Corner very much. I am a little girl 8 years old and I weigh about 55 pounds. Our school closed last week and I passed to the fourth grade. I have only one sister and I have not any brothers. My sister's name is Evelyn. She is 11 years old and will be in the sixth grade next term. My grandfather has 165 acres in his farm. I like the farm very much. We have only 18 chickens and eight little ones, which were hatched this morning. I have red hair and the children at school call me Red Top, but my real name is—Helen Smith, Box 40, R. F. D. 1, Yelm, Wash.

Happy When She Roams in the Woods.

Dear Aunt Nellie: I read my first letter in the Farmer and was glad to see it. I go to school every day. I have not very far to go to school. We are going to have a program on the last day of school. I am going to speak a piece. I am 9 years old. I am in the third grade. My teacher's name is Mrs. Smith. I love to see the flowers come again so I can go out into the woods to gather them and to hear the sweet songs of the birds. It makes me so happy to roam through the woods. I dearly love to read the Children's Corner.—Jennie Peterson, Thomas, Wash.

A Lighthouse on the Island.

Dear Aunt Nellie: We got two cows and one horse and 14 sheep. There is a lighthouse on this island. I have three brothers and one sister. My oldest brother is 15 years old. His birthday is the 1st of January. I am 9 years old. My youngest brother is 8 months old. It is three miles to school. My teacher's name is Mrs. Pinneo. There are 11 of us going to school now. We have two cats. We have 29 chickens. I like to read the farm papers very much.—Pearl Droullard, Prevost, Wash.

Helen Likes the Corner Letters.

Dear Aunt Nellie: I have been reading the Children's Corner for a long time. I like to read the many interesting letters. I am 10 years old and in the fourth grade. My birthday is the 18th of September. I have one brother. His name is Adrian. I live on a 25-acre farm. I walk to school three-quarters of a mile.—Helen Davis, Randle, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: George Nichols, Esther Eastman, Iva Brannan, Edith Anetta Parmeter, Wilma Anderson, Frances McCauley.

To Get a Flag Write Soon

With the declaration of a state of war our first supply of flags was quickly exhausted and we have had great difficulty in securing more.

We have at last secured a limited number of flags which we offer on the following terms:

OFFER NO. 1

3x5 flag together with The Washington Farmer for three years. Both for $2.50.

OFFER NO 2.

4x6 flag together with The Washington Farmer for three years. Both for $3.00.

We would suggest prompt action; orders will be filled as received.

The Washington Farmer, Review Bldg., Spokane.

Enclosed find $.... (your personal check, stamps or money order), for which send me American flag, as advertised, and The Washington Farmer for 3 years.

The Story of the War
Vividly Told

Subscribers to The Twice-a-Week Spokesman-Review are kept closely informed regarding the great world struggle into which our country has been drawn. It prints the facts regarding the gigantic war preparations, the tremendous battles, and the political maneuverings and intrigue which are taking place far back of the battle lines. No one will be considered well educated by his neighbors if he or she is unable to talk intelligently about these and other events which are taking place in these stirring times.

Accurate Information

The Twice-a-Week Spokesman-Review will keep you accurately posted regarding local, state, national and world affairs. It is complete, reliable, and condensed for busy readers. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from ever far-flung battle line.

Special Offer Is Repeated

Hundreds of our friends have already taken advantage of the offer below; but we are repeating it as we believe many hundreds more will wish to secure their state farm paper in combination with The Twice-a-Week Spokesman-Review.

Twice-a-Week Spokesman-Review for 1 year regular $1.00
The Washington Farmer for 3 years if subscribed for a year at a time ...$3.00

Total value $4.00

Our Special Price for Both, $2.00

Big things are happening this week. Big things will happen next. To get the facts about these events, send in your order at once. Paid ahead subscriptions will be advanced from the dates to which they are paid.

Address orders to

Ups and Downs of a Bunch Grass Boy

(Continued from page fourteen.)

became a bit less certain in its movements, just a bit panicstricken; and the black hound became surer. He made one move, presently, which seemed surer and quicker than the rest—and the game of tag was over. He had caught the coyote by a hind foot—just where the coyote had nipped him twice! Game to the last the gray animal whirled on its back and snapped its needle fangs into the hound's stiffly bowed neck, but futilly. With a crunch the dog broke the leg; and with another quick, sure movement, he had the coyote by the throat. A minute later he shook it in his great, powerful jaws, as easily as a terrier shakes a rat.

Sure that the coyote was dead, he looked around to see the other coyote; but it was gone. So he padded unconcernedly back to our doorstep, circled thrice, plumped down, and with powerful muzzle resting on his equally powerful paws, sighed contentedly and closed his eyes. Mother and I watched the great dog with a feeling akin to awe.

That summer the nights were very warm, and, for the sake of fresh air, mother and I often slept in our one-room cabin, with the door wide open. Jack, as we came to call the mammoth hound usually slept curled on the doorstep. Sometimes in the quiet night I would awaken and see him there, silent, but watchful, with an ear to the ground. I always was glad to see him there, and so was mother. Alike we were thankful for the big dog and the protection he afforded, but he had such an appetite. Verily, it seemed that he would eat us out of house and home. But as the days went by and we came to rely on him more and more for protection we thought less of his cave-like maw, and I know that either of us would gladly have gone hungry to feed him.

Late in summer fires broke out in the mountains and wild animals came down, crossed the river and appeared in unexpected places on the bunchgarss prairie. Neither mother nor I was alarmed, for this had happened every summer since we had lived on the claim, and we had never been disturbed by the mountain animals.

One moonlight night when the smoke from mountain fires hung like a smoky-blue cloud over the prairie we were awakened by the big hound growling on the doorstep. He had never growled before, to our notice, and we were alarmed.

We hastened out of bed and stood at the door by the black hound. He stood there growling in low, muttering tones, and his eyes, which, in a brief glance, flashed on us, were strangely ablaze. Mother spoke to him, but he was utterly unresponsive. I trembled with fear and so did mother. I stroked his huge head with a shaking hand, and remember that beneath my tremulous touch he was rigid as steel—always growling in low, menacing tones, with eyes afire with a murderous light; we scarcely recognized him, so singular was the transformation.

With a short, impatient growl he left the doorstep abruptly. We heard him growling behind the house; then at the corner, and again as he came back to the doorstep.

A long time we stood huddled together in the doorway, while the dog growled and seemed to listen. Presently we heard a cry, a curiously weird, half-human cry, not loud, but having in it a peculiarly penetrating quality or accent—grewsome it was, and one felt after hearing it that he must have imagined. It was so unreal.

But it was not unreal. Again the crying tone came through the night, distinct and unmistakeable.

The big hound's low, menacing growl ceased. He seemed to have made up his mind. Silently, padding stiffily with crest slightly raised and tail stiff he left our doorstep in the direction of the cry. We saw him pause on top of the hill south of the house, his black figure clearly silhouetted against the moonlit sky. Then he vanished—and never came back.

All that night we stayed awake, waiting to see his huge, protecting form loom on our doorstep. Vainly we watched. Toward morning, when the moon was low in the west and it was still dark, mother got up and shut the door. In my trundle bed I trembled with fear, and when I spoke to mother it was in such quaking tones that she perceived my terror and had me get in bed with her.

A few days later Charley Gifford looked up from the bottom of the well he was digging and saw the large, cat-like head of a mountain lion looking down at him, 20 feet below. He climbed out of the well, followed the animal and shot it.

Father returned from the harvest fields shortly after our big dog disappeared and the matter soon passed. As the years have slipped by, on me the conviction has grown that that night the Russian hunting hound—if such he was—recognized the presence of a deadly enemy, went out to battle and was slain. Brave and powerful and well trained as he was, he could hardly have killed a nine-foot mountain lion; but it must have been a great fight.

In next week's Farmer the Bunch Grass Boy tells of the feathered and furry animals, large and small, speaking a language which has become familiar to him:

When I was growing up on the western bunchgrass it was the curlews that told me when spring had come.

When the bluebirds came I knew that wild violets were blooming over in the rocky lands west of our farm a couple of miles.

After the bluebirds and the violets you noticed the ground owls—I do not know what else to call them.

The sandhill cranes told me when summer had come, just as the curlews told me when it was spring.

Late in the summer when the blue haze of approaching autumn hung heavy in the air and the evenings and nights were getting cool, the geese told me that winter was approaching.

Sidelights

Partial Responsibility.

Guest—See here, waiter, you've kept me waiting for half an hour, looking like a fool!

Waitress—Sorry I had to keep you waiting, sir, but you're responsible for the rest.

Worse Than Hubby.

Wilkom—What's that string on your finger for?

Bilkom—My wife put it on to remind me to post her letter.

Wilkom—Did you do it?

Bilkom—No. She forgot to give it to me.

The Police Captain Knew.

Captain—What's he charged with, Casey?

Officer—I don't know the regular name for it, captain, but I caught him a-flirtin' in the park.

Captain—Oh, that's impersonatin' an officer.

Took and Gave Father's Advice.

Father—Tommy, go out to the barn and hitch the horse to the old sleigh.

Son—Why not to the new sleigh, father?

Father—Wear out the old first, is my motto, son.

Son—Well, then, father, you go out and hitch up the horse.—Everybody's.

No Quarter for Him.

Mrs. Jones was standing in the doorway talking with old Mr. Hahn, a neighbor. They were speaking in uncomplimentary terms about an impostor who had lately passed through the village, swindling right and left.

"He'd better not come round here again!" exclaimed Mrs. Jones indignantly. "If he does, I'll give him no quarter."

"Quarter!" shouted the enraged old man; 'quarter! Well, I guess not! I wouldn't give him 10 cents!"—Youth's Companion.

One Look Enough.

A Quaker had got himself into trouble with the authorities and the sheriff called to escort him to the lockup. "Is your husband in?" he inquired of the good wife who came to the door.

"My husband will see thee," she replied. "Come in."

The sheriff entered, was bidden to make himself at home, and was hospitably entertained for half an hour, but no husband appeared. At last the sheriff grew impatient.

"Look here," said he, "I thought you said your husband would see me."

"He has seen thee," was the calm reply, "but he did not like thy looks and has gone another way."

Want American Ship Orders.

A number of Chinese shipbuilders are at present touring the United States with the object of getting orders for ships. They can build at half the cost and with designs drawn by Americans, they can, they say, multiply the number of ships faster than the United States can procure men to man them.

Want Ads

Want Ad Rates 30c Per Line

Want ads are run at this rate in The Washington Farmer and its associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

How to Figure Cost of Ads

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

Just What You Want

may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

Grain and Produce Markets

Chicago Grain.

CHICAGO, July 7.—Corn prices burst all restraint today and reached the highest level yet after more than a week of continued overtopping of previous records. Unseasonable cool weather and virtual exhaustion of the stock of corn here had much to do with bringing about the fresh advance. Quotations closed nervous, 1 3-8c to 3 3-4c up, with September at $1.56 1-4 to $1.56 1-2, and December at $1.18 1-8 to $1.18 1-4. Wheat finished unsettled at 5c decline to a gain of 2c, July 2.07, and September $1.94. Oats were unchanged to 7-8c higher, and provisions varied from 10c down to a rise of 2 1-2c.

Interest in the wheat trade seemed to be confined to guesses regarding what would be shown by the government crop report on Monday. It was not expected, however, that the report would be of a nature to disturb much, if at all, the anchorage which quotations have bee nsubjected to by prospective tightening of federal control.

Oats made only a moderate response to the strength shown by corn. The general bright outlook for the oats crop seemed to be too much of a handicap for the bulls, and it was said export buying had been curtailed.

Provisions gave way with hogs. The corn bulge resulted in merely a slight transient upturn for lard and ribs.

Cash Quotations.

Wheat—Nos. 2 and 3 red, and No. 2 hard, nominal.

Corn—No. 2 yellow, $1.84@1.85 1-2; No. 3 yellow, $1.84@1.85; No. 4 yellow, nominal.

Oats—No. 3 white, 71 3-4@72 1-4c; standard, 72@72 3-4c.

Rye—Nominal.

Barley—$1.15@1.40.

Timothy—$4@8.

Clover—$12@17.

1916-17	171	70	14	40

Portland Wheat.

PORTLAND, Ore., July 7.—No trading is being done or attempted in the wheat market and there will be none until the food bill is settled by congress. Nominal quotations here are $2.15 for bluestem, $2.10 for club, and fortyfold and $2.05 for red Russian.

Butter and Eggs.

ELGIN, Ill., July 7.—Butter—37 1-2c bid; no offerings.

CHICAGO, July 7.—Butter—No market.

Eggs—Receipts, 109 cases; no market.

SAN FRANCISCO, July 7.—Eggs—Fresh firsts, 32 1-2c; extra firsts, pullets, 29 1-2c.

Live Stock Quotations.

At Omaha.

OMAHA, July 7.—Hogs—Receipts, 12,000; market 10@15c lower. Heavy, $15.10@15.50; mixed, $14.90@15.10; light, $14.55@15.10; pigs, $12.50@14.50; bulk, $14.90@15.10.

Cattle—Receipts, 1400; steady. Native steers, $9.50@13.35; cows and heifers, $7.50@10.50; western steers, $9@11.75; Texas steers, $9@10.50; cows and heifers, $7@9; canners, $5.50@7.50; stockers and feeders, $6.50@9.50; calves, $9@15.50; bulls, $5.50@10.50.

Sheep—Receipts, 900; steady. Yearlings, $10.50@13; wethers, $9@10.25; ewes, $8.50@9.25; lambs, $15@16.

At Chicago.

CHICAGO, July 7.—Hogs—Receipts, 11,000; slow, 5@10c under yesterday's average. Bulk, $14.80@15.75; light, $14.50@15.75; mixed, $14.55@15.95; heavy, $14.45@15.95; rough, $14.45@14.65; pigs, $11@14.25.

Cattle—Receipts, 300; steady. Native beef cattle, $8.30@13.90; stockers and feeders, $6.30@9.50; cows and heifers, $5.40@11.75; calves, $10@14.75.

Sheep — Receipts, 13,000; steady. Wethers, $7.75@11; lambs, $10@16.50.

At Portland.

PORTLAND, Ore., July 7.—Hogs—Steady; receipts, 448.

Cattle—Steady; receipts, 309.

Sheep—Steady; receipts, 511.

At Seattle.

SEATTLE, July 7.—Receipts, 73 cattle, 33 hogs. Market steady on hogs. Cattle and sheep at yesterday's quotations.

Woodworth & Barton reports:

"A liberal run of cattle and much unfinished stock has caused a sharp break in the market, ranging from 50c to 75c per 100 pounds lower than the prices obtained on the same quality a week ago.

"The best steers sold Friday at $9.50, with the commoner grades of good weights ranging from 8c to 9c, while those coming in the stocker and feeder class sold from 6c to 7c.

"Prime cows sold at $7.85, with the bulk of sales ranging from 6c to 7c.

"While the run of hogs is light, the market shows little life, the extreme top being about $15.75, while good to choice range from $15.40 to $15.60.

"The sheep and lamb market is steady, with few offerings. Good lambs would bring 13c and yearling wethers from 10c to 10 1-2c."

Spokane Stock Yards Saturday.

Hogs — Receipts, none; market strong. Prime heavy packing, $15.40@15.65; prime light packing, $15.25@15.40; smooth heavies, $14.40@14.65; pigs, $13@14.25; stockers, $12.50@13.75.

Cattle—Receipts, 101, mostly stockers; market weak. Prime light steers, $9.50@9.75; prime heavy steers, $9.75@10; good steers, $8@8.50; ordinary to fair, $7@7.75; prime cows, $8.25@8.75; good cows, $7@7.50; common cows, $6@7; best heifers, $8.50@9; bulls, $6@8; calves, $7.25@8.75; stockers and feeders, $5.75@7.75.

Sheep — Receipts, none; market steady. Prime spring lambs, $12.50@13; prime shorn wethers, $9@10; prime shorn yearlings, $10@10.75; prime shorn ewes, $8.50@9.50.

Seattle Market.

SEATTLE, July 7.—Potato prices have been plunging heavily during the last two days and new stock from both eastern and western Washington can be bought at 3 1-2c per pound, with indications of a still farther decline next week.

Today the first lot of Puget Sound Early Rose potatoes were shipped into the market in lug boxes and are selling briskly at 3 1-2c per pound.

Eastern Washington pie cherries are scarce at 4@5c. Bings are plentiful and weak, with the various grades considered, at 10@14c and Royal Anns at 5@7c. Good cherries are likely to continue stiff in price, as the Puget Sound crop has been damaged 50 per cent by blight.

Strawberries firmed up considerably through lighter receipts. The weekend cleanup should have shown a decline, but the big week is now passing and from now on jobbers predict rising prices. Good Marshalls brought $1.50 and Clark Seedlings $2.

Local raspberries are easier at $3.50 per crate.

Receipts have fallen to such an extent and the losses from warm weather and long holding running so heavy that the fresh ranch egg market is firm to an advance. Jobbers predict that the 36-cent level will be entirely absorbed by Monday, and a 40-cent level is believed to be near at hand. Several of the larger houses are preparing to draw on their storage stocks within the next few days as a check against the rising price tendency.

Butter remains stationary. While the receipts of cream are not showing the volume per milch cow that was expected it is being pressed home to city creamerymen that there has been an increase in the production from some source in this territory.

Poultry quotations will remain unchanged next week. Jobbers report that they are well satisfied with the adjustment between sales and receipts.

Cheese is weak, but jobbers have been unable to get manufacturers to quote lower. Pressure exerted by consumers in bid prices for milk is alone preventing a decline.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transaction by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 30@33c per dozen.

Poultry—Live hens, fat, over 4 lbs., 18c per lb; 2 lbs. and under, 13@16c; old roosters, 12c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 14c per lb.; broilers, live, 15@17c per lb.

Butterfat, 32c per lb.; dairy butter, 27@30c.

Beef—Buying price: Prime beef, steers, 7@8c per lb; cows, fat, 7@8c per lb.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 13@14 1-2c per lb.; do heavy, 12@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 30c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 38c per lb.; dry calf (under 6 lbs.) 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 1c per lb.; dry butcher full wool sheep pelts, 30@33c per lb.

SELLING PRICES.

Asparagus—Local, $1.50@2 crate.

Cherries—Local, Bing, 10@14c lb.; Royal Anns, 5@7c lb.; local pie, 4@5c per lb.

Cappabe—3 1-2c lb.

Feed—Scratch feed, $75 per ton; all grain chop, 57 per ton; oats, $53 per ton; rolled oats, $54 per ton; oats, $63 per ton; rolled oats, $54 per ton; rolled or ground barley, $50 per ton; clipped barley, $53 per ton; wheat, $82 per ton; bran, $33 per ton; shorts, $36 per ton; soya bean meal, $54 per ton; whole corn, $74 per ton; cracked corn, $75 per ton.

Hay—Eastern Washington timothy, $29 per ton; alfalfa, $22 per ton; double compressed, $34 per ton; wheat hay, $22 per ton; Puget Sound, $20 per ton; straw, $15.

Rutabagas, $3 sack.

Strawberries—Clark seedings, $1.75@2 crate; Marshalls, $1.25@1.50 crate.

Butter—Washington creamery extras, cubes, 38c per lb; do bricks, 39c per lb.; creamery firsts, cubes, 37c lb.; do bricks, 38c per lb.

Eggs—Fresh ranch, 37c; seconds, 33c dozen.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—$3 cwt; new potatoes, 4½c lb; new local potatoes, $3.25 cwt.

Apples—Washington apples, cooking, 75c box; Rome Beauties, $1 box; N. Y. Pippins, $2.25 box; Ben Davis, $1.25 box.

Butter—Blanchard cartons, 40c lb; Medo-Maid, 40c lb; Cascade, 40c lb; Gold Leaf, 40c lb; Better Butter, 40c lb; Attalia, 40c lb; Diadem, 40c lb; Hazelwood, 40c lb; Solid Pack, 38c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 25½c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 29c lb; domestic Swiss, 35c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $10 case.

Live Poultry—Hens, 19c lb; old roosters, 10c; ducks, 13@14c; geese, 11c; turkeys, 20@25c.

Dress Poultry—Hens, 22c lb; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

Concrete in New Zealand.

The use of concrete by the farmers of New Zealand is increasing rapidly. It is used in making drinking troughs, dairy houses, cow sheds, fence posts, pigsties and practically everything that was formerly constructed of wood.

Portland Market.

PORTLAND, Ore., July 7.—The country produce markets are running about steady. Eggs require closer candling these days and the spread between case count and candled prices is wider. A fair demand is reported for country creamery butter. Poultry and dressed meats show but little change.

Northwestern prune packers have withdrawn from the market as buyers, pending the outcome in California, where the association named an unusually low opening price.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to prodcers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $45@45.50 per ton.

Corn—Whole, $72; cracked, $73 per ton.

Millstuffs—Bran, $32 per ton; shorts, $35.

Barley—No. 1 feed, $42; brewing, nominal; rolled, $49.

Hay—Buying prices: Timothy, eastern Oregon, $25; alfalfa, $18; grain, $16.

Eggs—Oregon ranch, case counts, 31c per dozen; candled, 33@33 1-2c.

Poultry—Hens, 15@16c; ducks, 15@22c; turkeys, alive, 20c; geese, 10@12c.

Butter—City creamery, prints, 38@39c per pound; cubes, 36 1-2c.

Cheese—Tillamook triplets, 23c; young Americas, 24c.

Dressed meats—Veal, 14 1-2@15c; pork, 19@19 1-2c.

Hops—Nominal.

Potatoes—New, 3 1-2@4c per pound.

Wool—Eastern Oregon, fine, 58@61c; coarse, 58@65c; valley, 72 1-2@75c.

Beans — California small white, 16 1-2c; large white, 16c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green hides (25 lbs. and up), 18c; green stags (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Wool Market.

BOSTON, July 6.—The Commercial Bulletin will say tomorrow:

Except for the sale of a sizable line of scoured fine cape wools the last week in the Boston market has been very dull, prices hold fairly steady, however, for everything.

Possibly the trade is a bit more optimistic as to the future, but the attitude of the federal government as to noils and waste prices is restraining trade in wool.

Manufacturers are busy, but new contracts have been few, while demand in the west is steady and prices strong.

Scoured basis.

Texas—Fine, 12 months, $1.70@1.75; fine, eight months, $1.45@1.50.

California — Northern, $1.70@1.75; middle county, $1.40@1.45; southern, $1.15@1.20.

Oregon—Eastern, No. 1 staple, $1.72@1.75; eastern clothing, $1.45@1.50; valley, No. 1, $1.45@1.50.

Territory—Fine, staple, $1.72@1.75; half-blood combing, $1.45@1.50; three-eighths blood combing, $1.30@1.35.

Pulled extra, $1.80@1.85; A.A, $1.70@1.80; A supers, $1.45@1.50; C supers, $1@1.05; fine combing, $1.40@1.45; medium combing, $1.25@1.35.

News for Breeders

In 30 Days 94 Pounds Fat.

Under date of June 28, Superintendent Malcolm H. Gardner of the Holstein-Friesian association writes:

I am advised through preliminary reports and by wire that the Holstein-Friesian heifer Von Heim Winnifred Colantha 329334 has broken the record for fat production in the junior two-year class of the 30-day division, by producing in 30 consecutive days 1925.3 pounds milk containing 94.245 pounds fat. She freshened at the age of 2 years, 1 month, 4 days. Her sire is Dutchland Governor Sir Colantha 90477; her dam is Winnifred Piebe De Kol 2d 183405. She was bred by Carnation Stock Farm, Seattle, Wash.; and she is now owned by J. von Herberg of Kent, Wash. In the junior two-year class of the 30-day division she displaces Fairview Korndyke Pietertje 252940, whose record for 30 days is 2064.8 pounds milk containing 93.829 pounds fat. Computed on the 80 per cent basis, the equivalent butter claimed for Von Heim Winnifred Colantha would amount to 117.806 pounds.

BROOKSIDE HERD DISPERSED.

The greatest dispersion sale of pure-bred dairy cattle in the history of the world took place at Liverpool, N. Y., on May 15, 16 and 17, when the great Brookside herd, founded in 1875 by the late Henry Stevens of Lacona, N. Y., and later owned and brought to a high state of perfection by his two sons, Ward W. and Ralph J. Stevens, was placed under the hammer and sold for the magnificent sum of $242,665. There were 309 head, and the average price worked out at $785, the two highest priced animals being the famous sire King of the Pontiacs, who sold for $10,500, and the finely bred King Model, who was knocked down at $10,400. N. W. Salmon of Glenfield, N. Y., purchased the former and H. Perkins & Son and M. Philip of Red Creek, N. Y., the latter.

Founded in 1875 by the purchase of the bull, Baron Steuben, and the two females, June and May, which were secured the following year, the first real success came after Mr. Stevens purchased the imported cow, Inka, then a yearling heifer. Baron Steuben was replaced by Mooie Hartog 4th and then followed Milla's Pietertje Netherland. One has only to think of a great Holstein sire or cow, and on tracing back he will invariably find the ancestry of the animal in the Brookside herd. Such splendid specimens of the breed as De Kol 2d, Belle Korndyke, Netherland Hengerveld, Helena Burke, Korndyke Queen and Korndyke Queen De Kol, are but a few of the animals whose work as foundation stock is familiar to every student of Holstein history.

It was announced in the ring that the grand old King of the Pontiacs had changed hands again, at a much higher figure, after the first sale, his new owners being the Winterthur Farms, Winterthur, Del., Tranquility and Allamuchy Farms, Allamuchy, N. J., and G. G. Burlingame and D. N. Hart, Cazenovia, N. Y.

That splendid matron, Pontiac Clothilde De Kol 2d (13½ years old), the first cow to make 37 pounds of buttter in 7 days, 145 pounds in 30 days, and over 1000 pounds of butter fat in a year, and also the first cow to make over 30 pounds butter in three successive lactation periods, was purchased for $2600 by the Fred F. Field Holstein company, Brockton, Mass. She is a three-quarters sister to King of the Pontiacs and is the dam of the splendidly bred bull, It, recently sold by Stevens Brothers to McAllister & Sons, the well-known Pacific coast Holstein breeders. Messrs. Field also paid $4200 for a 37-pound daughter of King Korndyke Hengerveld Ormsby and K P Polkadot.

The Wourms Sale

While a fairly large crowd gathered recently for the sale of the Jersey herd at Fred Wourms', four miles from Oregon City, they apparently were not anxious to buy.

The animals themselves appeared to be good individuals and were of excellent breeding.

Golden Cicely, a register of merit cow, sold for $160 to Thomas Withycombe. Ione of Rock Ridge, with a record of 337.9 pounds of fat in 265 days, was bought by Mr. Bohlander of Naef for $132.50.

After six animals were disposed of and several were led back without a bid, the sale was declared off.

F. M. Roseman, O. A. C. graduate, former cow tester in Clackamas county, now farming with his father at Dayton station, recently gave a demonstration of food conservation, and elimination of waste. This demonstration was given at the Wourms sale near Oregon City.

RECENT ANGUS SALES.

Recent sales by the Yakima herd of Aberdeen Angus cattle include:

J. I. West, Mapin, Ore., bull calf.

T. S. Brown, Wapinitia, Ore., yearling bull.

W. A. McLeod, Grass Valley, Ore., two yearling bulls.

Lars Kadegaard, Mabton, Wash., bull calf.

Jack Fendall, Devils Lake, Ore., yearling bull.

Cris Lannes, Bearmouth, Mont., two yearling bulls.

Besides the above, Dickson & McDowell, Prineville, Ore., bought an entire show herd which they expect to exhibit at the leading fairs this fall as follows:

One yearling bull, one six-year-old bull, five bull calves, two two-year-old heifers, five yearling heifers, three heifer calves.

CREDIT WHERE CREDIT IS DUE.

The handsome Clydesdale stallion, Decoration, shown with the report of the Union (Ore.) stock show in a recent issue was not grand champion of the show, as indicated, but was champion Clydesdale stallion. The grand championship, all breeds, was won by Albert Hunter's magnificent Percheron, Kroumer, as the report elsewhere showed.

Union county was cheated out of an honor in the report when Golden Duchess, owned by R. E. Boyce of Baker, was credited with being senior champion cow, an honor which was awarded to Roan Duchess 2d, a 2-year-old, owned by G. W. De Lay of Hot Lake. Golden Duchess, however, won first in her class.

A FOUR-YEAR-OLD CHAMPION.

News comes that Merry Miss Oonette —288311—takes first place among Oregon's senior four-year-old Jerseys, having produced, in a year's test, 15,055.5 pounds of milk and 685.62 pounds of butterfat. The new champion is owned by W. M. Ladd, Portland, Ore.

SPECIALIZE ON LINCOLNS.

Dr. S. S. McClure, secretary of the National Wool Growers' association, will make a specialty of thoroughbred Lincoln sheep on his Hagerman valley ranch, the old Bliss ranch near Gooding, Idaho. He has just received four bucks from New Zealand. He also has 30 registered ewes on the ranch.

Breeders' Department

Dispersal Sale of Cattle, Hogs and Sheep

At Grandview, Wash.

July 25th, 1917

50 head of Register of Merit Jerseys.
50 head registered O. I. C. hogs.
200 head of January lambs.

One herd bull, Hermit's Majesty, No. 146,981, whose close ancestors are 700 to 900 pound cows.

There are a few of the blood lines we offer: Raleigh's Honeymoon Boy, whose sisters are 600 to 700 pound cows.

Toppers Sunbeam, No. 238741, whose sisters are 600 to 700 pound cows.

Baby Buffs Ellen, No. 220,530, who herself has a record of 630 pounds in one year.

We offer the best blood lines in the Jersey breed, none excepted.

Stock tuberculine tested. Cow testing records will be open for inspection.

One Empire Double-Unit Mechanical milker.

Terms Nov. 1, 1917, 3 per cent discount for cash.

AUCTIONEERS:

Geo. Gochnour, Sunnyside, Wash. **J. W. Hughes, Forest Grove, Ore.**

C. C. WINGER, Owner, Grandview, Wn.

A. W. HAWN, Clerk, Grandview, Wash.

Send for Catalogues.

LUNCH WILL BE SERVED BY THE LADIES OF THE RED CROSS.

All trains will be met at Grandview and Mabton, Wash., on the day of the sale.

SHEEP

KNOLLIN RAMS--BETTER LAMBS

Largest purebred Shropshire flock in U. S.
World famous—thirty years standing.
Hundreds of prizes won.

Address A. J. KNOLLIN, Pocatello, Idaho

DUROC-JERSEY SWINE

Duroc Spring Boars

from state champion ancestors, 14 to select from. Order early and get your choice.
H. W. TURNER, Sunnyside, Wash.

Hillcrest Duroc Jerseys

Pigs from fine strain, matured stock; handled for results. Good looks and good breeding. You can't go wrong on these.
R. P. CAMP. Ione, Wash.

Duroc Jesery Spring Pigs

raised by Boys' Pig club. Excellent breeding, prices reasonable. Write Harry Jones, secy.
BOYS' PIG CLUB, R. 1. Mica, Wash.

DUROCS.

Boars and open or bred gilts of excellent breeding.
E. E. PRICE, CABINET, IDAHO, OR.
JAMES N. PRICE. Pullman, Wash.

POLAND CHINA SWINE

Fruitland Stock Farm

Poland China Hogs.

Herd headed by Idaho Expansion (541305), assisted by Superba Jr. (241305) and Sammy (79833). Top for size and quality. I have for sale extra good spring pigs. Correspondence solicited.

J. M. ROYSTON EST., C. ROYSTON, MGR., Payette or Fruitland, Idaho.

BIG TYPE, BIG LITTER

Easy feeding, eligible to register. Poland Chinas, foundation stock. If interested write for prices, description and booklet.
J. N. SCOTT. Naches, Wash.

DOGS

Fox and Wolf Hounds

of the best English strains in America; forty years' experience in breeding these fine hounds for my own sport and protection of sheep, hogs and poultry. Send stamp for catalog.

T. B. HUDSPETH.
Athley, Jackson County, Missouri.

HOLSTEIN CATTLE

Registered Holsteins

A FEW BRED A. R. O. YOUNG COWS and a fine lot of young bulls, some about ready for service. Herd sire an undefeated Grand Champion, backed by a wonderful array of world-renowned high-producing ancestry.

Write for pedigrees and terms.
H. R. BOOMER. New Plymouth, Ida.

Avalon Dairy

Registered bull calves by Hartwood Hello Hengerveld (129524) from cows with good A. R. O. records, De Kol Korndyke and Pontiac blood. Prices right. Six per cent interest on time payments. Write today.
AVALON DAIRY. Kuna, Idaho.

HOLSTEIN CATTLE

Young stock by richly bred grandson of King of the Pontiacs, out of high-producing advanced registry cows.
A. E. SMITH. Sumas, Wash.

BUFFALO DUKE DOEDE

(102228) heads my herd. He is a half-brother of world's record cow, Dutchess Skylark Ormsby, producing 1506 pounds of butter in one year. Wayside Ranch Holsteins and Poland China hogs.
H. H. STIYER. Buhl, Idaho.

HOLSTEIN BULL CALVES.

One from 20-lb. cow, another from a 16-lb. jr. 2-yr.-old. Herd headed by Model Fobes of Idaho, whose four nearest dams average 27.25 lbs. butter 7 days.
EARL BEEBE, R. F. D. 2, Rupert, Idaho.

GUERNSEY CATTLE

West Lea Guernseys

Two choice yearling bulls out of Island dams by Gold Finder's Western Boy, a bull of choice breeding and a very fine individual. Also a few choice Lincoln rams.
HAWLEY & SON McCOY, ORE.

SHORTHORN CATTLE

Hercules Shorthorns

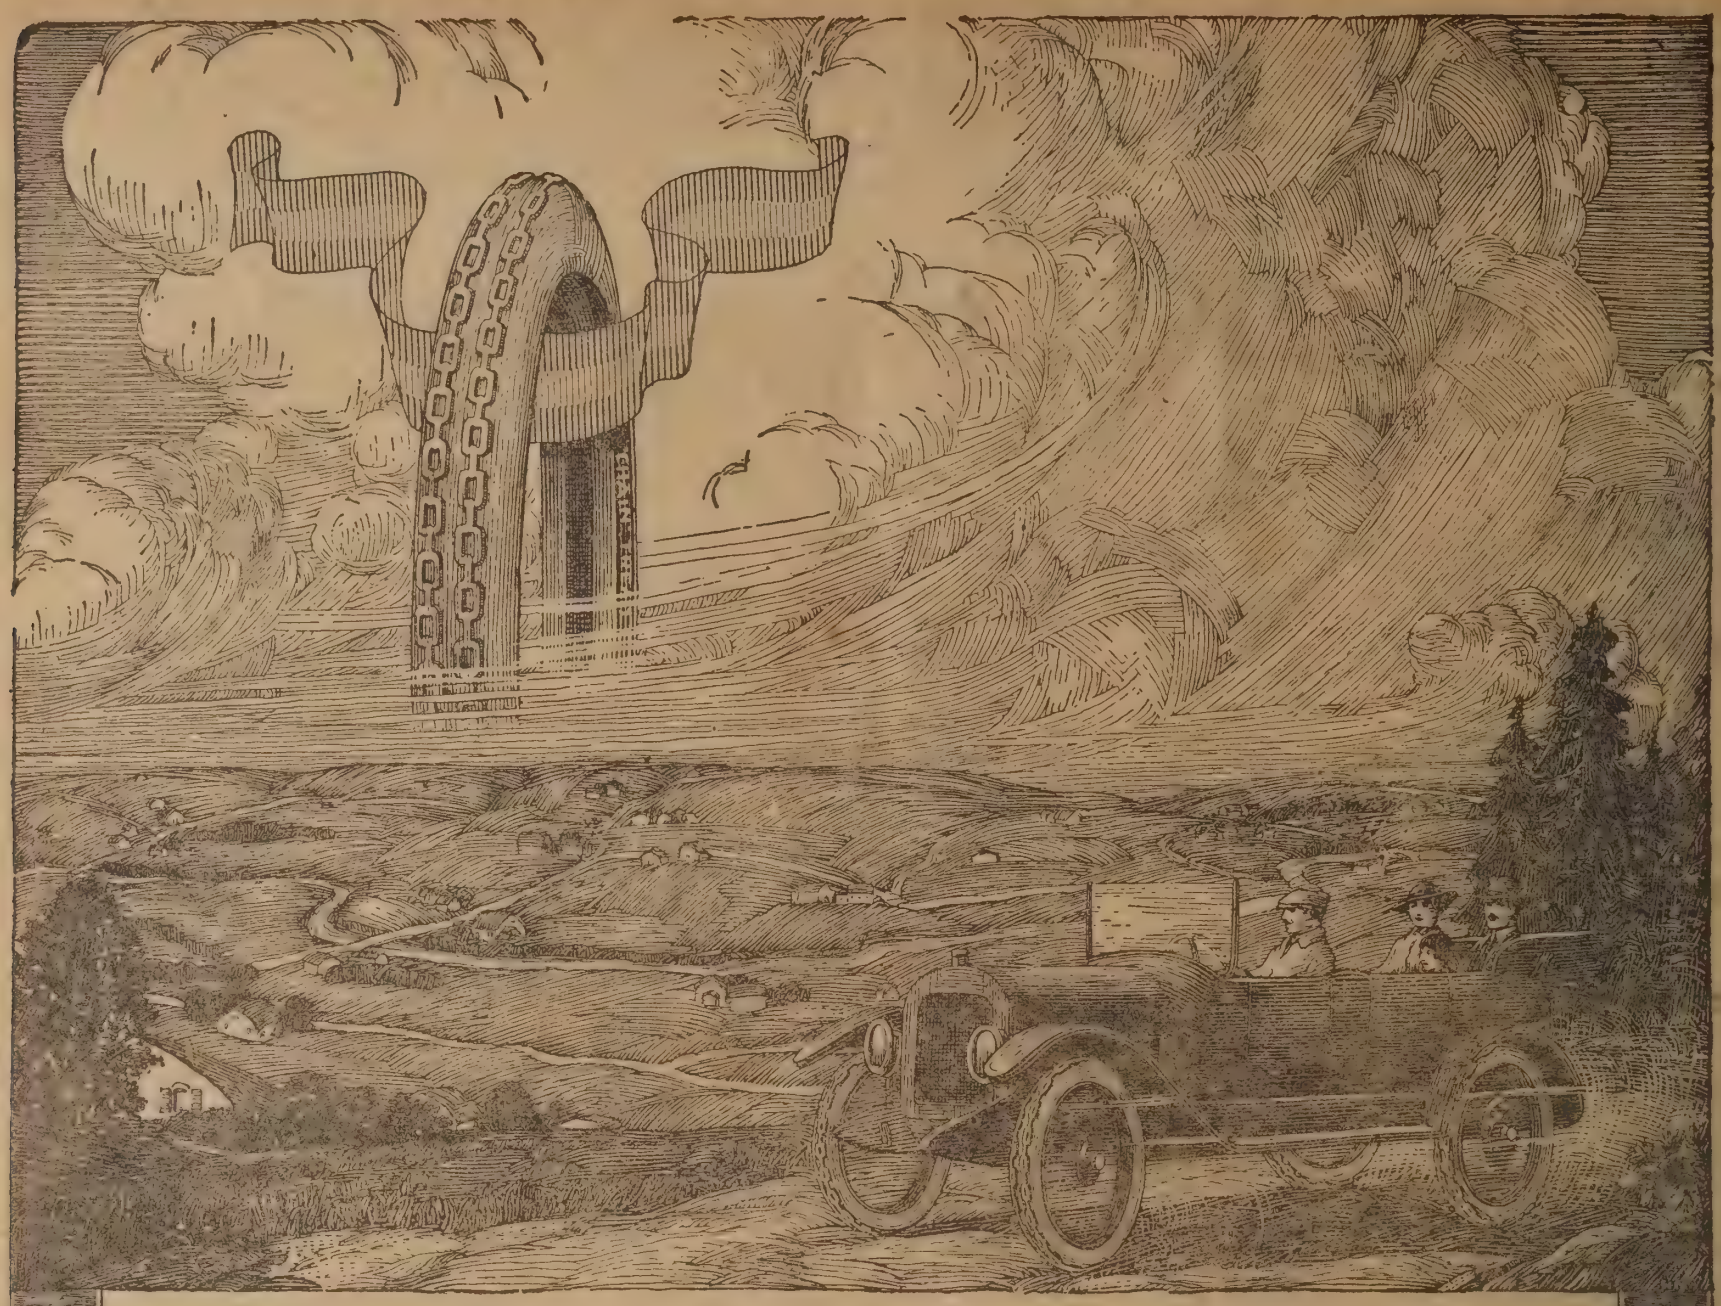
For particulars write
DAY & ROTHROCK
Exchange Bank Bldg.
Spokane, Washington.

BERKSHIRE SWINE

GALBRAITH RANCH BERKSHIRES.

Best breeding stock obtainable. Prices reasonable. Phone 20F.3.
T. A. GALBRAITH, Kent, Wash.

JERSEY CATTLE



Waikiki Farm Jerseys

We offer several young bulls and heifers of exceptional breeding. Send for descriptions and breeding.
WAIKIKI FARM, R. 7, Spokane, Wash.

FOUR HIGH PRODUCING COWS FOR SALE.

For the month of April we had 11 head on test. Our herd average was 62 lbs. butter per cow, including strippers, heifers and all. Most of these cows are bred to Gertie's Poppy's St. Mawes. Of the four cows for sale, none have an average test under 6 per cent.

MELLOW LAWN FARM,
F. A. Doerfler, Silverton, Ore.

Rough Roads

demand tires that are tough, resilient and efficient anti-skids. Inferior quality of rubber, workmanship and inspection won't do. Only the best material and craftmanship in tire-making can withstand the wear and tear of roads full of ruts and holes and rocks.

That's why the *United States 'Chain' Tread Anti-Skid Tire*—one of the five famous *United States Tires*—made by the largest rubber manufacturer in the world—is forging ahead in popularity with farmers and others who *know* the tire needs of rough country roads.

More mileage per dollar, better all round service and greater assurance against ordinary tire troubles—no matter how bad your roads may be—are guaranteed when you equip your car with *United States 'Chain' Treads.* Try them TO-DAY.

United States Tires

Are Good Tires

'Nobby' 'Chain' 'Usco' 'Royal Cord' 'Plain'

A tire for every need of price and use

What Service Can I Render My Country?

Council of Defense Is Perfecting an Organization to Answer This Vital Question

By N. W. Durham

As we see our boys putting on the uniform of their country, and read of their training work in great encampments, the question rises in the mind of every patriotic man and woman and every loyal boy and girl, "What can I do in the way of service to my country?"

N. W. DURHAM.

There is service for all and the road to that service will soon be pointed out by a wonderful patriotic volunteer organization that will have its ramifications in every county in the United States.

This organization is under the leadership of the council of national defense, composed of the following members of President Wilson's cabinet: Secretary of War Newton D. Baker, chairman; Secretary of the Navy Josephus Daniels; Secretary of the Interior Franklin K. Lane; Secretary of Agriculture David F. Houston; Secretary of Commerce William C. Redfield; Secretary of Labor William B. Wilson.

The national council of defense has called to its aid a large body of able and eminent citizens, distinguished in various lines of industry, science, business and the professions, who are called the advisory commission of the council of national defense and who serve without pay.

This brings us to the state council of defense, a body of representative and patriotic citizens, chosen by the governor and serving without pay.

State Council Membership.

Dr. Henry Suzzallo, president of the state university, is chairman of the Washington council, and its other members are: Charles Hebberd of Spokane, E. P. Marsh of Everett, A. L. Rogers of Waterville, C. J. Lord of Olympia, George Donald of North Yakima, Everett G. Griggs of Tacoma, W. A. Peters of Seattle, J. T. Hefferman of Seattle, W. A. Lowman of Anacortes, Mrs. J. S. McKee of Hoquiam, J. G. Kelly of Walla Walla, W. E. Boeing of Seattle, Dr. Ernest C. Wheeler of Tacoma, and E. S. McCord of Seattle.

This state council, at its meeting in Yakima, July 2, voted to organize in each county of Washington a county council for patriotic service, which shall have charge of the coordination of all voluntary movements for patriotic service within that county for the period of the war.

The county council holds the same relation to the county as the state council of defense holds to the state.

In each county a citizen has been appointed to organize a County Council of Patriotic Service. He has been instructed to "ask from 10 to 15 of the most able, patriotic and representative citizens of his county to act as the county council."

Each of these 10 to 15 councillors is to have responsible charge of some special activity, and the following special lines of activity are suggested by the state council:

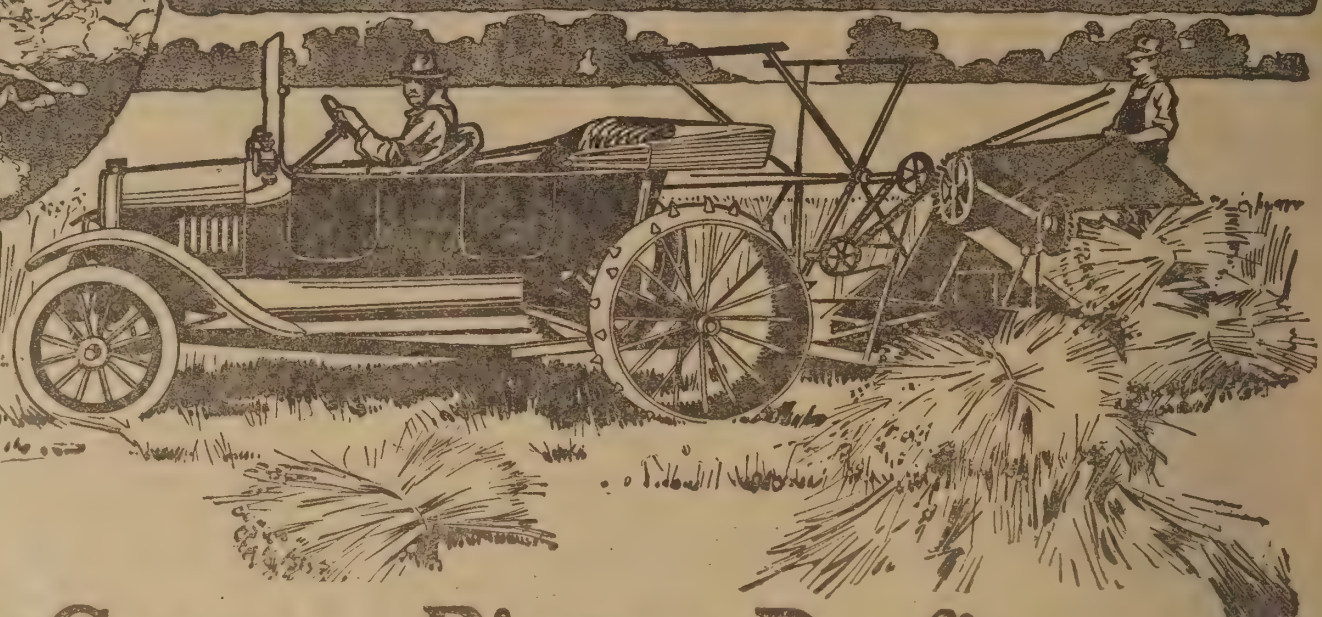
Food supply and conservation.
Industrial labor.
Farm labor.
Manufactures.
Shipping and ship-building (in the coast counties).
Lumber.
Transportation.
Home defense.
Fisheries.
Woman's work.
Publicity.
Sanitation.
Medicine and morals.
Legal and finance.
Coordination of patriotic and other societies.

It will be the duty of the county

(Continued on page five.)

The Washington Farmer Starts Big Information Department

Realizing that it is impossible for The Farmer in its regular departments to give its readers all the specific information that they may desire, we have determined to undertake the conduct of a special Information Bureau through which questions of any practical nature will be answered.



It is for you, the reader of this paper, to ask us a question of any kind—about anything that interests you or the answer to which will be of special value to you. It is for us to give you the best possible answer, making use of our own library of books, reports, bulletins, statistics and outside sources of information to which we have access. There will be no charge for this service.

It is our business as a farm paper to be of the greatest possible assistance to our readers. Nothing would please us better than to get a lot of questions by the next mail.

All questions must be signed with your name and postoffice address. All questions will be answered by personal letter, and replies of general interest may be published in the Farmer, your name being omitted if you so desire.

Smith Form-a-Tractor
$255 and a Ford

Bigger Crops—Bigger Profits—

Do Four Horse Work at One Horse Cost

MAXIMUM crops from every foot of farm land is the ambition and duty of every farmer now. The only positive method of achieving maximum crops and profits is through intensive farming—with the aid of wonderful Smith Form-a-Tractor.

Does Four Horse Work

Everywhere Smith Form-a-Tractor is daily demonstrating its wonderful ability. Farmers are amazed at the way it is doing the work of 4 horses and overcoming labor difficulties. They are saving the wages—now higher than ever before—of 2 or 3 farm hands, and plowing 7 acres in the same time horses took to plow only four acres. At this rate Smith Form-a-Tractor costs them no more to operate than one horse, and they save up to $500 a year in horse maintenance.

For All Farm Work

The wonderful ability of Smith Form-a-Tractor demonstrated in plowing is proportionate with its remarkable performance in every other kind of farm work—harvesting, discing, drilling, hauling heavy wagons out of the field and doing heavy road work.

Smith Form-a-Tractor gives you even greater working ability than big, expensive tractors. Your initial investment and operating cost are trivial compared with the cost of big machines.

24 Hours Work

Modern farmers who foresaw the wonderful possibilities of Smith Form-a-Tractor on the farm finished their plowing and planting long before farmers who stuck to old-fashioned methods.

Important farm work will not be delayed a minute on account of falling, dying horses overcome by heat, and you will have more time for yourself than ever before. Works day and night if necessary.

Change in 15 Minutes

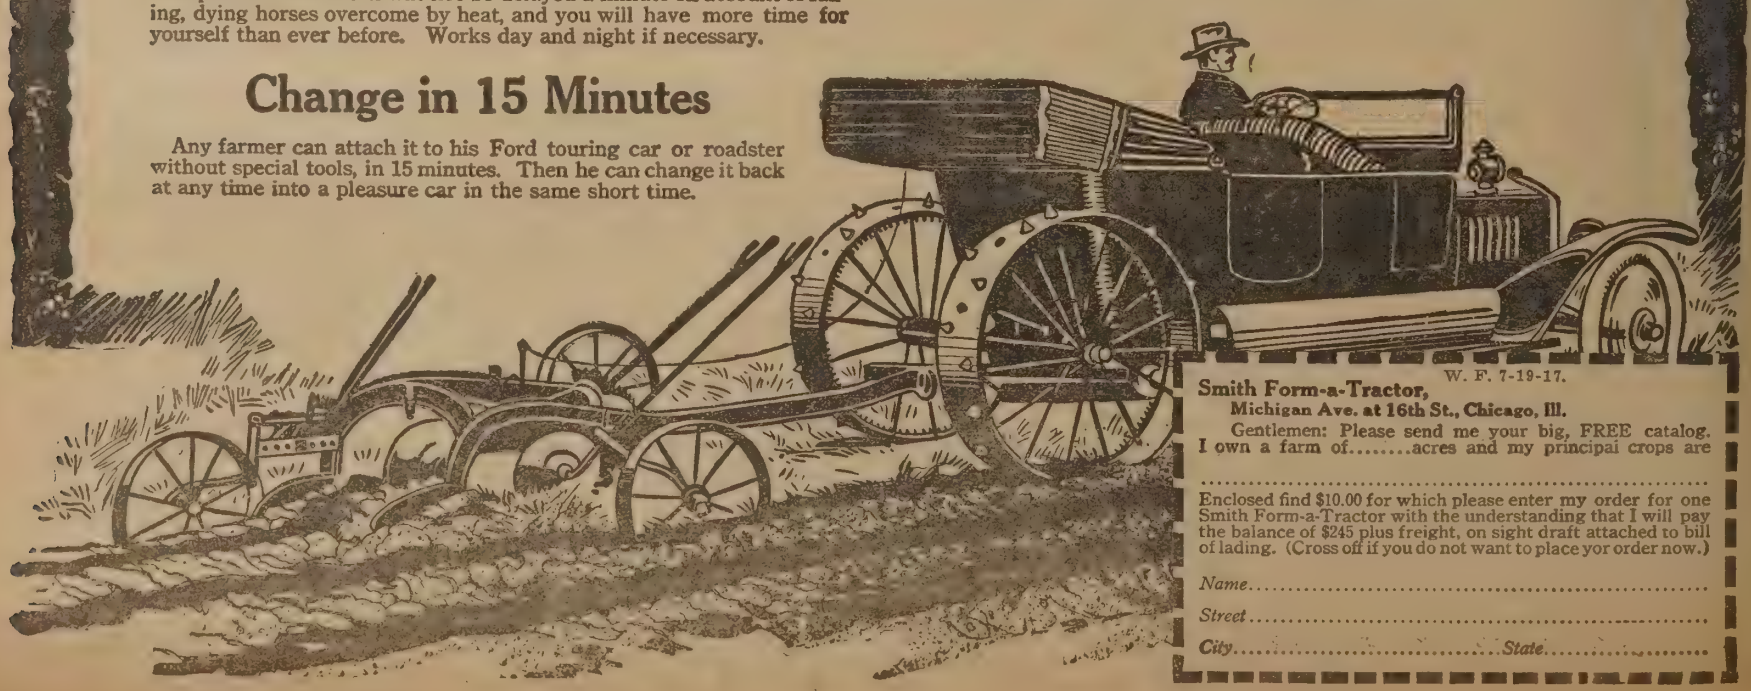
Any farmer can attach it to his Ford touring car or roadster without special tools, in 15 minutes. Then he can change it back at any time into a pleasure car in the same short time.

Remarkable Superiorities

The permanent features you get with Smith Form-a-Tractor make your Ford a better machine for pleasure purposes.

You get a new cellular type radiator many times more efficient than the ordinary Ford radiator. This guarantees you absolutely perfect cooling in hottest weather and adds to the service and money value of your Ford.

You get a Strong Patented Force Feed Oiling System, which pumps oil to all the bearings of the Ford motor and guarantees perfect lubrication under heaviest work. The big, staunch Smith Form-a-Tractor frame extends the full length of the car and fastens to the front axle.



The wide tractor wheels and 36 conical lugs, 18 in each wheel, give perfect traction in any soil.

Mail the Coupon Quick

It is up to every farmer to increase production—to adapt proved methods of efficiency on the farm. Mail the coupon below for amazing free book on Smith Form-a-Tractor and what it's doing for other farmers.

We will fill your order direct if there is no Smith Form-a-Tractor dealer near you. Send the coupon with $10 attached and we will ship Smith Form-a-Tractor to you at once. You pay the full cost less $10 when it reaches you.

Speculators Rob Producer and Consumer

Congress Urged to Hasten Legislation for Protection of the Public

Obstructionists in the senate can not stand out much longer against the telling arguments of Herbert C. Hoover, national food commissioner, who is leading in the fight for legislation to protect the producer and the consumer from the plundering tactics of the unscrupulous speculator.

Mr. Hoover tells the president and the public that while the producer received an average of $1.51 per bushel for the 1916 wheat harvest, yet wheat has been as high as $2.25 at Chicago, and the price of flour has been from time to time based on this speculative price of wheat, so that through one evil cause or another the consumer has suffered from 50 to 100 per cent and the producer gained nothing.

Mr. Hoover warns the country that this monstrous evil will not cure itself, and that unless government regulation is provided the speculators may extract even greater profits from the 1917 wheat crop.

Must Protect Farmer.

"In order to do justice to the producers who have shown great patriotism in a special effort to increase production in 1917, and further to stimulate the efforts of 1918, it is absolutely vital that we shall protect the farmer from a slump in price," he says.

Conditions as surveyed by Mr. Hoover are ripe for fine speculative pickings. Two powerful factors fix the prices at which the great majority of the producers must sell their wheat. One of these is the concentration into a single hand of the buying orders of the entente allies, "as that in a great measure the American producer is left to that buyer's judgment and is without voice."

Shortage of Ships.

The other factor is the shortage of shipping to transport grain to Europe. This will lead to a glut in our interior terminals. Here the speculator steps in, manipulates prices downward and leads up with cheap wheat at the expense of the producers.

Then, when the requirements of the allies are filled, the speculators shove up the price to the American consumers.

Mr. Hoover finds three facts standing out plainly from his investigations:

"First, that in this situation the farmer will need protection as to the price of wheat; second, that large masses of people in the consuming centers are being actually under-nourished today, due to the exorbitant cost of living; and that these conditions, unless some remedy be found, are likely to repeat themselves in even more vicious form at this time next year; third, the speculator, legitimate or vicious, has taken a large part of the money now being paid by the consumer."

Helpless Without Law.

These senators who are playing into the hands of the speculators to the detriment of the producers and consumers will find it difficult to combat Mr. Hoover's concluding sentence: "We are practically helpless to safeguard either the farmer or the consumer until the pending legislation is passed."

The following is Commisisoner Hoover's statement:

"Dear Mr. President: In response to your request I send you herewith the following notes, compiled by myself and my associates, upon the present situation with regard to wheat:

"1. The 1917 harvest promises to yield 678,000,000 bushels. The normal internal consumption and seed requirements (assuming a carry-over of same volume in 1918 as in 1917) amounts to about 600,000,000 bushels, thus leaving a theoretical export balance of 78,000,000 bushels. The conservation measures are already having a marked effect and it is not too much to hope that the national saving may be 80,000,000 to 100,000,000 bushels, and, therefore, the export balance increased to, say, 158,000,000 to 180,000,000 bushels.

"2. The experience this year in the rampant speculation, extortionate profits and the prospect of even narrower supplies than the 1916 harvest and carry-over must cause the deepest anxiety. No better proof of the hardship worked upon our people during the last year need be adduced than the recitation of the fact that the producer received an average of $1.51 per bushel for the 1916 wheat harvest, yet wheat has been as high as $3.25 at Chicago and the price of flour has been from time to time based on this speculative price of wheat, so that through one evil cause or another the consumer has suffered from 50 to 100 per cent and the producer gained nothing.

Due to Rank Speculation.

"After much study and investigation it is evident that this unbearable increase in the margin between producer and consumer is due not only to rank speculation, but more largely to the wide margin of profit demanded by every link in the chain to insure them

(Continued on page seventeen.)

WASHINGTON PORTRAIT NO. 24

C. C. BROWN.

C. C. Brown, who now resides at Castlerock, has been for years closely identified with agricultural interests. He was born in New York on a grain and dairy farm, and his early experiences were gained from the practical. Gathering wood ashes from the adjoining town, mixing them with land plaster he built up the farm on which he was born from a worn out condition to a high state of production. In 1898 he arrived in Seattle on the crest of the Klondike excitement, and hearing that the agricultural advantages were good on the lower Yukon river, he went north. He settled on land near Dawson and started a small garden. The smaller and tender vegetables were too expensive because of the cold nights, and so the garden was turned into potatoes, cabbage and turnips. After four years in the north, a representative of the pickle plants in Holland induced him to go to Holland and England to help them with the cultivation of their large farms. Later he returned to the United States and settled near Castlerock, Wash., where he has built up a large dairy farm, using the improved silos.

Mr. Brown is a firm believer in the raising of hogs, potatoes and artichokes, and makes a practice of keeping a few sheep on the ranch for cleaning up the brush. He also has a ranch in eastern Washington which is farmed by his brother. At present Mr. Brown is installing an evaporator on the place for taking care of the surplus fruit that usually goes to waste. He believes that the salvation of the country is to save what has been permitted to go to waste and produce a better grade of live stock, fruit and vegetables.

The next in the series of Washington portraits will be that of U. E. Fries, of Brewster, and will be given in next week's issue of The Washington Farmer.

Filbert Culture, Chickens, Garden

By PAUL E. TRIEM

Of the accompanying photographs the small one is the model cottage at Alderwood manor. The eaves are narrow so as to admit a maximum of light. The rooms are well arranged for a small family, and are intended to give the small farmer the same home comforts which he would have as a moderately well-to-do city man. The water system is supplied from a 90-foot well, having a depth of about 50 feet of water and an inflow sufficient to supply the needs of a large establishment.

The larger illustration is a section of the breeding house, 128x16. This house is similar to that at the experiment farm at Puyallup. The open space in front can be closed by rolling down the long canvas curtain. There is a dust bath just inside in the front of the house, and a feeding trough for wet mash just outside. Windows under the roosting platform, visible as small areas of light in the photograph, encourage equal scratching of the litter, as the hens are not obliged to work away from the front of the house to keep out of their own light.

Alderwood manor is the model farm operated by the Puget Mill company, in Snohomish county. On it, in addition to the buildings mentioned, are a laying house, 128x20, a feed storage an incubator building, colony brooder houses, a community center building for the use of the community as a whole, and various landscape and garden features. The main industry is expected to be filbert culture, with chickens and gardening as secondary sources of income. The company has hired a number of experts to serve as advisers, and has planned to sell land to the right sort of settlers partially developed, when desired. It is stated that Puget Sound is the only considerable area in this country where filberts do well.

Canning Vegetables in Home Kitchen

To Follow Out Fundamental Principles Insures Success

So absolutely essential is it that the fundamental principles of vegetable and fruit preservation by canning be kept constantly in mind and that they be followed out explicitly, The Farmer ventures again to repeat them:

Spoiling is due to the development and activity of minute organisms in the fruit or vegetables called germs or bacteria. Therefore, the fruit or vegetable must be entirely freed of them and kept entirely free of them. This is done by perfect sterilization through boiling or steaming and by perfect sealing after the sterilization is completed.

These principles and ways of putting them into effect have been described fully in The Farmer in the last three issues, but for those who overlooked them the following brief repetition of the methods is given:

Buy a commercial canner if you want to, but if you don't want to, use the wash boiler. Make a false bottom of woven wire or wooden slats. After preparing the fruit or vegetables according to the requirement of the various varieties or classes pack in jars, place tops on loosely, set in the boiler on the false bottom, with water coming almost or quite to the top; boil the required length of time, varying with the different kinds of fruit or vegetables; take out, seal, wrap to shut out the light, and store away. There are many incidental facts and considerations not to be overlooked, but the foregoing illustrates the principles and requirements.

On this page is found a table showing lengths of time for various operations of canning. Also below the table are repeated a few definitions of terms used.

The following recipes are from recognized authorities on canning vegetables:

Asparagus—Cut the stalks into convenient and uniform length. If the plants are young and tender blanch three minutes; if older increase time to perhaps five minutes. Cold dip. Pack closely into the jars. Add a teaspoonful of salt to each quart. Fill jar with boiling water. Adjust top of jars loosely. Place in cooker and sterilize 90 minutes. Remove. Seal. Wrap with cloth or paper to prevent breakage from cold air. Store away where shielded from bright light.

Okra—Blanch five to eight minutes. Cold dip. Pack closely into the jars. Add one teaspoonful of salt to each quart. Fill jar with boiling water. Adjust tops loosely. Place in cooker. Sterilize for two hours. Remove. Seal. Wrap in cloth or paper to prevent breakage. Store away where shielded from bright light.

Summer Squash, Squash and Pumpkin—These three vegetables may be canned by the same rule. They may be cut into small cubes and cooked in the process of sterilization or they may be cooked first and packed firmly into the jars before sterilization. Both methods are practical and the latter has at least the one virtue of enabling one to get a great deal more of the material into a jar than when cut into cubes. When the vegetable is cooked before sterilization a greater length of time will be required in sterilization because of the difficulty of heating the compact mass through and through. Fifty or more per cent additional time should be taken. The following recipe is for canning when the cube system is used:

Blanch 10 minutes. Cold dip. Pack into jars. Fill jars with hot water. Add a teaspoonful or slightly less of salt for each quart. Adjust on loosely. Place in cooker and sterilize one hour. Remove. Seal. Wrap in paper or cloth to prevent breakage. Store away where shielded from light.

Corn—Blanch 10 minutes on the cob. Cold dip on the cob. Cut from the cob with thin knife. Pack into jars. Add teaspoonful of salt to each quart. Fill jar with boiling water. Adjust top loosely. Place in cooker and sterilize three hours. Remove from cooker. Wrap in cloth or paper to prevent breakage. Store away. (Note: Corn can be canned on the cob by the same process, the periods for blanching and sterilization being the same).

In last week's Farmer recipes were given for canning greens, green beans, beets and peas.

CANNING TIME TABLE.

The following table is taken from a University of Missouri bulletin, written by Bab Dell and Addie D. Root, and shows the length of time for scalding, blanching and sterilizing various fruits and vegetables:

Products	Blanch or Scald	Sterilize
Vegetables	**Minutes**	**Hours**
Asparagus	3-5	1½-2
Beans	5-8	2
Beets	6	2
Carrots	6-8	1½
Corn	8-15	3½
Corn on cob	8-15	4
Eggplant	8-10	2
Greens	Until Shrunk	1½
Okra	5-8	2
Parsnips	6-8	1½
Peas	5-8	2
Peppers	3	¼
Pumpkin	10	1
Rhubarb	1	¼
Squash	10	1
Sweet potatoes	6-8	1½
Tomatoes	1	1-3
Fruits		**Minutes**
Apples (whole)*		20
Apples (sliced)		12
Apricots*		16
Berries		16
Cherries		16
Grapes		16
Peaches*		16
Pears*		30
Plums*		16
Quinces*		30

The time given as in the directions through the circular is for quart jars. Add 10 per cent for half-gallon jars and deduct 10 per cent for pint jars. In all cases, the water must be boiling during the entire time given for sterilization.

*Apples, apricots, peaches, pears, plums and quinces may be blanched if desired. The average time required is from one to two minutes.

Meaning of Terms.

The following definition of terms used in canning recipes was given last week, but are repeated to make the recipes given herewith perfectly clear:

Scald—Plunging of fruit or vegetable in boiling water for a few seconds.

Blanch—Placing of fruit or vegetable in boiling water for a few minutes.

Cold Dip—Plunging the fruit or vegetable directly from the scalding or blanching water into cold water.

Sterelize—Subjecting the fruit or vegetable to high temperature by boiling or steam pressure method after having been packed cold into the jars.

Shade Trees.

County Agriculturist A. M. Richardson of Douglas county, Washington, reports distributing 7500 black locust trees to farmers and schools in the county during the spring. Some of these trees were furnished by the dry land department of the state college, and some were bought by the county agent's office.

Olden Ways of Saving the Fruit

In this issue Dr. E. A. Bryan tells how peaches and apples were saved when he was a boy back in southern Indiana. The same plans can be followed very profitably, we believe, this season. Every reader of The Farmer should read this bit of most interesting and really valuable reminiscence because it carries an idea that may be made to yield many extra dollars of profit from fruit which might otherwise be wasted, especially this year. It is on page 20. Turn to it and read it.

Noted Food Conservationist Coming

Carl S. Vrooman Will Tell People of Nation's Problem

Great plans are under way for the appearance in Washington next Monday, July 23, of Carl S. Vrooman, assistant secretary of the federal department of agriculture, who is on a nation-wide tour in the interests of agricultural efficiency and food production and conservation. He will hold one private conference with executives and leaders of the state and will deliver two public addresses on that day in Spokane. His visit in that city will be his only stop in Washington, and a state-wide movement is being made to assemble representatives from every section of the state for the meetings.

Mr. Vrooman is recognized as one of the greatest authorities on matters of agricultural and food conservation nature in the country. His addresses, in which he will present in detail the government's food production and conservation plan, will be the signal for the opening of the state's definite and energetic conservation program.

Among those expected to attend the meetings are Governor Lister, State Commissioner of Agriculture Benson and the members of the state council of defense. The heads of the county councils of defense recently appointed to organize the work in the counties are also expected, as are many representative citizens from all districts of the state.

In the forenoon Mr. Vrooman will hold a conference with public officials and members of the defense councils and other conservation organizations. In the afternoon he will go to Coeur d'Alene, Idaho, where he will deliver a public address at 3 o'clock. He will return to Spokane afterward for a great massmeeting, when it is expected that several thousands of persons will hear him explain the purposes and methods of the nation's food production and conservation movement.

Farm Bank Lends a Million Dollars

Three Times a Million Soon Will Be in Farmers' Hands

The northwest district farm loan bank, covering Oregon, Washington, Idaho and Montana, and having its head offices at Spokane, has approved loans as asked by farmers of the three states for a total of $3,534,210.

Of this amount nearly $1,000,000 have been actually sent out to the farmers asking for the loans.

The remaining $2,500,000 is waiting only for the receipt by the bank of abstracts of title to the land on which the borrowings are to be made.

When a loan is approved by the bank the board requires that the borrower furnish an abstract showing the clear title to the land that is to be mortgaged to guarantee the loan. In many cases loans are held up a long time because of the delay of the applicant in furnishing this abstract. No loan will be made, however, until the title is shown to be absolutely sound.

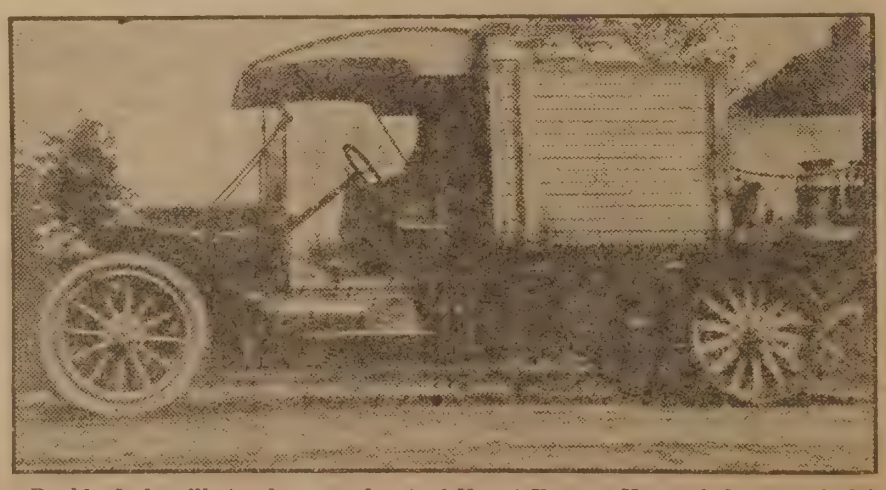
President D. G. O'Shea says that there are comparatively few of the borrowers who ask for all the money that they would be entitled to receive on their land, notwithstanding the suggestions that have been made that the bank was lending too heavily. "Ninety per cent of those seeking loans ask for less than the 50 per cent of the value of their farms, which the law provides they may borrow," he says.

One hundred dollars is the smallest amount that can be borrowed, and there are applications in considerable number for this amount on farms that would entitle the borrower to much greater sums.

The following is the list of associations chartered during the past week, which bring the total number chartered at this time up to 75. The figures show the amount of the loans approved by the board, for the charter membership of the associations:

Washington.	
Puyallup, Pierce county	$73,900
Woodland, Cowlitz county	78,000
Vera, Spokane county	58,800
La Center, Clarke county	40,000
Sedro-Woolley, Skagit county	63,800
Connell, Franklin county	43,800
Additional loans to new members in associations previously chartered	23,100
Oregon.	
Lebanon, Linn county	65,800
Montana.	
Boyes, Fallon county	25,800
Willard, Fallon county	36,900
Superior, Mineral county	37,500
Additional loans to the Billings association	5,700
Idaho.	
Emmett, Gem county	52,400
Richfield, Lincoln county	52,450
Additional loans to new members in associations previously chartered	2,100

Wheat Crop Hurt



Hot Weather Will Lower Yield

Reports from all over the northwest indicate that damage is being done to wheat by the long, hot and dry spell of weather. How serious the damage is can only be conjectured. Should cooler weather, with a rain, come immediately, the damage might be recouped to a great extent. In certain localities, where the grain was well advanced, it is reported only slightly damaged, though in some localities where the seeding was extremely late, and where the bulk of the crop is spring sown, injury is believed to be great.

Proper Covers for Machinery.

The growing demand of the government for cotton duck for strictly army and navy purposes brings a word of warning to farmers in the way of providing proper covers for machinery and brings into the foreground the treatment of this cloth covering for machinery with some good waterproofing preservative.

A Truck Double-Decked for Milk Hauling

Double deck milk truck on road out of Mount Vernon. Many of these truck drivers are going over to the new condensery, taking their entire route with them.

Fairs to Demonstrate

Government Urged to Send Exhibits

The councils of defense of the northwest are joining in a request to the United States department of agriculture that the latter send its farm demonstration car west for the fair season this year, with a view to making a great educational campaign for increased efficiency in the work for food production and conservation. If the request is granted the demonstration cars will be taken to as great a number of fairs as possible during the season, such as the regular state fairs, the Spokane Interstate and some of the larger district fairs.

The demonstration car carries models to illustrate silo construction, farm buildings construction, farm implements, road building, cultivation, various crops and their methods of production, harvesting and marketing and many other features designed to improve agricultural work and country life, and thereby stimulate the production of food materials so greatly needed.

Nation Calls 687,000 to the Colors

Northwestern States Will Furnish 18,000 Men for First Unit of Army

Within a week, if the plans of the government as announced materialize, the 100,000 men between the ages of 21 and 31 years in the state of Washington who registered on June 5, in accordance with the provisions of the selective draft act, will know definitely in what order they will be called before the federal boards for examination for enlistment or exemption. At the same time 7296 of them will know that they must be ready for instant and early response to a call to the colors, that number being Washington's net quota for the first half million unit of the great new army. President Wilson has issued a formal order as commander-in-chief of the military forces of the nation specifying that there shall be 687,000 men taken into the service immediately from the 10,000,000 who registered June 5.

Woodrow Wilson Commander - in - Chief of the U. S. Army.

This number is intended to fill the national guard and the regular army to full war strength and to provide a new army of 500,000. Additional men will be called later as exemptions reduce the number acceptable in the first selection. The filling of the guard and the regular army to maximum strength and the formation of the first new army unit of 500,000 will bring the men actually ready for battlefield service or in training camps up to about 1,262,000.

Distribution Equitable.

In order that the distribution of the selections be absolutely fair to every state, each state is credited with the number of men that it has in the national guard and the number of its regular army recruits since April 1, this number being deducted in each case from the number that the state would otherwise be required to give.

After these deductions are made the state of Washington is required to furnish 7296 men, Idaho 2287, Montana 7872 and Oregon 717. Oregon's comparatively small number is not due to favoritiism to the state, but to the fact that she has a national guard of 4683 men and has furnished nearly 2000 recruits for the regular army since April 1, leaving only the small net quota of 717 yet to be furnished out of her gross quota of 7378.

Method of Selection.

Under the method of selection adopted by the government, every man who registered will know within a few days at just what time in the development of the army plan he will be called to service. Every man registered is given a number. The entire United States is divided into about 4000 registration districts, the smallest one containing 187 registered men and the largest containing about 7000 men. Therefore, the numbers will run in each registration district from one to 7000, though, of course, in the smaller districts the drawing of a number higher than the total number of registered men in each will simply act as a blank.

Officers in each district have given each man a number. Each number will be placed in a capsule and the entire 7000 capsules placed in one big jar at Washington, D. C. There will be no drawing of numbers by states or by local registration districts. At Washington on the day selected as drawing day officers will remove the capsules from the jar one at a time. The number so drawn will call one man in each registration district in the country. Thus, if the first number drawn be No. 10, each man in each of the 4000 registration districts whose number is 10 will be drawn, and will be recorded as the first in that district to be called to service.

Every one of the 7000 numbers will be drawn at the one time, so that every registered man will know approximately when his turn to be called to the colors will come. As the numbers are drawn from the jar at Washington they will be recorded both by the number of the man and the number of the drawing. That is, if No. 10 be drawn first, No. 10 in each registration district will be recorded as No. 1 in the selection. If No. 20 should be the second number drawn, No. 20 in each registration district would be recorded as No. 2 in the selection, and so on down.

Since there are 4000 registration districts, resulting in the drawing of 4000 men by each number taken from the jar, it will require the taking of only 172 numbers to secure the entire 687,000 men first to be called to the colors. The others will be subject to call in the order in which their numbers are drawn from the jar.

What Service Can I Do My Country?

(Continued from page one.)

councils to organize in every village and town an auxiliary to the County Council for Patriotic Service, membership in which shall constitute membership in a statewide League for Patriotic Service.

Every man, woman and child should belong to some auxiliary of the League for Patriotic Service. It is the method by which every loyal citizen, who does not go to the battlefront, may enlist for service in this great war for "the safety of democracy."

It is planned to have a chairman and executive committee for each of these town and village auxiliaries, and have them report officers, conditions and activities to the chairman of the county council each week.

"These auxiliaries," says the state council, "should be made the centers of patriotic feeling, national loyalty and war service."

The county councils are directed to look to the prosecuting attorney of the county for legal advice, and to the sheriff for the local preservation of law and order.

The last paragraph of the instructions from the state council to the county councils is especially important:

"The organization and control of home guards should be directed by the County Councils of Patriotic Service under the special supervision of the member in charge of home defense. The home guards have no legal status and can only be used as a voluntary organization from which a large body of deputy sheriffs may be recruited. Be sure that all men suggested to the sheriff are persons worthy to be sworn in as deputy sheriffs, and are responsible representatives of every patriotic class of citizens in the community. Other local peace officers should cooperate with the sheriff, who should be the responsible officer to whom the county council should look for the enforcement of law."

Every Able-Bodied Man Is a "Reservist" For Home Defense When Called by Sheriff

By W. A. PETERS, "home defense" member state council of defense.

In recruiting a national army, the nation has necessarily drawn heavily upon the state militia; in fact so thoroughly nationalized has become our system of government that in case of war the state militia almost automatically becomes a part of the national army.

Our system of state government, however, following the line of state legislation generally, has wisely provided for the organization of what is termed the "reserve militia" to take the place for state service of the bodies of national guard which have been called into the federal service, so that the executive power of the state shall not be deprived of the means of enforcing the laws of the state and of upholding law and order, while the national forces are engaged with foreign foes.

W. A. Peters.

Expect True Patriotism.

One would expect that at such times an enlightened people would not hamper their efforts as a national unit in the prosecution of a great war in the defense of the nation by internal disturbances and local violations of law, and, thanks to a generous patriotism, this expectation is largely realized; yet there will always be the few to whom no argument appeals, short of the argument of force, and for the use of this argument when necessary, every sane government must be prepared.

I understand that the governor of the state, in pursuance of the requirements of the statute, has instructed the adjutant general to organize throughout the state the reserve militia to take the place of the national guard, to remain for service within the state. For this reserve militia, all male able-bodied citizens between the ages of 18 and 45 are subject. This, however, in no way interferes with the recruiting of the federal troops or the national guard for federal service, as there are plenty of men over the age not acceptable to the federal army, that is, between the ages of 30 and 45, who are amply able physically to give the less strenuous service required in the militia reserve.

In our state organism, the sheriffs are guardians of the peace of each county, and are required by law to see to it that the citizens and property of their counties have proper protection. It would be unwise under our democratic institutions to maintain as a standing force a sufficient body of men to aid the sheriff in enforcing law and order, for this would mean so many citizens drawn from useful industry. The sheriff, however, under the law, has the power, and it is his duty to call upon the citizens of his county to furnish in emergency that aid and assistance, in bearing arms, in resisting aud employing force, which may be necessary, and a citizen when called upon can no more refuse this service than can an enlitsed soldier disregard the order of his superior officer. The duty, therefore, of maintaining law and order in the county is primarily upon the sheriff, who should be advised in those matters by the prosecuting attorney, and not until the power of the sheriff is shown to be insufficient to cope with the situation is it ordinarily the function of the state militia to undertake the obligation.

Forcasts Fruit Crop

Yield Will Equal That of 1916

The state of Washington will produce 21,750 carloads of fruit this season as compared to 21,506 carloads last season, according to the estimate just completed by the horticultural branch of the state department of agriculture, M. L. Dean, chief.

The following is the tabulation of last year's production and the estimate of the present season; the figures representing carloads:

	1916.	1917.
Apples	16,955	16,925
Pears	1,639	1,247
Peaches	1,265	1,946
Grapes	25	30
Prunes	511	650
Apricots	87	165
Cherries	213	377
Strawberries	394	300
Other berries	417	110

A significant feature of this estimate is that the soft fruits are those responsible for the gains. It is seen that the prospect for such as peaches, apricots, prunes and cherries is better than last year, while the apples remain about the same and the pears and berries fall off.

See No Cheaper Milk

Further Increase Is a Possibility

A special committee making an investigation of the milk situation for the city of Spokane has reported that if "the careless methods of production and expensive methods of distribution are to continue there appears no likelihood of any lower prices to the consumer. On the contrary, there seems a strong probability of higher retail prices within the next few months."

The investigation and report are a part of the outgrowth of the great unrest in the dairy business and among the consumers of high-priced milk and cream.

Producers Must Get More.

The report of the committee states unequivocally that the producers must get more for their milk than they have been doing in the past and suggests that the only way the consumer can be relieved of paying the amount of increase necessary is for the cost of distribution to be reduced. How this cost may be reduced is suggested by the following portion of the report:

According to their own figures, it is costing the large dealers over 5 cents per quart to handle and distribute milk. It may be true that under the present system this cost can not be reduced, but your committee is of the opinion that with a centralized plant embracing all the large distributors and with a system of small distributing stations located in populous districts of the city under one central management, a material saving in cost of distribution would be obtained. In cities where the milk supply, or the bulk of it, is handled by one concern or by a properly organized and managed association of producers, a more economical result is obtained than in Spokane.

It was disclosed during the hearing that there had been a consolidation of distributors in Portland, Ore., by which a saving of 15 per cent was made.

Here are further interesting extracts from the report:

It became evident to your committee that the producers have been selling milk to the dealers for several years at less than cost, and, as stated by Mr. McBride after his Michigan investigation, the reason the dairy industry has been able to continue under such conditions is the fact of unpaid overtime and unpaid woman and child labor.

It costs just as much to feed and care for a cow producing 1 3-4 gallons as one producing three gallons per day, and the latter is not an excessive figure to expect.

If some practical method of cooperation among the producers could be brought about much good would be accomplished in every branch of the industry, but with the present conditions existing among so many scattered units it is difficult to bring about united action upon common sense, businesslike methods of operation. For the producers simply to unite and advance prices regardless of methods of production is not fair to any one, themselves included.

Double Vegetable Output.

According to an estimate made by P. E. Magruder, executive secretary of the Bellingham Chamber of Commerce, the vegetable production of Whatcom county will be doubled this year through the activities of the home defense food committee and the war-time food committee, the first working in the country and the second in the city.

THE WASHINGTON FARMER

Trade Mark Registered U. S. Patent Office.
PUBLISHED WEEKLY ON THURSDAY.

Subscription price: $1.00 a year—special 3-year rate $1.50. Canada and foreign, 1 year $1.50.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Employers and Workmen Must Give and Take This Season

It is unpatriotic for the laborer this season to quibble with the farmer or the employer in any other staple industry over matters of hours or wages or conveniences. It is equally unpatriotic for the farmer or other employer to withhold reasonable compensation and comforts from his employe. Workman and employer should work together for mutual interests. The success of the one depends on the success of the other. The workman should receive good wages, and in turn he should give a good day's work. He should be provided a good place to sleep and wholesome and palatable food to eat, and in turn he should cooperate with his employer in the work, not merely perform so many stipulated hours of disinterested labor. Cooperation embodies the idea of personal interest in the employers' plans and purposes and their accomplishment.

It is a blot of shame on the fair name of American citizenship that there should this trying year be a large number of so-called workers who are unwilling to give fair service for fair pay and who are openly doing all in their power to destroy the efficiency and peace of industry. It is equally to be regretted that occasionally there remains an employer who is unable to understand the rights that belong to the honest worker.

Worker, be fair with your employer! Employer, be fair with your employe!

Whot the Pig Clubs Are Doing

The pig club boys of one county in eastern Washington have announced that they have 150 or more pure-bred pigs for sale.

This is something that should arouse hope in the future of the hog industry of the state. These pigs are from sows grown or bought by the boys, probably with the assistance of local banks or public-spirited men of the communities. They are excellent stock—pure-breds, subject to registration. This one county is furnishing probably 75 pure-bred sires for the hog raisers of that part of the state, and probably an equal number of mothers for pigs next year. The offspring of these animals within one year may well be expected to run well up into the hundreds, and if several counties have equal success with their club work the number in the state should run into several thousands.

The boys' club work means something substantial to the live stock industry. What is true of pig clubs is correspondingly true of other clubs. Club work is a movement that deserves support and encouragement from all sources. Persons wishing to buy good breeding stock should investigate the clubs of their communities before sending to eastern breeders. Patronize home industry.

The Fire Season Is Here

A farmer may have his grain field or his haystack or his house and barn insured, but if they burn up somebody has suffered a real loss. The insurance company sees to it from the very first that it is self-insured. Its premiums are calculated to guarantee it against loss. In the final analysis, it is the farmer himself, or the farmers as a class, who pay the bill when farm property is destroyed by fire.

This season, above all, the farmer can not afford to be careless with fire. His products are too valuable from the money standpoint to be subjected to unnecessary risks, and the hungry world needs them as it probably never before needed them.

Every possible precaution should be taken to guard against fire. Each individual should feel upon himself or herself a personal responsibility in the matter. Each should take special care to avoid dangers, to eliminate carelessness. It is a personal matter. The carelessly dropped match, the over-heated stove, the open gasoline or kerosene can, the pipe or cigarette, the waste matter piled away carelessly to take fire spontaneously or to afford kindling for the spark or the match—these are responsible for many destructive fires. Personal care would prevent every fire so started.

Live Stock Pays the Mortgage

Animal husbandry makes for stability. At a time when $1 and $2 wheat is being discussed there may seem to be too narrow a margin of profit in pork, even at 15 cents a pound live weight. But year in and year out it is the hog and the cow that pay off the old mortgage or enable the farmer to replace it with one bearing a lower rate of interest.

Many of our readers who formerly lived in the "corn belt" will remember when farm loans were made in the now prosperous state of Iowa at from 12 to 20 per cent. The average in that state at the present time is 5.9 per cent, and at that rate there are outstanding some $469,000,000 worth of mortgages—much more than the three states of the northwest are borrowing on their farms, although the average rate here is above 8 per cent. Now, let us try to discover what brought the interest rate down in Iowa: It wasn't federal, state or county help in farm financing. Roughly speaking, Iowa's high interest rate prevailed till the cow and the hog became prominent citizens of the state. With their advent the interest rate began to go down.

Washington Cranberries

Before many years have passed the state of Washington is going to keep at home some $600,000 which it has been spending annually for eastern cranberries. The reason is simple enough—we are beginning to raise our own, and we find them at least equal to anything we have ever tried. Eastern producers are handicapped by two circumstances; one is that they must pay $2.50 to set every barrel of cranberries down in Washington; the second is that their cranberry bogs must be winter flowed to protect the vines from freezing, while in the mild climate of Pacific county, where most of the Washington cranberries are produced, no such process is necessary.

The peat bogs on which the cranberry plantations are maintained are covered, in their original condition, with a thick matting of spagnum moss. This is "sealped," and then the bog is covered with sand to a depth of three inches. Check rows 12 inches apart each way are marked, and the 18-inch cuttings are inserted where the rows cross. Drainage is secured by means of a complete system of ditches.

The young plantation must be hand weeded for the first three or four years, until it comes into bearing, in fact. The first picking is a hand process, likewise, but after that the berries are scooped up by means of an implement working on the comb principle. Thereafter the vines are good for a lifetime, with one re-sanding every seven years.

Washington Gleanings

The Farmers' Union Grain company will build a concrete elevator with a capacity of 75,000 bushels at Hartline.

The four states—California, Oregon, Washington and Idaho—this year will produce the greatest crop of potatoes in their history.

The salmon canners of Washington have decided that they will sell to the government at the regular wholesale rate. Each canner will furnish goods proportionately.

An Indian department will be an interesting feature of the Skagit county fair this fall. There are many fine Indian curio collections in the county which it is anticipated will be exhibited in the department this year.

The Horse Heaven irrigation district has voted to bond itself in the sum of $18,000,000 for the completion of the project. According to present plans about 215,000 will be put under water at a cost of about $47 per acre.

Cultivated acreage on the Yakima Indian reservation now is 57,507 acres, which is 9584 acres greater than last year and 1000 acres above the highest estimate earlier in the year. Added land is largely in grain, beans, corn, beets and potatoes.

The first steps toward the creation of the Kennewick irrigation district have been taken by the Highland Improvement club. As at present outlined, 38,000 acres will be included in the new project, all of which lies above the N. P. I. company's gravity canal.

A contract has been let for the construction of a five and a half mile link in the Olympic highway, from Discovery bay to a connection with the short new stretch of road connecting Gardiner with the Clallam county roads. The construction cost will be $46,130.

The sale of registered Holsteins owned by J. C. Graham of North Slope dairy farm, three miles south of Palouse, totaled $13,813. It was the largest sale ever held in that region. The average price of registered stock was $282 and the average price for all animals was $187. The herd consisted of 75 head.

The granges of Clallam county are asked to report how many farm hands are now employed in the county, as well as how many will be needed during the harvest season, to Secretary Teck, of the Commercial club of Port Angeles, in order that a check may be had and provision made for the extra number in time to get them through cooperation with the Washington State Harvesters' league.

Five hundred Seattle Y. M. C. A. boys will hire out as berry pickers in the Puyallup valley this season. They will work at regular wages and will be in groups of 15 or 20. An adult will be in charge of each group. Every year the boys go on an outing, but this year it was thought best to give them a chance to earn some money besides. They will do a good deal toward relieving the threatened labor shortage.

Mrs. Zorah Jackson, widow of the late R. A. Jackson, and children have incorporated their mammoth stock and farming interests under the name of R. A. Jackson Tucannon Rambouillet and Stock Farm. The capital stock of the company is placed at $200,000, fully paid up. The Jackson ranch is located 14 miles east of Starbuck on the Tucannon river. It is said that this is the largest corporation formed within the state of Washington to be headed by a woman.

What Others Say

The silo must be ready ahead of time. The corn will not wait on it.—The Farmers' Review.

It may seem a little hard to feed a large pullet for the next three months, but the reward will come when she begins to lay.—The Pacific Poultryman.

See that the harvesting machinery is kept in good repair. A delay of a few hours or a day may mean many dollars in damage.—Reclamation Record.

Wheat is too valuable now to guess at weight, dockage or moisture content. And you must know all these absolutely.—Price Current-Grain Reporter.

A kindly feeling prevails among farmers toward boys and men from the cities who patriotically are offering their labor on the farms for the summer and harvest period—Farm and Home.

Germany Is in Turmoil

Political Revolution Threatened

The whole world is watching with bated breath the political turmoil that is admittedly existing in Germany. Something bordering on a crisis is transpiring, though conjectures as to the real meaning of the happenings are all that can be made in the way of explanation. The outstanding single event is the resignation of Imperial Chancellor von Bethmann-Hollweg and the appointment of Dr. George Michaelis by Kaiser William to succeed him. The resignation of Foreign Minister Zimmerman preceded that of von Bethmann-Hollweg.

The disturbance undoubtedly has grown out of a two-fold condition, the desire on the part of a great mass of the people of Germany for a more democratic government and the desire of the same great element for peace.

Members of the reichstag, the German legislative body, have gone far in their fight for liberal government, winning some ostensible consideration from the crown. Kaiser William only a few days ago issued a decree which, on the face of it, seemed to be designed to grant popular equality in the ballot in Germany, which is one of the rights that the people have been demanding. Whether this is genuine on the part of the kaiser and his advisers, or merely a "grandstand play" to temporarily pacify the liberals is doubtful.

For some time Austria, the principal ally of Germany, has been openly favoring peace negotiations. She has gone so far as to bind herself to a policy of peace without annexations or indemnities, and has made certain peace overtures which indicate a possible, though not a probable separate peace with Russia should the militaristic regime continue to control Germany as it has in the past.

The resignation of von Bethmann-Hollweg followed a hurried conference in which German royal and military leaders participated. At this conference it is believed that the crown prince, a vigorous opponent of the democratization of Germany as desired by the rank and file of the people, controlled the situation.

This is further indicated by the appointment of Michaelis to the position, he being known to be strictly in accord with the bureaucratic government of the kaiser and the military party.

What It May Mean.

There seems some reason to believe that the outcome so far is a victory for the war party in Germany and a defeat for the liberal, democratization element. But there is also some reason to believe that it is such a victory as will engender greater popular opposition to the autocracy of the German government and ultimately lead to something more nearly equivalent to the recent Russian revolution.

The officials of the United States, however, are not inclined to look upon the situation as one which should give hope of early cessation of the war. A committee at Washington, D. C., authorized to review the situation and give out a public statement from the department of state, says in part:

"Information reaching the department of state indicates that the German political crisis now centers primarily on the question of internal reform and peace, and that the question of changes in the personnel of the government is subordinate in importance. The dispute is over measures rather than men. And whether or not the chancellor and several secretaries of state lose their positions, it is unlikely that the political storm can be stilled until definite action has been taken in regard to internal reform and peace.

"In spite of the bitterness of the present contest in Berlin, there is not the slightest reason to believe that it will result in anything remotely approaching revolution, or in any diminuation of Germany's military power. The crisis probably will lead to internal reforms, which, from the point of view of Germany, will seem colossal, but will be, in truth, only the first steps toward making the German people masters of their own destiny."

England Will Get Food.

Germany's submarine campaign, stupendous as have been the losses caused by it, is an absolute failure so far as conquering England this year is concerned. This is the opinion of persons in position to form sound opinions. The following from the Wall Street Journal, recognized as an authorative commercial publication, gives the gist of the condition:

"Up to the first of June, Germany had succeeded in destroying only six per cent of the tonnage carrying food to England. Had she been able to destroy the other 94 per cent in June, Germany would still have failed in her object, as England has within her own territory sufficient food without any importations to carry her over to this year's crop returns. English crops are good for at least a four-months' food supply. Therefore, so far as this year is concerned, Germany's submarine campaign is doomed to failure."

Allies Continue Gains.

The work of the Russian army on the eastern battle front continues to be victorious if reports may be believed. Continued advances are being made in Galicia, where the Germans rushed in troops in a futile attmpt to prevent the routing of the Austrians, who are defending the territory. The operations of the Russians for the last two or three weeks seems to indicate a successful termination of the revolutionary activities that brought about the abdication of the czar and the setting up of the more popular government.

While the recent operations of the English and French on the western battle line have been less spctacular than those of the Russians for the last two weeks, gains have been reported almost daily.

U. S. Operations Unknown.

Little or no official information is coming through concerning the United States troops in France. Absolute secrecy is being maintained as to the government's plans for putting them into the fighting or sending men to foreign soil. It is not withheld, however, that the war and navy departments are putting forth every effort to enable the navy and the army to strike with the greatest possible strength and effectiveness at the earliest practicable moment.

An interesting sidelight on the entrance of this country into the war is found in the apparently reliable report that the German authorities are trying to convince the German people that the United States can not greatly affect the outcome of the war. It is reported that the German government is figuring that this country can not put an appreciable army in Europe in less than 18 months, which seems on the face of it to be a move to prepare the German people for at least another year of the war.

Woodsmen Are Called.

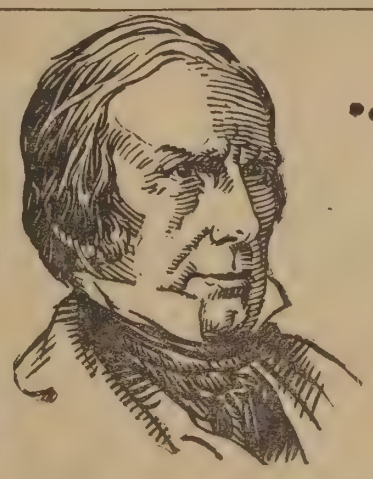
The fact that war is not merely a matter of guns and gunpowder and men to use them is indicated by the announcement that Henry S. Graves, chief of the United States forest service, has gone to France to familiarize himself with the lumbering needs of the allied countries and to prepare the way for a large corps of timber engineers and working woodsmen from this country. The department of agriculture, of which the forest service is a branch, announces that it will not be the purpose to place these men in combatant service at any time, but to put them into the timber regions behind the fighting lines to get out the timber required in carrying on modern warfare. Applicants for the expedition must be between the ages of 18 and 40 years, and must pass the regular military physical examination.

Food Bill Is Coming.

After delays lasting a month, the senate is reported to have agreed to take a final vote on the food regulation measure Saturday of this week. Whether other delays will be made and cause it to be further postponed, is doubtful. President Wilson and Food Commissioner H. C. Hoover have been bringing heavy pressure to bear on congress to pass the bill with its provisions designed to eliminate the food speculator and stabilize the markets for staple food products.

Patriotism Above Profit.

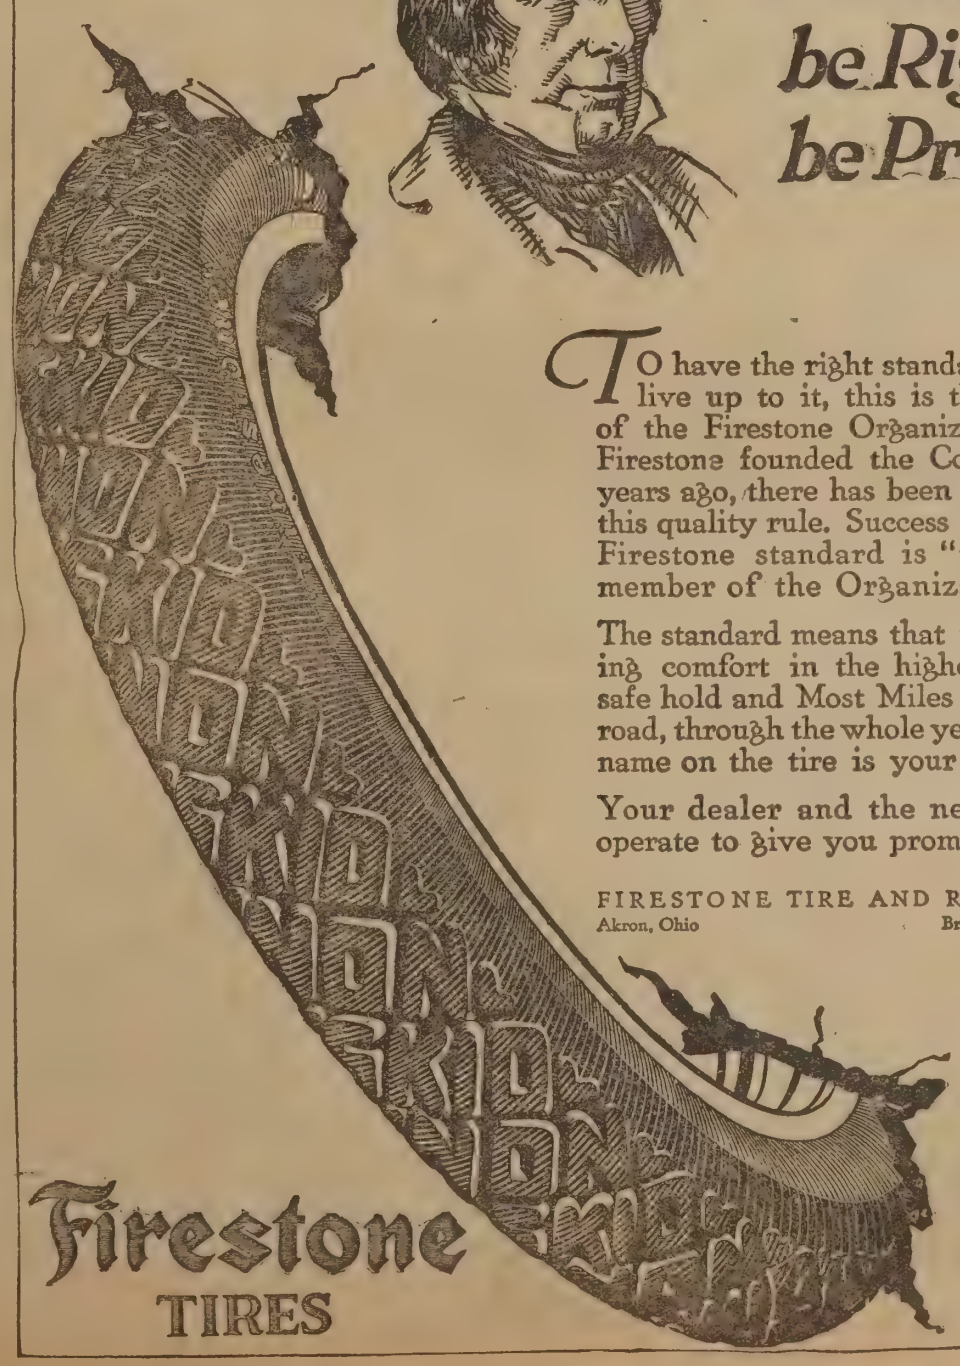
In a formal statement issued to the businessmen of this country President Wilson has made an urgent plea that money-making be forgotten during this crisis in the country's history and that patriotism be substituted for it. The president urges that all commerce and trade be conducted with the welfare of the country and her allies in mind rather than the making of money.



Favors Government Control.

To the Editor of The Washington Farmer: I am not a farmer but as a grain dealer I come in touch with the farmers of the community and am sure the majority are in favor of regulation of prices of farm products. I feel that the labor situation is such that no great increase in the amount raised can be made. Have heard of no movement for increased crops in the farming section, but the people of the town are utilizing all spare ground.

Asotin, Wash. C. C. DAY.



Tractors on Farms.

The fact that the army needs for horses are going to give farmers an unusual interest in the tractor way of handling farm work is brought out by E. E. Gerlinger president of the Gerlinger Motor Car company at Seattle. Not only cavalry horses but heavy draft horses are to be called for in army schemes. It is up to the farmers to be looking into this matter and see what kind of a tractor will be adapted to his farm.

"I Would rather be Right than be President"

A. B. NYSTROM, Editorial Contributor

Carlton B. Holt, manager of Waukesha Guernsey farm, on the edge of Boise, Idaho, says Guernsey milk outsells all others, on account of its rich color, even at the same percentage of butterfat. Mr. Holt has both registered and grade Guernseys. He had 60 tons of corn silage last fall, but will have more this year. His cows are run on bluegrass and white clover pasture, supplemented with alfalfa hay. He likes a little of the white clover in the pasture mixture.

Over 800 Pounds of Butter.

Here is a picture of the beautiful Jersey cow, Miss Oonette No. 288311, owned by the William Ladd Iron Mine Farm, Portland, Ore. She finished an official test Jan. 23, 1917, with the extremely creditable record of 15,055.5 pounds of milk and 688.62 pounds of fat or 806.61 pounds of commercial butter, and qualified for class A. A., by dropping a calf inside of four months. Her dam, Oonette No. 149351, is No. 2 in the Register of Merit. She qualified under the supervision of the Kentucky agricultural experiment station, producing 16 pounds 11 ounces in seven days at the age of three years and three months. Miss Oonette's sire is Merry Miss' son, sire of seven in the Register of Merit.

Iron Mine Farm now has 19 Jerseys on test and, while there is probably nothing prenomenal being done, all are making good records. H. A.

Stillaquamish Cows

There were 581 cows in the Stillaquamish Cow Testing association tested during the month of June. Of this number 566 were producing throughout the period. The average production for the association was 806.6 pounds of milk and 34.66 pounds butterfat at a cost of $3.27 per cow.

There were five herds aggregating 136 cows which averaged over 40 pounds butterfat, the highest average being 44.1 pounds. The lowest average was a herd of 23 cows at 18.75 pounds fat.

There were some good producers this month. Forty-seven cows produced over 50 pounds butterfat, 10 over 60 pounds, and two produced 70 pounds or better. This is the first time any of the cows of this association have reached the 70-pound mark. These two cows belong to Max Eitzenberger and John Furness.

The following are the names of members owning cows in the 60-pound class, also the number of cows owned in that class:

Carsten Thomson, three cows; W. G. Grimm, four cows; Max Eitzenberger, one cow; John Lee, one cow; C. Olsen, one cow.

The following are owners of 50-pound cows: Valley Gem dairy, two; Anthon Kraetz, one; Carsten Thomson, five; M. Lindquist, two; G. A. King, two; Hans Thomson, four; Max Eitzenberger, six; W. G. Grimm, seven; Ole Larson, two; J. B. Knutson, two; John Lee, one; O. Olsen, six; Gerhard Weerda, four; Herbert Thurmond, three.

E. O. Sneve purchased a purebred Holstein bull calf last month.

During the month 13 unprofitable cows were sold for beef.

Snohomish Cow Testing.

In spite of the continued adverse weather conditions, the cows in the Snohomish Valley Cow Testing association of western Washington did nearly as well for the month of June as for the preceding month. The high cow for the association for the month is owned by Thomas Bowen. She is a grade Holstein, Dora, age 5, producing 1470 pounds of milk testing 5.45 per cent and containing 80.1 pounds of butterfat. There were 52 cows in the association testing over 40 pounds of butterfat for the month, according to the report of V. B. Riley, official cow tester.

New York Milliners.

More than 12,000 women are engaged in the millinery business in New York city.

White River Valley Cows' Records

There was a general falling off in the milk flow of the cows in the White River Valley Cow Testing association, according to the June report of Robert Cowan, tester. This is reported due to the poorer pasture conditions caused by the warm, dry weather during the early part of the month. The averages per cow were milk 883 pounds, butterfat 29.73 pounds, feed cost $4.22. The number of cows tested was 610. Of this number 238 gave over 1000 pounds of milk, 107 over 40 pounds butterfat, 26 over 50 pounds butterfat. Sixteen were sold for beef. Of the 13 farmers in the association four were feeding grain and one was supplementing pasture with corn silage. One farmer has already contracted for his alfalfa.

The following table gives the names and records of the cows in the association which have produced more than 55 pounds of butterfat and 1200 pounds of milk during the period of 30 days, ending June 30:

Owner of cow.	Name of cow.	Breed of cow.	Age. (yrs.)	Lbs. milk.	Per cent of fat.	Lbs. butterfat.
A. Zeeuw	No. 117	Grade Holstein	8	1917	3.7	70.93

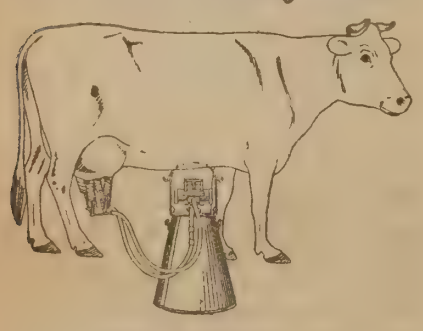
Milk Regulations in England



More food value in milk itself than in cheese, butter, condensed milk, dried milk and other milk products. This is brought out in comments made by the Irish Homestead:

We warned our readers a few weeks ago that there were likely to be restrictions on the sale of cream or the manufacture of butter, and that as milk was the most important food produced in these islands independent of foreign supply, steps would in all probability be taken to insure that the full food value would be made available to the public, and as by making butter or extracting cream the full food value was not made available, regulations would in all probability be issued shortly dealing with the uses to which milk would be put. These regulations have not yet been issued, but the report of the English committee to consider the effect of the existing milk order on the production and distribution of milk has just been printed, and we see among the more important recommendations that the production and distribution of all milk products made up in factories and creameries should be under the direct license of the food controller, who should have it within the exercise of his powers to compel such creameries and factories to release milk in liquid form to meet the urgent demands of the public. Also it is urged that the sale of preserved cream should be prohibited. These recommendations are by an English committee, and refer to England, but we consider it likely that as there will be a shortage of milk this autumn and winter in the Irish towns that somewhat similar regulations will be made with regard to Ireland, and that the shortage in the milk supply of cities like Dublin and Belfast, caused by the deficiency in the supply of brewers' grains, feeding stuffs, etc., for feeding cattle in town dairies, will be made up by a levy of a certain percentage of the milk supplied to Irish creameries. The committee report that having regard to the value of milk in comparison with milk products it is of importance that pure liquid milk should take precedence of cheese, butter, condensed milk, dried milk and other milk products. In Ireland there is not so great an urban population as in England, and the suggestions made could not be applied in this country; but we have no doubt that some regulations will be made.

United States' Peanut Crop.

The United States grows more than 6,000,000 bushels of peanuts a year.

The Perfection Milking Machine

D. E. Woodin of Sunnyside, Wash., says about the Perfection: "I feel sure that the Perfection Milker, used as I am using it, cannot possibly injure the cows, and can see no reason why it should not last a lifetime."

Newman Bros., of Elk Grove, Cal., say this:

"Anything called Perfection must go some to live up to its name. To be conservative, your machine comes mighty close to it."

The Perfection has the most simple pulsator.

The Perfection has a universal common sense teat cup with a downward squeeze.

The Perfection has a slow running pump.

The Perfection can be adjusted for milking different cows.

The Perfection will do the work, do it right and please the user.

CUTTER'S BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills	$1.00
50 dose pkge. Single pills	4.00
10 dose pkge. Double Pills	1.50
50 dose pkge. Double Pills	6.00
Cutter's Pill Injector....	1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

HOGE ARE SAFE.

Reasonable Profit Assured.

H. L. Randall of Boise, Idaho, who has been breeding Big Type Poland Chinas for the last 10 years, and who has most of that time been superintendent of the hog show at the Boise fair, looks at the hog situation with optimism. With the present shortage of hogs he feels sure prices will stay high. "While there is no big profit in hogs under present conditions," says Mr. Randall, "there is a fair profit." He does not expect farmers to go into the hog business on any gigantic scale, nor does he think it wise. A small herd can often be made profitable where a large one would inevitably cause loss. In fact there can be no great rush into hog raising for a while, as the breeding hogs are not to be had. But Mr. Randall does expect many small herds to be started. He has only a few sows and a fine herd boar, purchased from Wilson Brothers of Greenleaf, Idaho.

SHEEP PROFITABLE.

Make Good on General Farm.

Colonel E. Marsters, the well-known auctioneer of Boise, Idaho, sheared an average of seven and a half pounds of wool from his Hampshire ewes this spring which was cold at 50 cents a pound. Besides this the ewes produced over 100 per cent of lambs. They are imported ewes, 9 years old, and Mr. Marsters has decided that, under present conditions, sheep raising is about as profitable a line of live stock farming as can be engaged in. The sheep are run on good bluegrass pasture. Colonel Marsters still has a small herd of Holsteins and still raises some hogs. He says hogs can be turned off at a fair profit at present prices.

Draft Horse States.

In Iowa and Illinois, the two greatest draft horse producing states, Percherons constitute 60.68 per cent and 69.32 per cent of all pure bred draft sires. In Oklahoma 85.35 per cent are Percherons; in Kansas 77.65 per cent. Iowa, first in total number and in value of horses, has a higher percentage of pure bred draft sires than any other state—a high tribute to the good sense of her farmers, and the sound principles of her stallion law. The percentage of grade stallions is also less in Iowa than in any other state, save Michigan and Utah, where the percentage is slightly less. In Iowa, too, we find one pure bred draft sire to every 295 horses, while no other state even approaches this proportion. Illinois, which ranks second to Iowa in horse production, has one to every 361, and Indiana one to every 382 horses.

Meat Inspection Service.

About 2650 persons are engaged in the government meat inspection service. Of these 800 are veterinary inspectors, 1000 lay inspectors, grade 2; 700 lay inspectors, grade 1.

The Dairy Steer

By E. L. POTTER.

There seems to be no way to get rid of the dairy steer. Not only does the steer burden us with unwelcome presence, but the owners insist that there must be some way to make him profitable. They insist that the dairy steer is good meat, and that it is robbery to pay so much less for them than for beef-bred steers.

Why should a dairy steer bring less than a beef steer? It seems a foolish question, but since many ask it in all apparent seriousness we will try to answer in the same tone. The big and all important reason for the low price of the dairy steer is the inferior quality of the meat. The texture is poor, the lean is thin, the proportion of gristle large, and the fat is of an uninviting color and flavor. As a result customers in a good butcher shop will not accept this class of meat. The average customer of course, does not know anything about the breeding of beef, but he does know that he likes some beef and does not like others. The butcher knows that he does not like the dairy-bred beef, and that the customer's trade can not be held with that class of meat. The dairy beef must therefore go to cheaper shops where price is of more importance than quality.

In addition to the dairy steer, but not always dresses out a lower percent and the proportion of valuable cuts is less. It is also true that most men who raise dairy steers are poor feeders and their cattle are not fat, but even when equally fat the differences mentioned above hold good.

Veterinary

Dr. S. B. Nelson

Doesn't Come in Heat—I have a cow that was fresh three months ago and she has not been in heat yet. A. A.
Mount Vernon, Wash.

Answer—There are several abnormalities that may cause the condition you mention, and I can not tell which it is in your case. I would advise you to consult your local veterinarian. Have him make a physical examination of the animal and then he can without doubt tell you the best thing to do.

Knee Swellings—I have a cow that has swellings on her front legs just over the knee joint and she has had that for three years. Now they are getting quite large. She is a young cow. E. B.
Tumwater, Wash.

Answer—The only thing that possibly could be done for your cow would be to operate on her by opening the swelling and destroying the secreting membrane by means of caustic drugs and healing the wound by granulations. This is sometimes successful, but at times it is fraught with danger. I believe you had better leave her alone.

Front Legs Stiff—I have a horse that got stiff in his front legs shortly after I bought him. I let him rest up and he got pretty well. As soon as I worked him again he went lame. The cords in his legs seem to be shortening and his ankles to be knuckling over. G. K.
Port Orchard, Wash.

Answer—Trim the horse's toes short, shoe him with thick-heeled thin-toed shoes. Then blister the tendons behind the bone with the following blister: Red iodine of mercury, one part; powdered cantharides, one part; lard, seven parts, bees wax, one part; mix well. Apply to each leg with rubbing one week apart. Do not blister both legs at the same time. Three or four days after applying the blister, rub a little oil or lard into the blistered part.

Hock Joint Injured—I have a cow that got lame three weeks ago. There is a scratch on the hock joint and the joint is swollen. For the last 12 days she does not put any weight on it at all. L. E. K.
Okanogan, Wash.

Answer—It is quite possible that the cow's hock has been badly bruised and that pus is forming under the skin somewhere. Examine the hock carefully and if in the swelling there is a soft pointed spot open it and if matter is present drain it and wash it morning and evening with a 2 per cent solution of lysol. If there are no soft spots and no matter present paint the hock daily with tincture of iodine. It will probably take several weeks for recovery if it is a bone trouble.

A Woman Blacksmith.

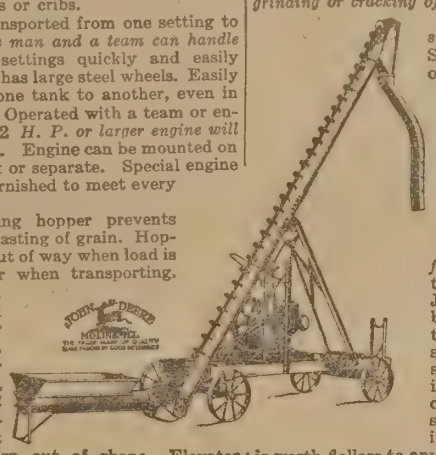
A New Hampshire girl has become a blacksmith. Her only previous experience had been in shooing hens.

Reduce the Cost of Handling Grain

Get the big profit from your crop. Save the cost of high priced sacks. Save the time and labor of sacking and tying. Handle your grain in bulk. Handle the biggest load in four to five minutes with no hard labor. Store your grain in tanks or cribs, or elevate direct into cars. All this is accomplished with a team of horses or engine and a

John Deere Tubular Steel Portable Elevator

Handles All Kinds of Small Grains



Elevates wheat, oats, rye, barley, flax, shelled corn and all small grains into tanks, granaries, cars or cribs.

Readily transported from one setting to another. *One man and a team can handle outfit.* New settings quickly and easily made. Truck has large steel wheels. Easily moved from one tank to another, even in rough fields. Operated with a team or engine power. *2 H. P. or larger engine will handle elevator.* Engine can be mounted on elevator truck or separate. Special engine drive jacks furnished to meet every requirement.

Big receiving hopper prevents spilling and wasting of grain. Hopper folds up out of way when load is driven up, or when transporting.

Wagon can be emptied from either side of hopper.

Built for years of service. Made of steel almost entirely. Cannot decay or warp out of shape. Elevator proper made of 3/16-inch steel well casing, 6-1/4 inches in diameter. Round steel flights run smoothly inside of casing. Chain is fastened in center of flight. Grain cannot get under chain or into sprockets. *No grinding or cracking of grain.*

Shafts operated in self-aligning boxes. Shafts cannot get out of line, cause heavy draft or breakage. Every part of the John Deere Tubular Elevator is designed and made to give satisfactory service.

Only steel tubular elevator on the market.

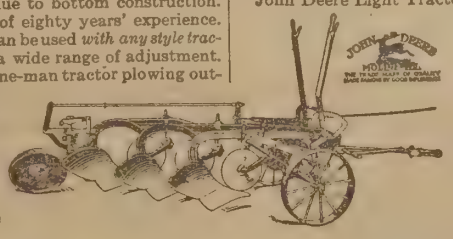
Big elevator book free. Tells all about the complete line of John Deere elevators, both portable and stationary; wood and steel. Tells how to save money in building a new corn crib or granary. Gives some valuable building plans. This book is worth dollars to any one who is planning to build a new granary.

When writing, please state the type of elevator in which you are interested.

The Bottom Is the Heart of the Plow

The right kind of plow bottom lays the foundation for the right kind of seed bed. Crop yield is increased The plow lasts longer and pulls lighter—a saving in actual cost, power, trouble.

John Deere Tractor Plows

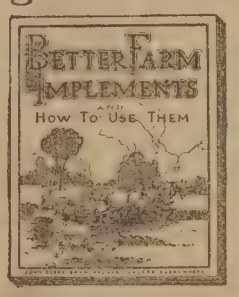


Have the Famous John Deere Plow Bottoms

The bottom on every John Deere plow is correctly designed—John Deere plow success is largely due to bottom construction. It is the result of eighty years' experience.

These plows can be used *with any style tractor.* Hitch has a wide range of adjustment.

They make one-man tractor plowing outfits. A pull of the rope by the man on the tractor lowers or raises the bottoms *high and level,* and the tractor does the work. The bottoms do not gather trash in turning or when plow is being transported.



John Deere Light Tractor Plows *can be backed up*—they have a stiff hitch.

Equipped with John Deere Quick Detachable Shares—*save eight to thirty minutes changing each share.*

Write for free booklet.

Big Book Free

Better Farm Implements and How to Use Them

America must produce more food. Labor-saving implements will play an important part in increased crop production.

This book tells all about a full line of labor-saving farming implements. Tells how to adjust and operate many of them. A practical farm implement encyclopedia. Worth dollars. Illustrates and describes the following machines: Walking and Riding Plows, Tractor Plows, Disc Plows, Disc Harrows, Spring Tooth and Spike Tooth Harrows, Corn and Cotton Planters and Drills, Listers, Alfalfa and Beet Tools, Grain Drills and Seeders, Riding and Walking Cultivators, Lister Cultivators, Mowers, Side Rakes, Loaders, Sweep Rakes and Stackers, Hay Presses, Grain and Corn Binders, Corn Cutters, Stalk Cutters, Kaffir Headers, Manure Spreaders, Portable and Inside Cup Elevators, Corn Shellers, Wagons, Farm Trucks and Buggies. This big book will be sent *FREE* if you state the implements in which you are interested and ask for Package X—1670.

The Name "John Deere"

is implement insurance. It fixes the quality, and has done so for eighty years.

Don't forget that goods that have the reputation and are the biggest sellers on the market are the best in their line — always.

The increasing number of John Deere implements in use every year indicates the farmers' final verdict.

POULTRY

Write to the Editor

JAMES DRYDEN
Editorial Contributor

The stubble fields will reduce the feed bill if the chickens are moved out on to them. The fowls will pick up every kernel of grain and make good use of it in either meat or eggs. Portable houses should be used, so that the chickens may be moved on to different parts of the field as they clean up the grain. A house 7x10 feet, with shed roof and open front, built on runners, is a convenient size. This is large enough for 50 or 60 pullets or cockerels. Cheap lumber will do, but there should be no cracks for the wind to whistle through in the back or ends. Leave the front or high side all open, but cover it with wire netting if there is any danger from coyotes or other vermin. It may be necessary to shut them in at night. An opening or door 4 or 5 feet from the ground, left open all the time, allowing them to come and go at will would protect them from most wild animals, and save trouble of shutting them in at night and letting them out in the morning.

With good range the chickens will need no feeding. There will be grain enough in the stubble. There should also be some green stuff. Usually there is sufficient grass or some weeds that they will eat. Another condition of a good range is the presence of bugs or insects. If grasshoppers are abundant the chickens will thrive on them. They need the animal food to grow well. The hen is a meat eater, and she relishes the grasshopper about as well as we relish a sirloin. Besides, the grasshopper leads her an active life and that is worth a good deal to the hen. If there is good running water available, and some grit or gravel, then the farmer has a chicken paradise, if there is such a thing.

At the Oregon station 500 cockerels were kept on 30 acres of wheat stubble for two months without other feed, except a little meat scrap, as the grasshoppers and bugs were scarce in that section.

This is a splendid opportunity to turn waste to account. J. D.

More Eggs in Storage.

During the first two weeks in June, 571,524 cases more were pleced in storage as reported by 311 storages this year than were reported by 219 firms last year. The total holdings on June 15 were reported by 338 storages at 5,752,225 cases, 477,609 cases more than the holdings reported by 252 storages August 1, 1916, the date of the maximum holdings of last season. On June 15, 5,151,421 cases of eggs were reported by 264 storages last year and 52,239,985 cases by the same firms this year, an increase of 1.7 per cent.

Cut Out "Best of Care."

"Will you please answer me in regard to raising turkeys. We have fine hatches. They thrive and do well until about two months old when they just droop and die without any apparent cause. They have the best of care, as far as I know how to give them." O. H. Reithner, Coeur d'Alene, Idaho.

The subscriber does not give enough information. I can only guess what the trouble is, and my guess is "best of care" killed them. Turkeys come near being wild birds, and they are apt to pine under civilization. Cut out "best of care"; turn the turkeys loose to roam at will in the fields and woods and there will seldom be a case of "droop and die." In sections where there are plenty of weed seeds, bugs and grasshoppers, no other feeding will be necessary, unless it is a little at night to keep them from going back to the wild life altogether. But be very sparing of the feed during the growing period. That is what kills them nine times out of 10. The turkey lives by the sweat of its brow, if it has any such mental adornment.

Some of the best turkey raisers in western Oregon make the turkeys rustle for their living practically all summer. They feed them a little the first few days after hatching, then give them their liberty on several hundred acres of range, fields, hills and woods. Some of them practice feeding a little grain in th eevening just to coax them home to roost. Then in the fall a month before killing time they are fed for fattening. Where there are stubble fields, they will fatten themselves. J. D.

British Poultrymen Up Against It

By JAMES DRYDEN.

A perusal of the poultry papers from London, England, indicates that the poultry keepers, those more or less extensively engaged in the industry, are facing a rather serious situation. Poultrymen are drafted into the war; they are called upon to donate a certain number of eggs for the hospitals; they are prohibited by law from feeding wheat to poultry; it is against the law to feed stale bread, because stale bread may be used for human food in some forms, such as puddings; "stale bread soaked in milk" is no longer a chick formula; corn also is prohibited, or that portion of it that can be used for human food. In fact, I gather that all the cereals are prohibited except those of low grade, such as screenings, damaged grain, etc. Surely the British poultrymen are up against it. But patriotism and the law demand it.

The command has gone out to the poultryman from the authorities that there must be a culling out of the stock of poultry. The food fattening of poultry is to stop. But good layers are to be kept and the nonproducers culled out. No food must be fed to hens that do not make profitable use of it. The poultryman now realizes that fact well enough without command from the government because of the high price of feeds. Not long ago the government was encouraging poultrymen to increase their flocks; but now it says that the flocks must be decreased and only such fowl kept as are economical producers of food.

Let us hope it may never be necessary for the United States government to take similar action. It would not be surprising if the order goes forth before long that no wheat be fed to poultry, except that of poor quality. The poultryman, as a patriotic duty, must study the feed question. He must study it also for his own profit. I have already given rations from which wheat is eliminated. If the food shortage continues we may have to eliminate more.

The good poultryman will not wait for government command to cull out his flock; he should begin now. If he can use trapnests for a month now he should kill off or market those that do not lay for a month in July or August. Also kill off all that are more thad two years old except those that are of special value for breeding. All cockerels weighing more than a pound and a half should be marketed now.

The war will force many new adjustments in the world, and the poultry business will not be exempt.

Fur-Bearing Animals.

The fur trade in this country has grown to such proportions as regards its business value that naturally the concern of those engaged in it is directed to its permanency. Curiously enough, the prevalent opinion that fur-bearing animals are fast decreasing in numbers is not correct as regards those animals which furnish the bulk of the fur business.

There are a number of fur-bearing animals which can not exist in civilized and thickly settled countries, and which consequently are fast dying out. But muskrats, coons, skunks and some others seem to thrive and multiply in spite of civilization, for such old and thickly settled states as New York, Pennsylvania and Ohio still contribute largely to the fur trade, especially in muskrat skins. Should the time come when these animals can not be had plentifully in their wild state, it is not unlikely that they will be bred especially for their furs.

Grain and Hogs in Denmark.

The grain crops of Denmark average 600,000 tons of wheat and rye and 540,000 tons of barley. In 1916 there was a shortage of wheat and rye, and only 440,000 tons of these grains were raised. As much of the rye is suitable only for feed, it is estimated that 150,000 tons of wheat and rye will have to be imported before the next harvest. Hogs slaughtered during 1916 show a decrease of 11 per cent, from 2,426,000 in 1915 to 2,150,000 for the last year.

Canneries Short of Workers.

Anacortes salmon canneries are likely to have a hard time to get enough workers this summer if the run of fish comes up to expectation, says The American. Canned salmon is one of the world's most valuable foodstuffs and thus one can do his or her patriotic duty by working in the salmon canneries this summer.

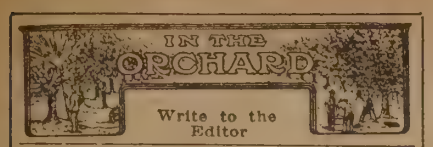
DICKS Blizzard Ensilage Cutter

"All the repairs I used in these twelve years were two shear plates and three sets of knives. The rest is good as new today. There is simply no wear out to the Blizzard". J. P. Moskop, Valmeyer, Ill.



All parts of wear are replaceable at small expense in the Blizzard. Earliest machines are still running. Latest machines have good improvements, but same old reliability.

The Blizzard is simple, compact, and does the work with minimum power. Knives and fans both mounted on heavy-rib-reinforced fly wheel. Every ounce of power counts. Your regular farm engine is big enough. World's highest silos have been filled with Blizzards. Cuts silage evenly, no matter how fast it's run. Repair expense small. Practically no wear-out to it.

WRITE FOR LATEST CATALOG

—It's a book every silo owner should have. Explains the different principles of building silo fillers, and describes the Blizzard in detail. Contains full particulars regarding the new double feed Blizzard. Gives wonderful capacity, with minimum work of feeding.

"Who Showed the Little Ant?"

There was once a popular poem beginning with the words:

"Who showed the little ant the way
Her little hole to bore,
And spend her pleasant summer day
In laying up her store?"

Now we are looking for some one to show us how to get rid of them. They are an awful orchard pest; at least we think they are. However, the article on ants, in the last edition of the Encyclopedia Britanica says "ants devour scale insects." If that be true, the orchardist in fighting the ants may be fighting his best friend. It may be that they are both friend and foe. Like cats that kill the ghophers and mice that injure the trees, but also kill birds that eat insects damaging to fruits. Be that as it may, I have been trying to get rid of the ants.

I did not believe that arsenate of lead, regular strength for a codling moth spray, would kill ants. If it would, then why are they so numerous in orchards where codling moth are under control by arsenate spray? What I did believe was that the ant was immune from poison in greater degree than most insects, but not wholly immune. Scientists are of the opinion that certain animals and insects are able to protect themselves from poison because they contain in their organisms "anti-bodies" that react on poison and other bodies, neutralizing its effects, therefore are said to be immune. But I believe enough arsenate to overcome the anti-bodies would kill the ants.

On June 22, 1917, I prepared equal parts of bread, sugar, water and powdered arsenate of lead, mixed them in two separte buckets, tipped them over on their sides near two separte ant hills, to await results. In about two hours a considerable number were in the buckets. I tipped them back quickly, tied cloths over the tops to prevent the escape of the ants, yet so they could get air. I held them as prisoners for 18 hours, and at the end of that time, there was not a dead ant in either bucket, and they were still feasting on the arsenate of lead, sugar and bread.

Test With Black Leaf.

The next day I made a test with black leaf. We had been spraying with black leaf at a ratio of one to 800, to kill codling moth, aphis, red spider, scale, etc. I concluded to try it on ants, not by spraying, but by dipping branches heavily infested with ants into it, to be sure that they got it.

The first test was one to four hundred, or twice as strong as we had been using for other insects. It seemed to affect them unfavorably, but did not kill. I tried one to 200, and a few of the weaker ones died from the effects. I then tried one to 100, and as nearly as I could guess about one-half of the smaller, (perhaps younger) died. I did not try a stronger solution, because it seemed to me too expensive for a practical application in general use.

Cyanide of potassium mixed with water and sugar will kill them, but that is so deadly a poison for human beings, that I do not like to have it about the premises. It is a little like dynamite in this, that it is safe in the hands of one who knows just how to handle it and who always does the best he knows; but it is not safe to be left lying around where children or careless persons may get it. G. L.

Salvation of Orchard Industry

Demands Cooperative Marketing Among Fruit Growers

The United States Chamber of Commerec has just completed a survey of the fruit crop of the United States. It reaches a clear conclusion that cooperation among growers is the hope and salvation of the orchard industry, especially in the west.

"It is very difficult, in fact, almost impossible," the report declares, "to obtain complete and reliable statistics as to the total production and value of the fruit crop as a whole. If all manner of fruits, such as watermelons, cantaloupes and the like, are included in the reckoning, it is possible that the annual output will show a total value of about $500,000,000."

The real problem today, the committee says, is that of marketing. Most kinds of fruit are very perishable and will not keep any length of time without serious deterioration both in quality and value. Added to this fruit growing sections, especially in the far west and the extreme south, are often a long way from the markets. Also there is constant competition, which is further complicated by the fact that the large markets are very few compared with the producing districts which supply them.

Cooperation has largely proved the saving grace of the fruit situation, as the innumerable cooperative growers' associations, particularly in the far west, only too plainly demonstrate. The nature and purpose of these associations, the report goes on, are far reaching and comprehensive. They cover all the details of cultivating, gathering, grading and packing of fruit; of prices, transportation, marketing, collecting the proceeds of sales, developing new markets; in fact, every phase of the growing, shipping and selling of fruit.

"Without the growers' and kindred associations," the report concludes, "the growing of fruit on a large scale, especially in the more thinly settled parts of the country, would be impossible, since as a rule the individual could not possibly handle so complex a situation. Thus the older and more populous sections would be deprived of that diet of fruit now so abundant, usually so reasonable in price and always so healthful."

"The condition of apples, the most important of all fruits, is generally good everywhere throughout the country," says Archer Wall Douglas of St. Louis, chairman of the committee. "The usual and inevitable local exceptions to this statement are not of sufficient importance to affect its substantial accuracy."

The story of small fruit, strawberries and other berries, cherries and the like, according to the committee, is much mixed but on the whole is for a large yield, especially of cherries, if the weather is not too wet from now on. Strawberries seem to have suffered much in some districts, especially in southwest Missouri and nothwest Arkansas, from both drouth and cold, but on the whole, it is said, a generous yield of high quality fruit may be expected.

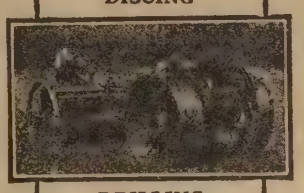
Pears, the report states, were damaged much by cold and blight, but the total production promises to be fully up to the average. The forecast for a heavy yield of plums and prunes, items of growing commercial importance, is very bright. The condition of citrus fruits—oranges, lemons and grape fruit—is not good in southern California but somewhat better in southern Arizona, southern Texas and Louisiana. The trees were severely damaged by extreme cold weather throughout the Florida peninsula, and the yield there will consequently be greatly reduced.

Peaches, the survey details, suffered severely from winter killing in almost every section. Their condition is extremely spotted in one part of a state and fairly good in another. Their promise is best in sections so far apart as the Pacific Coast and the Middle and South Atlantic states and the poorest in the central west and central south. In some states, notably Oklahoma and Arkansas, the crop suffered not only from very cold weather in the winter and untimely frosts in the late spring, but likewise from severe hail storms. The total yield, while not up to normal, will on the whole, it is thought, be larger than seemed possible 30 days ago.

English Food Economy.

In all parts of England, food economy is being vigorously promulgated. In many country districts the people have not yet awakened to the necessity of eating less and to abstain from every form of waste, and the authorities are striving through local committees to teach economy in food by means of meetings and demonstrations of cooking, says the London correspondent of the Northwestern Miller. Efforts are being made even to instill into some of the youthful members of the community the spirit of economy by teaching them the following doggerel:

"Save the crumb
And you save the loaf.
Save the loaf
And you save the corn.
Save the corn
And you save the ships.
Save the ships
And you save the men.
Save the men
On land and sea, and thus you
Save your country."



THE ORIGINAL
2-WHEEL TRACTOR
That Does All Farm Work
WITHOUT HORSES

WHEN you begin to consider the purchase of a tractor, whether for a farm of 80 acres or more, there are a number of questions you will need to ask yourself before you buy. Here are some of them:

—Will it CULTIVATE as well as plow? Will it do ALL my farm work without horses? Will it work on plowed ground without packing the soil? Will it do the work quicker; easier; and save on hired help? Is it really a ONE-MAN tractor? Will it handle as easily as a team of horses, rather than be too heavy, clumsy and inconvenient? Do I ride on the tool where I can see the work I am doing, or will I have to have someone run the tractor while I am operating the farm implement?

Here is the tractor that answers these and all other farm power problems of the average farm most practically and profitably. A tractor that is heavy enough to do all farm work that horses will do, yet light enough to be handy and work on plowed ground without packing your soil.

DISCING

DRILLING

CULTIVATING

HARVESTING

MOLINE ORIGINAL 2 WHEEL

UNIVERSAL TRACTOR

This is the original Two-Wheel Farm Tractor. It pulls two 14-in. plows; will disc, harrow, plant, CULTIVATE all hill and row crops, pull mower, binder, manure spreader, fill your silo—and do all belt work on the average farm. In fact, it will do anything you can do with horses; do it quicker, easier; and with less hired help. It weighs only 2800 lbs., but all its weight being on its two wheels —*all its weight is traction weight.* The tool you hitch it to forms the rear wheels and you do not have to pull around a ton of needless weight. It will back up with tools attached easier than a team will back. You can turn around in a small space; get close to the rows and the fences.

Write for Catalog Folder and read how farmers everywhere are solving the power and hired help problems on their farms.

MOLINE PLOW CO. Dept. 51 Moline, Illinois

The Moline Line includes: Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Spreaders, Mowers, Manure Spreaders, Plows, (Chilled and Steel), Scales, Seeders, Stalk Cutters, Farm Trucks, Vehicles, Wagons.

Also STEPHENS SIX Automobiles

Raise Any Crop on Any Size Farm Now Without Horses

YOU can now raise any crop with Avery motor power—corn, cotton, potatoes, etc., as well as grain crops. How to use motor power successfully for raising a crop planted in rows has been until now an unsolved problem. Now you can do it. Plow and harrow your ground with an Avery Tractor—then plant and cultivate with an Avery Motor Planter-Cultivator. See this work done at the Fremont, Nebraska, Demonstration, August 6th to 10th.

Avery Motor Planter-Cultivator a Wonder
Plants or cultivates two rows at once. Single front guiding wheel runs between rows—double rear driving wheels outside of rows. Turns short either way at ends to go back on next two rows. Costs less to operate than horses or mules. A great success.

Motorize Your Farm the Avery Way
First, select from the six sizes of Avery Tractors the size that exactly fits your size farm. No farm is too small or too large for an Avery. Six sizes from 5-10 to 40-80 h.p.; fit every size farm.
Then get one or more Avery Motor Planter-Cultivators, as you may need and you have motor power for raising any crop on any size farm.

Why Avery Tractors Lead
The five larger sizes are the only make tractors built in five sizes all of one design. **Special double carburetor and gasifier make them best kerosene burners.** Patented sliding frame—least gears and shafting in transmission. Only tractor with renewable inner cylinder walls. 5-10 h.p.; smallest and lowest-priced tractor built.

Insure Getting Real Service After You Buy
Avery Tractors and Motor Cultivators are built by an established company with many Sales and Service Branches and Distributors, which insure permanent service after you buy an Avery.

Write for the interesting Avery Tractor and Motor Cultivator Book. Will tell you many facts about raising any crop on any size farm with motor power

Social Relations of Honey Makers

You Can Find Much of Humans in Bees, or Much of Bees in Humans

By GRANVILLE LOWTHER

> Bee characteristics are very like the race characteristics of men. There are light and dark colored bees. There are big bees like Russians, and little bees like Japs. There are hot-tempered bees like Spaniards, and mild-tempered like the philospohers of India.

Bees are interesting to the farmer, because they fertilize his crops and increase the yield; to the orchardist, because there are many kinds of fruits that can only be grown by the aid of bees and other insects that carry the pollen from flower to flower. They are interesting to the professional apiarist because they manufacture the honey out of which he makes his living. But they are interesting to the sociologist as well, because they observe certain laws of life and of social relations that in some form are to be worked out and applied in a well ordered state of human society.

There are catalogued about 5000 species, of which 1500 are honey bees. They have race characteristics, growing out of the conditions of climate and circumstances under which they live. They inhabit the whole world, except in the very coldest climate, and become adapted to their environments or die.

Their Enemies.

Among the enemies of the bee are the bee louse, bee moth, bee flies, bee birds and certain animals that feed upon the honey.

Bees often become enemies of one another, and war is the result. There are guest bees, that lay their eggs in the nests of burrowing bees where they are permitted to grow their young, and the two species often live together in harmony and become amalgamated.

Robber bees are those that invade the hives of other bees, and a fight occurs. If the robbers are whipped they go back home, recuperate and attack another hive. If they are not whipped, then either the conquered bees move out, leaving the hive to the invaders, or they live together and unite their forces to whip another colony.

Division of Labor.

There are three general classes, with subdivisions, all of which perform some useful work, according to their ability. The first is the males, whose only work is to fertilize the hive. They can not gather honey, they can not defend the hive, for they have no stings, and they are fed by the workers until their work is done. Then they go out voluntarily from the hive into the world to die in order that their food may be conserved for the good of the colony, or they are cast out by the workers or killed outright and carried out. This is what we are calling now in American society "the conservation of the food resources." In a similar way the ancient Greeks at one period of their history conserved the food supply by disposing of the aged, the infirm who were considered incurables and the malformed. This method has been practiced by several primitive nations in cases of special exigencies when the people were facing famine, and the survival of the colony depended upon furnishing food to the workers and defenders. However, with bees it is a habit of such long standing that it has come to be an instinct of their nature.

The queen bee might more properly be called the mother bee, for she performs none of the offices generally performed by the queens of human society. She is not a ruler in the regal sense, but she has been developed by feeding from the larval state from among the females until she is much larger than other females that are less developed. This mother bee is capable of producing 3000 eggs in one day, and as there are from 10,000 to 100,000 bees in a hive it is clear that she can soon deposit eggs enough to become the mother of a new colony. In one particular she is wiser than the best human scientists, for she knows when she deposits her eggs whether they are male or female, deposits them in separate apartments, and does not have to wait until a later period of development or until hatching time to determine.

The worker bees clean out the hives, build cells for the larva out of which is to be developed the young bees, go on excursions for food, attend the young, guard the colony against enemies and fight.

Bees in their social organizations are collectivists of the communistic type. They are collectivists in this, that they know they can not live alone, that they must live in colonies or die, and they know, further, that if they live in a collective state of society they must own the food supply collectively. Therefore, there are no rich and poor bees in a colony; there is no pauper problem, no overfeeding of one class or underfeeding of another. In their labor "Every one renders according to his ability, to every one according to his needs." Or, as it is said of the communistic societies of early Christians, "He that had much had nothing over, and he that had little had no lack."

They seem to be instinctively altruistic, for even in their swarming habits the strong ones leave the hive, go out into the world to found a new colony and leave the old home with its cells and food supply to the younger and the weaker.

The fighters are also the workers. They have stings and defend the colony; but on their stings are little barbs which, when the sting is inserted into an object, prevents it from being extracted in much the same way as the barbs on a fish hook holds the fish. However, the sting is pulled loose from the bee and inflicts a wound upon it that is certain death. Therefore, whenever a bee goes out to fight it knows is it going to die. Yet it does this for the good of the colony.

Some Lessons for Americans.

Now, I do not claim that we are to follow all the habits of these lower forms of life in our social relations, for it is supposed, at least, that we have evolved far beyond the state of intelligence and morality of any other form of life on this planet. Yet we might ask ourselves some questions and study them with profit.

First—Suppose we call the nations of the world colonies and the different races of men varieties or species. In the United States our ancestors founded a colony, or government, the chief cornerstone of which was that "All men are created free and equal by nature and are endowed by their Creator with certain inalienable rights, among which are life, liberty and the pursuit of happiness."

The peoples of other countries have heard of these principles and have liked them. Therefore, they have come from all lands to be our guests. Using the analogy of the bee, they are "guest bees." What should be our attitude toward those guests? My answer is, if they come to make their homes among us, if they are willing to bear their share of the burdens of producing the food for the young, maintaining the colony and defending the society against its enemies the same as we who were born here and have no other national or political relations, then they are of us, are part of our colony—our brothers by adoption if not by birth. If, however, they become our enemies, and because the colony from which they originally came is at war with us, they dynamite our factories, murder our citizens, refuse to contribute to the defense of the colony and hinder the production of food and supplies for the success of the fighters and workers, they are "alien enemies," and such guests must be cast out, interned or otherwise cared for as a matter of self-protection.

Second—Suppose a colony or a group of colonies should conceive the idea that it is easier to whip weaker colonies and take away their substance than it is to go from flower to flower to gather it, what should be our attitude toward the "robber bees"?

In 1864 Germany whipped Denmark and took away three states. This was more in harmony with her tastes than acquiring territory in some other way. In 1866 she whipped Austria and Hungary, took five states and levied an indemnity. In 1870 she whipped France, took two states and levied $1,000,000,000 indemnity. By this time the conquered states of Denmark, Austria-Hungary joined with the "robber bees," the conquerors, in order to whip Belgium, France, Serbia and other states to further enrich themselves. There grew up an alliance of colonies to determine whether the industrial system or the robber system should be the law of nations. We are in this struggle, the greatest in the history of nations.

Third—Suppose certain members of our colony refuse to work and persist in hindering others who desire to work, what should we do?

Fourth—Suppose some who will not work and who hinder others from work destroy the property created by the labor of others, what should we do?

Fifth—Suppose certain others who never work persist in getting control of the food supply gathered from various sources by the workers. Suppose they buy this food at a comparatively low price, because they take advantage of the necessities of the workers to obtain it, and then charge two or three prices for it, thereby making it practically impossible for the wage workers to feed their families, what should be done with them?

The laws of self-preservation, from which have evolved the instincts of self-preservation, say, "Sting them." Sting them to work or to death, it matters little which. Society must protect itself against its enemies at home and abroad.

I would require every able-bodied person, male or female, to have some kind of useful occupation and perform something useful to the general good or die. In order to carry that into effect I would furnish employment to all who have no employment, and if they will not work, put them first on short rations, then shorter until every one will work or starve. "If any man will not labor, neither let him eat."

When Grains Are Well Dented.

Recent investigations have shown that silage varies widely in feeding value. The Iowa experiment station after careful study advises: "The corn should be ensiled when the grains are well dented, which is generally when the lower leaves and husks are beginning to dry up, and the corn is nearly ready to cut for shocking." The trouble is, however, that very often a farmer must fill his silo when the cutter crew is in his neighborhood or wait until his fodder has become dry and harsh.

Donkey Clearing Outfit.

J. A. Edmiston, from the Upper Skokomish, was in Shelton the other day looking up information on the gasoline donkey clearing outfit, which he plans to buy and open up more of his farm. He already has about 50 acres under cultivation, and after getting the rest of his 80 cleared he expects to find plenty of similar work to do for his neighbors to help pay for the machine.

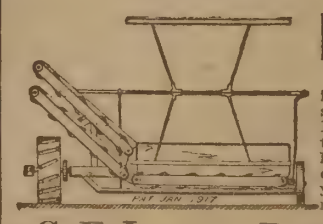
"Concealed Weapons."

"I want a license."
"Hunting?"
"No! I've just finished hunting."

Grain Smuts

The U. S. Dept. of Agriculture recommends the use of Formaldehyde for cleansing seed grain before planting. It guards against the development of stinking smut and loose smut in wheat—

FORMALDEHYDE
The Farmer's Friend



The loss through smut in this country amounts to millions annually. This can be prevented by treating all seeds before planting with Formaldehyde solution. Pint bottles at your dealers, 35 cents, treats 40 bushels. Complete directions for using Formaldehyde, U. S. Dept. of Agriculture reports and hundreds of valuable suggestions in our big illustrated booklet sent free.

The Story of the War
Vividly Told

Subscribers to The Twice-a-Week Spokesman-Review are kept closely informed regarding the great world struggle into which our country has been drawn. It prints the facts regarding the gigantic war preparations, the tremendous battles, and the political maneuverings and intrigue which are taking place far back of the battle lines. No one will be considered well educated by his neighbors if he or she is unable to talk intelligently about these and other events which are taking place in these stirring times.

Accurate Information

The Twice-a-Week Spokesman-Review will keep you accurately posted regarding local, state, national and world affairs. It is complete, reliable, and condensed for busy readers. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from ever far-flung battle line.

Special Offer Is Repeated

Hundreds of our friends have already taken advantage of the offer below; but we are repeating it as we believe many hundreds more will wish to secure their state farm paper in combination with The Twice-a-Week Spokesman-Review.

Twice-a-Week Spokesman-Review for 1 year regular $1.00
The Washington Farmer for 3 years if subscribed for a year at a time $3.00

Total value $4.00

Our Special Price for Both, $2.00

Big things are happening this week. Big things will happen next. To get the facts about these events, send in your order at once. Paid ahead subscriptions will be advanced from the dates to which they are paid.

Address orders to

The Washington Farmer
Review Bldg., Spokane, Wash.

Exchanging Work Is Great Help

Labor Shortage Equalized by Community Cooperation and Crops are Sown Without Any Unusual Loss of Time

CASTLE ROCK, Cowlitz County, Wash., July 2.—The season has been exceptionally good for the last three weeks for the farmers to put in their crops. There has been little rain and plenty of sunshine, drying off the lower ground and making it ready for cultivation. Early sown grain has a splendid stand and looks exceptionally well. Early potatoes are not, as a rule, as good as in former years. Still a large crop is predicted, owing to the extra acreage. Prospects are so flattering for an increase in the production of milk that new stations are bidding for the patronage of the milk men. Cheese factories in the southern end of the county are flourishing and prospects are good for one or more in the northern part.

Labor at the present time seems to be equal to the demand and the most of our farmers are well equipped with farm machinery for handling the crop and to equalize the help situation they are changing work with each other and putting in the crop without much delay. Haying has started in good earnest and the crop promises to be above the average, especially so where the ground has been plowed and reseeded during the last two years. One of the difficult things that we have to contend with in the county is properly preparing the ground for seeding. Unless the land is well drained it plows up chunky and lumpy. The disk will not cut the lumps, as they roll around between the blades and are left. Then the crusher is put on and this drives them into the ground but does not pulverize them enough for perfect cultivation.

The crop of calves in the county is good and shows a decided increase over last year. There is no disease among them. Sleek and healthy hogs are the kind we have here, and the stock men are combing the country for good breeders. Ten dollars is the price for pigs soon after birth. There should not be any scarcity of hogs, but some will be getting skeptical if the prevailing prices still keep up. However, it will have a tendency to increase very materially the hog production, and this is the quickest way to the increasing of the meat supply. Government reports are that the whey from the cheese factories makes good hog feed, but the farmers in this locality seem to have the impression that it is no better than water.

C. C. BROWN.

Binder Twine Is Up.

FERDINAND, Idaho County, Idaho, July 7.—The agitation for the increased crop production had but little or no effect on small grain. On account of the late spring it was impossible to get it all in. Some have only half of the land planted to small grain that they intended to plant.

The acreage of potatoes and peas have been increased very much. The fall sown grain looks very promising, but needs rain to fill out well. The spring crops are far behind the average, and if it doesn't rain soon, will be a failure, for some of the last sown isn't up. Laborers are scarce. Machinery and work stock are nearly normal. It is uncertain what methods will be pursued in harvesting.

Since the binder twine went up to 18 cents per pound many are talking header again. H. W. UHLENKOTT.

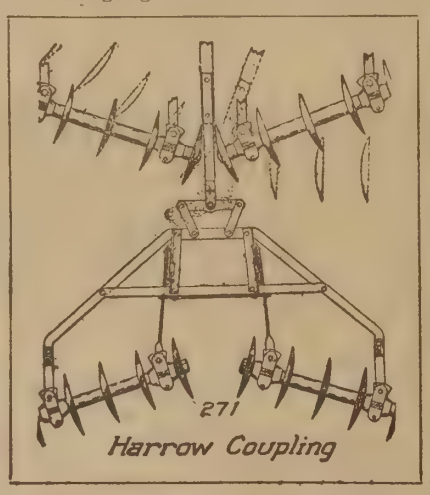
To Sell Dairy Herd.

SOUTH BEND, Pacific County, Wash., June 28.—By far the greatest increase in crops is seen in garden produce. The weather has been very favorable this month, plenty of rain that made the setting out of plants easy. Some gardeners have been trying a few drops of creo dip in a gallon of water to keep the bugs from the cabbage plants. They simply moisten the ground with a little of the solution when setting out the plants. The gardens are late, but doing nicely. C. O. Rhodes is shipping strawberries in large quantities all over the country. The berries are extra large and fine flavored. The cranberry crop is a promising one. In June there was no hay weather, so the hay will be made later. Mr. DeHinmen of Menlo, who has a dairy ranch at that place, will sell off his fine herd of Holsteins soon and go to California, where he has purchased a farm. He has one of the best herds in the county. There is a good opening in South Bend for a milk route, for this summer all the milk routes stopped. The dairymen are selling their milk to the condensery at Chehalis, which pays them better than the retail trade.

MRS. WINNIFRED BUCKINGHAM.

Stock Cattle Decreased.

OMAK, Okanogan County, Wash., June 22.—Dairy cattle have increased to some extent during the last year, while stock cattle have decreased. Horses have greatly decreased on account of the war. I believe the meat supply could be increased quickest by raising hogs, as they multiply and can be raised to maturity much quicker than the stock.

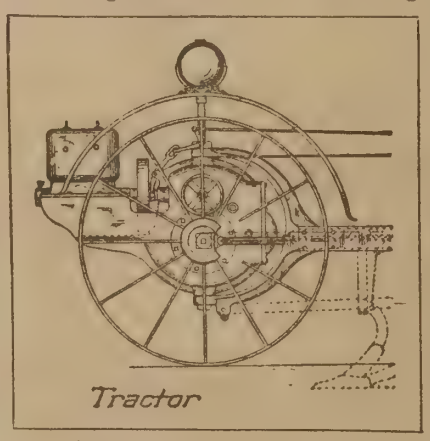


E. O. WOODS.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Tandem Disk-Harrow Coupling.



It is claimed that this coupling makes the rear gangs of disks assume such an angle on turning that the ground is not thrown up in ridges and the side draft is decreased.

Harrow Coupling

Tractor.

We show here the front traction wheels of a small three-wheeled tractor. The gears run in oil in a housing which serves as a strong framework and as a rigid support for the engine. The tractor pulls two plows.

Tractor

Do You Know That

You wouldn't do lots of the foolish things you do if you looked ahead just a day or an hour to see what the results would be?

43½ Bu. Wheat Per Acre

Mr. W. Loat writes: "I had 203 acres of **wheat** that averaged 43.5 bushels an acre, 17 acres of **oats** that averaged 65 bushels, 25 acres of **barley** that averaged 50.5 bushels an acre."

This is **only one of thousands** of good reports coming from Western Canada. Yet nowhere can you buy good farm land at such low cost as along the Canadian Northern Ry.

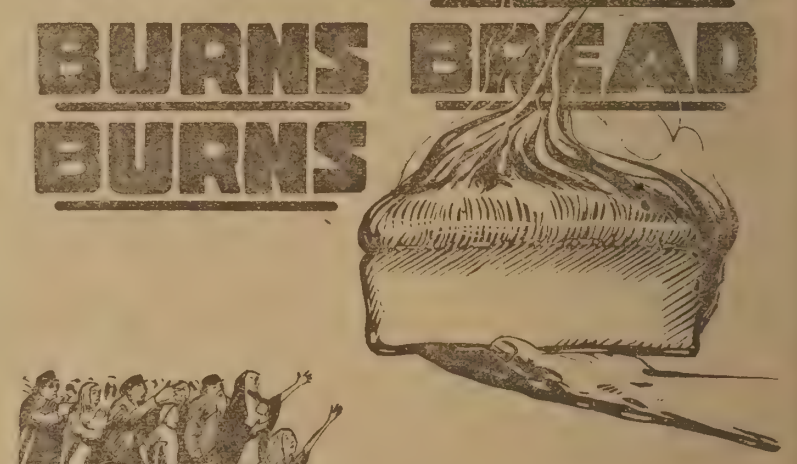
BEST FARM LANDS at $15 to $20 per acre

Here you can buy specially selected, centrally located lands **close to the railway,** that will produce crops that can only be equaled on farms costing $150 to $200 the acre in a more densely settled community. This includes the **best grain land,** land also adapted to **dairy** and **mixed farming.** Here the man with limited cash can become the owner of one of these fertile farms through the liberal installment payment plan.

Low Fares Low round-trip home-seekers' fares to Western Canada are in effect every Tuesday, to November 27th inclusive.

Free Homesteads

If you have not the capital to buy land you can still get one of the **recently surveyed 160 acre fertile Homesteads** along the Canadian Northern Railway, the newest transcontinental railroad, "The Road to Opportunity."



FreeBook Besure to write today for a free copy of the "Home-Seekers' and Settlers' Guide," full of complete and authentic information. **A fortune is waiting for you.**

WHEN GRAIN BURNS BREAD BURNS

SAVE THE WHEAT

Act NOW to protect your grain from FIRE.

The world is looking to America for BREAD, one-twelfth of the nation's wheat supply coming from the Inland Empire.

It is a duty every patriotic citizen owes the country, to do everything possible to protect the food supply—to avert a loss insurance can not replace.

Insurance Will Not Make Bread!

The fate of your wheat is in your hands. The state council of defense is mustering its forces; the insurance department of the state is asserting its police power to eliminate excessive fire hazards; the Northwestern Mutual is throwing itself into the fight heart and soul.

But these agencies are powerless unless you, the custodian of your own crop, use every safeguard in your power. Organize! Prepare to defeat this common enemy—fire.

For years the Northwestern Mutual has devoted its fullest energies toward fire prevention, and now all its field forces are doing their utmost working with the grain growers to reduce this season's losses to a minimum.

Let us all cooperate in this vital cause. Please write us for valuable information that may save you big loss.

Remember—Insurance does not restore grain that is burned. And the world is crying for BREAD.

Northwestern Mutual Fire Association

Five Books Free

DO YOU want to save money on your stump blasting? Do you want to get the stumps out cleaner—split them up better—and cut down the quantity of powder required? Our Stump book, "Better Stump Removing," tells and shows how to do it.

OR do you want your fruit trees to grow faster, yield sooner and bear bigger crops. Our Tree book, "Better Orchard Tillage," shows how you can secure these results by blasting when planting.

IF you want to save fertilizer and grow bigger crops, send for our Crop book, "Better Farm Tillage." It tells how blasting will make the subsoil mellow several feet deep and release new plant food for your crops.

ARE there rocks on your farm? Our folder, "Better Boulder Breaking," shows how a few minutes' work will get them out of your way forever.

DOES your farm need draining? Our Ditch book shows how to blast clean, smooth ditches of any size—the easiest, quickest way of making them.

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

Here are some of the reasons why you should insist upon Giant Farm Powders for all farm blasting.

1. They are made especially to suit Western farm conditions, by a Western company with 50 years' experience.
2. They are the *genuine* Giant Powders—the product of the manufacturers who originated the name. The fact that other explosives are often called "giant powders" indicates the high quality of the genuine.
3. They go further than ordinary dynamites. They exert their strength over a wide area, cracking, splitting and heaving out stumps, roots and all, rather than shattering and throwing them high in the air.
4. They will not freeze at ordinary temperatures, standing 32° for days without requiring thawing.
5. They are being used by thousands of farmers, scores of whom state that the Giant brands "give better results"—"save money"—"have wider breaking power"—"shoot the roots"—and "are always uniform in strength and action."

There are two of the Giant Farm Powders: Giant Stumping Powder, for wet work, and Eureka Stumping Powder, for dry work. Eureka costs less and many careful blasters use it for wet work, too.

Ask Your Dealer

Your local dealer probably has Eureka and Giant Stumping Powders and other Giant blasting supplies. If he does not have them, write us. We will see that you are supplied promptly through the local dealer with whom you prefer to trade, through a dealer in a nearby town who has a magazine, or direct from our nearest distributing point.

The Giant Powder Co. Hom Office **San Francisco**
CONSOLIDATED *"Everything for Blasting"* ESTABLISHED 1866
Branch Offices: Seattle, Spokane, Portland, Salt Lake City, Denver

Mail the coupon below or a post card and get one or all of the Giant books. You will find them valuable. They contain illustrations of the most economical ways of doing farm work with Giant Farm Powders.

Make This Test

Get a 25 or 50 pound case of either of the Giant Farm Powders. Get at the same time a case of any other dynamite or stumping powder.

Blast with each. Keep track of the quantities used. Figure the cost. You will find—as farmers everywhere have found—that the Giant Farm Powders save farmers time, work and money.

To make it easy for you to secure Giant Farm Powders we print a trial order form in the coupon at the right. Fill it out and we will have our nearest distributor supply you with a trial case at the lowest market price.

Our "Want" Ads Are Doubly Profitable

It Pays to Read Them as Well as to Use Them

READ WHAT SOME SAY WHO HAVE USED OUR "WANT" ADS

RESULTS FROM POULTRY AD.

"As to my ad in The Farm Trio, I had splendid results; in fact, more than I could supply."—A. O. Laabs, Coeur d'Alene, Idaho.

17 POLAND CHINAS SOLD IN WEEK.

"It pays to advertise. Sold 17 last week, all registered stock, for breeding purposes. Nothing cheap about my stuff except the price."—F. P. Farrington.

AD SELLS $1000 WORTH OF LIVE STOCK.

"We feel more than pleased with the results secured so far through our advertising in your papers. We have sold to buyers in these states to the amount of $1000 in the last four months, every one having mentioned one or another of your papers."—Pomeroy & Son, Scappoose, Ore.

SELLS HIS SEED CORN.

"I have a great deal of confidence in the Trio as an advertising medium, as I have just had some success in selling some seed corn through the three papers. Enclosed you will find my check for $7.42, covering the ad for January. Please run this ad as per my letter of January 25, through February."—L. F. Pourtales, Oroville, Wash.

BEST FOR SELLING TURKEYS.

"Results from my turkey ad in The Farm Trio: Aside from one local order all shipments have been one, two or three birds in a shipment, going to all parts of Washington, Oregon and Idaho, and some to Montana. We have been carrying ads in six or seven weeklies, and can safely say that 85 per cent of our inquiries come from The Farm Trio."—Mrs. H. J. Cortner, Payette, Idaho.

SELLS FARM AND RAW LANDS

"No doubt it will please you to know that the classified 'want' ad service of your three state papers has been productive of very good results for us. Your papers are bringing us a constant stream of good, live inquiries from all three states, which shows plainly that a good proportion of your subscribers in all sections of Washington, Oregon and Idaho are always on the lookout for promising real estate investments and that they must watch your 'want' ad pages pretty closely for legitimate snaps in farms, raw lands and city property."—J. Melvin Thomas & Co., Spokane, Wash.

Examples showing cost of different sized "WANT" ads inserted in The Washington Farmer, The Oregon Farmer and The Idaho Farmer.

(2 LINES.)
FOR SALE—43 LINCOLN AND SHROP ewes with lambs. P. C. Jensen, Ilo, Ida.
Cost of 4 insertions, $2.28.

(3 LINES.)
W. S. C. STUDENT WANTS A YEAR'S DIversified farm work, beginning June 20. O. A. F., 361 College Station, Pullman, Wash.
Cost of 4 insertions, $3.42.

(4 LINES.)
FOR SALE, OR EXCHANGE FOR SMALLer place—My 552-a. stock and grain ranch, 3 miles to town. Address owner, R. E. Warner, Crawfordsville, Oregon.
Cost of 4 insertions, $4.56.

(5 LINES.)
BABY CHICKS, S. C. WHITE LEGHORNS; they are real mortgage lifters; the kind that lay while mere kiddies. 50,000 left. Valuable catalogue. I. D. Casey & Sons, R. 7, Waitsburg, Wash.
Cost of 4 insertions, $5.70.

(6 LINES)
BUY ROUTLEDGE'S "HIGHEST QUALity" field, garden and flower seeds. Trees, plants and bulbs. Poultry and bird supplies. Our 144-p 1917 annual free on request.
ROUTLEDGE SEED & FLORAL CO.
145-147 2D ST., PORTLAND, Ore.
Cost of 4 insertions, $6.84.

Every time your ad is printed in this paper it will also appear on the "want" ad page of the two other big state papers of the Pacific northwest, thus bringing you into communication with thousands of prospective buyers or sellers in every section of Washington, Oregon and Idaho.

Speculators Rob Producer and Consumer

(Continued from page three.)

from the great hazards of trade in the widely fluctuating and dangerous price situation during a year when all normal stabilization has been lost through the interruption of world trade and war. All these factors render it vitally necessary to initiate systematic measures which will absolutely eliminate all possibility of speculation, curb extortionate profits and effect proper distribution and restriction on exports to a point within our own protection. These measures can not be accomplished by punitive prosecutions of evildoers, but only by proper and anticipatory organization and regulation all along the distribution chain.

"3. During recent months the allied governments have consolidated their buying into one hand in order that they might relieve the burden of speculation from their own consumers and as the restricted exports to neutrals are but a minor item the export price, if not controlled, is subject to the will of the allied buyer, so that in a great measure the American producer is left to that buyer's judgment and is with out voice.

Glut in Interior Terminals.

"Furthermore, in normal circumstances, United States and Canadian wheat is moved to Europe largely in the fall months, such shipments averaging about 40,000,000 bushels per month and relieving a corresponding flow from the farms into the interior terminals. This year, owing to the shortage of shipping, the allied supplies must proceed over a large period of the year and will not during the fall months apparently average over 20,000,000 to 25,000,000 bushels per month.

"We must therefore expect a glut in our interior terminals during a considerable period. The financial resources of the grain trade are probably insufficient to carry this extra load without the help of speculators, and, moreover, the consolidation of practically all foreign buying in the hands of the allied buyer has further tended to diminish the resources of capital available by putting a number of firms out of business and limits the financial capital available in export trade.

"The net result of this situation is that unless some strong and efficient government action is immediately settled and brought into play the American producer will face a slump in wheat, and in any event the price of export wheat will be dictated by a single agency and the American consumer will be faced with the situation that a large part of the essential breadstuff has passed into the hands of speculators; for some one must buy and hold not only the normal flow from the farmer, but this probable glut.

Send Flour Abroad.

"4. With great reduction in the consumption of wheat bread now fortunately in progress the employment of our mills must be greatly diminished and with the reduction of domestic flour production and our daily feed from wheat residues will be greatly curtailed. Therefore we must induce foreign buyers to accept flour instead of wheat.

Must Protect Farmer.

"5. In order to do justice to the producers who have shown great patriotism in a special effort to increase production in 1917 and further to stimulate the efforts of 1918, it is absolutely vital that we shall protect the farmer from a slump in price this year due to a glut as above or from the uncontrolled decisions of any one buyer. I am informed that most of the allied countries have fixed the price of wheat to the farmer at $1.80 per bushel, and many of their producers believe that as allies it is our duty to furnish wheat at a price which delivered to them will not exceed their domestic price, in other words, about $1.50 per bushel, Chicago.

"Neither their responsible officials nor I hold this view, because I consider that the stimulation to production, if for no other reason, is in the long run in the interest of the allies. There is, however, a limit to prices which so trespass upon the rights of the consumer as to defeat its own object through strikes, raises in wages and social disturbances in the country. It is with the view to finding a solution to these problems, filled with the greatest dangers to both our producers and consumers, that legislation has been proposed and pressed for speedy enactment.

Study Consumers' Plight.

"6. The proposed food administration has conferred with many hundred patriotic men engaged in production and distribution, and has investigated the condition of the consumers in many centers as well. Many plans have been tentatively put forward and abandoned, and others have developed; but in any case none has or can be settled until legislation has been completed. Three facts stand out plainly enough from our investigations.

"First, that in this situation the farmer will need protection as to the price of wheat; and second, that large masses of people in the consuming centers are being actually under-nourished today due to the exorbitant cost of living; and that these conditions, unless some remedy be found, are likely to repeat themselves in even more vicious form at this time next year; third, the speculator, legitimate or vicious, has taken a large part of the money now being paid by the consumer.

"7. It seems to be overlooked in some quarters that the marketing of this year's wheat is surrounded with circumstances new to history and that the old distributing safeguards are torn away by isolation from the reciprocal markets abroad and the extinction of a free export market and free export transportation.

"The harvest has begun to move, and from these very causes the price of wheat has begun to drop, and if the farmer is to sell his wheat either the speculator must return to the market to buy and carry on not only the normal flow from the farmer in excess of domestic and foreign requirements, but also the glut due to the restriction upon the outlet to the latter.

"He must necessarily charge his toll to the producer and the consumer, and this latter probably upon a more extensive scale than last year, as his risks will be greater.

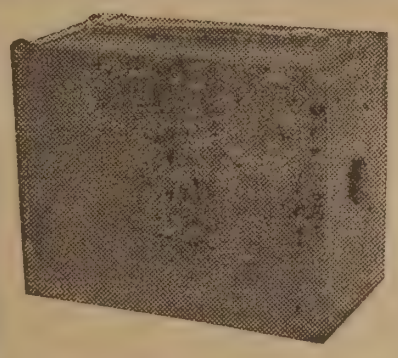
"Or, on the other hand, the government must buy the surplus of wheat at some reasonable minimum price, allowing the normal domestic trade of the country to proceed with proper safeguard against speculation. Nor would the services of the speculator be necessary, for the government should be able to stabilize the price of wheat without his assistance and can control the price and quantity of export wheat. We are practically helpless to safeguard either the farmer or the consumer until the pending legislation is passed.

"HERBERT HOOVER."

Another Dryer for Yakima.

The California Packing Corporation of San Francisco will erect an evaporator of the "'Stack Type," at North Yakima, to handle the season's cull and C grade apples in the valley. The plant will have a capacity of 10 tons of green fruit daily for each unit, and the plant will start with two units. Dr. Ira D. Cardiff and associates are building a plant of the Kiln type to handle 80 tons of green fruit daily.

As good as mother's! The reason is they are made with the same flour that made mother's reputation—



DRIFTED SNOW FLOUR
A SPERRY PRODUCT

For "golden brown" biscuits, the "perfect loaf," crisp cookies, light and fluffy cakes, the important part of the recipe should be Sperry Drifted Snow Flour, a household favorite for more than 60 years because it is always uniform in high quality. Order a sack today.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XIX.

On a bunchgrass prairie reaching 50 miles in any direction, with the small, unpainted cabins and insignificant plowings of early settlers at but rare intervals, the feathered and furry animals, large and small, speak a language which a boy of 10 to 15 years old, growing up with the prairie creatures as his most frequent playmates, learns to understand.

When I was growing up on the western bunchgrass it was the curlews that told me when sping had really come. We might have warm breaks in the weather in the latter part of February; even in March we might have warm stretches of sunshine, when the redbreasted robins would be hopping about. But I was not deceived. I knew that spring weather had not come for good till I heard the curlews calling in the big gulch east of the house, and when the curlews did call there I knew that they were building a nest and getting ready to raise some baby curlews—and real spring had come at last! Melting snow, warm south winds, the robin's song, the whistling of squirrels out ahead of time all were significant; but it was the curlew's cheerful melody over in the big gulch that I accepted as the only authentic springtime sounded by Nature in my listening ears.

When the bluebirds came I knew that wild violets were blooming over in the rockly lands west of our farm a couple of miles. Some morning, bright and early, I would take a half gallon tin lard pail and trudge afoot across the two miles of moist fragrant prairie and fill my bucket with the sweet, wild violets.

Let me say here that if you have never delighted your senses with the sweet fragrance of wild violets you have never learned what real violet fragrance is like. The wild violets are smaller than the home grown and hothouse variety. They peeped forth from the green prairie moss that grew in early spring between the masses of bunchgrass. Their stems were short; but their fragrance filled the whole prairie and came to you on the gently fanning spring breeze with a tang of the wild, which you can find only in the untamed heart of Nature.

After the bluebirds and the violets you noticed the ground owls—I do not know what else to call them. They were little owls that lived underground, and stood like sentinels by twos and threes on the round mounds of their burrows and sang "ho-ho-hooo-o" at you as you went by. If you stopped to look at them they bobbed at you in a funny way, and their eyes grew big and yellow; and if you still looked at them, or moved ever so slightly in their direction, they bobbed again, and scooted underground.

They did not dig their own burrows. This was done for them by the badgers; for the badgers in quest of fat squirrels were under the necessity of digding for them which they did most industriously, making many holes in the prairie at which many a cowboy has hurled maledictions. The ground owls when desiring a home, simply moved into one of the badger holes and made a nest. Why the badger did not come back and eat them, I do not know. Evidently the badgers did not do this for the bunchgrass certainly was prolific with ground owls.

I learned to imitate their call perfectly by cupping my hands and blowing into them. Often in the evening when the house was lonely and silent, I would cup my hands and whistle "ho-ho-ho-o-o" with a rising inflection at the end, just as did the little owls. By and by an owl would answer; then another and another, and soon the whole prairie would resound with their soft, melodious cries, some gruff, some shrill, some far and some near.

By cupping my hands differently I could sound a wild, shrieking whistle that rose and fell in ear-splitting notes; that would frighten the owls to momentary silence. They perceived a stranger was in their midst. Sometimes I would get another reply to my louder, piercing call—the distant yell of a coyote. Answering my call, the coyote assured me that he expected to sniff around our henhouse that night; and in anticipation of his nocturnal call I promptly ceased talking to the owls and went out to see that the henhouse door was shut and that no foolish hens were roosting out.

The sandhill cranes told me when summer had come, just as the curlews told me when it was spring. Playing in the yard I would hear their far away dismal croaking. It took keen ears to hear them and sharp eyes to see them far up in the summery sky. Where they came from I knew not, whither they were bound I knew not; but I learned that sometimes they would drift down to a chain of small lakes that in early spring and summer were a couple of miles west of our place in the rough, rocky land. The lakes dried up as summer advanced, but until they did, the cranes often settled down there to drink and rest a bit.

They were shy I was told, and because they were shy and floated through the sky at such wonderful heights and had such a lonely, sad croaking cry, I longed to see one at close range.

I did this finally by hiding in the tall wild rye grass which grew in clumps and small hillocks out among the small lakes. There were days when the blue sky seemed full of cranes and their mournful, gutteral croaking came from everywhere, and on such days I hastened to the lakes and hid in the rye grass. Many times I did this vainly. Once I was successful. With plaintive cries, a triangle of the birds drifted earthward, crying more loudly and discordantly as they came nearer. Had each crane been an animal of the maneating kind, my excitement could not have been more. When the cranes were a hundred feet or so above ground, their perfectly formed triangle broke up in a disorderly, excitedly honking and croaking mob, and they descended swiftly, working their long legs up and down as they did so.

Often I have wondered why the sandhill cranes stretched and doubled up their legs as they swooped nearer to the ground. As a boy I concluded that it was because the birds had flown so long in the air that they were rather timorous about putting their feet on the solid ground. Perhaps also, their vision was deceptive in enabling them to gage the distance of the earth to which they were rapidly descending, and they kept "feeling down" for it. I noticed that each bird as it struck the ground ran forward with stiff, stumbling steps, then stopped, stretched, preened, and stalked sedately to the water's edge, unless, perchance, they lighted in the water, which frequently they did.

The cranes at near view were less wonderful to me than when floating thousands of feet high across the whiteness of a cloud, or seen less certainly against the pure blue of the sky. They were rather small bodied, brownish, with darker colored tufts or plumes falling from the top of their heads down the back of their long necks. After resting and drinking they would begin to flap their wings as

(Continued on page twenty-three.)

War Program for Country Churches

In order that it may perhaps help the country churches of America to fulfill the great duty and meet the great opportunity of the hour, the committee on church and country life of the Federated Council of the Churches of Christ of America, of which Gifford Pinchot is chairman, proposes the following:

The Farmer.

1. Urge upon the farmers the absolute need of an immediately increased food supply as their first duty and as their most vital contribution to the winning of the war. Make it clear that we must prepare to supply food not only for a long war, but for the years immediately following the war.

2. Show how waste in food may be eliminated in field and in home. Urge immediate and hearty support of federal war prohibition of the manufacture and sale of intoxicating beverages as one means of saving both food and human resources.

3. Promote the fullest cooperation on the part of farmers with farm bureaus, agricultural colleges and boards of agriculture, the United States government, national, state and local committees or councils of defense, as well as with organizations of earnest and patriotic women and business men in the cities.

4. Make sure that emergency laborers, especially lads from the schools and colleges, understand their duty to their employers and to the community for faithful work and clean living as their contribution to the nation's task. On the other hand, these boys and young men should have fair treatment, kindly sympathy, wholesome recreation, Christian consideration.

5. Develop the spirit of cooperative enterprise in each community wherever possible, in order that new methods of working together in the production, saving and selling of food, and for public safety and relief to wounded and suffering may be developed and made effective.

6. Should the need arise, the farmer must not and will not shrink the great sacrifice—the giving of his sons to the army and navy of his country.

The Church.

7. Arrange for a food Sunday and for occasionally special sermons, in order that this war program may be proclaimed and continued.

8. Aid to the utmost, even with small gifts, those great efforts, such as the Red Cross and the Y. M. C. A., that attempt to lessen the horrors and distresses of the war.

9. As never before, make each local church a true community church, which shall support all good words and works and aid in every possible way to bring cheer, hope and blessing to all the souls within the neighborhood. Let each church search its heart to see if it be really and truly democratic and brotherly.

10. Let relations between local churches as well as between great church boards of different denominations attain a new fraternity of feeling and cooperation in activities, on behalf of all the purposes of Christian democracy at home and abroad.

The Preacher.

11. Let the country preacher preach, in season and out of season, the deeper issue of the war; That the world must be made safe for democracy; that a world kingdom of God means a brotherhood of nations living in peace and good will; that America must learn that sacrifice is the law of salvation, in personal character as well as in national life, and that it is our great task to see that American rural work and life, as well as urban work and life, shall become and shall remain truly free and democratic.

12. Many country preachers can do emergency service, either at home or by some form of enlistment, in Red Cross, as army chaplains, as special Y. M. C. A. workers in camps or among boys and young men at work on the farms, and in other ways that will suggest themselves. Churches should be willing to release their pastors for special service of this sort whenever the call is clear. Oftentimes, in communities having several churches, a plan of "doubling up" would release half the pastors for emergency service elsewhere.

Conclusion.

By some such program as this, suggested to and urged upon the country churches of America, it is hoped and believed that God's great purpose in this awful day of war may be promoted by his servants on earth.

Soldier and Family

Canada Provides Compensation

The Canadian compensation for the soldier and his family includes not only $33 of monthly pay for the private in active service, but a separation allowance to his dependents of $20 a month from the dominion government and further assistance in special cases from the Canadian patriotic fund.

For example, the wife of a private soldier with three children between the ages of 10 and 15 may receive either $15 or $20 from the assigned pay of her husband, $20 separation allowance and $25 from the Canadian patriotic fund, or in all $60 or $65 a month.

If her husband is killed she will receive $40 a month for herself and an additional $6 a month for each of her children until her boys are 16 years of age and her girls are 17 years of age. In addition, if she lives in Toronto or one of a number of other cities, she will receive life insurance.

If her husband is disabled she will receive a special maintenance allowance while he is having medical treatment and learning a new occupation, and when he is discharged, if his physical disability continues, a pension will be paid according to the extent of his disability and the number of his children under 16 or 17 years of age.

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University)

How to Break Baby of the Habit of Sucking His Thumb

You will scarcely defend these two obnoxious habits, that of sucking thumbs and biting nails. You can not deny that they are habits. A habit, be it said for the nonce, is sensation - motion combination, scarcely recognized by the one who exhibits it—that is to say, a habit is something done as a consequence of a sensation received, neither of which appears in consciousness at present, but both the sensation and the movement of which were originally carried out consciously with a definite purpose.

Dr. Hirshberg.

Thumb-sucking and nail-biting are typical habits. The infant, perchance, cold or hungry once or twice, aimlessly waves its hands around. The energy thus expended made the child warm and its thumb, very likely, encountered its lips. The comfort and pleasant satisfaction thus consciously attained is repeated until the original consciousness is lost, but the soothing sensation and the movement, which gets results, remain.

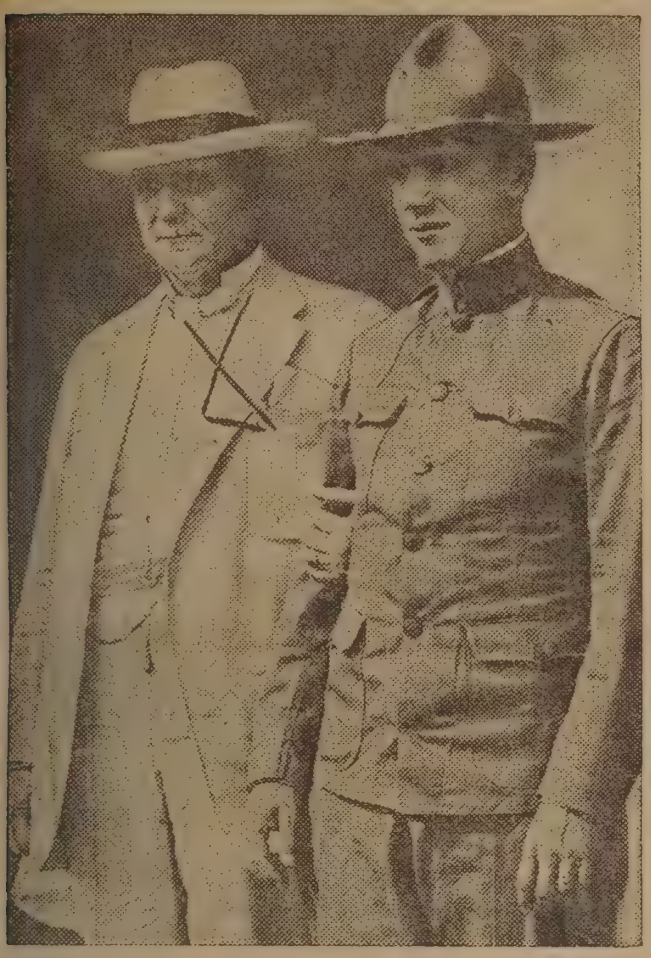
Habits then "get results" in the shortest possible time without the delay entailed in being aware of what is going on. The point is that a habit thus formed may work havoc as well as good.

How then are you to bring into consciousness again that a destructive or dangerous habit must be broken? By punishment or something equivalent that will stir up the muscles and feelings and do away with the unconscious memory habit of pleasure.

The original incentive to thumb-sucking or to nail-biting gives way in the habit to a compulsive power, which, as Dr. Caroline Richards says, "defies all means of correction."

In the very young child it is idle to invoke "strength of will" against the great power of unconscious habit and the "animal spirits," which give play to its abundant energy. Something else must be done.

It has been found practical to do away with such habits by restoring knowledge of the unsocial and disgraceful behavior in grown-ups and by deflecting the energy thus expended in the infant into a pleasanter channel.



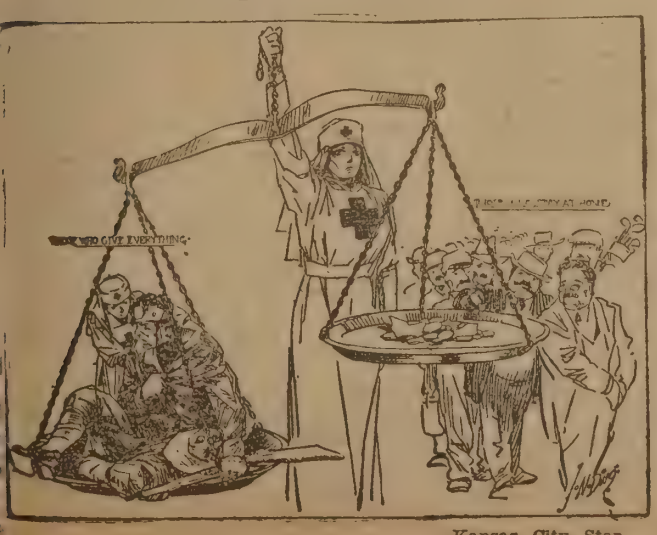
While the use of bitter substances, such as aloes and quinine, are not always helpful, they are worth the trial by virtue of the punishment thus automatically bestowed.

However, in the matter of the infant, if a bottle of sweetened milk and water is repeatedly and quickly substituted the instant the thumb is observed in its mouth the habit can be broken. This has been found of great assistance by at least one mother.

A slight slap of the fingers and thumb, with care not to injure the delicate bones as the thumb is snatched from the child's mouth, followed by the nippled-bottle of very sweet milk or water—both of which ought to be boiled—may do away with a habit that can lead to no benefit.

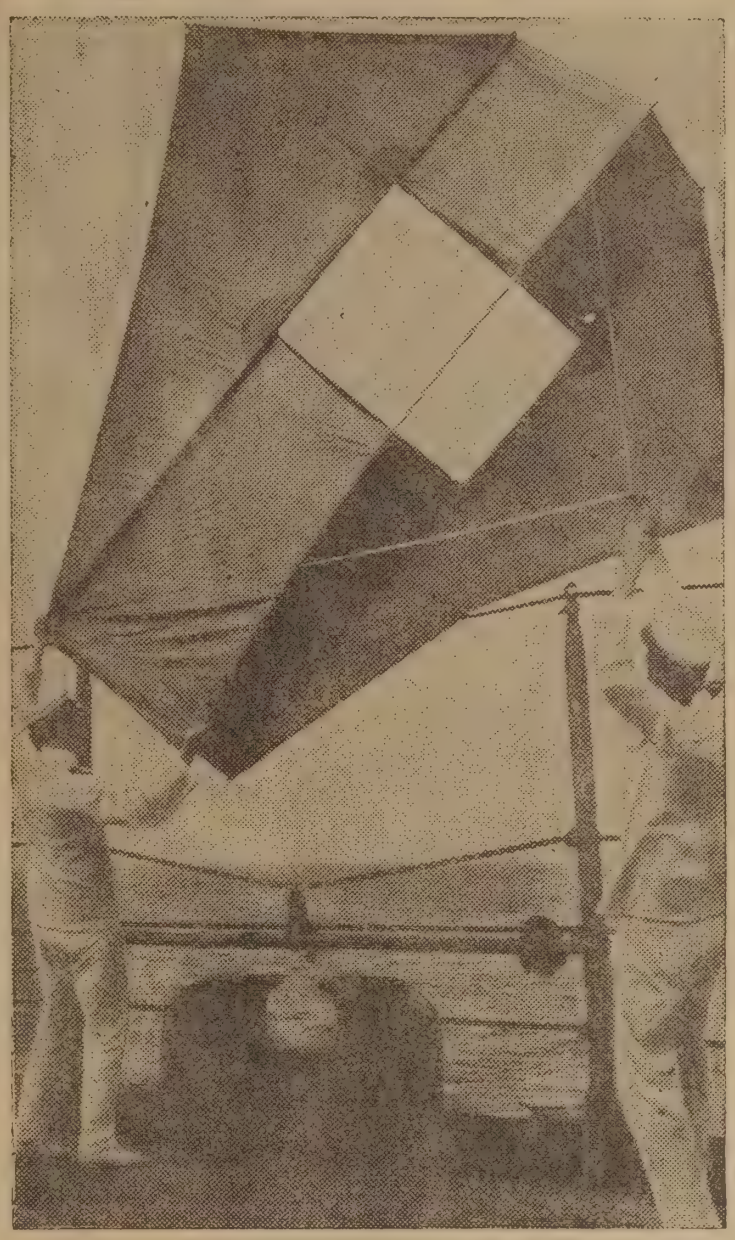
All the World's a Stage, and All the Men and Women Merely Players

Clark's Boy a Soldier



The speaker of the house of representatives, Champ Clark, raised his boy to be a soldier. The photograph above shows the speaker and his son, Bennett Clark, as snapped at the baseball game in Washington between the republican and democratic members of the house of representatives. Bennett Clark is a candidate for an army commission and is now drilling in the officers' training camp at Fort Myer, across the Potomac from Washington.

"God Bless Mr. Hoover"



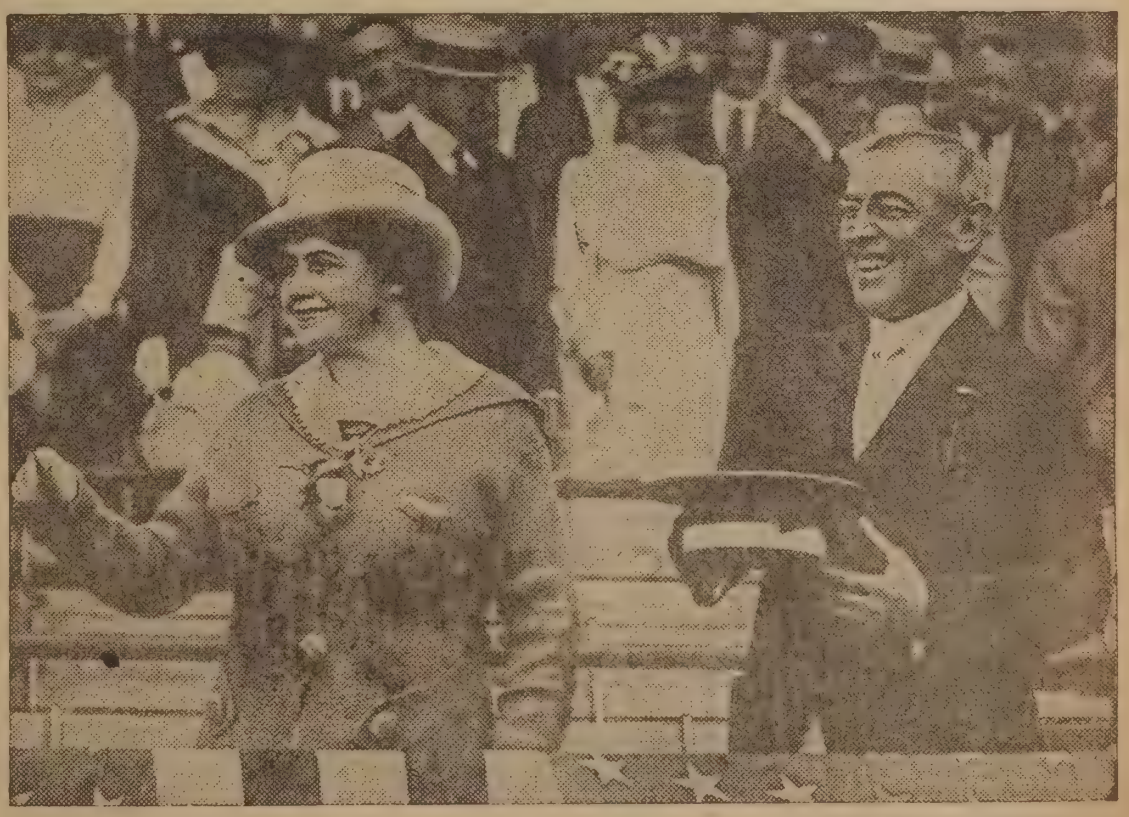
—Philadelphia Public Ledger.

Keep It Balanced

—Kansas City Star.

Huge Kite for Mark to Shoot At

Copyrighted by International.



Officers and men of an American battleship are shown in the above picture sending up one of the huge kites that are used as targets for anti-aircraft guns. These kites are used in practicing "potting" enemy aeroplanes and the gunners have acquired wonderful accuracy.

Helmets and Body Armor.

This is what the United States soldier may look like when prepared for attack, if plans the war department is said to have go into effect. Bids have been asked to furnish helmets made of a special alloy steel, 15-100ths of an inch in thickness and capable of turning a rifle bullet. The body armor is made of a series of thin spring-steel plates, made semi-flexible by being sewed together in a canvas sack.

Wilsons Watch Congressmen Play Ball

Copyrighted by International.

A short time ago the republican and democratic members of the house of representatives played an interesting game of baseball in American League park, Washington, for the benefit of the Red Cross. Among the spectators at the game that day were the president and Mrs. Wilson, and they proved to be two of the most enthusiastic fans present. The president is a busy man these days, but ocasionally he takes a little relaxation from the serious duties of his office. In the photograph may be seen the president and his wife watching the game. The game was almost as hotly contested by the two political parties as some of the measures that have come up recently in congress, and some of the plays caused comment favorable and otherwise from the crowd in the stands and bleachers. President Wilson threw the ball to start the game.

Olden Ways of Saving Fruit

By E. A. BRYAN

The well-known practices of one generation easily become the lost arts of the next generation. The age of hand-spinning and hand-weaving are supplanted by the age of "hand-me-downs," and daughter asks mother at the "home economics" show, "What is that?" The mother replies: "That is a spinning wheel and that is a hand loom like grandmother used to make the cloth for our dresses on."

Back in southern Indiana, after the close of the civil war, peaches continued to flourish and apples were abundant, but money was scarce and crops were poor and hard to sell. We did not know how to market peaches then and there was no market, anyway. If there appeared to be any chance at all to sell any peaches in the short but abundant peach season we placed hay in the bed of the jolt wagon, piled a heap of the small but well-flavored peaches into the wagon bed, put the half-bushel measure on the heap of peaches, placed a board across the front end of the wagon bed and drove to town. There we peddled from house to house, glad if we could sell a few at from 25 cents to 50 cents a bushel, that would be from eight to 16 cents a box by our modern system. But at best we could sell but a few, and so we saved by "drying" and "canning." When we ran out of tin cans we often canned in earthen jars. I remember a six-gallon stone jar which regularly was opened in midwinter when the contents would not spoil during use. It was a very economical method. We also saved both peaches and apples by making the delicious peach butter and apple butter, which we prepared in large kettles and which kept well even with a paper over the jars. And how good they were!

But what I was going especially to mention as appropriate just now, when everybody feels it a duty to save from wastage, was the "dry kiln" and the "dry house." As a boy from 12 to 15 years old I made several of them. For the dry kiln I dug a trench about 18 inches wide and eight feet long and set some flat stones on edge along each side. A few odd scraps of iron placed across made a support for other stones laid flat. Over this I spread a stiff mud, four or five inches thick, which was made quite smooth on top with a shingle paddle. This top, when slowly dried out, made a hard, dry surface on which halves of "free-stone" peaches, laid back down, might be dried quite rapidly, a fire having been made in the furnace with long sticks. The peaches were finished off in the sun.

Better still were the simple dry houses. Trays of lath four feet square were made, on which the peaches were laid, as before. A simple box house four feet wide, eight or 12 feet long, into the side of which the trays would be shoved one above another—two or three trays to the tier and six or eight tiers high—the ends of the trays resting as guide boards, gave you a means of rapidly drying considerable quantities, to be finished off in the sun. The fresh trays are shoved in at the bottom as the dried ones are taken out at the top. A "kiln" as described above might furnish the heat or a small stove might do as well or better. In this way many bushels of wholesome, easily preserved fruit were saved. Apples and other fruits were saved in the same way.

The method of preservation by "drying" should not become a lost art. In the "canning" business, excellent as it is—we can tremendous quantities of water. We are not unlike certain railways are with their stock. In drying we save the same nourishment without the water. The simplest precaution prevents any loss of dried fruit, while with best efforts much canned fruit is lost. Revive the lost arts of an age when economy was enforced, for we may need it all and more if the world is to be preserved from actual want.

Silage for Wintering Sheep

By E. L. POTTER

At the request of many farmers who are contemplating the erection of silos for wintering ewes we submit a few fundamental facts relating to the subject.

One hundred pounds of silage contains about 25 pounds of dry matter and the remainder is water. On the other hand dried corn fodder or hay is only about 10 per cent water. One hundreds pounds of silage dried out so that it would keep like hay would only weigh 27 to 30 pounds instead of 100. The dry matter in silage, however, is rather more palatable and somewhat more digestible than in dried fodder, so that on the basis of nutrients about three pounds of silage is equal to one pound of good hay.

Many animals, however, crave succulent feed, especially in the winter, and if the succulence is given in proper amounts it seems not only to have a high value in itself, but to increase the value of the remainder of the ration.

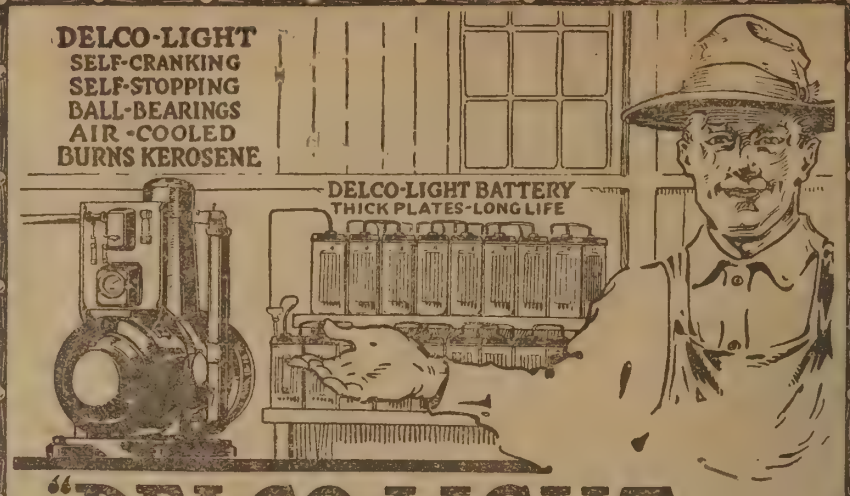
Comparative Values.

For these reasons a limited amount of silage may be considered worth half as much as good hay, pound for pound, but if fed alone, or nearly so, only one-third as much as good hay.

Sheep are fond of silage, but not as much so as cows, and furthermore they go off feed more easily if the silage is at all spoiled. It has been found that breeding ewes should not be fed more than two pounds a day. Since the average allowance of hay for wintering ewes is three pounds a head daily, this would mean that the ideal silage ration would be two pounds of silage along with two pounds of hay. Since the silage is highly carbonaceous, it is important that the hay be one of the legumes, as alfalfa, clover, or vetch.

If silage was scarce a good ration would be two and one-half pounds of hay and one pound of silage. These rations would be applicable to the smaller range ewes, but would need to be increased slightly for the larger ewes.

How Fast To Lower Silage.



In planning a silo it must be kept in mind that the exposed silage on top spoils rapidly and that to prevent the top from becoming moldy it must be fed off faster than it can spoil. This means at least two inches a day, or five feet a month. This would mean that for four months' feeding the silo must be at least 24 feet deep, allowing four feet for settling and 20 feet for the actual silage. For a long feed the silo must be proportionately higher. In diameter 10 feet is as small as is practical, since with smaller silos the expense of construction per ton is high and the spoilage around the edges heavy. On the other hand 16 feet in diameter is as large as convenient to feed out of.

One would, therefore, have to have at least 280 ewes to justify a 10-foot silo and 400 ewes for a 12-foot silo. With this in mind it will be seen that a silo exclusively for sheep is not practical with little farm flocks of 50 to 100 head, but since many of the farms with small flocks also keep cattle one silo may be made to serve both purposes.

In a word then we would recommend a silo for sheep wherever there are enough sheep to justify it and where good well matured corn silage can be grown at less than one-half the cost of good hay. As a general proposition wherever a heavy crop of mature corn can be grown the cost will be low enough to justify its use. We would not, however, recommend a silo where the corn crop is light or immature. We would also hesitate to recommend any other silage crop than corn, although if any one cares to experiment with other crops we are very glad to see them try it and would like to know what results they obtain.

Starts Skunk Farm.

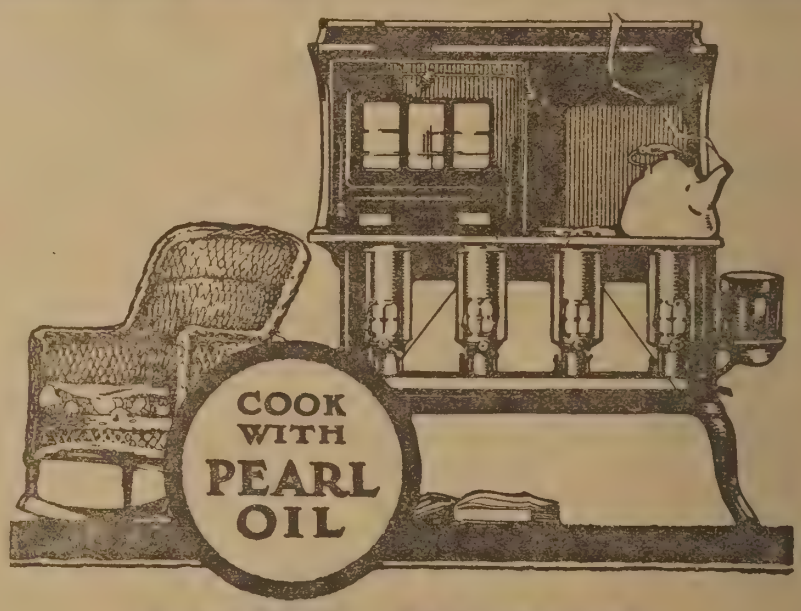
Walter Boak of Reedsport, Ore., has shipped from the east, five skunks, one male and four females. With this beginning he will start a skunk farm at some point on Smith river or on the Umpqua for the purpose of raising skunks for their fur. The ones which he has received are of the best breed of the animals of that kind, and are odorless and easily handled, being as gentle as kittens. Each skunk is expected to raise one litter of kittens each year of from four to 14 to a litter. Mr. Boak expects to receive from $4 up for the fur. This, he says, is an experiment, and if it proves a success he expects to go into the business on an extensive scale.

"DELCO-LIGHT

works for me every day in the year, furnishing electric light and power."

"When I want light I just press a button. There are no lanterns to carry. There are no lamps to clean.

"I have running water in the house and barnyard, pumped by electricity. The churn, cream separator and washing machine are run by a small electric motor.



"The entire family is delighted. And what appeals to me is the fact that Delco-Light is rapidly paying for itself in time and labor saved." *Jacob Stine, R. R. 4, Lewisburg, O.*

Thirty thousand other users are finding Delco-Light to be a good investment.

Two sizes, $350 and $420 f. o. b., Dayton, Ohio, except Western U. S. and Canada.

The Woman's Part

Learn What Thrift Really Means

By Ruth Gipson Plowhead.

A recent cartoon tellingly shows a fat, slovenly housewife standing by the back door gazing at an overflowing garbage barrel. We can easily see that neither economy nor thrift dwells there, and it is by the use of these that the homekeeper may do her part toward feeding the fighting armies. There are a number of things which we may all do to help reduce the cost of living. Mrs. Richards, in a book on "Cost of Food," claims it is possible to live in perfect health on 10 cents a day—this sum spent for food alone. While she was undoubtedly not figuring on our present war time prices, who of us who read this has ever tried to come anywhere near that small sum for living?

Skim or separated milk and buttermilk are often wasted, yet both of these furnish inexpensive protein, only the fats are taken out. Practically all famous dietetians advocate less meat and eggs, less concentrated rich foods and more bulk and raw foods. Bran, used in connection with flour, makes excellent muffins and bread is considered a splendid bulk food. Cabbage, lettuce, turnips, beets and carrots are all inexpensive, and all good bulk foods.

A nourishing and very inexpensive rice pudding is made by baking one cup of rice in the oven in several quarts of milk (separated will do). It may cook for several hours on a morning when one has a hot stove, and a few minutes before serving a well-beaten egg, sugar and flavoring to taste be added. It should be cooked down until creamy and rich.

Another nourishing pudding is made by adding one cup of corn meal to the boiling milk as for mush, add three-fourths of a cup of sugar, one-fourth cup of molasses, one-half teaspoonful of cinnamon and ginger, and allow this to bake slowly for several hours, adding milk from time to time if it bakes down too much.

Cottage cheese, thick vegetable soups served with toasted dry bread, mush and milk, corn and graham breads are all inexpensive. While we all want our families to be well fed and satisfied we must seriously pause at extravagance when we think that luxurious meals on our part may be taking the food out of some one's mouth—some one who may be starving.

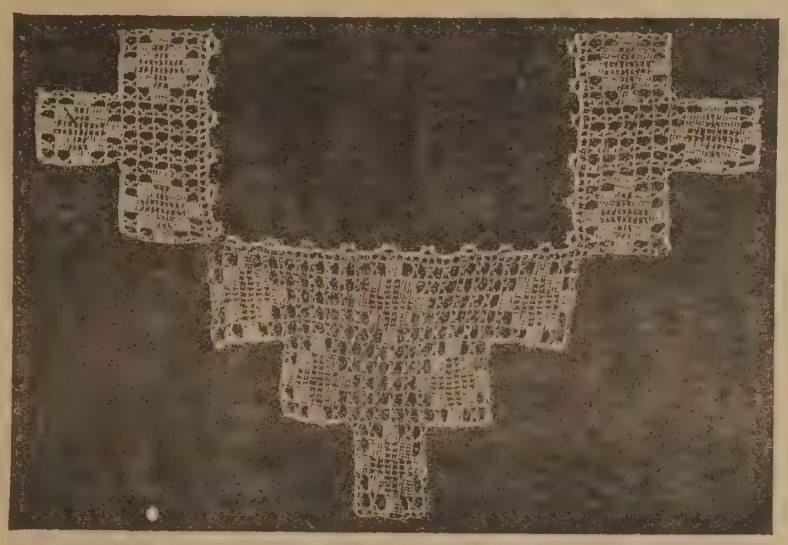
Herbert Hoover, who is to be food controller, tells us that we positively must reduce our living to the least upon which we can maintain good health if we are to do our part in feeding the nations.

The waste and scraps that can not otherwise be saved should be given to your own or your neighbors' chickens or hogs. Suppose we begin to study what the word thrift really means.

Instead of a cake made with four or six eggs and plenty of butter, suppose you try this some evening and see if it is not good:

Quick Cup Cakes.

Break one very large or two small eggs into a cup, beat well and fill with milk or cream.



Sift one and a half cups of flour (being sure to use the same size cup as in No. 1, and measure carefully), one cup of sugar and two teaspoonfuls of baking powder. Add to milk and eggs, beat hard, flavor with lemon peel grated, and beat either in flat sheet or in muffin tins. These are very good served with whipped cream, while still warm.

Some must be great. Great offices will have
Great talents. And God gives to every man
The virtue, temper, understanding, taste
That lifts him into life and lets him fall
Just In the niche he was ordained to fill. —Cowper.

Fifth row—5 ch. 7 t., 1 ch. 1 t. (repeat 8 times) 7 t. 1 t.

Sixth row—Same as 5. This completes half of block pattern. For first drop, ch. 34, repeat pattern filling upper space with lacets. Second drop. There are two block patterns. This in front of yoke. Shoulder and back are made with only one dropped block.

Give Canning a Fair Trial.

"Don't judge the success of canning by your first effort with whatever product you happen to find in market, when you begin operations," says a statement just issued by the United States department of gariculture. "It is more than likely that if you are a beginner at canning you will start with strawberries, the first fruit available. If you do you should realize that strawberries are one of the most difficult of all products to can satisfactorily. It is next to impossible, in fact, to can this fruit, as distinguished from preserving it (in which case a much larger proportion of sugar is used) so that its color, size, and texture will be preserved.

"Don't feel, therefore, that your strawberry canning is a failure. Above all, don't become discouraged and fear that all your canning will be unsatisfactory. Practically every vegetable and fruit worth canning may be canned and kept in condition fairly comparable in flavor and texture to the fresh product."

A GOOD FURNITURE POLISH.

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

To the Editor: A good furniture polish is made of equal parts of olive oil and vinegar. Rub on with a soft cloth and then polish with another soft cloth.

MRS. J. C. LEHMAN.

Paha, Wash.

Misunderstood.

She—Does Dr. Cutter treat many people

He—No; he's notoriously stingy.

EXHIBIT OF BIG POTATOES

at Our Store, INTERSTATE FAIR WEEK, September 3-8, 1917

The Great Big Potato
The HAT BOX Potato
The Red Cross Potato
The Potato That Grows in the Sunny Northwest

CHOICE of ANY $5 HAT IN THE STORE

awarded to the exhibitor of the largest potato at our large potato exhibit during Interstate fair week, Spokane, Wash., Sept. 3-8.

RULES GOVERNING EXHIBITION AND AWARD

1—All potatoes for exhibit must be delivered to our store on or before September 1.

2—Each exhibit must be marked with name of grower, town, state and variety, and probable date of planting.

3—Exhibits will be received from Washington, Idaho, Oregon and Montana.

4—When shipping exhibits, address "Big Potato" Exhibit, the "Hat Box," Spokane, Wash.

5—The awarding of our best $5 hat to the successful entrant will be determined by state and county agricultural judges.

6—All potatoes sent us for exhibition in this contest will be on display in our Howard street windows during fair week, after which they will be given to the Red Cross organization.

A chance for you to do your bit and proudly wear one of our best $5.00 hats. Select that potato hill today, and see that it gets every attention possible to be a leader of all the leaders.

No. 6 Howard Street **THE HAT BOX** Spokane, Washington

Patterns

2152-2153—A Stylish Gown—Waist 2152 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 2153 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 6 1-2 yards of 44-inch material to make the entire dress of one material for a medium size. The skirt measures about 2 1-2 yards at the foot, with plaits drawn out. Two separate patterns, 10 cents for each pattern.

2139—Child's Set of Short Clothes—Cut in five sizes: 1, 2, 3, 4, and 5 years. The dress will require 2 1-4 yards of 36-inch material. The slip 1 1-2 yards, the drawers 1 1-4 yards, for a 4-year size. Price, 10 cents.

2159—Dress for misses and small women. Cut in four sizes: 14, 16, 18 and 20 years. It requires 5 1-8 yards of 44-inch material for a 16-year size. The skirt measures about 2 1-2 yards at the foot. Price, 10 cents.

2143—Girls' Middy Dress—Cut in five sizes: 4, 6, 8, 10 and 12 years. It requires 4 1-4 yards of 27-inch material for an 8-year size. Price, 10 cents.

2151—Girls' Dress—Cut in four sizes: 2, 4, 6 and 8 years. It requires 3 1-4 yards of 24-inch material for a 4-year size. Price, 10 cents.

1843—Girls' Dress—Cut in five sizes: 6, 8, 10, 12 and 14 years. It requires 3 1-4 yards of 44-inch material for a 10-year size. Price, 10 cents.

1277—Ladies Bib Apron—Cut in three sizes: Small, medium and large. It requires 5 1-2 yards of 36-inch material for a medium size. Price, 10 cents.

1343—Boys' Blouse Suit—Cut in four sizes: 3, 4, 5 and 6 years. It requires 3 1-4 yards of 36-inch material for a 5-year size. Price, 10 cents.

1892—Ladies' Yoke Skirt (in raised waistline)—Cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3 3-8 yards of 44-inch material for a 24-inch size. The skirt measures about 3 yards at the foot. Price, 10 cents.

2138—A Simple Night Gown—Cut in five sizes: 12, 14, 16, 18 and 20 years. Size 16 requires 4 1-8 yards of 36-inch material. Price, 10 cents.

2144—Ladies' House Dress—Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 6 1-4 yards of 36-inch material. The skirt measures about 2 1-2 yards at the foot. Price, 10 cents.

1919—Ladies' Waist—Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2 3-4 yards of 36-inch material for a 36-inch size. Price, 10 cents.

Honey Sweetened Whipped Cream.

When whipping cream try adding a teaspoonful of strained honey instead of sugar. It not only gives the cream a delightful flavor, but causes it to stay whipped and firm all day.

Wouldn't Exchange With a City Girl.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and in the fourth grade. My birthday is January the 31st. Our school let out May 25. We had a picnic in the woods. There were 25 children going to school, but six left, and my sister graduated We had a man teacher this year, but next year we will have a lady teacher. I have four brothers and one sister. Her name is Agnes. She is 15 years old and is the oldest in the family. My brothers' names are Albert, Viggo, Irving and Leslie. I live on a 30-acre farm. We have eight cows, one horse, three calves, three pigs and some chickens. I haven't many pets, but I have two cats and six kittens. There are two big maple trees in front of our house which I think are very nice. There is also a big cherry tree, which was very pretty when it was in blossom. We have many apple trees and other fruit trees in our orchard. I would never exchange places with a city girl. If any of my cousins write to me I will gladly answer.—Herdis Hansen, R. F. D. 1, Bothell, Wash.

Lightfoot and Grayfur Are Her Cats.

Dear Aunt Nellie: I have read the children's letters many times and have enjoyed them very much. We live on a big farm about 100 acres, counting rough land. We raise hay and potatoes, but we have some stock. There are three cows and a calf that will soon be a cow; then we have another calf. We have six head of horses on the place, but only three of them are ours. I have a dog and two cats. The dog's name is Rex, and the cats' names are Lightfoot and Grayfur. Lightfoot has two little kittens. One is spotted, with a white ear, and the other ear is gray. The other kitten is all gray. They used to spit at me when I went in where they were. My school was out the 29th of May. I had two miles to walk and I walked with two little girls. Their names are Velma and Louise. I was in the fourth grade at school, but I passed into the fifth. I am 9 years old and will be 10 the 9th of October. I was born in 1907. We have a car and we live 13 miles from Yakima. We live on the Naches Heights. I hope I have a twin.—Helen Mehl, Naches, Wash.

Do Come Again, Julian, We Like You.

Dear Aunt Nellie: My brother Henry takes The Washington Farmer and I like to read in the Farmer first of all the Children's Corner. This time I am going to tell you the names of all my brothers and sisters and also their ages and myself included. First in the rank is my big brother, Hank, he was 12, 12 on April 20th. Next, I compete with a year and some weeks, I am 11, 11 this day on this beautiful morning of June the 12th. Third is Miss Sylvia, who will be 10, 10 on October the 18th. Fourth is Miss Ida May, the fair little maiden, who will be eight on September 26th. Fifth is Miss Anna, the cute little tot, she will be six, six on September ninth. Sixth is brother Benoit, he will be four, four on January 11th, 1918. Last of all is our darling little baby Carl, with his sweet little face and pretty blue eyes, he was born February seven of winter last. If this is printed and I allowed to, I will come again some other time.—Julian H. Yoss, Whitcomb, Wash.

A Climb Up the Mountains.

Dear Aunt Nellie: I am going to write about the last day of school. The last day of school we went up on the mountain. My teacher was ill, so she did not accompany us. We followed an old wagon road which led off to a cattle trail. I was very tired when I reached the top. We walked part of the way down the other side and went to a cliff. It was very high and steep and was covered with moss and vines. Underneath it was a field of rocks which had fallen from its sides. My head grew dizzy when I looked over and saw how steep it was, but it was very pretty. This cliff was a large projecting rock and underneath there were about six inches of snow, which looked very strange this time of the year. I shall be 12 years old the 25th day of August. If I have a twin I would like very much to hear from her. —Lois Barnhart, R. F. D. 1,, Tekoa, Wash.

Likes "That Printer of Udell's" Best

Dear Aunt Nellie: I was 12 years old the 19th of May. I have read many books, including, Making Over Martha, Blazed Trail, Return of Tarzan, Girls of True Blue, Million Dollar Mystery, Little Shepherd of Kingdom Come, A Texas Ranger, and That Printer of Udell's, which I think is the best of all. It is about a little boy whose mother dies. He calls to his dog and says, "Come on, we better be going now or he'll kill us." He meant his drunken father lying by the fireplace. He was glad his mother was dead so that his father couldn't beat her. Later on the dog dies and the boy becomes a carriage driver. One day he met an old friend of his father's who tells him that his father is dead. Later on the boy marries a beautiful girl. He has many adventures trying to find her after she ran away. It is a very interesting book. I hope many of the cousins can read it some time. It was written by Harold Bell Wright.—Josephine Prouty, Outlook, Wash.

Lots of Fun Since School Is Out.

Dear Aunt Nellie: It has been so long since I have had a letter in the Children's Corner, so I thought I would write to you again. Summer is almost here, but the weather has been so bad that it doesn't seem much like spring to me. School was out the first day of June. I have lots of fun now. My girl friend came over to Sunday school and we had a big program at 12 o'clock. After Sunday school she came home with me and had dinner. After dinner I went over to her place and we went down to the lake and after we were down to the lake, we went up on the hill and played around until it was time to go home. Then I got my hat and coat and went home. My favorite books are "Herbert Carter's Legacy" and "Black Beauty."—Lillian A. Wotton, Friday Harbor, Wash.

Five Little Kittens, Gray and Blue.

Dear Aunt Nellie: This is the first time I have writen to the Children's Corner. I am 10 years old. My birthday is October 29. I will be in the fifth grade next year. It is a mile and a half to school. I read most of the letters and I enjoy them very much. I can crochet and tat. I have two sisters and two brothers. My sisters' names are Elsie and Lillian. My brothers' names are Roy and Delbert. We live on a farm. It is about eight miles to town. We have two ponies. Their names are Ginger and Buster. We have five little kittens, three of them are gray and two are blue. We have 24 big sheep and 28 little ones—Mabel Evanson, Benge, Wash.

Thelma Has a Magpie for a Pet.

Dear Aunt Nellie: My friend, Harry Woods, takes the Washington Farmer and he gives it to us. I like to read the Children's Corner fine, so I thought I would write to you. I am 11 years old and in the sixth grade at school. I have dark hair and blue eyes. My birthday is November 20. Have I a twin? If I have I would like very much to hear from her. I have two little pets. One is a litle coltie and the other is a little magpie. The little coltie's name is Ben and the magpie's name is Mary. I have one brother and one sister. My brother's name is Rolland and my sister's name is Helen.—Thelma Gowing, Pomeroy, Wash.

Hasn't Written For a Long Time.

Dear Aunt Nellie: I have not written to the Children's Corner for a long time, but I am going to write again. I will be in the fourth grade. We have three cows, two calves, 19 horses and about 35 chickens. We have one dog and 10 cats. The calves names are Spot and Major. I live one mile from school. My smallest brother has a tricycle. There are 14 pupils in our school. We live one mile from town. I will be 10 years old December 19. My oldest brother is 21 years old. The next is 18 years old and the youngest is five years old.—Edith Crabb, Marengo, Wash.

Marie Was Promoted This Time.

Dear Aunt Nellie: This is my first time to write to the Children's Corner. I am 9 years old. My birthday is December 2. I have a little brother. His name is Howard, and his birthday is November 28. We have 80 little chickens. We have a 30-acre farm. We have six cows and six calves, one hog and two horses. We have 17 little rabbits and four old rabbits. We have a white cat. I was promoted to the fourth grade. My school was out the 11th of May. I live seven miles from school. We ride in an auto bus to school.—Marie Day, Kennewick, Wash.

Visiting Two of Her Girl Friends.

Dear Aunt Nellie: I have been reading the letters in The Washington Farmer and like them fine. I like to read the stories, too. I am 12 years old and am in the sixth grade. My birthday is the 15th of November. I have light hair and blue eyes. Have I a twin? I am visiting two of my girl friends now and am going to stay with them all week. I have eight brothers and two sisters. Both of my sisters are married. My oldest sister has eight children. My friend, Thelma, is writing you, too.—Christina Schmelzer, Pomeroy, Wash.

Raising Opions to Sell This Fall.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I like to read the letters so much. I was 12 years old the 23d of May. I hope I have a twin in the Children's Corner. I have a sister and brother. Their names are Cecile and Edwin. I live on a 20-acre farm. I am in a garden club. I am raising onions and hope to have a good crop to sell this fall. I have a little wild rabbit I am trying to raise. It is very cute.—Helen Roberts, R. F. D. 1, box 62, Grandview, Wash.

Enjoys Playing With Her Pet Rabbit.

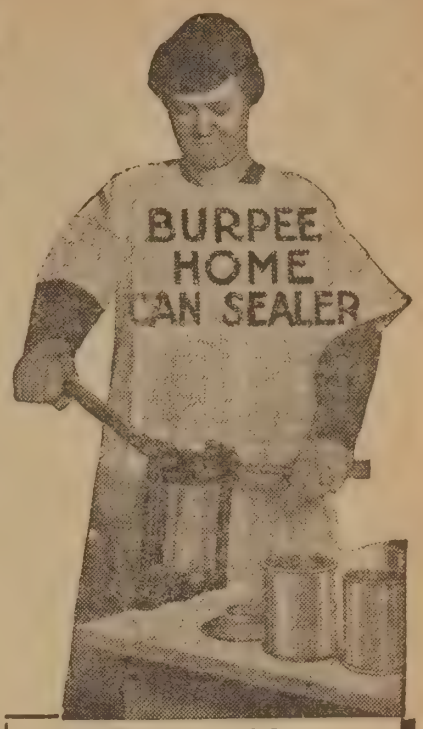
Dear Aunt Nellie: This is the first time I have writen to the Children's Corner and I like to read the letters very much. I am in the seventh A grade at school and will be 13 years old December 4. Have I twin? I live on a fruit ranch about two miles from town. Our cherries will soon be ripe and I will help pick them. We have one cat, a dog named Teddy and 17 turkeys, two of which are mine. I enjoy playing with my pet rabbit. —Florence Spoolman, route 7, box 160, North Yakima, Wash.

Ups and Downs of a Bunch Grass Boy

(Continued from page eighteen.)

though stretching them; and presently would rise in flight, and in a few moments would be specks in the blue distance above.

With the passing of the sandhill cranes, passed the last fresh breath of spring. Long since, the curlews had gone; so had the robins, the bluebirds and the violets. The prairie grass curled and dried up, actually "cured in the bunch" as the settlers said. Before summer was over, the squirrels had thinned out, going into the ground for their long hibernation. Only the coyotes and sage hens and ground owls remained; and presently the owls disappeared, in the ground, too, I imagine, for I never saw one of them fly more than a few hundred feet from their mounds.



Summer and autumn was a period of slender living for the coyotes. Often I wondered what they lived upon, with the squirrels holed up, the sage hens beyond their reach on the wing, and a sparse prairie population of long-eared, long-legged jackrabbits that could almost outrun a coyote and nearly always find a badger hole to dive into if pressed too closely by a hungry coyote. I am sure that the coyotes were hungry most of the time; by their discordant, discontented yapping and snarling and howling morning and night they said very plainly that they were disgusted and cross as two sticks. Sometimes they would start yelling in the evening, and from the sounds one would judge that they were fighting among themselves, the stronger trying to devour the weaker.

Late in summer when the blue haze of approaching autumn hung heavy in the air, and the evenings and nights were getting cool the geese told me that winter was approaching. The swish of their wings as they flew by in great triangles, one triangle following another, reminded me of the whistle and rush of winter wind and the pelting of snowflakes. They were cheerful, noisy, gossipy and fat, were the geese. They came in by the thousand and settled on the stubblefields scattered through the prairie, to feed on fallen grain heads that had been left by the harvesting machines. Many will not believe me, I presume; but I swear that I have seen half of an 80-acre stubblefield black with geese. How many thousands were in these mammoth flocks you can imagine. To shoot them you had simply to dig a hole in the stubblefield, equip yourself with a goose call (a kind of whistle), and get some wooden geese, or "decoys," which you scattered about your rifle-pit. Then you waited for a flock to come your way, and when it did you blew your goose call with might and main. Generally the geese would be attracted by your call and the decoys which they mistook for their own kind; and when they were sufficiently near you cut loose with both barrels into the thickest part of the flock.

Following the geese came the snowbirds—what kind of bird I know not; but to us they were snow birds and told me that winter was right at hand. It was time to hurry in the winters' wood, tighten up the holes in the barn, and bank up the house. George Collins, one of our bachelor neighbors, surprised a flock of snowbirds that had settled on his haystack; and with shots from his double-barreled shot gun, slew nearly a score, I think. He gathered them up, put them in a sack and told me to take them home to mother and have her make a bird pie—which I did. From that day to this I have longed for another snowbird pie, and when I see a flock of snowbirds fluttering about a haystack, I have much the feeling about my mouth that a cat has as it stalks up to seize one—if it can! I can imagine the joy of the king, who, according to my nursery rhyme, was fed "four and twenty blackbirds baked in a pie." But I think the rhymster made a mistake. He should have said "four and twenty snowbirds." I never did think that blackbirds would be good in a pie.

Here is a paragraph from the next instalment of "The Ups and Downs of a Bunchgrass Boy," which will appear in the Farmer of July 26.

"Philip McIntee, cattleman and pioneer, the first mayor of Coulee City, who built his log cabin among the sagebrush and greasewood of the Grand Coulee long before Coulee City had been heard of, was typical of the old-time pioneers whom to meet was to be inspired."

Canning Clubs

All Over the Country

have adopted the Burpee Home Can Sealer, because of its simplicity and the fact that no solder, no acid and no extra equipment are required. Seals cans airtight. Absolutely sanitary.

Can Foods at Home

Put up your own fruits, vegetables, fish and meats. Save your surplus. Don't waste anything. Can everything you don't sell. Then sell the delicious canned foods at a good profit or use them yourself. Satisfaction guaranteed. Write for free book.

Cascara Bark

We buy cascara bark, Oregon grape root and Oregon balsam of fir at the prevailing market. Submit samples and quantity you have for sale.

BLUMAUER-FRANK DRUG CO.
337 Everett, Portland, Oregon.

The Motor Car
On the Farm

Roy Hickman, a farmer of Colfax, Wash., makes his motor truck supply practically every hauling need on his ranch. He wouldn't think of changing his truck for horses, he says. He purchased his truck, a three and a half ton, in Spokane last fall, for hauling wheat. Mr. Hickman has a ranch eight and a half miles from Mockonema, and raised last year about 4000 sacks of wheat, which he hauled off in only 21 days, averaging four round trips per day, hauling from 80 to 85 sacks of wheat a load. His wheat was heavy, making an average load of about 11,900 pounds. With the truck he was able to haul over 320 sacks a day. Under the old regime with a four-horse team he could only haul 45 sacks on one day, Mr. Hickman says.

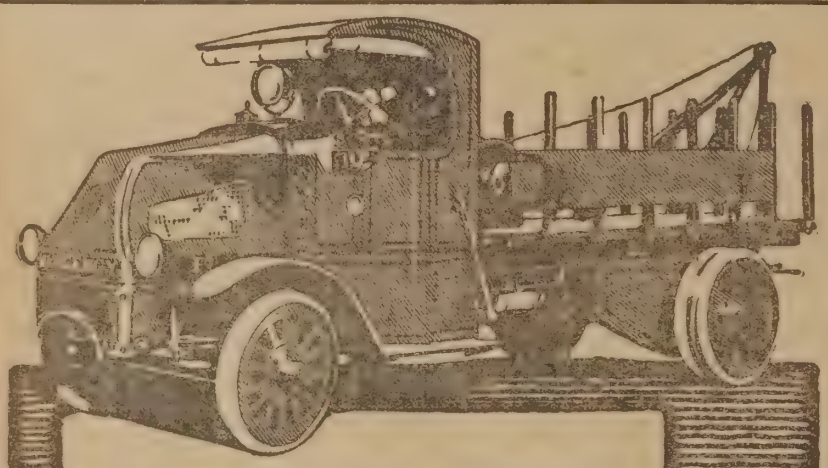
Mr. Hickman has another ranch five and a half miles from Almota. Almota is on the Snake river and there is a rise of 1200 feet in the road in the first three miles. This haul used to require all day with a good heavy four-horse team. With his truck he made on an average of four trips per day with an average gas consumption of 14 gallons per day, or slightly over three miles per gallon.

On several occasions Hickman has hauled a load of 30 hogs from his home into Colfax, a distance of 15 miles, in one and a half hours.

With the long frame put on this model truck he can profitably use it for hauling hay, having a capacity for from three to four tons. He has also used the truck for hauling barley, sand and lumber.

Good Roads Pay Dividends.

There is a farming community in Virginia, around the town of Fredericksburg, that had a hunch that good roads pay dividends. The farm products exported from this town by rail at the time the road improvement work started amounted to 49,000 tons annually. Two years after the roads had been put into good shape the tonnage of farm products shipped from Fredericksburg had increased to 71,000 tons, a growth of more than 45 per cent.



During the same time the cost of hauling a ton load a distance of one mile decreased from 20 cents to 12 cents. The total annual saving to the farmers of the county of which Fredericksburg is the county seat has been estimated at $41,000 annually.

Such a saving of money by means of good roads perhaps seems a trifle fictitious to those familiar only with driving teams. Except when roads are at their worst, a team seems to travel about as well on a dirt road as on an improved one. But the farmer who owns a motor car quickly observes from the position of the throttle and the amount of gasoline used that improved roads require much less power in proportion to the load. In bad weather the difference is even more obvious.

Thus, entirely aside from the pleasure value of good roads and the ability to use them every day in the year, they reduce the cost of all kinds of travel and "are just as real a source of profit as the increase in the price of wheat."

Farm Tractors Loaned.

Believing that, through the use of farm tractors and tillage implements, the agricultural products of New York can be largely increased, the state food supply commission has purchased 40 tractors with plow and harrow attachments. The tractors are to be used to increase the number of acres of land plowed and tilled during the season of 1917 in addition to the number of acres that would otherwise be plowed and tilled, and to demonstrate the feasibility of such aid by the state. The tractors are loaned to a county farm bureau association, a county home defense committee, or some responsible farmers' organization. The commission depends on its county representative to satisfy himself that all the conditions of the contract are fulfilled, that the increased acreage is available, and that the land is adapted to the use of a tractor.

FARM LOAN MONEY FOR AUTO TRUCKS

"If an automobile or truck is so constructed and equipped as to be a piece of farm machinery, and if it is used in such a way as to take the place of some other necessary piece of farm equipment, I believe it comes within the field of legitimate purchases with farm loan money."—President D. G. O'Shea, Spokane Farm Loan bank.

Here is definite encouragement from the government for the grain grower and the general farmer, to provide himself with the greatest aid to economical farming that modern invention and mechanics have produced—the Truck.

MACK TRUCKS

stand for all that is strongest, most enduring, most satisfactory. In buying a truck, either with your own money or with Farm Loan money, you are making an investment in efficiency. Use the coupon to get the latest literature on MACK TRUCKS; they are truck efficiency 100 per cent.

Worth While Offers

In the want ads of this paper you will find frequent attractive offers.

Grain and Produce Markets

Chicago Grain.

CHICAGO, July 14.—Corn averaged higher in value today, despite some setbacks due largely to bearish inferences regarding the outlook for peace. Scarcity of supplies available for immediate use formed the chief element of strength. The market closed unsettled at the same as yesterday's finish to 7-8c up, with $1.59 1-4 for September and $1.12 1-2 for December. Wheat gained 1c net, closing at $.04 for July and $1.95 1-2 for September. Oats were unchanged to 3-8@1-2c higher and provisions varying from 5c decline to a rise of 25c.

Business in wheat remained at nearly the zero stage, awaiting congressional action at Washington as to the food control bill. Meanwhile prices hardened a little, influenced perhaps by current bullish crop reports from Canada and North Dakota and by a government decree lifting quotations in France to $3.05 a bushel.

Oats duplicated the action of corn. Some reduction in the visible supply of oats was expected to be shown in the weekly statement on Monday. Demand for lard was stimulated by peace talk.

Seattle Market.

SEATTLE, July 14.—The new potato market is drawing the attention of both brokers and jobbers this week. The quality of Washington grown stock has not been desirable, although there is a brisk demand at going prices and an excellent market here for Kennewicks and the spuds fom other sections provided they are graded and culled for the shipping trade.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transaction by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o.b. Seattle:

Eggs—Local, 34@35c per dozen.

Poultry—Live hens, fat, over 4 lbs., 18c per lb.; 2 lbs. and under, 13@16c; old roosters, 12c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 14c per lb.; broilers, live, 15@17c per lb.

Butterfat—44c, per lb.; dairy butter, 38@31c.

Beef—Buying price; Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 13@14 1-2c per lb.; do heavy, 12&13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 30c per lb.; green hides, 17c per lb.; salted bulls, 16c per lb.; dry hides (short trim), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 13c per lb.; dry butcher full wool sheep pelts, 38@42c per lb.

Live Stock Quotations.

At Omaha.

OMAHA, July 14.—Hogs—Receipts, 9500; slow, 5@10c lower. Heavy, $14.90@15.50; mixed, $14.75@15; light, $14.60@15.10; pigs, $12.50@14.50; bulk of sales, $14.75@15.10.

Cattle—Receipts, 800; steady. Native steers, $9.65@13.65; cows and heifers, $7.50@10.50; western steers, $8.50@11.50; Texas steers, $8@10; cows and heifers, $7@9; canners, $5.25@7.25; stockers and feeders, $6.50@9.50; calves, $8@14, bulls, stags, etc., $6@9.50.

Sheep—Receipts, 100. Steady. Yearlings, $10.50@11.50; wethers, $9@10.50; ewes, $8@8.75; lambs, $14.60@15.60.

At Chicago.

CHICAGO, July 14.—Unevenness of prices was a feature of the hog market today, owing to activity of shippers and backwardness of killers. Nearly all of the cattle and sheep that arrived went direct to packers.

Hogs—Receipts, 8000. Unsettled, 5c off to 5c above yesterday's average. Bulk, $14.75@15.75; light, $14.40@15.60; mixed, $14.05@15.80; heavy, $14.25@15.85; rough, $14.25@14.45; pigs, $11.25@14.30.

Cattle—Receipts, 700. Steady. Native beef cattle, $8.30@14; stockers and feeders, $6.25@9.25; cows and heifers, $5.40@11.90; calves, $9.50@14.50.

Sheep—Receipts, 700. Steady. Wethers, $7.75@11; lambs, $10@15.75.

At Seattle.

SEATTLE, July 14.—Receipts, none. Market steady on cattle, sheep and hogs at yesterday's quotations.

At Portland.

PORTLAND, July 14.—Hogs, steady; receipts, 154.

Cattle, steady; receipts, 97.

Sheep, steady; receipts, 4.

Spokane Stock Yards Saturday.

Hogs—Receipts 286, market steady. Bulk of sales, $15.50@15.80. Prime heavy packing, $15.70@15.80; prime light packing, $15.55@15.70; smooth heavies, $14.55@14.80; pigs, $13.50@14.50; stockers, $12.75@13.75.

Cattle—Receipts, 66; market slow. Prime light steers, $8.75@9; prime heavy steers, $8.50@9; good steers, $7.25@8; ordinary to fair, $6@6.75; prime cows, $7@7.50; good cows, $6.25@6.75; common cows, $5@6; best heifers, $7.50@8; bulls, $5@7; calves, $7@8.50; stockers and feeders, $5.50@7.

Sheep—Receipts, none; market steady. Prime spring lambs, $12.50@13; prime wethers, $9@10; prime yearlings, $9.50@10.25; prime mutton ewes, $8@9.25.

Portland Market.

PORTLAND, Ore., July 16.—The butter market has become firmer since the flush of the season passed and prints are now quoted by city creameries one cent higher.

Eggs are also advancing as receipts have fallen below local requirements. A few dealers have begun to draw stocks out of storage.

Poultry and dressed meats are very firm with limited receipts and a good average demand.

An advance in hides was expected this week, but failed to materialize as the eastern markets did not keep up their forward pace.

Wool buying has slowed down, owing to the check to the advance in the east.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to prodcers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $45 per ton.

Corn—Whole, $78; cracked, $79 per ton.

Millstuffs—Bran, $32 per ton; shorts, $35.

Barley—No. 1 feed, $42; brewing, nominal; rolled, $49.

Hay—Buying prices: Timothy, eastern Oregon, $26; alfalfa, $18; grain, $16.

July Crop Report.

A summary of the July crop report for the state of Washington and for the United States, as compiled by the bureau of crop estimates (and transmitted through the weather bureau), U. S. department of agriculture, is as follows:

Winter Wheat—State: July 1 forecast, 11,300,000 bushels; production last year (final estimate), 18,285,000 bushels. United States: July 1 forecast, 402,000,000 bushels; production last year (final estimate), 481,744,000 bushels.

Spring Wheat—State: July 1 forecast, 27,700,000 bushels; production last year (final estimate), 19,350,000 bushels. United States: July 1 forecast, 276,000,000; production last year (final estimate), 158,142,000 bushels.

Oats—State: July 1 forecast, 14,100,000 bushels; production last year (final estimate), 14,300,000 bushels. United States; July 1 forecase, $1,450,000,000 bushels; production last year (final estimate), 1,251,992,000 bushels.

Apples (Agracultural Crop)—State: July 1 forecast, 2,700,000 barrels of three bushels; production last year (final estimate), 3,225,000 barrels. United States: July 1 forecast, 66,800,000 barrels of three bushels; production last year (final estimate), 67,415,000 barrels.

Barley—State: July 1 forecast, 6,800,000 bushels; production last year (final estimate), 6,814,000 bushels. United States: July 1 forecast, 214,000,000 bushels; production last year (final estimate), 180,927,000 bushels.

Potatoes—State: July 1 forecast, 11,510,000 bushels; production last year (final estimate), 9,900,000 bushels. United States: July 1 forecast, 452,000,000 bushels; production last year (final estimate), 285,437,000 bushels.

All Hay—State: July 1 forecast, 1,950,000 tons; production last year (final estimate), 2,048,000 tons. United States: July 1 forecast, 103,000,000 tons; production last year (final estimate), 109,786,000 tons.

Prices—The first price given below is the average on July 1 this year, and the second the average on July 1 last year. State: Wheat, 219 and 79 cents per bushel. Corn, 150 and 97. Oats, 80 and 40. Potatoes, 218 and 81. Hay, $18.80 and $15.20 per ton. Eggs, 33 and 23 cents per dozen. United States: Wheat, 220.1 and 93.0 cents per bushel. Corn, 164.6 and 75.4 cents. Oats, 68.9 and 40.4 cents. Potatoes, 247.9 and 102.3 cents. Hay, $14.60 and $12.09 per ton. Cotton, 24.7 and 12.5 cents per pound. Eggs, 24.8 and 19.7 cents per dozen.

Wool Market.

BOSTON, July 13.—The Commercial Bulletin will say tomorrow:

Another quiet week is reported through the wool trade, although on the whole the market appears fairly buoyant, believing that it is the intention of the government to interfere in the private conduct of the business just as little as possible consistent with the maintenanme of the national defense. A few houses report a fair trade at about former rates. The mills are well engaged on old business, but find new orders rather slow. The west is less active and in certain sections hardly as strong as a week ago.

Quote—Scoured basis:

Texas—Fine, 12 months, $1.70@1.75; fine, 8 months, $1.45@1.50.

California—Northern, $1.70@1.75; middle county, $1.40@1.45; southern, $1.15@1.20.

Oregon—Eastern No. 1, staple, $1.75; eastern clothing, $1.50@1.55; valley, No. 1, $1.45@1.50.

Territory—Fine staple, $1.75@1.77½; half blood combing, $1.45@1.50; three-eighths blood combing, $1.30@1.35; fine clothing, $1.55@1.65; fine medium clothing, $1.40@1.50.

Pulled—Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.45@1.50.

Butter and Eggs.

SAN FRANCISCO, July 14.—Butter fresh extra, 37c; prime firsts, 36 1-2.

Eggs—Fresh extras, 34c; fresh firsts, 33 1-2c; fresh extra pullets, 31c; extra firsts pullets, 30 1-2c.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—$3 cwt; new potatoes, 3½c lb.; new local potatoes, $2.50@2.75 cwt.

Apples—Washington apples, cooking, 75c box; Rome Beauties, $1 box; N. Y. Pippins, $2.25 box; Ben Davis, $1.25 box.

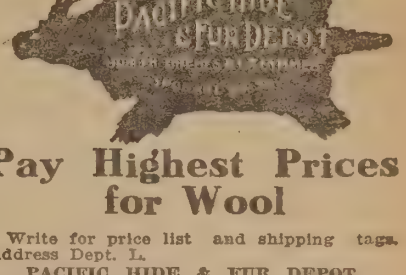
Butter—Blanchard cartons, 40c lb; Medo-Maid, 40c lb; Cascade, 40c lb; Gold Leaf, 40c lb; Better Butter, 40c lb; Attalia, 40c lb; Diadem, 40c lb; Hazelwood, 40c lb; Solid Pack, 38c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 25½c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 29c lb; domestic Swiss, 35c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $10 case.

Live Poultry—Hens, 19c lb; old roosters, 10c; ducks, 13@14c; geese, 11c; turkeys, 20@25c.

Dress Poultry—Hens, 22c lb; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.



Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

FIRST BARLEY AT $35 A TON

WALLA WALLA, July 13.—The first Walla Walla barley appeared on the market today, bringing slightly above $35 a ton. It was raised on the J. E. Short farm near Lowden on irrigated land and yielded an average of better than 70 bushels to the acre.

Dement Brothers Milling company purchased this barley, which was the first grain threshed in the valley this year.

Canada's Liberal Offer of Wheat Land to Settlers

is open to you—to every farmer or farmer's son who is anxious to establish for himself a happy home and prosperity. Canada's hearty invitation this year is more attractive than ever. Wheat is much higher, but her fertile farm land just as cheap, and in the provinces of Manitoba, Saskatchewan and Alberta

160-Acre Homesteads Are Actually Free to Settlers and Other Land Sold at From $15 to $20 per Acre.

The great demand for Canadian wheat will keep up the price. Where a farmer can get over $2 for wheat and raise 20 to 45 bushels to the acre he is bound *to make money*—that's what you can expect in Western Canada. Wonderful yields also of **Oats, Barley and Flax. Mixed Farming** in Western Canada is fully as profitable an industry as grain raising.

The excellent grasses, full of nutrition, are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent. There is now an unusual demand for farm laborers to replace the many young men who have volunteered for service in the war. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Can., or to

News for Breeders

Corn Growing Tests.

County Agriculturist O. T. McWhorter of Clallam and Jefferson counties, Wash., reports that following the corn growing tests of last year arrangements have been made with E. B. Stookey for the western Washington experiment station to make further tests with Minnesota 13 field corn, grown in five different localities in the northwest.

One farmer at Dungeness has 35 acres planted and will plant 10 acres more. Seed used was navy pea type and most of it home grown. The Port Townsend high school boys have all told about four acres planted. Many farmers are putting in small patches for home use.

Much more barley, oats and some wheat are and have been planted this season than last year. Thin meadows have been plowed for this purpose. Farmers, a large percentage of them, are treating the seed grain with formaldehyde for "smut" and are trying to secure high grade seed. Last year they did not take so much interest in it. No census has been taken on increased acreage yet.

Shorthorn Notes.

A. R. McDonald of Cambridge, Idaho., who owns a good Shorthorn herd from foundation stock purchased from McCroskey & Sons, Fishtrap, Wash., had the misfortune recently to lose his herd bull, Snowball. Snowball, pure white, was a grandson of the great Golden Goods. He had both scale and quality and his calves were good. Mr. McDonald runs his cattle entirely on his own enclosures, but on native grass.

To Get a Flag Write Soon

With the declaration of a state of war our first supply of flags was quickly exhausted and we have had great difficulty in securing more.

We have at last secured a limited number of flags which we offer on the following terms:

OFFER NO. 1

3x5 flag together with The Washington Farmer for three years. Both for $2.50.

OFFER NO 2.

4x6 flag together with The Washington Farmer for three years. Both for $3.00.

We would suggest prompt action; orders will be filled as received.

The Washington Farmer, Review Bldg., Spokane.

Enclosed find $.... (your personal check, stamps or money order), for which send me American flag, as advertised, and The Washington Farmer for 3 years.

St. Mawes Beauty.

This is a picture of St. Mawes Beauty, bred and raised by Ed Cary of Oregon. She was sold recently for $2500 to Airedale farm of Bangor, Maine. St. Mawes Beauty at 1 year and 11 months gave 10,239 pounds of milk and 690 pounds of butter. At the age of three years she gave 12,515 pounds of milk and 379 pounds of butter.

Succeess With Herefords

L. L. Young of Nampa, Idaho, is an example of a man who came west with large ideas and made them win in the face of adverse circumstances. He bred Herefords in Nebraska for 25 years and came to Nampa, Idaho, eight years ago and has continued breeding Herefords. He now has 200 head in the herd and has sold about $15,000 of registered Herefords since last fall. Oregon takes about 40 head per annum and he has good sales in both southern and northern Idaho. One car went to Montana, one to Wyoming and one to eastern Washington. Bulls that have been used and are still in service include Beau Mischievous, by Beau Mystic; Bonnie Lad, by Bonnie Brae, 24th; Imp. Harold, by Monarch, and Beau Gallatin, 45th, by Beau Gallatin 2d, head of the state farm in Montana. Mr. Young expects cattle prices to go still higher and the great demand for breeding stock to continue.

While Mr. Young's Herefords are well grown, he grows them on pastures and feeds hay in winter. He feeds no grain except a little to weaned calves in bad weather. Mr. Young does not claim any more for his Herefords than any others, but does claim they are the best breed of cattle in the world for the northwest; that they mature better on hay and pasture with less feed and at a younger age than any other breed; that they bring a larger percentage of calves, with fewer culls, and finish at a younger age; that the cows have the best motherly instinct of any of the beef breeds; that they are the best rustlers, are the most contented, and that they cross better with the dairy breeds for veal than any other beef breed.

WAR DEMANDS HORSES.
Supply Must Be Equal to Need.

By RICHARD HAMILTON BYRD.

The European war has drawn heavily on saddle and draft animals of the United States. According to a compilation the number of horses exported since the beginning of August, 1914. is 920,000 and of mules 330,000. The horses were valued at $194,000,000 and the mules at $66,000,000.

Statistics show about 22,000,000 horses still in this country, which is about one-fifth of all in the world. The average valuation of the horses exported in the first year was $221 per head, in the second, $205, and in the third, $214. The average price of the mules in the first year was $193, in the second, $205, and in the third, $206 per head.

The department of agriculture in its report on the number and value of farm animals shows the average value of all horses on farms January 1, 1917, at $103 per head, against $109 per head on January 1, 1914. The loss of nearly a million of the best horses of the country, however, had a perceptible effect upon the total value of farm horses in the country, since the department of agriculture estimates of the value of all farm horses in the country fell from $2,292,000,000 in 1914 to $2,175,000,000 in 1917.

The fact that this is "not a cavalry war," and that automobiles, motorcycles, flying machines, and observation balloons are performing much of the service formerly done by the horse in war time, does not seem to have checked the demand for American saddle and draft animals.

More Silos in Grant County.

County Agriculturist H. W. Reaugh has been interesting the farmers of Grant county, Washington, in silos for next year's crop. The prospects are that several silos will be put up in the vicinity of Neppel.

Dispersal Sale of Cattle, Hogs and Sheep

At Grandview, Wash.

July 25th, 1917

50 head of Register of Merit Jerseys.
50 head registered O. I. C. hogs.
200 head of January lambs.

One herd bull, Hermit's Majesty, No. 146,981, whose close ancestors are 700 to 900 pound cows.

There are a few of the blood lines we offer: Raleigh's Honeymoon Boy, whose sisters are 600 to 700 pound cows.

Toppers Sunbeam, No. 238741, whose sisters are 600 to 700 pound cows.

Baby Buffs Ellen, No. 220,530, who herself has a record of 630 pounds in one year.

We offer the best blood lines in the Jersey breed, none excepted.

Stock tuberculine tested. Cow testing records will be open for inspection.

One Empire Double-Unit Mechanical milker.

Terms Nov. 1, 1917. 3 per cent discount for cash.

VOL. XL. NO. 30. JULY 26, 1917. * * WEEKLY.

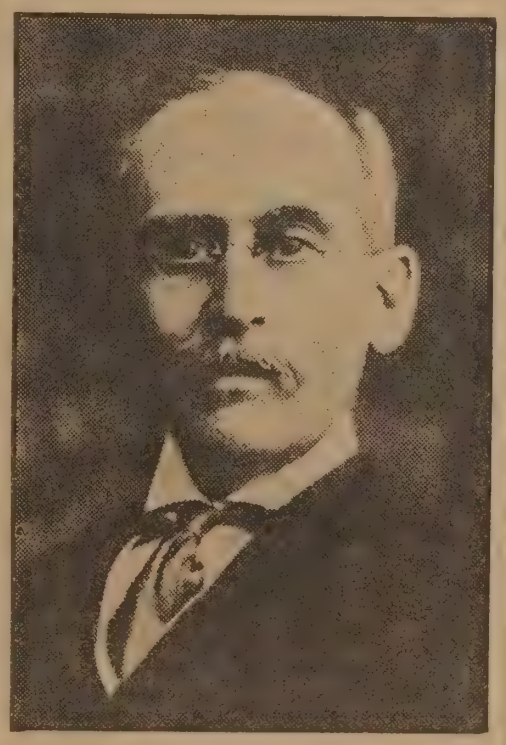
Organization of New National Army Begins

Stupendous Lottery Selects Those Who Will First Be Called Into Country's Service

The event affecting more people in a vitally personal way than any other one event in the history of the United States occurred at the national capital, Washington, D. C., last Friday, July 20, when a blindfolded man drew from a glass jar, one at a time, the capsules containing the numbers of the 10,000,000 young men who registered for their country's service last month.

The drawing determined the order in which these ten millions will be called before the examining boards preparatory to drafting into the ranks of the regular army, the national guard or the first half-million unit of the great new national army.

Six hundred and eighty-seven thousand men are to be called to fill the regular army and national guard vacancies and make up the first new army unit. Government officials calculate that probably half of those called for examination will be exempted because of physical deficiencies, industrial occupations or family dependents. Therefore it is virtually certain that the first 1,350,000 men on the great numbered roll will be called before the examination boards before the 687,000 are accepted.



The Stupendous Lottery.

For weeks the officials at Washington city have been working under the leadership of Provost Marshal General Enoch H. Crowder to provide a democratic, fair and accurate way to make the selections of the men that are to be called. The method in brief follows:

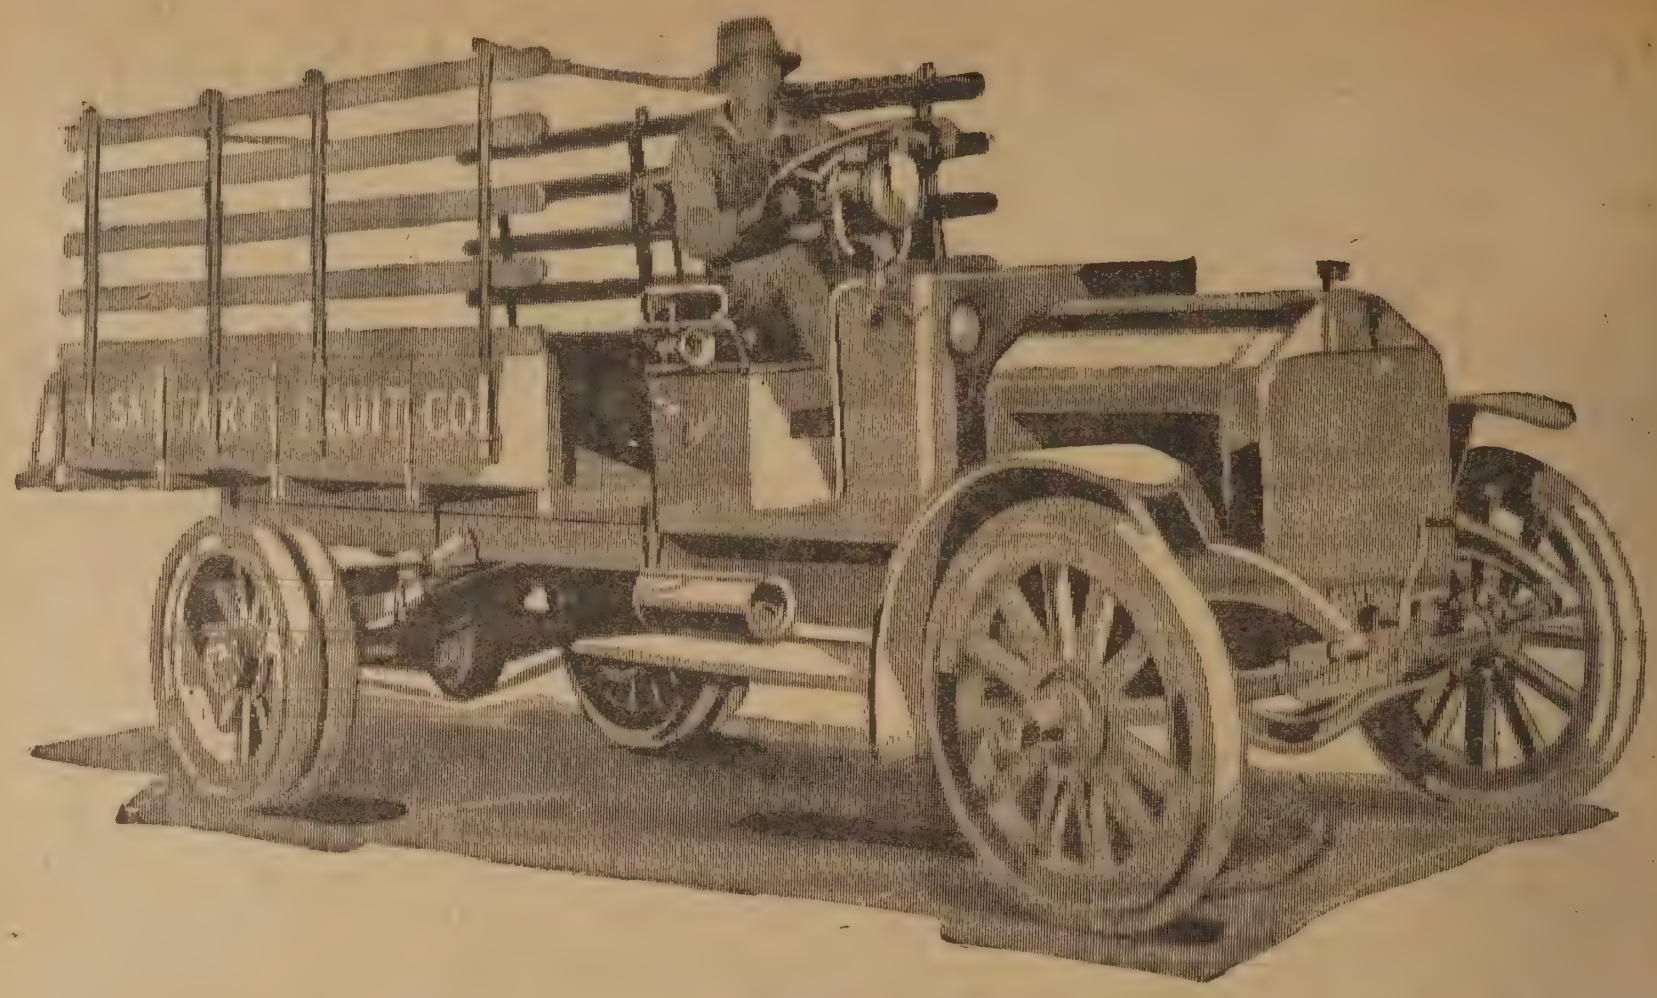
The nation was divided into some 4000 registration districts for registration on June 5. Every man between the ages of 21 and 31 years was required to register. Later the officials in each registration district throughout the country numbered every man who registered in that district. The result was that, since there were about 4000 registration districts, there were about 4000 men in the United States bearing No. 1, about 4000 bearing No. 2, about 4000 bearing No. 3, and so on.

Some of the districts were larger, one containing more than 10,000 registered men, and therefore making it necessary that more than 10,000 numbers be drawn to include all of them.

Preparatory to the actual drawing at Washington city, officials printed each

General Enoch H. Crowder, under whose leadership the plans for the great army drawing were prepared and carried out.

number from 1 to 10,500 on small slips of paper. Each number was rolled and placed inside a black capsule about three-quarters of an inch long. The entire 10,500 capsules were then put into a large glass jar about a foot in diameter and a foot and a half high.



Friday morning, July 20, the official force having the drawing in charge gathered in a large room in the senate building at Washington. The glass jar was brought in and placed on a table. The seal was broken, and a blindfolded man began his day's task of stirring the jar of capsules with a spoon to add to the element of chance in the lottery. In honor of his position, Secretary Newton D. Baker of the war department, blindfolded, reached his hand into the jar and drew out the first capsule. It was No. 258, and its drawing drafted into the service of the United States nearly 4000 men, one in every registration district in the United States which registered that many men.

Other noted officials, including Provost Marshal Crowder, were blindfolded and each allowed to draw one capsule. Then began the routine work of the day.

Drawing Is Guarded.

The blindfolded man continued to stir the capsules in the jar, and another blindfolded man began taking out capsules one at a time. As he took out each he handed it to an announcer, who opened it, announced the number it contained, and passed it to another official, who verified the announcement. Another man stood at a large blackboard and wrote each number down in order as it was announced and verified. This blackboard held 1000 numbers, and when filled was removed, photographed, the numbers erased and another 1000 written in as they were taken from the lottery jar. The photographs of this blackboard constitute the official record of the drawing. Reproductions of them will be bound in small booklets and sent to every exemption board in the United States as the board's official returns from the drawing. Upon receipt of these, but not before, the exemption boards will begin the task of calling in the men first liable to drafting and subjecting them to examination. It has been announced from Washington that the local exemption boards shall pass upon only the questions of physical fitness and family dependents of the drafted men, but not on industrial occupations that might entitle one to exemption from service. For the industrial exemption, a special board is provided in each federal judicial district.

"The Best Truck Possible"

—Says the Sanitary Fruit Company of Red Bluff, California

"We purchased our Garford two ton truck with the firm conviction that we had selected the best truck possible for our service.

"The truck has fulfilled every promise you made for it.

"It has worked steadily—doing about fifty miles per day—and is very economical on fuel and maintenance.

"We take pleasure in recommending it to anyone."

(Signed—Sanitary Fruit Company)

Garford MOTOR TRUCKS

Fruit growers demand prompt, dependable hauling.

For loss of *time* in transportation means a direct *money* loss to the shipper.

Garford motor trucks are time savers—and consequently money savers.

They put you vastly *nearer your market*. They *shorten* your hauling hours. They *increase* your profits.

The Sanitary Fruit Company says the Garford is *"the best truck possible for our service."*

And if it is profitable for hauling fruit, it will be even *more* profitable for hauling hogs, cattle, hay, grain, garden truck and all the other burdens that a farmer's truck must bear.

Any kind of body can be furnished—to efficiently meet your hauling requirements. And the wide range in Garford carrying capacity, from one to six tons, gives you an opportunity to select a truck exactly suited to *your* needs.

Any one of our dealers will gladly give you detailed information—or you can get it by writing direct to the factory.

The government has asked for *practical* economy from every citizen of the United States. Garford Motor Trucks will help *you* do *your* bit by cutting out waste of time, labor, produce and money.

Write for our booklet, "Roads—Their Influence on Social and Economic Conditions."

Garford Motor Truck Co., Inc.
1701 Broadway Seattle, Washington

The Fancher-Larson Company
1201 First Avenue Spokane, Washington

Oregon-Oakland Motor Company
522 Alder Street Portland, Oregon

The Garford Motor Truck Company, Lima, Ohio
Manufacturers of Motor Trucks of 1, 1½, 2, 3½, 5 and 6 ton capacity
4½, 7 and 10 ton Tractors
The Garford Road Builder
Distributors and Service Stations in all Large Cities

FOR GOOD FARMING, ATTRACTIVE COUNTRY HOMES AND HAPPY COUNTRY PEOPLE

THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 40. No. 30 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF July 26, 1917

Food Shortage Is Not Imaginary

Carl Vrooman Brings Stirring Appeal to People of the Northwest

"Famine is just over the sky line of every European country."

So declared Carl Schurz Vrooman, assistant secretary of agriculture, in his address Monday at Spokane, to the county agricultural agents and the agricultural extension representatives of the state college, and through them to the farming industry of Washington, in the most stirring appeal for agricultural preparedness yet heard in the northwest.

"We must not say that if we do not increase production there will be a world food shortage. There is now a food shortage, the worst that has been seen in your lifetime or mine," the federal representative declared with emphasis born of conviction and earnestness.

Making Preparedness Tour.

Assistant Secretary Vrooman is making a nation-wide tour in the interests of agricultural preparedness. His stop in Spokane was his only stop in Washington owing to the pressure laid upon him for speeding up the work. He was in conference with northwestern leaders in agricultural work and with the state council of defense nearly all forenoon Monday. Monday afternoon he went to Coeur d'Alene, Idaho, where he addressed a massmeeting. He returned to Spokane and addressed a gathering at the armory in the evening that numbered thousands.

Build for Permanency.

The keynote of the conference talks by Mr. Vrooman, and by those leaders in conference with him, was that the agricultural development so strongly urged and so vitally needed should not be of temporary nature, but permanent in character. Mr. Vrooman declared that the war, deplorable as it is, was forcing the people of the United States to develop a better agricultural industry. He said that it was doing what the department of agriculture and the agricultural colleges had been trying to do for decades. He urged that a greater and constantly greater practicalness be injected into the agricultural work of the educational institutions.

"Let us thank God," he said, "that in spite of the pestilence of war, we are given this opportunity to build up a sound, practical agriculture."

Starvation in Europe.

Reports that starvation has already taken its toll in many European countries because of food shortage and inability to transport what supply is on hand are not exaggerated, said the speaker. He declared that millions have actually perished already because of famine. In some of the war stricken countries he said that one could go for miles and miles through once populous and prosperous districts without finding a child under the age of 5 years, every one of tenderer years having died for lack of food.

No Painless Patriotism.

The patriotism in business and industry at home must be the same as that among the soldiers in the trenches, urged Mr. Vrooman. On this point he said:

"There are a few, a very small minority of our business men who have not achieved this high level of patriotism yet. The majority have. There never has been a time in the history of the world when the business classes of a nation were as patriotic and showed themselves to be as patriotic, showed themselves to be as little mercenary, showed themselves to have as little greed for gain as our American business men today. But there is a small minority, the scum of the business world, that has not risen to the real conception of the nature of this contest, and what part they play in it. Some of them seem to think, like the miser, that the only thing in life worth doing is to make money.

"I believe we are going to organize, in addition to our other armies, an army of business men who are going to fight the battles of democracy and liberalism at home while their sons are fighting those same battles in the trenches. We are very free to tell Germany that she should liberalize herself; that she should cast down the junkers, the reactionaries, the despots of Germany and make of Germany a free, self-governing people.

'How about ourselves? We have a nation that is a free and self-governing nation, but we have certain minorities in every state and in every community who are reactionaries, who are not liberal. We have the food pirate, the food gambler, the man who is trying to run up the price of coal or steel, or other things necessary for the successful conduct of the war. We must organize the sentiment of this country among the business men, so that every business man in this nation will do his part just as bravely and just as self-sacrificingly as every soldier is expected to do his part in the trenches.

'The farmers are trying to increase their acreage of food. In order to do that successfully they must be able to market that food without any class of people being able to levy a tribute, an illegitimate war profit, upon the produce of their toil. We must create for the farmer a marketing system, and see to it that when he produces food it will be sent over to the consumer, whether that consumer be the people here at home or the soldiers in the trenches, without any man or set of men being able to extort from him or from the consumer an illegitimate war profit.

"I did not come all the way across the continent to urge you to do a lot of easy things, to urge you to go in for painless patriotism. I came out here because I believe you represent some of the best blood of the world, to ask you to look around for something difficult for a job that is a man's size, something that means a real sacrifice; to ask you to go into it, if you are a business man, with all of your business shrewdness and training. The government can not handle this war unless the business world gets behind it.

"While the boys in khaki are covering our flag with glory they are leaving a lot of despicable food pirates and others who will be staining it with graft, extortion and greed. That infamy must not come upon our flag. We must mobilize the patriotism of the business world; we must forget partizanship; we must overcome the lust for money; we must overcome our ambitions as individuals. Those of us who can not go out in the trenches and fight for democracy can fight here, if we are brave enough, if we are free from the yellow streak, if we love our country more than we love the shekels that jingle in our pockets.

"Yes, there is just as good fighting at home as there is abroad. And right now this country is more menaced by the enemy within its gates than it is from any enemy without. And if the business world will rise to this emergency and will do something new in the history of mankind, will keep business clean and pure and patiotic, will keep that flag from getting any stain of graft or extortion during the continuance of the war, then the business world, as I said, will have achieved something novel in human warfare. They will have added a new luster to the glory with which the boys in the trenches are covering that flag at the cost of life."

County Council of Defense

Every Loyal Man and Woman Should Enroll

By N. W. DURHAM.

The council of national defense, authorized by act of congress, and urged by the president of our country, has requested the organization of councils of defense in the states, the counties of the state, and in the municipal subdivisions of the counties; the state council of Washington has been organized, and auxiliary to it the county councils are being formed, and it is now urged that auxiliary local councils be organized throughout every county in the state.

The broad and comprehensive purpose is for the national defense and for patriotic service for the general welfare of our country. Every patriotic citizen, man and woman, should enroll in this great work.

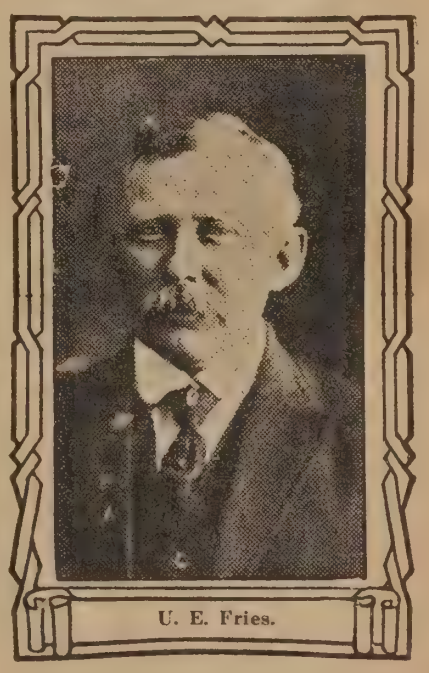
Many of our citizens are voluntarily risking their lives in this great crisis for the protection and security of those of us who remain at home, and those of us who do not risk our lives on the battle front can enlist here for voluntary service in this great war for the safety of democracy.

You are urged immediately to enlist the cooperation of your neighbors and citizens and enroll the membership of every patriotic citizen of your community in this great service.

The county councils are asking communities to organize local auxiliary councils, elect a chairman and secretary and an executive committee, in the membership of which committee may be included the chairman and secretary of the local, if expedient.

Membership in a local auxiliary shall constitute membership in a state-wide league for patriotic service.

Suggested activities in the service of our country will, from time to time, be called to their attention. In the meantime, and all of the time, make your local meetings the center in your community of patriotic feeling, national loyalty and war service.



Consider and discuss how best to stimulate loyalty and industry, conserve our general resources, eliminate waste, discourage and suppress disloyalty and treason, and finally insure the success and permanence of democracy throughout the world.

The Spokane county council has adopted the following form of membership roll for community auxiliaries:

"For the welfare of America, and to volunteer and enlist our individual services, in the defense of our common country, we, the undersigned, subscribe ourselves as members of the..... Washington, local auxiliary, of the Spokane county council of national defense, and pledge ourselves to the loyal and patriotic service of our government."

It is planned to organize about 50 of these local auxiliaries in Spokane county, and similar organization is being worked out in other counties.

Washington Portarits No. 25.

U. E. Fries.

U. E. Fries came from Denmark to the United States when only 17 years of age and settled, after three years of working in different parts of the country, in Okanogan county. After a great many hardships and privations Mr. Fries has succeeded in building up a good farm. Mr. Fries tells of his early experiences in the Okanogan county, in another part of this issue.

The next in the series of Washington portraits will be that of B. E. Smead of Opportunity, and will be given in next week's issue of The Washington Farmer.

Land Bank Rushes Loans to Farmers

Central Office and Field Appraisers Hurry Farm Finance

With the movement of farm development and efficient cultivation at a stage never before known in this country, the federal farm loan bank, with northwestern office at Spokane, is rushing its work of chartering loan associations, appraising the lands on which loans are sought and completing the work of making the loans where proper title to the land can be secured.

During the last week charters have been granted to 15 new associations, and approval given to more than three-quarters of a million dollars of loans asked by their members. Actual loans to members of associations formerly chartered have also been made and are being made with the greatest possible speed.

The following are the new associations chartered since the last issue of The Farmer, together with the loans sought by the charter members and approved by the land bank board:

Washington.	
Sunset, Spokane county	$ 66,850
Kirkland, King county	26,650
Adna, Lewis county	38,400
Toppenish, Yakima county	34,850
Curlew, Ferry county	25,550
Duvall, King county	45,500
(Additional loans, Spokane county)	16,350
Oregon.	
Prineville, Crook county	102,700
Elgin, Union county	48,000
Idaho.	
Arbon, Oneida county	22,800
Holbrook, Oneida county	43,550
Cottonwood, Idaho county	80,500
Montana.	
Baker, Fallon county	102,400
Westmore, Carter county	73,400
Libby, Lincoln county	25,250
Elkalala, Fallon county	32,450

Drying Foodstuffs Is Way to Win War

Simple Methods Enable Households to Conserve Tons and Tons of Food Otherwise Wasted

There are three recognized methods of drying fruit or vegetables: (1) The sun drying method; (2) the artificial heat method, and (3) the air blast method, or that where a constant current of air is passed over the drying product to carry away the moisture.

While the sun drying method is the simplest and the least expensive under ordinary circumstances, it is easy for any one to construct drying apparatus for use over a cook stove, heater or specially made heating appliance.

Drying can be done over the cook stove during the regular cooking hours by using a simple bit of frame work so constructed as to hold two or three or more trays to contain the fruit or vegetable. The oven is coming to be a popular place to dry products. It is often desirable to dry small portions of corn, peas, beans, apples, peaches or what not at times when there is just a little on hand. These bits may well be dried on the back of the stove or in the sun or in the oven or anywhere that it is convenient to have a little heat and cleanliness.

Care Should Be Exercised.

"Care should be taken that the material is sliced thin enough but not too thin. From an eighth to a quarter of an inch is a fair thickness for most of the common vegetables to be sliced and dried," says the United States department of agriculture in a new bulletin just issued. This bulletin is issued for the benefit of the people of the country in the food conservation movement, and should be secured by as many as possible by addressing the Division of Publications, U. S. department of agriculture, Washington, D. C.

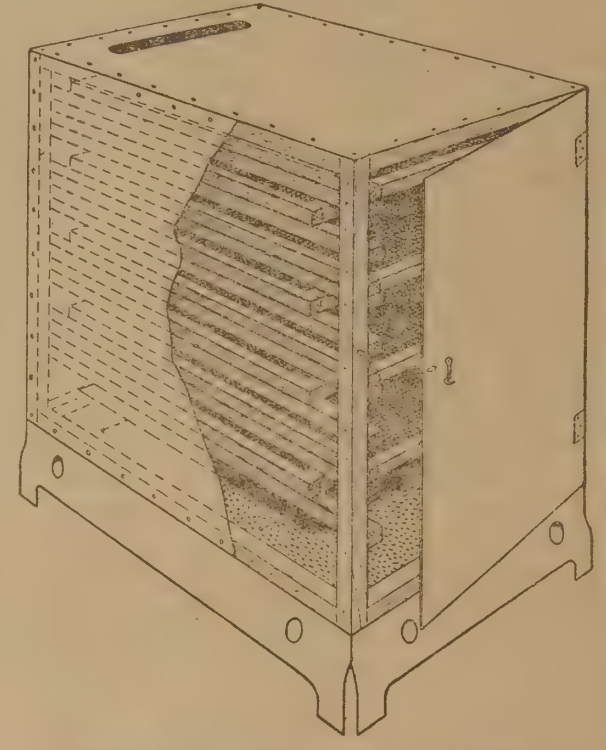
"Cleanliness is as necessary in the preparation of vegetables and fruits for drying as in their preparation for canning, perhaps even more so," continues the bulletin.

To secure a fine quality of dried products much depends upon having the vegetables absolutely fresh, young, tender, and perfectly clean. If steel knives are used in paring and cutting have them clean and bright so as not to discolor the vegetable. The earthy smell and flavor will cling to root crops if they are not washed thoroughly before slicing, and one decayed root may flavor several kettles of soup if the slices from it are scattered through a whole batch of dried material. High-grade dried "root" vegetables can only be made from peeled roots.

Blanching of vegetables is considered desirable by some housekeepers, although it is not strictly essential to successful drying. It is claimed that the blanch gives a more thorough cleaning, removes the strong odor and flavor from certain kinds of vegetables, and softens and loosens the fiber. This allows the moisture in the vegetable to evaporate more quickly and uniformly. It also quickly coagulates the albuminous matter in the vegetables, which helps to hold in the natural flavors. Blanching consists of plunging the vegetable into boiling water for a short time. Use a wire basket or cheese-cloth bag for this. After blanching the required number of minutes, drain well and remove surface moisture from vegetables by placing between two towels or by exposing to the sun and air for a short time.

Apparatus for Sun Drying.

The drying of fruits and vegetables in the sun is a simple process if they have been prepared properly. In its simplest form such drying consists in spreading the freshly prepared slices or pieces on sheets of paper, or, if there is danger of the product's sticking, spreading on old pieces of muslin held down with stones. Bright, hot, sunny days are chosen for this work, and a close watch is kept to see hat no rain or dew wets the product. If flies and other insects are abundant, a mosquito bar is thrown over the product. Once or twice a day the slices are stirred or turned over with the hand and the thin ones which dry first are taken out. Sun drying has much to recommend it, since it requires no expenditure of fuel and there is little danger of the product becoming overheated. Dust, however, gathers on the product, and unless it is protected carefully, flies and especially certain insects which habitually attack dried fruits will lay their eggs upon it. These eggs later will hatch out, and the worms, or larvae, will riddle the dried fruits or vegetables, rendering them unfit for the table.



Specially Made Driers.

The two fundamental requirements of a drying cabinet or other apparatus for the use of artificial heat is the availability of heat and the circulation of air. If a drier is too close, the moisture from the vaporating fruit will collect and not only prevent further drying, but threaten the fruit or vegetable with souring or molding. The moisture that evaporates must be carried away.

Therefore, in constructing the cabinet drier, such as illustrated on this page, it is essential that there be air openings at the bottom and also at the top. In placing the trays, it is highly advisable that they be arranged so that the air will pass over the lower one, up at one end of the cabinet and over the next one, up at the other end of the cabinet and over the next tray, and so on to the final openings at the top.

The Air Blast.

The air blast method of drying requires a strong current of air to be passed over the product to be dried. This may be accomplished by means of an electric fan or other blower. This method is not so practicable in the ordinary home as the sun drying or the specially made drier methods, but it does have the advantage of completing the process with a lower degree of heat, which advantage some claim results in a better flavor to the dried product.

Artificial drier, showing method of placing the trays so as to allow circulation of air from bottom to top, the heat being provided at the bottom.

Conditioning.

The government experts urge upon persons drying either vegetables or fruit the advisability of "conditioning" the product before it is put away for future use. "This is best done," says the bulletin, "by placing the material in boxes and pouring it from one box into another once a day for three or four days, so as to mix it thoroughly and give to the whole mass an even degree of moisture."

Recipes for Drying.

The following recipes for drying are taken from the government bulletin before referred to. The letters a, b and c indicate different methods of drying the vegetables or fruit in question.

Sweet Corn.

Only very young and tender corn should be used for drying, and it should be prepared at once after gathering.

(a) Cook in boiling water two to five minutes, long enough to set the milk. Cut the kernels from the cob with a sharp knife, taking care not to cut off pieces of the cob. Spread thinly on trays and place in position to dry. Stir occasionally until dry.

(b) Boil or steam on the cob eight to 10 minutes to set the milk. To improve the flavor a teaspoon of salt to a gallon of water may be used. Drain well and cut corn from cob, using a very sharp and flexible knife. Cut grains fine, only half way down to the cob, and scrape out the remainder of grain, being careful not to scrape off any of the chaff next to the cob. Dry from three to four hours at 110 degrees to 145 degrees F. When field corn is used, good, plump roasting-ear stage is the proper degree of ripeness. A pound of dried corn per dozen ears is an average yield.

(c) The corn may be dried in the sun. Dry in oven 10 to 15 minutes and finish drying in the sun. Sun drying, of course, is not satisfactory in moist weather.

Pack in cartons or boxes for a few days to "condition," as described on page 8.

String or Snap Beans.

All varieties of string beans can be dried, but only beans in ideal condition for table use should be selected for this purpose.

(a) Wash, remove stem, tip and "strings." Cut or break the beans into pieces half to one inch long, and place on trays and dry. They also can be run through the slicer and then dried quickly.

(b) Prepare as directed above, but instead of cutting the beans, thread them on coarse, strong thread, making long "necklaces" of them, and hang them above the stove or out of doors until dry. An old-fashioned recipe calls for boiling the pods until nearly cooked through before drying.

(c) Wash and string beans carefully. The very young and tender beans can be dried whole. Those that are full grown should be cut in one-fourth to one-inch lengths with vegetable slicer or a sharp knife. It is better to cut beans than to snap them. They are then put in a bag of cheesecloth or in a wire basket and blanched in boiling water for six to 10 minutes, depending on the maturity of the bean. One-half teaspoon of soda may be added to each gallon of boiling water to help set the green color in the beans. Remove surface moisture by placing between two towels or by exposing to the sun and air for a short time. Dry young string beans two hours, more matured beans three hours. Begin drying at temperature of 110 degrees F. and raise temperature gradually to 145 degrees F.

Wax beans are dried in the same manner as the green string beans.

Lima Beans.

Lima beans can be shelled from the pod and dried. If gathered before maturity when young and tender, wash and blanch from five to 10 minutes. Length of time for blanching depends upon size and maturity of beans. Remove surface moisture and dry from three to three and one-half hours at same temperature as string beans.

Okra.

(a) Small, tender pods sometimes are strung on a stout thread and hung over the stove to dry. If dried in that manner, heat in oven before storing on trays.

(b) Wash, blanch three minutes in

(Continued on page eleven.)

Save Perishable Foods by Canning

Recipes Make It Simple Matter to Preserve Successfully

In previous issues of The Farmer recipes for canning the following vegetables have been given: Greens, string beans, beets, peas, asparagus, squash, pumpkins, okra and sweet corn.

In last week's issue appeared a summary of the principles and the general methods to be used in canning.

The following recipes are given in addition to those previously published and those to be given in subsequent issues:

Lima Beans—Blanch three to five minutes. Cold dip. Pack into jars tightly. Add a teaspoon of salt to each quart. Fill jars with boiling water. Adjust tops loosely. Place into the cooker. Sterilize by boiling for two hours. Remove. Seal. Wrap in paper or cloth and store.

Egg Plant—Slice the egg plant. Blanch eight to ten minutes. Cold dip. Pack into the jars closely. Do not salt until taken out for use. Fill jars with boiling water. Adjust tops loosely. Place in cooker. Sterilize by boiling for two hours. Remove. Seal. Wrap in cloth or paper and store.

Carrots—Select medium size carrots. Blanch six to eight minutes. Cold dip. Pack in jars. Add a teaspoonful of salt to each quart. Adjust tops loosely. Place in cooker. Sterilize by boiling for 90 minutes. Remove. Seal. Wrap in cloth or paper and store away.

Rhubarb—Cut into pieces to suit. Blanch one minute. Cold dip. Pack into jars. Place one part of sugar to three parts of water in a separate vessel and bring to a boil. Fill the jars with this sweetened liquid. Adjust tops loosely. Place in cooker. Sterilize by boiling for 15 minutes. Remove. Seal. Wrap in cloth or paper and store away.

Tomatoes—Blanch one minute. Cold dip. Remove skins. Place in jars either cut or whole as desired, but preferably cut if large. Add a teaspoonful of salt to each quart. Fill jars with boiling water, or, preferably, a boiling juice from a few cooked tomatoes. Adjust tops loosely. Place in cooker. Sterilize 20 to 25 minutes. Remove. Seal. Wrap in cloth or paper and store.

Parsnips—Follow same directions as for carrots, except cut the parsnips in suitable sizes if too large.

Sweet Potatoes—Follow same directions as for carrots and parsnips.

Canning Fruits.

Anna M. Turley, in a home economics department bulletin of the Oregon Agricultural college, divides fruits into three classes: The soft fruits, including such as strawberries, blackberries, dewberries, sweet cherries, blueberries, peaches, apricots and so on; the sour berry fruits, including gooseberries, currants, cranberries, sour cherries and so on, and the hard fruits, including such as apples, pears and quinces.

For each class she gives one general recipe, which is given below in so far as it applies to the common water bath outfit, for which all the recipes given in this series of articles are intended.

Soft Fruits—Can the same day fruit is picked. Grade and rinse the fruit by pouring water over it through a strainer. Cull, seed and stem. Pack immediately in glass jars or tin cans. Add boiling hit thin sugar syrup. Place rubber and top in place. Partly tighten. Sterilize in hot water bath outfit 10 minutes. Remove. Tighten covers. Invert to cool and test joints. Wrap glass jars in paper to prevent bleaching; then store.

Sour Berry Fruits—Can same day picked. Stem, hull and clean. Blanch in hot water one minute. Remove and dip quickly in cold water. Pack berries closely in container. Add hot sugar syrup considerably heavier than for the soft fruits. Place rubber and cap in place. Seal partly, not tight. Sterilize in hot water bath outfit 10 minutes. Remove jars. Tighten cover and invert to cool and test joints. Wrap in paper and store.

Hard Fruits—Grade, blanch one and a half minutes, and plunge quickly in cold water. Core, pit or remove skins, if necessary. Pack whole, quartered, or sliced, as desired. Add boiling hot medium thin sugar syrup. Place rubbers and tops in position. Partly tighten. Sterilize 20 minutes in hot water bath outfit. Remove jars. Tighten covers and invert to cool and test joints. Wrap glass jars in paper to prevent bleaching and store.

Adapted to War-Time Needs.

The 1917 Puyallup summer session of the state college has been adapted to present and future war time needs of the country. Academic branches have been dropped and the energy and effort of the school have been concentrated on problems of more efficient production, greater conservation of wealth and energy, and wiser and more economic consumption.

Colorado Potato Bug Invades Northwest

Reports Indicate Menace That Requires Strenuous Methods to Combat

Every potato grower in the northwest, though he have only a garden patch, owes himself, his neighbors and his country a simple, but vital, duty brought upon him by the reported appearance of the notorious Colorado potato bug in this heretofore famously pestless region. That duty is the inspection of the potato patch and a declaration of a relentless war if even one of the yellow, black-striped beetles that have wrought such havoc to the potato states of the east is found.

The Colorado potato bug, two and a half or three times natural size.

The Pest Is Here.

That the genuine, Colorado potato beetle is in the northwest is the positive statement of L. C. Barrett of the Spokane Seed company, who has received reports from many counties of eastern Washington, northern Idaho and Montana, together with one boxed sample of the pest.

Kootenai, Latah, Clearwater, Nez Perce and Lewis counties of Idaho have reported the presence of the beetle. Whitman, Spokane and Stevens counties in Washington admit its presence, and authentic reports show it to be in Lewis and Clark, Flathead, Missoula and Granite counties in Montana.

How extensive the spread of the bug is in the northwest will be learned through an investigation that The Farmer is now inaugurating. That the most strenuous methods of combat available should be employed at once is certain. The first appearance of the Colorado potato bug was reported three or four yars ago, but sufficient stress was not laid on the need of a vigorous fight against it at that time or the greater offensive would not be required now. Every potato grower should see to it without fail that his patch or field is not allowed to provide the home for even one of the bugs.

Effective Remedies.

There are three recognized remedies: Paris green, arsenate of lead and arsenate of zinc. Each depends upon the arsenic poison contained in the preparation. Owing to the expensiveness of the arsenate of zinc, together with the danger of burning or otherwise injuring the potato plants or other vegetation with it, Mr. Barrett considers it comparatively impractical, though it is recognized as a powerful bug poison.

Paris green has been used in the past perhaps more than has the arsenate of lead, but its price is now well nigh prohibitive. Paris green, which ordinarily sells at from 18 cents to 25 cents a pound, is now costing much more, or 60 cents to 75 cents a pound.

Arsenate of lead, though considerably higher than in former times, may be secured at from 30 cents to 45 cents a pound, and is considered as effective a poison against pests as is the paris green.

The arsenate of lead apparently has the additional advantage of an adhesive quality, either in the dust or the liquid spray form, which makes it cling to the leaves of the plants where the paris green is easily blown or washed off.

Should Spray Potatoes.

Either the liquid spray or the dust is effective against the potato bug. It is the eating of the poison that destroys the biting pest, not the mere application to its body as in the case of some of the sprays for sucking pests. Mr. Barrett says that about five pounds of the arsenate of lead powder, applied as a dry dust, is required for an acre, while from three to four pounds is sufficient for liquid spray made from the paste compound. The dry method has the advantages of being more easily applied and of penetrating into all the recesses of the plant, under side as well as upper surfaces. But it has the disadvantage of losses through inability to confine the spraying to the potato plant only.

The Colorado potato bug is not familiar to the farmers of the northwest. The so-called potato bug of this country should not be mistaken for it. The bug most common in this region, and much less destructive, is a longer, more slender insect. Of these there are at least two varieties, a steel blue one and a striped one. Both are much longer than they are wide or thick.

The potato grower's real enemy, the Colorado bug, is heavy in build. It is about three-eighths of an inch in length and two-thirds as wide as long. Its color is yellow, except for black lines that run parallel to each other, lengthwise of the bug's wings. The thorax, or collar, has several black spots, and the head has a black triangular spot. The lower part of the body is marked with black.

The bug hibernates in the ground over winter, sometimes burying itself several inches or two or three feet. It comes forth early in the spring, and flies about readily and quite actively. It lays its eggs on the under side of the leaves, where they hatch in from four to eight days. One female produces as many as 500 eggs. The egg hatches a dark red creature, which, as it grows, becomes paler and is a disgusting, slug-

The Colorado potato beetle, showing (a) the eggs, (b) the larva, (c) the pupa, (d) the mature beetle, and (e) the enlarged wing.

gish animal frequently called a slug. It has spots along the sides.

In from 16 to 20 days these creatures reach the pupa stage, when they descend into the ground, where they remain for seven to 15 days, being transformed into the mature beetle, which comes forth and is active till late in the fall.

Can Joke About Past Hardships

Had Long, Hard Pull, but Now Sees Success on Farm

To the Editor of The Washington Farmer: I was born in Denmark, December 19, 1866. Father was a Lutheran minister, who had 18 children, and I was number 13 of the flock. He died when I was 12 years of age. At 14 I left school to work for a living because mother was poor, as my father's estate had been declared bankrupt after his death. I received no wages on the two different farms where I worked, just board and lodging, and mother clothed me. The wages at that time in Denmark were very low, so mother proposed for me to go to the United States.

I consented, and at the age of 17 I left and landed in Castle Garden, May 18, 1883, with $13 in cash and a ticket to Chicago. I worked on farms in Illinois until March, 1886, when I left for the west. I worked in different parts of Oregon and Washington, managed to save up $350, and the following spring, March, 1887, at the age of 20 years, I started from Ellensburg afoot, leading a pack horse, and in company with four young Germans, for Okanogan county, which at that time was Stevens county. We crossed the Columbia river at Moses Coulee, went straight through the country over Badger mountain. There were no fences to stop us and Waterville was not thought of at that time, but there was a small settlement around Douglas City. We saw no settlers before we came close to Foster creek ferry, where now Bridgeport is located. We crossed the river here into the Colville Indian reservation and forded the Okanogan river some 10 miles up from its outlet into the Columbia. After traveling for some time over the country I selected a place and made final settlement in April, on the homestead I have lived on ever since. It is nine miles north of the town of Brewster and three miles from the orchards that won world renown for its famous and unexcelled apples.

When I started my home my desire was to run cattle, as this locality is well adapted for that. In order to use little of my capital and save most of it to buy stock, a neighbor and I bought a team, wagon and other implements together. We exchanged work, built our houses and fences and our little farming the first year in partnership. But the following year we divided.

In the fall of '88 I bought eight cows and calves in Kittitas valley, where I had gone to earn a "grubstake." The provision was freighted to Rock Island on the Columbia and shipped on steamer from there to my home town. My little herd of cattle was turned on the range in the summer to care for themselves and I went out working for wages. During the winter I cared for them, made fencing and put up buildings. The winter of 1889 was a very severe one. It was estimated that 90 per cent of the stock in the county starved to death because feed was not to be had at any price. I had provided for my little herd, however, and saved them. I was offered four work horses for two tons of hay and traded. In the spring I started to break up land and to clear up the dense growth of brush which part of my land was covered with. Since then I have lived off my farm by selling different products and surplus stock.

In 1892 I married. My wife raised chickens, and sold butter and eggs, which were our salvation when cattle and horses in the '90s were so cheap, that a 120-pound cow brought but $15, as also did 2-year-old steers. Three and 4-year-old steers sold for $20 and $22.50 a head, and we were glad to sell at that price. I was six months selling a span of mares weighing 1200 pounds each for $25, which money just bought a cheap sewing machine or my wife. By exercising great saving we lived throughout the hard times although butter sold for 12 1-2 cents per pound, eggs at 5 cents a dozen, and a deer hide was legal tender for two pounds of sugar at the little country stroe.

The development of our county was held back by the absence of a railroad. The shipping of farm products on the boats gave but small returns to the farmers. Cattle in the early days were driven to Ellensburg, from there shipped to Seattle. Later on the Great Northern built to Wenatchee and then stock were shipped from there.

In 1907-08, when hay went to $20 a ton on account of poor crops and cattle were cheap, we sold neary all of our cattle. However, this was our mistake, as we soon learned that even if cattle were cheap, they were the most profitable domestic animal we could keep on the place. Hay soon dropped to its normal value and below it. For several years we had sickness in the family. We made debts, our land lost in fertility by not having manure to apply to it, everything we raised was hauled away even to the meadow hay. Then came the task to rebuid a herd which by no means is an easy matter, but through determination we are succeeding.

My principal crops are corn, wheat, oats and alfalfa. I fertilize my land for corn and potatoes, following it with wheat or oats, which do well on corn land. With the prices I have received lately in Seattle for live stock we are doing well and I and my family can now joke about the hardships we have endured.

U. E. FRIES.
Brewster, Wash.

"UNDER THE BLACK CANOPY."

This is the title of a story of the northwest that The Farmer is going to run, beginning in an early issue. It is written by a northwestern writer known to the readers of The Farmer. It deals with people and things right here where we live. Watch for it.

Pacific Nurserymen

In Annual Convention at Tacoma

The Pacific Coast Nurserymen's association, in annual session at Tacoma, has decided to start an educational campaign, especially directed toward business and working men for increased food production from town lot gardens. F. A. Wiggins of Toppenish, Wash., the president of the association, in his address, said:

"Our press committee, aided by the landscape architects, will publish charts of homes surrounded in front by artistic shrubbery and flowers and in back by a few fruit trees, some small fruit and some vegetables," said Mr. Wiggins.

"It will endeavor to encourage each family to grow its own fruit and produce with perhaps the exception of that used for canning. For instance, I believe a single backyard, 40x50, can easily contain five fruit trees, six berry plants and a small vegetable garden.

"This information with practical instructions will be gotten out as soon as possible so that gardens may be started early for the new year. All the expenses necessary to carry on the campaign will be assumed by the association, which will give a special sum for the purpose."

Information of an unknown and infectious disease, which if it spreads may put rose growers of the west out of business, was given by J. A. Balmer of Cle Elum. The disease came to him from California.

Said Mr. Balmer:

"It was just as if I were raising walnuts and potatoes instead of roses when those plants matured. Funny, hard knobs appeared not only on the roots, but on the stems. I soon found that the flinty bunches formed wherever a rose had been cut, and that my scissors had infected many of my own choice plants.

"After a bud or flower had been cut a nice callous formed, but instead of finally starting another sprout, it merely continued to be a callous, except that the callous grew and grew until it had become a walnut or potato in size. And I hadn't planted nor paid my good money for walnuts or potatoes, I wanted roses.

"The disease is certainly new and very serious," said R. A. Stadthalter of Seattle, representing the United States department of agriculture, of which he is the field pathologist expert. "It seems a matter of importance that is not sectional, but national. I will immediately place specimens and all possible information in the hands of government experts."

Walnut growing was the subject of a paper read by Fred Groner of Hillsboro at the afternoon session. Uniform packing standards, measures, wholesale and retail prices were discussed. It is generally believed by the nurserymen that the only way to accomplish uniform laws is through the federal reforms rather than state regulations.

Before the convention adjourned officers were elected. Those chosen were: M. McDonald of Orenco, Ore., president; C. Malino of Seattle, vice president for Washington; A. Brownell of Portland, vice president for Oregon; C. T. Hawkes of Caldwell, vice president for Idaho; C. L. Trotter of Vancouver, vice president for British Columbia, and R. W. Mills of Helena, vice president for Montana; secretary, C. A. Tonneson of Tacoma; executivve committee, A. Brownell of Portland, S. A. Burglehaus of Sumner and H. A. Lewis of Portland.

To the FOOD ADMINISTRATOR, Washington, D. C.:

I am glad to join you in the service of food conservation for our nation and I hereby accept membership in the United States food administration, pledging myself to carry out the directions and advice of the food administrator in the conduct of my household, in so far as my circumstances permit.

Name .....

Address .....

Number in household ..... Do you employ a cook? .....

Occupation of breadwinner ..... Will you take part in authorized neighborhood movements for food conservation? .....

There Are No Fees or Dues to Be Paid.

The food administration wishes to have as members all of those actually handling food in the home.

DIRECTIONS: Mail this slip to the National League of Woman's Service, Room 201 Sherwood Bldg., Spokane, Wash., and later you will receive FREE your first instructions and a household tag to be hung in your window.

Subscription price: $1.00 a year—special 3-year rate $1.50. Canada and foreign, 1 year $1.50.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Opposition to Freight Rate Increase Proved to Be Sound

When The Farmer opposed the granting of the 15 per cent advance in freight rates which the American railroads asked from the interstate commerce commission its position was criticized in some quarters. "You are interfering with the development of the country," said one banker to the writer of this article, who went on to argue that the railroads needed the money badly to provide increased equipment to take care of the transportation needs of the industries of the Pacific northwest.

But The Farmer knew its ground, and the commission's decision and still more recent earnings returns of the transcontinental roads prove that it was right.

All the western lines are highly prosperous. Take, for example, the Northern Pacific and the Great Northern. The former is earniug directly a clear profit of nearly 10 per cent per annum on its stocks, and the latter upward of 10 per cent.

But that does not tell the whole story of their prosperity. The Chicago, Burlington & Quincy, better known as the Burlington, is the premier profit-earning railway system of the United States. In the fiscal year ended June 30, 1917, it made 28 per cent clear profit on its $110,000,000 of stock.

This great system, which connects with the Northern Pacific at Billings, Mont., is operated jointly by the Northern Pacific and the Great Northern under a lease which obligates them to pay 8 per cent dividends on Burlington stock. After meeting that obligation the two Hill lines take the remaining 20 per cent of Burlington profits to themselves.

Roughly speaking, this Burlington "melon" is equivalent to 4 1-2 per cent on the stocks of the Hill roads. They therefore have a profit income of about 15 per cent on their stocks after payment of interest on their bonds, costs of operation, taxes, etc.

Do you wonder that the interstate commerce commission rejected their plea for permission to put up freight rates on all commodities by a round 15 per cent?

With an annual profit of 15 per cent the Northern Pacific and the Great Northern should find it an easy problem to pay liberal dividends, while at the same time purchasing new equipment, improving their lines and laying aside a very respectable reserve.

I. W. W. Must Not Destroy Harvest of Foodstuffs

Quoting a European statesman's remark that the war would probably be won by the last 500,000 bushels of wheat, Food Commissioner Herbert C. Hoover said:

> It is within our power to give this last 500,000 bushels, but only if we organize to save and organize to supply all our allies. Our problem is not alone to mobilize our civilian population for the support of the fighting men of our allies. We must feed our allies, that their people remain in the war. Liberty can not be maintained on the empty stomachs of the women and children.

But it will avail us nothing to organize to produce and to conserve if unpatriotic men, led on by I. W. W. agitators, are allowed to paralyze harvest operations.

At best we shall have a light grain crop in the Pacific northwest. Hot weather has enormously reduced the yield, and more than ever is it obligatory to save the last possible bushel of the crop. The people are in no mood to tolerate I. W. W. threats and interference with the vital work of saving the crops.

Are You Doing Your Part?

The United States department of agriculture, in one of its food posters, makes the following statement: "Somebody has to raise or pack everything you eat." It drives the fact home with this question: "Are you doing your share?"

There is the entire gist of the food production and food conservation problem. What we eat must be raised and preserved. Somebody must do it. Everybody should do his or her fair share.

The person who wastes food this year is not a true patriot. He is not a true humanitarian, for there are thousands of human beings actually starving today and others in large numbers threatened with starvation for lack of food within their reach.

And it is wasteful to allow a good piece of land to go uncultivated, a real waste of food. It is wasteful to feed to live stock food that is more valuable for the use of human beings. It is wasteful to eat food of the staple, easily preserved kinds and allow the perishables to spoil. It is wasteful to eat more than one needs for good physical nourishment.

Having the money to buy plenty, even at the present high prices, does not justify lavish living, for when one man lives lavishly, another is denied even a spare living.

Pays to Study the Market

Mrs. O. J. Wold of Bellevue, Wash., knows how to extract the dollars and cents value from her reading. Last fall she kept track of the potato market, reading for that purpose the market columns of The Washington Farmer. As a result she graded her potatoes more rigidly than usual, saving the small size, even potatoes which in years of big yields and low prices she would hardly have bothered with. These small-sized potatoes brought readily $1.50 a sack, and both buyer and seller were benefited.

In addition to this Mrs. Wold sold a quantity of potatoes for seed. This seed stock was hill seeded, from a variety imported from Scotland several years ago, and sold readily at 10 cents a pound. It is these little details in careful marketing that bring in the net profit.

Mole Pest in Western Washington

The mole pest is a serious question in Wahkiakum county, Washington. To combat this pest County Agent A. T. Flagg made arrangements with Theo. H. Scheffer of the United States biological survey to give four days of demonstrations of skinning and drying the pelts. All the meetings were well attended and interest was shown by the farmers and boys of the communities visited. Merchants agreed to stock up with the proper traps for combating the mole pest.

Washington Gleanings

A national farm loan association was organized at Lind recently with 12 members.

More Colville land has been opened to settlers. A large tract heretofore held to be mineral is now subject to entry for agriculture.

Dairymen of Snohomish and Island counties to the number of over 300 have organized the Snohomish and Adjoining Counties Dairymen's association.

Unit No. 8 of the King County Dairymen's association has been organized at Meridian. The officers are: President, P. T. Nelson; secretary, J. C. Berg; treasurer, J. J. Whall.

County Engineer Weir of Thurston county has approved the widening and deepening of Black river for a distance of 2000 feet near Little Rock for the purpose of reclaiming approximately 1500 acres of land.

Dan Wuille & Co., the London fruit merchants, who have exported large quantities of White Salmon apples to England, announce that they will this year export to Australia, where they have branches and an efficient distribution system.

The Kennewick valley's early potato crop began to move to market recently when the Kennewick-Richland Marketing union shipped the first full carload of the season. The union's potato business this year is being handled by Dr. M. P. Davidson.

The 1917 strawberry crop in the vicinity of Arlington is in excellent quality this season. A. F. West of Edgecomb recently took a quart box to Arlington which was completely filled with 21 berries, weighing 20 ounces, or practically one ounce to the berry.

"Every fruit district in the state of Washington will have one or more evaporators in operation this year," says Dr. J. S. Caldwell, byproducts expert of Washington State college, who has been called into consultation in nearly every instance where there is a new plant to be built.

J. W. Vickers, manager of the Kennewick branch of the Spokane Fruit Growers' company, has received returns from a full carload of cherries shipped to Chicago and sold at auction. The car was sold for a little less than $4300, which is about $120 more than the famous first car sold for in Philadelphia two years ago.

County Agriculturist Richardson of Douglas county has been holding a series of meetings throughout the county at which Miss Walker of the state college extension department lectured and gave demonstrations on home canning and Dr. S. B. Nelson, head of veterinary science at the state college, talked on the feeding of horses.

L. W. Van Aiken of Blackfoot, a representative of the state horticultural department, has been making an inspection of the orchards in the vicinity of Arco. Mr. Van Aiken states that the fruit crop on Lost River this year will be very poor, due to the exceeding hard winter, which caused many of the trees to winter kill, but that fruit prospects of the Snake river country were never better.

Dayton has organized a home guard of over 200 business and professional men, who propose to take every means possible to see that the crops of Columbia county are not destroyed at the hands of incendiaries who have sent anonymous letters to farmers threatening to destroy the crops before they are harvested. If necessary, every highway of the county will be patrolled from the time the grain is ripe enough to burn until it has been harvested.

The Imperial Farms company of Palouse, A. W. Bradrick, manager, has just shipped in a carload of purebred cattle from the east to add to the herd which is already one of the best in the Palouse country. The shipment consisted of a purebred Holstein bull, bought at Liverpool, N. Y., a son of King of the Pontiacs, and six head of purebred milking Shorthorns. The Imperial Farms company is supplanting its Jerseys with Holsteins and Shorthorns.

What Others Say

Mirror, Morton: Dictator Hoover is better than Dictator Hunger.

Independent, Chewelah: This is the time to look out for dry grass and brush fires. A word of caution to your boys and girls may have a very excellent effect in reducing the fire loss among these inflammable materials.

Journal, Kent: With all the associations and clubs that are being formed today in various lines, why is not some move made by the poultry and egg producers to get together into an organization for mutual help and support?

Herald, Concrete: Reports of the last few days are to the effect that heat is seriously affecting the wheat and other grain crops of eastern Washington and Montana; but even though in the end there should be a shortage in cereals there is certainly going to be an abundance of vegetables of every description. Those "war gardens" will help tremendously in solving the high cost of living the coming fall and winter.

There Are Five

brands of United States Tires to select from—a tire for every need of price and use. All of them are GOOD tires. All of them give better service, more mileage per dollar, greater resilience and stouter resistance to road-wearing conditions. Four of them—the 'Royal Cord,' the 'Nobby,' the 'Chain,' the 'Usco'—are famous anti-skids. The other is an equally famous 'Plain' Tread. Choose which one meets your special requirements and order TO-DAY.

All good dealers carry a complete line of United States Tires, made by the largest rubber manufacturer in the world.

A. B. NYSTROM, Editorial Contributor

N. B. Smith of Oregon City, whose Jersey cow, Picabo, came near making a world's record for milk production, has 14 registered Jersey cows, every one either with a register-of-merit record or on test. Picabo ended a year's official test March 9, begn at 9 years and 3 months of age, with 698.33 pounds of fat, or 821.36 pounds of commercial butter. Brown Bessie's Alphena Gem ended her year March 7 with 702.96 pounds of fat, an even higher record than Picabo. Both of them became gold medal cows by producing over 800 pounds of butter in a year. Both will qualify for Class AA by dropping a calf inside of four months from end of test.

Pride of Cedar Hill, a daughter of Brown Bessie Alphena Gem, began at 1 year and 11 months, and in 216 days has produced 321.52 pounds of fat. She is practically sure of 500 pounds of fat for her year, or almost 600 pounds of butter. Ella of Cedar Hill, a daughter of Picabo, began at 1 year and 11 months and had 51 pounds of fat in January, but was poisoned and has taken some time to recover, but will make a good record. Minette of Ashwood at 2 years and 1 month had 238.54 pounds of fat in 145 days. Mr. Smith gives his cows good care, but no very special attention. He pastures as much as possible. He is a strong believer in line breeding when one knows he is breeding a producing line.

H. A.

Ferndale Lady.

This is a picture of Ferndale Lady, a registered Holstein, owned by George Steiner, a prominent Whatcom county dairy farmer. She is 4 years old and has a record of 546 pounds of milk in seven days. Her best record for one day is 81 pounds. Mr. Steiner bought Ferndale Lady from William Bishop of Chimacum when she was only a few months old.

Walla Walla Tests

The report of the Walla Walla Valley Cow Testing association for the month of June, 1917, shows a number of points in which the association has been helpful to the members. June is the eighth month in the second testing year and to date 64 cows have been sold for slaughter as unprofitable by 19 members, and 55 cows have been sold for dairy purposes by seven members on the strength of their association records.

Much interest has been shown in the quality of sires used to perpetuate the herd, 14 purebred sires having been purchased since the beginning of the testing year. Twenty-two of the 26 members of the association are now using a purebred as the head of their herd.

Silos are becoming more popular, 20 of them being on the places of 13 members at the present time and 10 more will be erected by eight members before fall.

The following, as reported by the tester, Will Horn, is a list of the cows producing over 50 pounds of butterfat during the month:

Owner.	Breed.	Lbs. Milk.	Lbs. B. F.
State Penitentiary	H	2040	73.4
State Penitentiary	H	1206	67.2
State Penitentiary	H	2010	64.3
State Penitentiary	H	1824	63.8
E. S. McKinney	H	1791	62.7
State Penitentiary	H	1788	59.0
Burbank Co.	H	1598	59.0
State Penitentiary	H	1698	57.7
State Penitentiary	H	1866	56.0
State Penitentiary	H	1536	55.3
State Penitentiary	H	1680	53.8
State Penitentiary	H	1554	51.3
State Penitentiary	H	1524	50.3

Breeders Have Outing.

Inspiration for the members of the Linn County Cow Testing association, encouragement for the Jersey breeders and a general good time for all were realized by those who attended the picnic of the Linn County Jersey breeders and Linn County Cow Testing association last month. R. L. Burkhart and wife were hosts and the picnic was held in the beautiful grove on their dairy ranch on the edge of Albany, Ore. In spite of the busy season nearly 200 members, neighbors and friends gathered. Mr. Burkhart has imported Island cows, as well as American bred, of the most fashionable strain and individuality that compels admiration. His herd is headed by two richly bred bulls, Moose of Fern Hill and Carnac Noble.

Mr. Burkhart keeps his cows in stanchions in the barn only while being milked and fed. He was the first man in the Willamette valley to adopt the shedding system. He does not feed in the shed. It has drop windows, which give plenty of light and ventilation, but the draft is above the head of stock. The driveway from barn to shed is of concrete. The Burkhart silo is built of tiling.

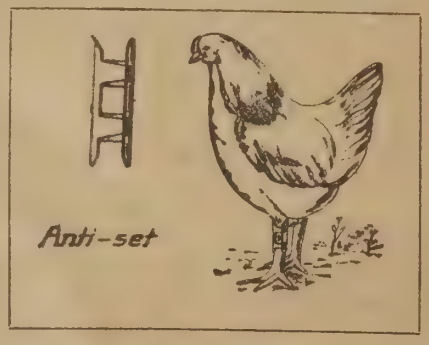
Mr. Burkhart, who is president of the club, introduced Mr. McGinnis, president of the cow testing association, who presided during the program. Patriotic selections on a victrola and songs of the same nature were a much enjoyed feature of the afternoon's program.

Professor Westover, who is in charge of the cow testing work at the O. A. C., spoke of Oregon having more breeders winning Jersey medals in 1917, than any other state. The Idaho buyers at the Forest sale came because the cows had records and it pays from every standpoint to test and know just what a cow can do. He pleaded for a cooperative spirit among breeders.

Carl Hanneman, tester for the Marion county association, said his association showed a big improvement over last year's work. He said lack of physical energy is one cause of dairymen's failure. Leaving a few drops of milk in the udder has a tendency to cause a cow to go dry and he urged that every drop should be drawn when milking.

Dr. Young, pastor of the Albany Baptist church and Dr. Gibson, pastor of the Methodist church, made brief patriotic addresses and Professor Kendall gave a humorous reading.

Professor Fitz of the O. A. C., said it is our patriotic duty to conserve food and spoke of the dairy cow's part after the war, while the beef cow and other animals can act only once.

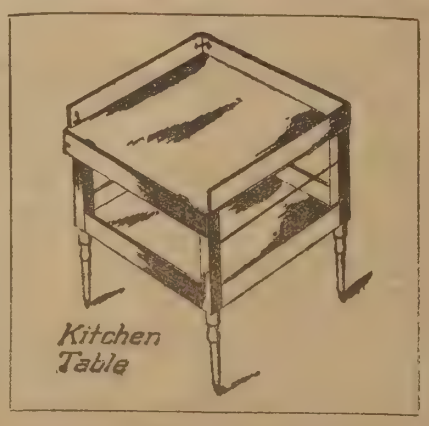


Horace Addis of the Oregon Farmer and C. D. Minton of the Pacific Homestead, each spoke briefly.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Device to Prevent Hens From Setting.



This device is a metal sleeve, which is clamped about the hen's leg in such

position that she can not bend the leg and therefore can not set.

Kitchen Table.

This table runs on casters and is used to carry dishes between the kitchen and the dining room. The sides of the top can be folded up into box shape when desired.

The Motor Car

On the Farm

Aside from its use as a means of conveyance on errands of business and pleasure, what other uses do you get from your motor car?

Of course, there are a good many cars of the lighter type that are converted into tractors. Also a number that are transformed into trucks. Some cars again are made to pump water, saw wood, grind feed, lift hay and fill silos.

We do not believe, however, that these are by any means all the chores that a good, well-broken, properly harnessed motor car can do. We believe the ingenuity of many of our subscribers has been exercised in making their cars do various kinds of stunts, an account of which would be very interesting if told about. We should like to hear from any and all of you who have "trained" your car to do useful bits of work about the farm when it isn't in use as a vehicle. Or if there is any bit of advice or information you wish at any time, we will gladly furnish same promptly by letter. In writing, address Automobile Editor, care of The Farmer, and your letter will be answered with as little delay as possible.

Plowing 50 Cents Per Acre.

J. A. Donnelly of Olympia, Wash., has been keeping books on his tractor, with the following results: Tractor plowing has cost him on the average 50 cents per acre, and the machine will turn over from three-fourths of an acre to one acre each hour. A good team will plow from two to two and one-half acres a day, and team plowing cost Mr. Donnelly from $2.50 to $3 per acre. A further consideration which enters into his calculations is that the tractor can work long hours—day and night if necessary—while the best team going will wear down under too much work.

Oversize Tires.

A subscriber wants to know just what the advantage is of equipping a car with oversize tires. There probably is little or no advantage except where the car is a heavy one, or where it is made to carry capacity loads. Recently we read the experience of a man whose car weighs about 2500. He used up six ordinary casings in two years of moderate driving. Then he equipped with oversize tires which he says he has run for over two years without a puncture or blowout. If you are accustomed to carrying good sized loads in a light car, or in a heavy car either, for that matter, the oversize tire will probably mean a good big saving in the long run.

A Damaged Flock.

Bobbie had never seen a live sheep, but one of his most treasured toys was a little woolly lamb on wheels, which he drew all about the house and yard. Last summer he went to visit his uncle, who owns a sheep ranch in the west. When Bobbie spied a flock, he exclaimed:

"You must have got them cheap, uncle, 'cause they've all lost their wheels."

RECENTLY SURVEYED HOMESTEADS NOW OPEN.

Every reader of this paper should write at once for a free copy of "The Home Seekers' and Settlers' Guide." It tells all about the rich 160-acre free farms, excellent for growing grain and mixed farming, also what others are doing. Address Canadian Northern Railway, A. A. Brostedt, D. F. & P. A., 605 Hastings st., Vancouver, B. C., Canada. —Adv.

Purebred Registered HOLSTEIN CATTLE.

Prof. Carlyle of the Wisconsin Experiment Station asserts that "It will be readily seen that the Holstein cow has the ability to digest coarser feeds and work them over to a better advantage than Jerseys and Guernseys and this is a strong point, in which I contend that the Holstein has a great advantage over any of our smaller breeds, and it is a point which is going to appeal to the farmer in the future far more than it has in the past." There's big money in the big "Black and White" Holsteins.

Baby Beef Facts

College Makes Vital Feeding Tests

By ROBERT WITHYCOMBE.

Among the various cattle feeding experiments conducted at the eastern Oregon Agricultural experiment station at Union, possibly none are of greater interest to the stockmen than the experimene pertaining to the relative cost of producing baby beef in comparison with that of 2 or 3 year old steers.

For this test the station secured last fall 72 head of good thrifty range calves with an average weight of 503 pounds. They were divided into six lots of 12 each and fed various rations. For instance, one lot received the waste hay from the beef pens, another lot had good alfalfa hay, another received alfalfa and all the grain they would eat, and the last lot received a daily ration of straw and two pounds of oil meal per head.

At the close of the winter feeding period all these were turned out on the range excepting those in one of the lots that had been on alfalfa and a full grain ration. These were placed on meadow pasture and received their full feed of grain until marketed as baby beef.

The yearlings that went to the range will be returned to their respective feed lots in the fall and it will be interesting to note whether or not those that had been roughed through the winter, so to speak, had caught up with those in adjoining lots that had received a more expensive winter ration. Or, in other words, see how much the stockmen are really losing or gaining by their usual method of caring for stock cattle.

The test is made as practical as possible, and while some of these cattle will be marketed as baby-beef others will be marketed from time to time either off grass or from the feed lot.

The experiment will not be concluded until the entire 72 head have been marketed and it is hoped that the test might be continued for several years, in order that abnormal market conditions and high cost of feed materials may not interfere materially with final results.

The baby-beef lot in this experiment consumed an average of 15 pounds of alfalfa hay and 6.6 pounds of chopped barley and made an average daily gain of 1.82 pounds per head. During the 43 days on pasture they consumed 5.9 pounds of grain and made a daily gain of .98 pounds per head. These were recently marketed at Portland, and while they were not as highly finished as they should have been, yet they made a very creditable showing on the market.

While it will be noticed that these yearlings sold for $72.55 per head, which is a big price, yet they were really fed at a loss, owing to the high cost of feed materials.

The experiment station produces its own feed; however, in calculating final results, the feed cost is based upon its market value at the beginning of the test.

The results are given in the following tabulation:

Average weight of 12 head at experiment station		798 pounds
Average weight at Portland stock yards		758 pounds
Shrink during trip 40 pounds—5%.		
Financial Statement.		
Cash sales receipt for 12 head		$870.58
Initial cost of 12 head October 25, 1916	$322.68	
13.36 tons alfalfa at $15	200.40	
7.97 tons of chopped barley at $36.50	258.05	
Labor	100.00	
1.4 months pasture at $1.00	16.80	27.35 loss
	$897.93	$897.93

Feeding Work Horses

By A. M. RICHARDSON.

Albert McKay, north of Waterville, Wash., has been feeding his twelve work horses this spring according to the system advocated by Dr. S. B. Nelson, veterinarian, Washington State College. As a result, he has done more work, brought his horses through the season's work in better condition than ever before, and has saved between three and four tons of hay. He had but one light case of colic. He has worked two three-year-old colts all the time and they are in splendid condition.

Last year Mr McKay plowed, packed and harrowed 160 acres in 25 days, with two six-horse teams. This year he did the same work in 19 days. He credits the difference to the change in his system of feeding. Heretofore he has fed his horses as practically all other farmers do, that is: grain first thing in the morning; hay and water after breakfast, just before going to the field; at noon, water, grain, hay, and water; at night, water, grain and hay.

According to the system advocated by Dr. Nelson, which Albert McKay followed this spring, the horses are watered first thing in the morning, fed grain but no hay, and are not watered after breakfast; at noon they are watered and fed grain but no hay, and no water after dinner; at night they are watered, fed hay for an hour or two, then grain, and then all the hay they will eat during the night.

This system of feeding horses will take less feed, keep the horses in better flesh, give them more life, prevent digestive disorders better than any other system of feeding we have seen tried. It is physiologically correct. Each organ in the horse's digestive apparatus does the work adapted to it and no organ is overworked. A good many men told Dr. Nelson that they fed headings during harvest and had more or less colic and founder, and wanted to know what they should do. Dr. Nelson said it was a question for each farmer to settle for himself. He could feed headings and take chances on colic, founder and the loss of a horse occasionally, or he could feed hay and grain as advocated and not have the trouble from sickness. The actual cost of feed would be practically the same. It is largely a matter of convenience.

Pushing Swine Industry

The hog is one of the most profitable animals to handle for meat and money. The various swine record associations are making every effort to promote not only their own particular breed, but the hog business generally. Among these, the National Duroc-Jersey Record association is playing a prominent part. Within the last year the association has added another office, that of field secretary. This officer's duty is to look after the promotion work and the interests of the breeders in this and other countries. For this work the stockholders selected R. L. (Bob) Hill, Columbia, Mo., who at the time of the selection was a director in the association.

Bob Hill, as he is familiarly known, will make a trip west during the month of September in the interests of the Duroc-Jersey breed and breeders, and during this time will attend the state fairs of California, Washington, Oregon and other fairs adjacent. He will be glad to meet with as many of the breeders as possible, to help them form state, county or district associations or to give any further assistance that the breeders might desire.

Those who want to get in touch with Mr. Hill on this trip should write to him at once at Columbia, Mo.

Those who are interested in Duroc-Jersey hogs should get in touch with the National Duroc-Jersey Record association at Peoria, Ill., for any information they might want.

Pure-Bred Shrothorns.

Horace W. Bush of Bonners Ferry, Idaho, has bought a yearling roan bull from the Hercules stock farm at Sprague, Wash., also five cows from the Meadow Lake herd of J. H. McCroskey & Sons of Sprague. "I think we have a good stock country," said Mr. Bush. "We intend to build up a good herd of the best blood. Our country is not much for grain, but the forage is fine."

Boys!

Win These Prize Ewes

THE Bradley Sheep Club offers sixty flocks of bred ewes as prizes to stimulate interest in sheep raising and to increase wool production.

Any boy between the ages of 13 and 17 inclusive, is eligible for one of these prize flocks. In five years the flock you win will earn enough to send you through college. This is your chance to learn a profitable industry and help clothe and feed our soldiers. Prizes awarded on merit only.

Write us for Free Booklet on Sheep Raising by Mr. Anthony Gould of the American Sheep Breeder. Full details of contest will be sent with booklet.

Wagons That Stand Up

BEAR this point in mind the next time you buy a wagon—**Columbus and Weber wagons are guaranteed to stand up under capacity loads.** You don't have to be a wagon expert to buy a **Columbus** or **Weber** wagon safely. All you really need to know is the weight of your heaviest loads. Buy a wagon marked to carry that load and we guarantee safety and satisfaction worth more to you than all the talking points of all the wagons in the market put together.

Ask any dealer who carries **Columbus** or **Weber** wagons to show you just what we mean by this statement, or write to us for full information. Our wagons have many good features—the International fifth wheel, the sandboard wear plate, link end rods, folding end gate, superior material—more features than you will find on any other wagon. All these help to give the good service, long life and economy that you get with **Columbus** or **Weber** wagons. See the wagon or write to us before you buy again.

Do not feed high-priced feed to non-producers.

The present situation demands better feeding, not less feeding.

Ship the cockerels to market when they reach a pound and a half or two pounds weight. J. D.

When feed is high do not cut down on the feed. Cutting down on the feed cuts down on the egg yield.

If a good grade of commercial scratch feed can be purchased for less than a good grade of wheat and corn, use that, but be careful of the grade.

If you know a hen that hasn't laid an egg for two weeks in July, kill her and eat her or sell her for eating purposes. The early quitters are not good layers.

Keep the pullets growing. Do not stint them because feed is high. If you do you will be wondering next winter why they don't lay when eggs are high.

Eliminate wheat, doing it gradually, and substitute cheaper grains Corn is likely to be much cheaper than wheat. If this proves to be correct, use corn instead of wheat, or part oats or barley and part corn, and feed liberally on bran and shorts or middlings.

Egg-Eating Hens

My chickens eat the eggs as fast as they lay them. Could you tell me how to stop them? It is not one alone that eats them, but all of them have a hand in it. Some say to cut the end of the bill off."
—Dewey Churchill, Tenino, Wash.

To stop egg-eating by the hens the important things are, first, to furnish them with animal food enough and with plenty of lime or shell-making material. The hen eats the egg usually to balance her ration. She must have certain amounts of animal food and shell material. With a hopper of meat scrap or milk before them all the time they do not often learn to eat the eggs. That is a question of feeding.

Sometimes a broken egg on the floor or in the nests will start the habit. That suggests the idea that anything that will prevent the eggs from getting broken, or if broken, from the hens seeing them, will often prevent the trouble. The nests therefore should be in a rather secluded or dark place, two feet from the floor or better. It is a good plan to have the entrance to the nests at the back, with the front and top of the nests covered. In this way the eggs are not exposed to the view of the hens on the floor. Another point: There should be plenty of soft straw or hay in the nests all the time to prevent eggs being broken. A hen in laying rises a little in the nest and if the egg drops on a bare board it is liable to break or crack. A broken egg is the beginning of the vice. This is a question of mechanical arrangement of the nests.

There is another point that is important, and this has to do with the management of the flock, which should not be overlooked. It is mostly the closely confined hens that eat eggs. A hen that is more or less idle is looking for trouble, and she usually finds it in one way or another. Satan finds some mischief for idle hens to do. A hen that is busy hunting for legitimate food in a legitimate way very seldom will be caught eating eggs. Hens that have free range and spend a good deal of their time hunting over the farm for food are not often egg-eaters. If they spend most of their time in the house, there should be plenty of straw litter on the floor and their grain should be thrown in the litter, enough at a time only to keep them scratching as much and as long as possible.

So we see in preventing egg-eating by hens we have an argument for good feeding, good housing, and good management. I hardly think breeding or heredity has anything to do with it. It is an "acquired characteristic" that is not inherited.

As to a cure for the habit, I do not think there is any very certain cure. Blowing the contents of the egg out and filling it with a paste of mustard, then laying it on the floor for the hen to eat may sometimes give her such a bad taste in the mouth that she will not try it again. Throwing china eggs around on the floor sometimes helps. Trimming the beak, I do not think, is very effective. Sometimes the best and only cure is to kill the hen.

But try the darkened nests, and more nests; feed more meat scraps or milk, then keep the hens busy. J. D.

Heredity Governs Value

To the Editor: I have some choice purebred single comb White Leghorns that are 2 1-2 months old. A neighbor wants them and wants to pick out my pullets only. Can you tell me about what price they should bring?—N. B. D., Bend, Ore.

The value of the chicks will depend, first on the value or cost of the eggs from which they were hatched; second, on the cost of the feed consumed in raising them; and, third, on the value of the labor expended in rearing them. As to the cost of the eggs used, if they were ordinary eggs, worth so much a dozen for market purposes, the initial cost of the stock need not be much, unless, as sometimes happens, it takes a dozen eggs or so to produce one chicken. If the eggs, however, are from high-priced breeding stock the egg cost will be a considerable item. The fact that they were "choice purebred White Leghorns" does not indicate their real value. White Leghorn eggs can be purchased often at market price by the dozen. But if it is high-priced stock; if for instance, it is 200-egg stock, the hens having actual records of over 200 eggs in a year, and the owner has paid $10 apiece for them or more, then the value or cost of the eggs would be proportionately more. Ordinary purebred chicks can be purchased when a day old at 10 cents each. Chicks that are from selected heavy layers are worth more than twice as much, say 25 to 50 cents, depending upon on how highly bred they were for eggs. Sometimes a dollar apiece is paid for eggs for hatching; I have had such offers for eggs from our heavy-laying college station stock at Corvallis, Ore. Such chicks start out in life with a considerable load to carry. If it takes two eggs to produce one chick, as it often does, the chicks start out with an initial cost of $2. But no one should pay such prices unless he "knows chickens" and knows exactly what he is getting.

The cost of the chicken at two and one-half months or any other age depends first on the cost of the egg or eggs used in hatching it. The large commercial hatcheries charge in the neighborhood of 10 cents apiece for day-old chicks. Such chicks have no particular breeding. They may be pure bred, but they haven't been bred up for several years for heavy production by an accurate trapnest system of pedigreeing. Such pedigreed chicks are worth more because they have cost more to produce. The chick may be produced by ordinary farm methods at 5 cents each on an average. With eggs at this year's prices they will cost more. Supposing we charge up 5 cents as the cost of the chick. Add to this 35 cents for feed and labor and the chick has cost at two and one-half months 40 cents. Selling it at 50 cents the poultryman is making a profit of 10 cents a chick. It will pay the purchaser to pay a dollar each if they are from stock of a proved heavy laying strain rather than 50 cents for average stock.

The term "single comb white leghorn" or "rose comb Rhode Island Red" does not indicate anything as to whether the chick is worth 50 cents or 100 cents. There are very good layers among them and there are very poor layers and you don't know what they are worth or how many eggs they are likely to lay unless you know something of what their mothers, grandmothers and great-grandmothers on both sire's and dam's side, laid before them. It is heredity that fixes their value. J. D.

Difficult, Indeed!

Stranger—Why don't you try to cheer the baby up?

Little girl—Say, did you ever try to cheer anybody up who'd ate five benanas an' a half pound o'citron candy?

SILO A NECESSITY?

Cost Not Considered Prohibitive.

By C. C. BROWN, Castle Rock, Wash.

A number of silos have been put in Cowlitz county this year and will make a decided change in the order of farming. The silo is essential on every farm where stock is kept, some claiming that the ensilage furnishes just what the chickens and hogs need for perfect health during the winter months. The price of a silo either home-made or knocked down by the companies building them is not prohibitive. For the small difference in cost between the factory built and home-made, the general impression is that the factory has the preference over the home-made. The picked lumber and other material give satisfaction and results. More corn has been sown around here this year for the silos than in former years, and where clover is a short crop vetch and peas are taking its place for a filler for the silos.

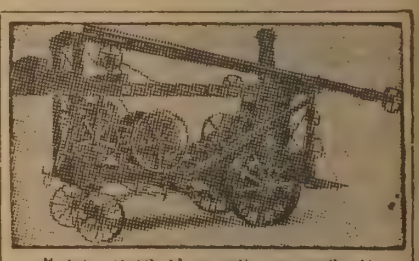
FAIR JUDGES NAMED.

Experts Will Place the Ribbons.

The state fair board has announced the list of judges who will score the live stock exhibit this fall at the fair at North Yakima. The list is as follows: Dairy cattle, Professor H. H. Kildee, Minnesota university; beef cattle, John L. Smith, Spokane; swine, Professor William Hislop, Pullman; sheep, Professor C. E. Howell, Pullman; dairy and cheese products, G. E. Fervert, Salt Lake City; draft horses, C. F. Monroe, Grays Harbor; poultry, James A. Tucker, Royal Oaks, Mich.

Children's Day at Fair.

The annual fair held by the Okanogan county Pomona grange in October will set apart one day exclusively to the school children of the county. Frank G. Graham, president of the Pomona grange, has named the following fair committee: W. T. Beals will be secretary, and the committeemen, as far as named, are W. C. Ostenberg of Malott, John Chalmers, Okanogan; J. L. Freeman, Tonasket; U. E. Fries, Brewster; County Agriculturist Walter A. Holt and Superintendent of Schools Geargian Donald.



THE BEST LINIMENT
OR PAIN KILLER FOR THE HUMAN BODY
Gombault's
Caustic Balsam
IT HAS NO EQUAL

For the Human Body —It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Exterior Cancers, Boils Corns and Bunions CAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

A Perfectly Safe and Reliable Remedy for

Pull-U-Out
The little thing with the big pull

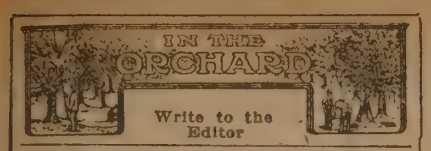
Consists of a winding drum, lever crank, 40 ft. of steel cable, two 7 ft. chains and 3 stakes. Weighs only 28 lbs. and fits in space 4x8x14 in.

Pull-U-Out makes child's play of heavy lifting jobs

Easily rigged for similar jobs anywhere

Here's the most wonderful little machine ever invented for farmers. It combines two things—a rescuing device for your automobile and a machine that will do hundreds of lifting and pulling jobs on the farm, easily and quickly. It saves a world of back ache and is worth its weight in gold.

Pull-U-Out fits into the tool box of your auto, yet is so powerful that it will pull a 5,000 lb. auto out of hub-deep mud without delay, expense, trouble or damage to car or clothes. Lifts 2,000 lbs. dead weight; pulls 100,000 lbs. on wheels.



No motorist, however experienced and careful, should venture out, even on the best of roads, without Pull-U-Out, because accidents come *suddenly* —without any warning. Trouble is lurking every where. You may get stuck in the mud, skid into a ditch or overturn. It is then that you will bless the day you bought a Pull-U-Out. With powerful, inexpensive little Pull-U-Out in your tool box you need never fear road conditions; you can go wherever your business or fancy leads you. If you meet with an accident you *know* that you have *immediate* and efficient help right at hand. Don't wait for an accident to make you wish you'd bought a Pull-U-Out—buy one today.

Does wonders on the farm!

Wherever there's *any* heavy lifting or pulling to do, use Pull-U-Out. For loading and unloading wagons, scalding hogs, quartering beef, lifting wagon beds and hay racks on and off the running gear, stretching wire fences, loading baled hay, bales of cotton, sacked grain and other heavy things, Pull-U-Out is marvelous. It is light, portable and strong. Easily moved by one man from one place to another. Does lifting and pulling jobs that usually take from 3 to a dozen men.

Test it at our risk
Pull-U-Out is shipped and sold on the make good basis.
Interesting booklet—free
Tells all about Pull-U-Out, how and why it works.

Pull-U-Out Sales Co., 1444 Syndicate Trust Bldg., St. Louis, Mo.

Fights Insect Pests

By H. H. BUSHNELL.

A long time ago the Chemawa Indian school was located at Forest Grove. When it was removed to its present location near Salem, after various property transfers were made, a small patch of ground was overlooked, and lay there without any visible owner. Some man occupied it for quite a while and used it for a garden. When he moved away nobody knew who it belonged to, but a search of titles recovered it to the interior department, and now it has been turned over to the entomological office for the northwest and is being used as an experiment plot.

This office was established by the department of agriculture and its work is for the purpose of studying and combatting insect pests of cereal crops. Its jurisdiction extends into California on the south and covers Oregon, Washington, Idaho and Montana.

At the present time C. W. Creel, who is in charge of the station, is in Montana engaged in fighting those German assistants, the grasshoppers. L. P. Rockwood, one of his assistants, is also fighting hoppers in Montana or Idaho. M. C. Lane, another assistant, is in California studying the Hessian fly. Hessians were our enemeis from Germany during our revolutionary war.

J. M. Landston, a third assistant, remains at the home post and fills in his time with the study and slaughter of the clover midge.

The clover midge and the Hessian fly are the two most potent foes of the cereal growers of the Willamette valley. A great deal of work has been done on the clover midge. Perhaps a fourth of an acre is devoted to experiment plots of clover. Plots have been cut every week or 10 days in order to discover which cutting catches the midge at the time of dropping the larvae. The dates vary considerably. Last year the right cutting was about June 1. This year it appeared to be June 25; such is the difference in the two seasons.

The remainder of the ground is devoted to wheat, and in screened boxes the Hessian fly is not only permitted, but urged to do his dastard work, while keen scientists take notes of his reckless progress and make plans to ruin him.

Farmers in the state should know of this station at Forest Grove. It is established for their benefit and may prove of great value to them. The work done on the clover midge has already been of great value to those who have followed the advice furnished on the basis of past experiments.

Drying Foodstuffs

Is Excellent Way to Win the War

(Continued from page four.)

boiling soda water, and dry two to three hours at 110 degrees to 140 degrees F. Use one-half teaspoon soda to a gallon of water. Dry young and small tender pods whole. Older pods should be cut in one-fourth inch slices.

Peppers.

(a) Peppers may be dried by splitting on one side, removing seed, drying in the air and finishing the drying in the drier at 140 degrees F. A more satisfactory method is to place peppers in biscuit pan in oven and heat until skin blisters, or to steam peppers until skin softens, peel, split in half, take out seed, and dry at 110 degrees to 140 degrees F. In drying thick-fleshed peppers like the pimento, do not increase heat too quickly, but dry slowly and evenly.

(b) Small varieties of red peppers may be spread in the sun until wilted and the drying finished in the drier, or they may be dried entirely in the sun.

(c) Peppers often are dried whole. If they are large they can be strung on stout thread; if small, the whole plant can be hung up to dry.

Peas.

(a) Shell and spread on trays and dry.

(b) Shell full-grown peas with non-edible pod, blanch the peas from three to five minutes, remove surplus moisture, spread in single layer on trays and dry from three to three and one-half hours. Begin drying at 110 degrees F., raising temperature very slowly in about one and one-half hours to 145 degrees F. Continue drying one and one-half or two hours at 145 degrees F.

(c) Shell full-grown peas, passing through a meat grinder, spread on trays and dry. Whole peas take longer to dry, but when cooked they resemble fresh peas. The ground peas dry more quickly, but make a product which can be used successfully only in the preparation of soup or puree.

(d) When drying the very young and tender sugar peas, use the pod also. Wash and cut in quarter-inch pieces. Blanch in boiling water six minutes. Remove surplus moisture and dry the same length of time and at the same temperature as string beans. It is not necessary to use soda when blanching peas.

Garden Beets, Onions, Leeks, Carrots, Turnips, Parsnips, Cabbage.

Beets: (a) Select young, quickly grown, tender beets. Wash, peel, slice about one-eighth inch thick, and dry.

(b) Boil the whole beets with skin until a little more than three-fourths done. Dip in cold water, peel and slice into one-eighth or one-quarter inch slices. Dry two and one-half to three hours at 110 degrees to 150 degrees F.

Turnips: Turnips should be treated in the same way as beets.

Carrots: Varieties having a large, woody core should be avoided.

(a) Wash, peel, slice lengthwise into pieces about one-eighth inch thick, and dry.

(b) Clean, scrape or pare, and slice into one-eighth inch slices. Blanch six minutes, remove surface moisture and dry two and one-half to three hours. Begin drying at 110 degrees F. and raise temperature gradually to 150 degrees F.

Parsnips, kohlrabi, celeriac and salsify are dried by the same methods.

Onions: (a) Select well-matured onions and remove the outside papery covering. Cut off tops and roots. Slice into one-eighth inch pieces and dry quickly. Store in a light-proof container to avoid discoloration.

(b) Wash, peel and slice onions into one-eighth to one-quarter inch slices. To avoid any unpleasantness, peel and slice while holding under water. Blanch in boiling water five minutes. Remove surface moisture and dry two and one-half to three hours, beginning at 110 degrees F. and raising temperature gradually to 140 degrees F.

Leeks are handled in a similar manner, cut into one-quarter inch strips and dried.

Cabbage: (a) Select well-developed heads of cabbage and remove all loose outside leaves. Split the cabbage, remove the hard, woody core, slice the remainder of the head with a kraut cutter or slicer, and dry.

(b) Shred or cut into strips a few inches long. Blanch 10 minutes, drain, remove surface moisture, and dry three hours at 110 degrees to 145 degrees F.

Spinach and Parsley.

Spinach that is in prime condition for greens should be prepared by careful washing and removing the leaves from the roots. Spread the leaves on trays to dry thoroughly. Slicing will greatly facilitate drying.

Parsley should be treated in the same way as spinach.

Beet Tops, Swiss Chard, Celery and Rhubarb.

Beet tops: Tops of young beets in suitable condition for greens should be selected and washed carefully. Both the leafstalk and the blade should be cut into sections about one-quarter inch long, spread on screens, and dried.

Swiss chard and celery should be prepared in the same way as beet tops. Celery also may be prepared in the same way as pumpkins and summer squash.

Rhubarb: Choose young and succulent growth. Prepare as for stewing, by skimming the leafstalks and cutting into pieces about one-quarter to one-half inch in length. Do not use the blade of the leaf.

Cauliflower.

Clean, divide in small bunches, blanch six minutes, and dry two to three hours at 110 to 145 degrees F. Cauliflower will turn very dark when drying, but will regain part of the color in soaking and cooking. Dried cauliflower is especially good in soups and omelets.

Brussels-sprouts may be handled in a similar way, but add a pinch of soda to the blanching water.

Pumpkins and Squash.

(a)—Select sound, well-grown specimens. Cut into strips; peel these; remove all seeds and the soft part surrounding them. Cut strips into smaller bits not over one-fourth inch thick and two inches long, and dry.

(b) Pare and cut into about one-half inch strips and blanch three minutes. Remove surface moisture and dry slowly from three to four hours, raising temperature from 110 to 140 degrees F.

Soup Mixtures.

Each vegetable used in the soup mixture is prepared and dried separately. They are put together in proportions desired, the prepared flavoring vegetables predominating. A combination of several vegetables makes the most desirable soup mixture. Those most often used are carrots, cabbage, onions, celery, potatoes and okra.

Herbs.

Celery tops, parsley, mint, sage and herbs of all kinds need not be blanched, but should be washed well and dried in the sun or in the drier. These are good for flavoring soups, purees, gravies, omelets, etc.

Apples, Pears and Quinces.

Early varieties and sweet apples are not well adapted to drying. Winter apples should be used for this purpose.

(a) Peel, core, trim and slice one-fourth inch thick. Dip in weak salt solution containing eight teaspoons of salt to one gallon of water. Spread on trays and dry. It is only necessary to dry apples long enough for them to become tough and somewhat leathery.

(b) Pare, core and cut into eighths, or core and slice in rings, using fruit or vegetable slicer. As apples discolor quickly, do not let them stand long before drying. To prevent discoloration, as the fruit is prepared it may be dipped for one minute in a cold salt bath, using 1 ounce of salt to 1 gallon of water. Remove surplus moisture and dry at 110 degrees to 150 degrees F., raising temperature gradually. Dry from 4 to 6 hours, and longer if necessary.

Pears are dried in the same way as apples. They may be steamed 10 minutes before drying.

Quinces are treated in the same way as pears.

Raspberries.

(a) Sort out imperfect berries, spread the selected berries on trays, and dry. Do not dry so long that they become hard enough to rattle. The drying should be stopped as soon as the berries fail to stain the hand when pressed.

(b) Pick leaves and stems from fruits and spread on trays. Handle carefully and do not bruise. Spread in thin layer on tray and dry slowly. Raise temperature gradually from 110 degrees to 125 degrees F. in about 2 hours. Do not raise temperature higher than 130 degrees F. until a considerable portion of the moisture has evaporated, as otherwise expansion will occur and juice will be lost by dripping. This is accompanied by loss of flavor and color. Finish drying berries at 140 degrees F. for 2 to 3 hours. It is necessary to dry berries from 4 to 5 hours.

Blackberries, dewberries and huckleberries can be dried in the same way as raspberries.

Peaches.

Peaches usually are dried unpeeled, but they will be better if peeled before drying.

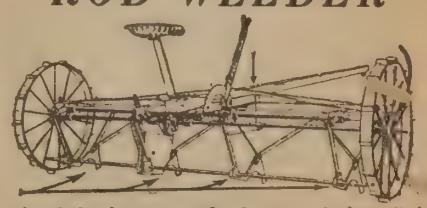
(a) Remove the stones, cut the fruit into halves, or preferably into smaller pieces, and spread on trays to dry.

(b) Cut in halves, pit, lay in trays pit side up, and dry at same temperature and for same length of time as apples.

Plums and Apricots.

Plums: (a) Plums are not peeled, but the pits are removed, the fruit being cut into halves and dried in the same way as peaches.

(b) Select medium-ripe plums, cover with boiling water, cover the vessel and let stand 20 minutes. Small, thin-fleshed varieties are not suitable for drying. Drain, remove surface moisture, and dry from 4 to 6 hours, gradually raising temperature from 110 degrees to 150 degrees F.



Apricots are handled in the same way as plums.

Cherries.

(a) Remove stems of cherries and, if the fruit is large, the pits also. Spread out on trays to dry. Small, black cherries can be dried when containing the stones.

(b) Wash, remove surface moisture, and spread cherries, unseeded, in thin layer on trays. If cherries are seeded there will be a loss of juice. Dry from 2 to 4 hours at 110 degrees to 150 degrees F. Raise temperature gradually.

Opportunity for Owner of Rig or Automobile

THE publisher of **The Washington Farmer** wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are offering these positions only to farm owners or renters and are paying good salaries to workers who had no experience in this line before accepting our offer. In almost every neighborhood there is an opportunity for building up a successful business. Perhaps this is the very chance you want to earn some extra money.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month, or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter.

THE WASHINGTON FARMER
Review Building, Spokane, Wash.

Two Dollar Wheat?

Senate Favors This as a Minimum

With a view to stimulating the greatest possible production of wheat in the year 1918, the United States senate has passed the house food control bill with an amendment placing a minimum price of $2 a bushel on No. 1 hard northern wheat at interior grain centers. Other wheat would be regulated in like manner, different varieties and grades having prices corresponding. This regulation would govern both the 1917 and 1918 crops. This would amount to a guarantee to the farmer of a good price for his grain, fixing only the lower limit and not the upper limit of the possible price to be obtained.

This action by the senate, however, does not mean that the measure is finally passed with this provision. The bill originated in the lower house of congress, and now must go back for approval there as amended by the senate. Conference committees are this week working on the amendments with a view to getting the food control bill ready for final passage after the long delay that it has experienced in the senate. There are many amendments attached by the senate, each of which will likely cause more trouble and delay.

The measure as it came from the house approved the president's plan to place the food control under one man, to which position he already has appointed Herbert C. Hoover. The senate amended the measure so as to require a board of three instead of one for food control. It is known that President Wilson and his close advisers favors the one-man plan, and will make an effort to have the conference committees agree to eliminate the senate amendment on this matter.

Another matter of difficulty in the measure is the substitution by the senate of a section prohibiting distilled beverages, but not malts, during the war, for the house bone-dry section. This is in conformity with President Wilson's recommendation, but is sure to meet with strong opposition in the house, and also from certain senate members who favor bone-dry legislation.

The bill as it now stands places in the hands of the administration, through the proposed commission of three men, the control of foodstuffs, feeds and fuel, including gasoline and kerosene. It also contains an appropriation of $10,000,000, made by senate amendment, for purchase by the government of soda nitrates for use as fertilizers in the nation-wide attempt to increase food production.

It also provides stringent regulations whereby the president could exercise broad control over cold storage plants and grain exchanges that were found hoarding foodstuffs or manipulating prices to the detriment of the public and of the allied governments engaged in the struggle with Germany.

Russians Are Checked.

The activities of the Russian army in the Galicia region apparently has received a vigorous setback by the German reenforcements that were rushed to the aid of the Austrians. For two weeks the Russian armies drove fiercely and desperately into the Austrian lines, gaining much coveted ground. Seeing the distress of their allies, the Germans hurried to their assistance and it seems have delivered a telling blow. A breach eight miles wide and 10 miles deep in the Russian lines is said to have been made.

With a view to reinspiring the Russian soldiers for more vigorous defense and a new movement of aggression, Premier Kerensky, who started the first successful offensive, has again gone to the front, according to latest reports.

Activity has been less marked of recent on the French front, though battling continues there. No reports of important successes or defeats on the part of either side have been received for several days.

The Submarine Situation.

It is apparent that Germany is still placing supreme confidence in her submarines to win the war or so cripple the effectiveness of England and her allies as to permit the armies to rush to victory. That the submarine is not as successful as Germany had hopes is indicated by the latest report, which shows that only two weeks since the inauguration of the submarine campaign has the loss to allied shipping been as low as during the last week officially reported, July 11-18.

The following figures show the weekly losses to allied shipping since the beginning of the campaign, the ships being classified as those of over 1600 tons capacity and those under that capacity:

Week—	Over 1600 Tons.	Under 1600 Tons.	Small Craft.
First	14	9	3
Second	13	4	3
Third	16	8	21
Fourth	19	7	10
Fifth	18	13	6
Sixth	17	2	6
Seventh	19	9	12
Eighth	40	15	9
Ninth	38	13	8
Tenth	24	22	16
Eleventh	18	5	3
Twelfth	18	9	3
Thirteenth	18	1	2
Fourteenth	15	3	5
Fifteenth	22	10	6
Sixteenth	27	5	..
Seventeenth	21	7	..
Eighteenth	14	3	7
Totals	385	149	128

Grand total, 622.

Air Army Bill Passed.

The United States senate has passed the house bill appropriating $640,000,000 for the financing of this country's great aeroplane development. Under the provision of the measure and the plans of the war department there will be constructed as rapidly as possible 22,000 airships, and a force of 100,000 trained men will be developed to man them.

The aeroplane bill was fought bitterly by a number of senators, led by Senator LaFollette of Wisconsin, who opposed the provision in it by which men could be drafted into the service to operate the planes.

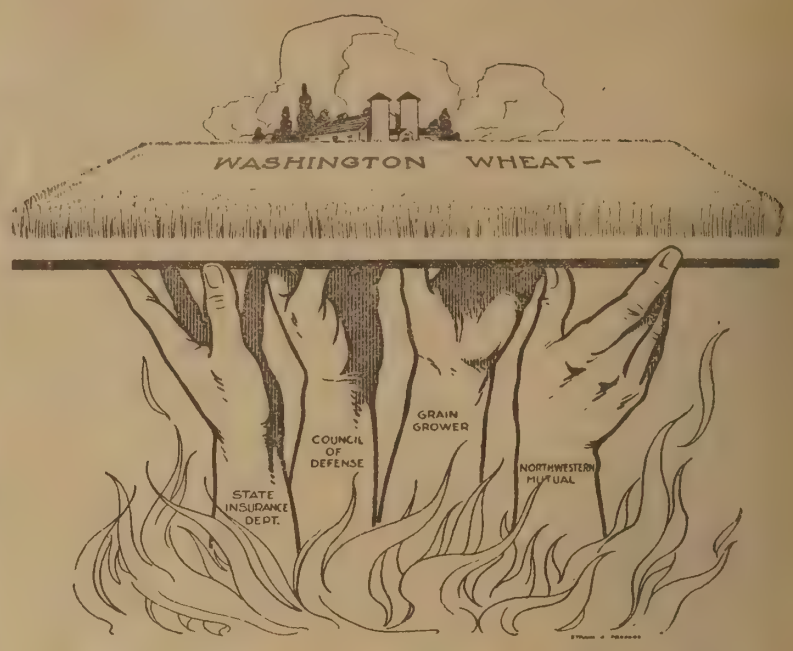
ALLOT LIBERTY BONDS.
All Small Bonds to be Issued.

Every applicant for a small Liberty bond during the nation-wide campaign for their subscription early in June will receive his bond, according to Secretary W. G. McAdoo of the United States treasury department. Only the subscriber for a bond in excess of $10,000 will have the size reduced. This is due to the fact that there are applications on file for bonds totaling over $3,000,000,000 when the total issue was only $2,000,000,000. Every subscriber, however, will secure a bond. The following table indicates what percentage of the bond subscribed for by any individual will be issued to him by the government.

Size asked.	Percent to be issued.
Up to $10,000	100 per cent.
$10,000 to $100,000	60 per cent.
$100,000 to $250,000	45 per cent.
$250,000 to $2,000,000	30 per cent.
$2,000,000 to $6,000,000	25 per cent.
$6,000,000 to $10,000,000	21 per cent.
$25,000,000 (two such applications)	20¼ per cent.

Economy in Powder.

By J. R. MATTERN.



The war naturally has had the effect of raising powder prices several cents on the pound over what they were a few years ago, and many land clearers have been reducing their use of powder accordingly. This is a wrong viewpoint, for recent improvements in both powder and methods of using it make possible cheeaper stump removing today than ever was possible before. In respect to powder, the development largely has taken the form of a turn from nitroglycerin to ammonia. The old way was to dig a hole under a big stump and load in a single large charge. If enough powder was put in the stump was blown out—together with enough dirt to leave a hole as big as several horses in some cases. Quite often, however, the single charge failed to take out a large part of the stump, even while throwing the other parts long distances.

The new method of firing several charges together by means of electric current does away with the waste of powder required in the excessive single charges, insures the complete removal of the stump with all its roots, and makes holes little bigger than the underground parts of the stumps themselves. The greater efficiency of the elecetric firing method comes from hitching the force or power shorter to the load it must lift.

First Car Trinidad Wheat.

The first carload of this year's wheat was shipped from Trinidad, Wash., July 23, when W. P. Gilbert of the Columbia View farms shipped a load of Early Baart to Seattle, receiving $2 a bushel for the same. Mr. Gilbert has 1500 acres in crop and it will average 18 bushels to the acre.

COOPERATION!

United Action Will Lift State's Wheat Above the Fire Danger Zone

Lift your wheat crop to the safety level above fire-danger!

By close cooperation Washington's wheat may be saved 100% strong for hungry mouths that look to the Inland Empire for bread.

In the fight for safety the grain grower may call to his assistance three powerful forces—the State Insurance Commissioner (fire marshal), the State Council of Defense, and the Northwestern Mutual Fire Association.

Including the grain grower himself, here is a quartet that will transform danger into safety, and will enable the state to do its patriotic duty in delivering all the grain the wheatfields yield.

The Insurance Commissioner is laying down wise regulations for protecting the growing grain and is urging the formation of fire-fighting forces; the Council of Defense is strengthening local authorities and arousing people to action through grain-producing sections, while the Northwestern Mutual has released its entire field force to cooperate with the grower in every possible way.

Remember, insurance is as necessary as ever, but it does not restore burned grain or feed the hungry.

Consult any Northwestern Mutual representative, or write TODAY for fire fighting suggestions that may save your own and your neighbor's grain.
Delay may be fatal. ACT NOW!

Northwestern Mutual Fire Association

The Story of the War
Vividly Told

Subscribers to The Twice-a-Week Spokesman-Review are kept closely informed regarding the great world struggle into which our country has been drawn. It prints the facts regarding the gigantic war preparations, the tremendous battles, and the political maneuverings and intrigue which are taking place far back of the battle lines. No one will be considered well educated by his neighbors if he or she is unable to talk intelligently about these and other events which are taking place in these stirring times.

Accurate Information

The Twice-a-Week Spokesman-Review will keep you accurately posted regarding local, state, national and world affairs. It is complete, reliable, and condensed for busy readers. Being a member of the Associated Press, the important happenings are flashed to it instantly from every capital and village, and from ever far-flung battle line.

Special Offer Is Repeated

Hundreds of our friends have already taken advantage of the offer below; but we are repeating it as we believe many hundreds more will wish to secure their state farm paper in combination with The Twice-a-Week Spokesman-Review.

Twice-a-Week Spokesman-Review for 1 year regular $1.00
The Washington Farmer for 3 years if subscribed for a year at a time ...$3.00

Total value $4.00

Our Special Price for Both, $2.00

Big things are happening this week. Big things will happen next. To get the facts about these events, send in your order at once. Paid ahead subscriptions will be advanced from the dates to which they are paid.

JORDAN
Being a Tale of Boys, Bees and Brawn

By PAUL E. TRIEM

"As Walter Kenedy finished roping his trunk, he heard his father enter the kitchen. Something in the firm and heavy step and in the other home sounds that formed a background for it—the strident voices of chickens in the yard and the lowing of cattle in the south pasture—something in all these familiar noises brought a lump into the boy's throat. Mechanically he puckered his lips and began to whistle.

"On Jordan's stormy banks I stand, and cast a wistful eye——"

Then he blinked something very like tears out of his eyes and went downstairs into the living room.

Mr. Kenedy was wraping a bundle of mail. He turned, at the sound of his son's entrance, and stood for a moment silently regarding him.

'Well, Wally," he said, "I guess we're all ready for town. Is your trunk roped?"

Walter nodded. He didn't feel like talking, for even his favorite song had failed to banish that queer feeling in his throat.

Mr. Kenedy seemed not to notice the boy's silence. His own keen, gray eyes rested meditatiely on the stalwart figure of the youngster, and he nodded.

"Wally," he continued, "when a boy leaves home for the first time, his father usually gives him a sort of lecture on how he is to behave while he is away. I don't believe that's necessary with us—you and I have been chums for pretty close to seventeen years now, and you know what I think about most of the things that come into living. The details of existence may be different in one place from what they are in another, but the principles are the same the world over. There's just one thing I've thought of that it may be worth while to mention: in school, you'll find a good many youugsters who have never done any work and who will look down on you because your clothes aren't quite as fancy as theirs and because your hands are big and strong. Now I want you to remember that a boy who can finance his own schooling by working 80 acres of land in addition to helping his father, hasn't anything to be ashamed of. And on the other hand, I don't want you to admire yourself too much, nor to look down on the boys who don't understand you. There's no virtue in being misunderstood, and it's neither good business nor at all comfortable. Try always to get the other fellow's point of view, and learn to make him see yours. That's half the art of getting on in this world."

Walter nodded. Truth to tell, his father's advice made little impression on his attention just then, but he remembered it afterward.

His first duty after he had landed in the little middle western college town was to engage a room, have his trunk brought up from the station, and visit the registrar. After paying his tuition he went to the president's office and arranged his studies for the spring term.

"Too bad you couldn't have started with us in the fall, Mr. Kenedy," the kindly man who helped him with this commented. "It's always a little hard taking up work in the middle, as you are doing."

"I couldn't get away from my work earlier,' Walley explained. "And I've been studying at home, nights. I think Ill be able to get along."

President Allen looked from the strong, clean face to the sturdy figure of the new student. Perhaps it took him back to a time when he, too, was a country boy, starting at the foot of the education ladder.

"I think you will," he agreed.

And if there had been nothing to do but to prepare lessons and recite them, Walter would certainly have held his own without much effort. His exuberant vitality gave him a fund of reserve energy upon which to draw, and the fact that he had had to earn the privilege of attending school made him eager to get ahead. But there were other things—

He wasn't really shy, but he was not accustomed to the quick shifting and clashing of thought and conversation which life in the city cultivates. He took time to think before he asked a question or answered one, and although this saved explanations in the end, it gave his speech the appearance of slowness. Some of the teachers misunderstood this deliberation; more of them appreciated it; but among his fellow students, Walter quickly came to be considered a "bone head." For some time he failed to notice the signs of gathering amusement at his expense. Then, very unexpectedly and brutally, as is apt to be the way with youngsters who have not yet learned in the university of hard knocks the supreme lesson of tolerance, the awakening came.

It was at the first meeting of the Choral club. Walter attended, together with many others of the new students. He liked to sing, and only regretted that in the preliminary exercises, which consisted of singing various songs evidently well known to the other students, he was unable to join. Selections were called for.

"Don't be bashful, fellows," Don Carlson shouted from his position on the platform. "This is just a little get-together meeting—we'll sing the bashfulness out of ourselves, and then get down to organizing. Who has something else for us to try our lungs on?"

Apparently most of the favorites had been selected, for there was a pause of some moments' duration. Wally cleared his throat.

"We .haven't sung 'On Jordan's Banks,'" he said. "'On Jordan's stormy banks I stand—' you all know it."

For a moment there was silence in the big room. Everybody had turned and was regarding Wally with undecided curiosity. Very evidently he was in earnest, however, and next moment the whole concourse had burst into a roar of laughter.

"'Jordan's banks—' I say, that's a gaod one! When did you wake up Mr. Van Winkle?" someone next him exploded.

Up on the platform, Don Carlson was pounding the table for order. "Come, come, fellows—somebody else suggest something—something up-to-date, if you don't like 'Jordan!'"

Wally's face flushed slowly as he sat back in his chair listening to the amused titter which still sounded around him. "Up-to-date"—that was why he had not known any of the songs they were singing! And Jordan was old! For the first time he realized that a gulf separated him from these gay and dashing young fellows around him. He sat silent through the rest of the meeting.

He was making his way thoughtfully and somewhat bitterly home across the college grounds, with their winding paths and shrubbery and their broad, open lawns, when a voice hailed him.

"Hey, Jordan! Wait a moment!"

He turned and saw two well dressed young fellows of about his own age coming along the path behind him. One of them was Don Carlson. The other he recognized as Jimmy Spicer, one of the school's star athletes. They came up with him next moment, and Spicer looked at him as if Wally were a new variety of bug or fossil.

"I say, Jordan, do they still sing that kind of thing where you come from?" he demanded incredulously. "I'm asking for information—'data on the folk customs of the rural population,' old Tucker would call it."

Professor Tucker taught various English and rhetorical subjects, Wally remembered, and his eyes grew hard and bright as he understod the slur.

"We do more than sing where I came from," he replied quietly. "We work, hard and long, and when we do have time for singing , the old fashioned songs are good enough for us. I'm sorry I didn't understand the kind of people I was among," he added.

"Come, come, now fellows," Don Carlson protested amiably. He was a blue-eyed, genial boy with a flaxen pompadour and a gift for diplomacy. "The dean says the real purpose of education is to broaden our understanding and sympathy. Let's show that we're beginning to learn our lessons by forgetting these little differences—as Shakespeare says, 'Every man sings the same tune when he's hit with a brick!'"

Jimmy Spicer fell silent, but the smile of superiority did not leave his face. The three journeyed together across the square that formed the college grounds.

"So long, Jordan!" Spicer said, as they parted.

And that name stuck, long after the Choral club incident was forgotten. It stuck, and it carried with it something of condescension and superiority which would have humiliated many a boy. Wally had remembered his father's parting advice, however, and he was determined to retain his own perspective, his own fairness of vision, even if he could not force his fellow students to look upon him with the same tolerance.

"There's no virtue in being misunderstood, and it's neither good business nor at all comfortable!"

He knew that now, and he was resolved that some way, some time, he would force these debonair students around him to see him as he saw himself—not a "little tin god on wheels," but one like themselves in honesty and ambition and in a liking for a good time.'

That time was long in coming. With the full swing of the spring work Walter found himself more and more forced back upon his own companionship and resources. Don Carlson some times stopped to talk with him, when they met on the snow-blanketed campus or in the corridors of one of the school buildings; Jimmy Spicer occasionally condescended to bestow upon him a supercilious, "How are you, Jordan?" But he had made no real advance into companionship with any of the many students, and in his none too cheerful room in the boarding house he spent many a long hour grinding at his lessons.

Once, for a few minutes, he sprang into prominence. It was after the snow and ice had vanished, and the lawns had reemerged, apparently greener and more luxurient than ever, from under their winter covering. Wally had crossed the college grounds from the rear and had just rounded the corner of the recitation hall when a huge twisting ball rolled in front of him. He stepped precipitately back,

REMINGTON UMC
Wetproof
Steel Lined Shot Shells
The test that really proves something

A sportsman on the Pacific Coast, in a spirit of "show me," put a half dozen of the new Remington UMC Wetproof Shells into a bag and placed them, bag and all, in a pail of water for a three hours' soaking.

Then he rubbed and tumbled the bag and shells together—just the way wet shells would be rubbed around in the pocket of a hunting coat.

The shells were then dumped out onto an oil-cloth-covered table—unaffected by the soaking and rubbing, except for a slight fading of color.

Next he cut one of the shells through with a knife—and found both powder and shot perfectly dry.

Stiff pressure with the thumb showed that the crimp was still firm.

Comparison with a dry shell proved that the body had not swollen.

Then he worked the remaining five soaked shells through the magazine of a Pump Gun, and found them as quick and sure fire as though they had never been near the water.

This is the severest test of wetproofing a shell has ever been through—and one that only these Remington UMC Wetproof Shells would stand.

They make your shooting independent of climate. They are the shells you want.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK.

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XX.

Telling of a certain fiendish, yellow cat, possessed of an evil spirit that made life miserable for Madden, a Chinaman who kept a "washee house" in Coulee City when that place was "wild, woolly and full of fleas."

In pioneer eastern Washington 25 to 30 years ago you met two classes of people—one whom you were glad to meet; and another class whom you had little to gain, and a little to lose, maybe, in meeting.

The ones you enjoyed meeting were the pioneers there ahead of you, who, like you, were poor. Everybody was poor. Everybody was hopeful of the future. No man thought he was better than his neighbor—and if he did, he was at once pronounced a misfit in the country, and the weight of public opinion generally helped him to other climes.

Philip McIntee, cattleman and pioneer, the first mayor of Coulee City, who built his log cabin among the sagebrush and greasewood of the Grand Coulee long before Coulee City had been heard of, was typical of the old-time pioneer whom to meet was to be inspired.

He came into the Coulee country so many years ago that I am at a loss to say when; but I know he was there when the Indians were not exactly friendly. Because they were unfriendly one memorable winter, he had to get out of the country as swiftly as a tough cayuse would take him, and he saved a white woman's life by getting her out and safe to Walla Walla the same winter. This and similarly thrilling exploits were told of Philip McIntee; but of himself he said never a word. So a good deal that Philip McIntee dared and did in the early days of the Coulee country is still a matter of conjecture. But he took his chances, without a doubt, for he was in the country at a time when a white man's scalp was not safe unless he was married to an Indian woman—"squaw men" they were called; but Philip McIntee never married a squaw, and kept his scalp just the same.

We were his guests for dinner one day shortly after father had camped on the Coulee bottom ready to hunt for a farm on the surrounding bunchgrass prairie. For dinner there were potatoes boiled, unpeeled, stewed dried apples, fresh beef, baking powder biscuits made by McIntee himself, syrup made of brown sugar and water, and coffee. The syrup can set of the back of the stove, and at each meal was replenished with more sugar and more water, and served hot. McIntee and one of his cowboys got dinner. To get some sugar for the syrup can McIntee passed into the small, dark room of the cabin adjoining the kitchen which was used also for a living room. He explained:

"The plagey ants are after me shuggar, Mum; so I kapes it in the bidroom where it is dark."

His cawboys called him "Mishter MaCountey" and this nickname seemed to have appended to it, a joke of some kind at which he became greatly flustered when one of the cowboys threatened to tell it on him.

"Tell it, and I'll be landin' on ye with me skillet," he said with a red face. To my mother he apologized, adding that "the b'ys were a worthless lot, always in divilment up to their ears."

Dan Paul was another old-timer who came into the country years before others thought of coming there. Several more settlers were scattered up and down the Coulee bottom at intervals of 10 to 20 miles. One and all they welcomed later comers, such as us. In their welcome there was an actual eagerness that was almost pathetic. They wanted neighbors—some one to talk to. They insisted that you camp with your wagon and animals and children in their front yard and stay there all summer and eat with them three times a day. When they went away they left the door wide open so that you would feel free to enter and make yourself at home—and if you failed to enter and make yourself at home, they felt injured.

To see her is to love her,
And love but her forever;
For Nature made her what she is
And never made anither.

—Burns.

Those were the old-time pioneers you would have enjoyed meeting; and their inspiration continued on down into the first and second and almost to the third generation of later pioneers and settlers. Now, this grand western hospitality is getting a bit out of fashion, I think. It's too bad; but it has passed with the pioneer west.

A good many of the pioneers, or semi-pioneers, whom you would not have cared about meeting did not stay long. They had their rise when the Central Washington railway built through from Spokane to Coulee City and stopped there in the greasewood and scab-rock. A double row of pine board houses sprang up, making the main street of the town, with a livery stable at one end and the railway depot at the other; and as you passed along the street, on either side, a good many of the doors you passed opened into a saloon, all of which did a flourishing business. The town filled up with all sorts of gentry—railroad workmen; Indians, full blooded, half blooded, quarters and eighths; gamblers, drunkards, hoboes, amateur bad men and would-be toughs. On the outskirts of the town and environed by sagebrush, scab-rock and alkali flats, flourished the so-called tenderloin district. For a little while Coulee City was the real thing—"wild, wholly and full of fleas and never curried below the knees."

Cowboys who, on the wide, clean, grass range, with fire-water and its itinerant temptations a hundred miles away, were clean-minded, active fellows, turned hellward and drank like fish. One of the boys got super-hilarious one night and began to shoot through the ceiling, the windows, the walls and the floor. A man was walking by in the unlighted street; a stray bullet hit him in a tender spot. At sunup they found him there "dead as a door nail," as somebody said. The shooter was found and arrested. A jury was sworn in, and the killer got 20 years at Walla Walla.

The unique character of the town was Madden, the Chinaman who ran a "washee house" back of Hutton's saloon. One of the vaudeville artists of Hutton's saloon was a huge yellow and yellow-eyed cat that would, for the entertainment of the crowd, lap up three saucers of beer and then circled after its tail in a teetering, tipsy way which made everybody howl with delight. Madden didn't like Hutton's yellow cat.

It seems that the cat was persona non grata to the Chink, on grounds of religion, superstition, sentiment and a hatred of the whole feline tribe. Whenever he saw the big yellow creature, he cursed it as only a Chinaman can curse. He explained, one day, in the midst of a typhoon of Anglo-Chino swearing, that it was bad luck to have a yellow-eyed cat around. It developed that if anything went wrong with Madden's washing he cursed Hutton's cat. He had an immense line of washing of the snowy white kind out one day, and a southwest gale stirred up such slouds of alkali dust that he had to do all the washing over again—which he did, cursing Hutton's cat the while.

When the boys found how Madden hated the big cat they began to have some fun. While the Chinaman was out gathering his washing they would slip the yellow cat into his shanty and shut the door. Behold Madden plodding back with soiled clothing piled high on his back, and opening the door of his house to find the big, yellow cat glaring and spitting at him, or adeptly climbing the walls!

Instantly there would be a double explosion—Madden and the cat. He would hurl wood, stones, tin cans, whatever he could lay his hands on. The cat would yowl in a fiendish way and dart through the door between Madden's legs and streak into the saloon through the back door, eyes like coals and tail the size of a stovepipe.

The boys would troop out and sympathize with the cursing Mongolian. What was the matter? The damned cat! How in the world did it get in the house with the door closed? Everybody wondered, and the Chinaman swore. They would go all around the house and inside, helping Madden hunt for a hole where the cat might have gotten in, and ask him time and again if he was sure he had shut the door when he left. The Chinaman was deceived. The cat was an evil spirit beyond a shadow of doubt. He would glare and swear whenever he saw the cat; likewise would the cat glare and swear in its cat way whenever it saw Madden.

One night in a storm, when there was rain, wind and thunder, the boys slipped the cat into his shack while he was asleep. Two other cats were secured and their tails tied together in readiness, at a signal, to be hung over Madden's doorknob. A couple of the fellows carefully mounted the roof of the Chinaman's dwelling, made holes in it and let down strings to which fishhooks were attached. Receiving the signal, the custodian of the cats hung them by their tails on the doorknob and instantly there ensued a wild shrieking and snarling. Madden awoke; as he did so his bedclothes were lifted from him with a ghostly, invisible hand. He hopped out of bed with a howl; and the big, yellow cat imprisoned in the room with him turned loose with howls, yowls, growls and much spitting and hissing. Madden yelled like a maniac and the cats squalled in a way that would have disturbed the dead. He burst through the door, and after him the yellow cat, big-eyed and fur on end.

Madden, in spite of his humble occupation in America, seems to have been a Chink of rank in the Flowery kingdom, though something of a family black sheep. The cowboys asked him many questions, and often were absolutely indelicate in their questioning and surmises as to why he left China. Madden wouldn't tell. He presently would get angry, shake his fists, and shout to the effect that all China and all Chinese could go "stlaight to heiley," grab a big, hot iron and slap it on the bosom of a shirt with a mighty whack and a cloud of steam.

But, someway, he received a family forgiveness in China, or was absolved to the extent of coming into an inheritance of much money. All of a sudden the Chinaman was rolling in wealth. He made trips to Spokane and came back with half a dozen tailor-made suits of clothes, the most expensive that money could buy. He had pink, purple, red, lavender and still more gorgeous colors in neckties, and an immense tie pin made of gold wire twisted into a queer looking letter—part of his Chinese name, maybe. He wore a good watch, wore shining patent leather shoes, silk socks, gloves, sent all his laundry to Spokane—was a "sport" all the way through. He sailed into the barber shop one day and announced with a shout that he wanted his queue "cutte off." He proposed to become a white man—no more of the Chinese for him. The pigtail was amputated and the Chinaman ridiculed it as it lay helpless at the barber's feet.

The Salvation Army invaded Coulee City that winter. They held meetings in Rice's hall, opposite the Coulee post-office; and immediately there was a landslide of sinners.

There were several really pretty girls in the Salvation Army band. In voices sweet, sad, and divinely compelling they sang every night:

"In a graveyard lonely, many miles away,
Lies your dear old mother in the cold, cold clay——"

I can not remember more of the song, though it went on at some length, "skies" rhyming with "dies," I think. It had its effect; I have seen the roughs and toughs of the town weep as they heard it, and crowd to the penitent's bench up in front. One night Madden in a brand new suit of clothes, big pink tie redolent with jockey club perfumery and his Mongolian hair parted in the middle, went to the bench with them. He proposed to take on the white man's religion along with the white man's clothes, language and manners in general.

That night, the bench was pretty well loaded, and several of its occupants were somewhat "loaded." Stated otherwise, they were "lit up"—they had been drinking. Presently the bench broke. Madden's legs were caught and pinched under the broken boards with several hundred pounds of sodden humanity on top of him.

"Offee my leg!" he howled. They did not move quickly enough, so he began to swear. Those in the back of the hall began to laugh, and the merriment spread to the tangle at the demolished bench. Those who but a moment before were tearful under the very real weight of their sins and at the memories stirred by the song in which "dies" rhymed with "skies" now wept tears of merriment as the indignant and volubly discoursing Chinaman was pulled from the tangle at the bench.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University)

What a Calory Is and How It's Used to Determine Diets

Can you eat a "calory?" This is a fundamental question nowadays. A calory is neither a ghastly visitation, a wild animal nor a fearsome bugaboo of the technical "professor." It is a simple little thing equal by analogy to inches, degrees, gallons and other standards of childhood's unhappy hours.

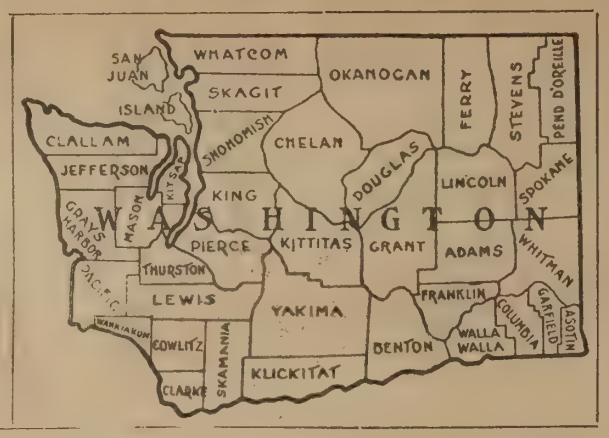
Dr. Hirshberg.

If school books taught you "how many calories there are in a pound of cheese," just as it made you memorize "how many mills make one cent" or "how many bushels make a barrel," calories would not be such odd fish and strange birds which you take them to be.

The amount of heat in a piece of bread—or any other food—necessary to raise one pound of water 1 degree is one calory. To keep the average person warm and on the go about 100 calories, the quantity contained in one serving of either half a potato, rice, barley, oatmeal, whole wheat, a banana or an orange, are necessary. Not all of these, mark you. Any one item here mentioned is a portion or a "serving," and it will raise the temperature of one pound of water 100 degrees, and that of a 200-pound man half a degree.

One tablespoonful of butter yields the human living creature 100 calories. So does an ounce and a half of steak, an ounce of beans, flour or peas. A French roll yields as many calories as a lamb chop, but in a starchy-sweet from, and not as albuminus matter. The latter, called protein, is more constructive. Proteins are the structure-making bricks and mortar of the human form divine.

Milk, fish, nuts, eggs, meats, fowl, flesh and cheese are all rich in proteins, the tissue builders. The protreins in vegetables and fruits are similar to those in flesh, fish and fowl.



To be sure, meat as human fodder is a much abused and overdone ration. Indeed, the less meat the quiet, non-muscular person eats the better it often is for him.

About three ounces of proteins are a very liberal allowance in the ordinary diet. Of man's 3000 of calories a day about 300 of them are "more than a plenty" in the form of proteins. A roll of cream cheese—a quarter of a pound—four eggs or third of a pound of roast beef yield you all the tissue fodder needed. Moreover, this relatively small yet proper amount of nitrogen will do away with much of the constipation so common among many Americans.

"Liver trouble," "indigestion," "sluggish blood" and other flapdoodle words, words which exhibit human ignorance at its worst, are terms to denote only too often constipation.

Pea Crop Badly Injured by Heat

Many Farmers Regret Planting the Land to Peas That Ordinarily Is Given a Year of Rest by a Summer-fallow.

FAIRFIELD, Spokane County, W[illegible] July 12.—Where the summer fallow in past years averaged one-third of the acreage, this year it is practically nothing. But just now many farmers are lamenting the fact that they haven't the one-third in summer fallow and less peas. The hot winds are cutting all spring sown crops very hard and especially the peas on new pea land. Many acres have already been ruined and will not make the seed back. There seems to be plenty of labor and with the light yields the stock and machinery is more than adequate to handle the harvest. This community will harvest in the same way as formerly except a new pea harvester will be tried by some farmers.

ROY G. ADAMS.

Use Combine Harvesters.

MOHLER, Lincoln County, Wash., July 13.—On account of hot weather crops are going to be much below the average in yields. Harvesting this year will be done altogether by combined harvesters. Farmers who heretofore have harvested by headers are buying harvesters.

A. S. MARLER.

No Increased Acreage.

MEAD, Spokane County, Wash, July 13.—As farmers here were utilizing about every foot of available ground, the agitation for increased production has not resulted in much increased planting over ordinary years. Prospects are poor for yields of spring grain, and rapidly growing worse by reason of continued dry and hot weather. There will be no scarcity of labor, machinery or stock to harvest crops promptly. There will be no change in methods of harvesting from that of former years by binder and threshing principally from the stack. Winter wheat, while not suffering like spring sown grain, will not yield nearly as well as the last two or three years.

GEORGE HINGSTON.

Cheerful Outlook.

LA CONNER, Skagit County, Wash., July 16.—At the present time the crop conditions seem to be very good. It is more noticeable, perhaps, in the hay crops than in others. In a number of places the oats show signs of the wet spring, but in general the outlook is very good. A great deal of the spinach has been plowed up and replaced with other crops. It appears that spinach will not do in ground that is inclined to be the least bit sour.

The beans and potatoes that were crammed into every available space seem to be making a very good showing. The late potatoes are making the best showing, as the early spring was cold and wet.

The harvesting of the hay crops is now in full blast, and there seems to be no lack of labor in the fields. In most cases the crops are good, and the farmers seem to be satisfied with the outlook.

J. W. ALEXANDER.

More Vetch and Oat Hay.

GIG HARBOR, Pierce County, Wash., July 16.—As the season advances it is quite evident that all the propaganda and publicity for increased crop production has not been thrown away. About here the increase is more noticeable among the root crops, particularly potatoes, and among the legumes, particularly peas and beans. We can not run to the grain crops very extensively here because of the lack of cleared acreage, and all the appliances needed for harvesting and threshing a grain crop. I think that I might safely say that there has been an effort among our poultry growers to produce a little more wheat, oats and peas to be fed to the chickens in the form of straw scratching material from which they can extract the equivalent of one good grain feed per day during the coming winter. I seem to see more vetch and oat hay being made this season hereabouts than I have observed during former years.

The crop prospects are fairly good in this region. The first cut of clover got caught in the heavy rain of early July with some, but for the last 10 days weather has been perfect for haying and harvesting. On the whole, the crop of roughage has been good, and secured in good condition. Root crops are looking well where planted on soils fairly supplied with natural subirrigation. Yes, it can not be denied that the increased crop production propaganda, added to the farmer's own native canniness, has increased the aggregate production of this section of the country.

W. D. BOYNTON.

No Labor Anxiety.

SPOKANE, Spokane County, Wash., July 16.—Regardless of the great effort that has been made this season for increased crop production and the cooperation of all parties concerned, it looks as though we are doomed to a great disappointment when it comes to the harvest. This would not have been the case, however, if the weather man had favored us with the abundance of rain as he usually does about the first of July. The spring crops are generally conceded to promise only half of a normal crop. This includes wheat, oats, peas and barley. Unless a rain is forthcoming within the next week it may be that the crop will be far less than half. What winter wheat there is left is in very good shape, but such a small percentage of it came through the winter last year that it is hard to estimate what percentage of a normal crop we will have.

In regard to the labor situation, there is not the anxiety that was felt before the drouth struck us. The chances are we will have plenty of labor to handle the short crops in a satisfactory way. Each community is supplied with plenty of work stock and machinery to handle their crops. Different towns have prepared to establish a local man who will get in touch with the federal labor agent in Spokane and notify this office of the needs for harvest hands. In this way it is expected to take care of the labor situation throughout the harvest season. It is generally conceded that the wage scale will be somewhat higher than heretofore, but much will depend upon the crop prospects from now on.

J. R. SHINN.

Hay Crop Almost Doubled.

CHEHALIS, Lewis County, Wash., July 16.—Seasonable June rains have about doubled the hay crop of Lewis county. Ideal haying weather the middle of July allows it to be rushed into barns in rapid-fire shape, largely assisted by side delivery rakes, power hay loaders and improved hay handling machinery in the many big new barns. Many new silos will also be filled this season. So less than a third of the usual amount of money will be sent out of the county for feed. If the fall is favorable much the largest crops of potatoes and beans ever grown here will be gathered. Sheep and pigs are extra scarce and bring record prices. Stock cattle and good cows are in fair demand at slightly advancing prices. Little roosters and hens are being rushed to market at 10 to 14 cents a pound—less than half their cost—and eggs are getting scarce at 40 cents a dozen.

L. K. COGSWELL.

Potatoes in Good Condition.

EPHRATA, Grant County, Wash., July 14.—The rye harvest is on in the south part of this county. Rye is not as good as usual, owing possibly to the exceptionally dry fall and poor stand. Wheat in the sandier sections of the county is very good and has not been affected very much by the hot weather. Some sections of the county have been hurt worse than others by the hot wind, but there will be almost an average crop in the largest part of the county. Some sections will give about half the usual yield.

The potato crop will be large this year as a large acreage has been put in and they seem to be in very good condition.

Quite a number of the small combined harvesters have been sold in this county, partly because the farmers have felt that there is apt to be a shortage on the labor situation this year and with a small combine there is nearly always enough help in the family to harvest crop without any additional outside help. Many of the harvesting crews have been made up already and it is hoped that there will be very little delay in harvest this year owing to any shortage in labor.

Several farmers have also gone together and bought a small threshing machine. In this way they will have nearly all the crew among themselves and will not need to call on outside labor very much.

H. W. REAUGH.

High Price Causes Big Acreage.

OTHELLO, Adams County, Wash., July 16.—I notice an increased acreage of spuds but no material increase in grain because of the agitation for greater crops. The facts are that farmers are doing their utmost because of prevailing prices. There will not be much shortage of help to handle the crops here. The same policy as of old will prevail. Wages will be about $3 to $3.50 and board per day. The crop here will be about the same as last year. The past week the thermometer has been 100 to 108 degrees.

A. O. LEE.

Fine Hay Weather.

FERNDALE, Whatcom County, Wash., July 14.—No cloud has as yet appeared in the sky to dishearten the hay makers. The weather has been ideal and if it holds out a week longer practically all the hay will be under cover. Hay hands are scarcer than in other years and wages are higher. The strawberries have come and gone. The yield was not as heavy this year as previously and the price was a trifle higher. Cherries are ripe now. Local potatoes are on the market. While the fruits and berries are not as plentiful as in other years the gardens are surpassing our wildest hopes, though a trifle later than usual. The I. W. W. agitation that is exciting other parts of the state does not seem to be very alarming here, though the county fire warden has warned timber owners to take extra precautions in guarding their buildings, as he has inside information that an attempt will be made to destroy the timber by fire.

MRS. JACK PLASTER.

Kill Jack Rabbits for Meat.

BICKLETON, Klickitat County, Wash., July 18.—Hot, dry weather and east winds are doing damage to the grain in this section. Unless a change occurs soon serious damage will be done to the spring grain crop. In a few cases in the Glade and Six Prong country the crops are past hope. I think the number of live stock is about the same as last year, probably a little on the increase. There are many ways of increasing the meat supply. Probably the quickest returns would be from hogs, but the cheapest would be from a few sheep. There is one meat supply, but a poor one, and that is the raising of hares and rabbits. We have millions of rabbits in the northwest eating up thousands of dollars' worth of crops without raising any more. A person can kill 500 or more wild rabbits in the same length of time it takes to raise one tame one.

BERT H. FAULKNER.

Says Farmers Should Organize.

KING HILL, Elmore County, Idaho, July 17.—The agitation for greater crop production has not had much effect in this community, but I notice that papers and would be know-it-alls are talking of great big harvests all over the country, and that there will not be a market for potatoes and such crops, and unless the farmers get some protection the speculator will get the profits as usual. Our own state is making a great big talk of crops and going over the state to get an estimate on the harvest. The farmers ought to organize and demand certain prices and take not less. Farmers are only getting 2 to 3 cents for new potatoes now, and stores are charging 7 and 8 cents. Who gets the profit after paying 6 cents for seed? Hay hands have been very scarce and farmers have been paying $4 and $5 dollars a day with board. Some have just finished putting up their first cutting and some are starting to cut a second time. There are no changes in the methods of harvesting.

WM. A. DUNCAN.

LET US DEVELOP YOUR FILMS. Our price is only 25c for developing a 6-exposure roll film up to postal size and making six prints, mailed back, prepaid. Cash must accompany order. MOEN'S ART STUDIO, Preston, Minnesota.

COMFORT

Cook in a cool, comfortable kitchen this summer. An oil cook stove is comparatively inexpensive to buy and it will soon pay for itself in comfort and lower fuel expense. Meals in a jiffy, and a cool kitchen in summer.
Bakes, broils, roasts, toasts. Better cooking because of the steady, evenly-distributed heat. More convenient than a wood or coal stove for all the year 'round cooking, and more economical.
The long blue chimneys prevent all smoke and smell.
In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

Save One Pound

Can It or Dry It for Winter Use

There are about 20,000,000 homes in the United States. If one-half of them would each can or dry five pounds of vegetables or fruit that otherwise would be wasted because of its perishable character; if one-half of the remainder would can or dry 10 pounds; if one-half of the remainder would can or dry 25 pounds, and the remainder can or dry 50 pounds, what would it mean?

Nearly 300,000,000 pounds of foodstuffs. Nearly 150,000 tons of foodstuffs. Nearly 6000 carloads, enough to make a train 40 or 50 miles long.

Every housewife in America has opportunity to save some little article of food by the canning or drying method. There are times when half a pound of something must be wasted if it is not in some way preserved from spoiling. Dry it or sterilize it and seal it up.

The Farmer is devoting much of its space this week, as it has been for several weeks, to this food conservation proposition. Articles illustrating methods of drying or canning fruits or vegetables are to be found on preceding pages in this issue. Making preserves, jellies, pickles, relishes and the like will also be treated as time and space will permit. Read these articles carefully and put into practice at least a part of their suggestions. There are thousands of persons in the world at this very time starving. Cold calculations show that it will require every possible ounce of food that the world can produce to supply the actual needs of the world's people this year and until next year's harvests. To waste food is murder.

Subs Cut Wire Nets.

A cutting device which eats through a steel netting like a "hot knife through butter," is a part of the equipment of German submarines now. It is described as being similar to a buzz saw; by officers arriving from a Mediterranean port. They say the subs are very bold in the Mediterranean. They approach the harbors without fear to sink ships, cut nets and plant mines.

Neighborliness

There Are Different Kinds of It

Dear Women of the Family Circle: Let us have a cozy little talk all by ourselves this time—just a visit over the teacups. Suppose we talk about neighborliness.

I once heard an old man, who was not blessed with a great amount of common sense, give utterance to a bit of wise advice. It was this: "A man should always be good to his neighbors so they will be good to him. A man can't get away from his neighbors. All his relations may move away to some other part of the world, but his neighbors always stay, and so he should be kind to his neighbors."

I once knew two friendly women who were neighbors to each other for many years. Their farms were about a mile or so apart. They were the old-fashioned kind of neighbors, the kind that one finds in communities where the settlers are few and far between—and that sort of scattered settlements are growing fewer every year. These two women neighbors took time to visit occasionally, all-day visits usually. These women had a system of signals whereby they might communicate with each other. If a distant neighbor came for an all-day visit to one of their homes there would be a white cloth fluttering from an upstairs window immediately. If the hostess found she was low on bread and would like a loaf, a black cloth was put out along with the white one; but if a pie or a cake was needed there would be a red cloth floating to the breeze beside the white one. The white one always meant the neighbor was wanted to come at once. Many times when a little girl I have gone with my mother on these all-day visits, and I have a vivid recollection even yet of the delicious meals we used to be served. I can see Mrs. Locke, the neighbor who always responded to the signals an the days when we—my father, mother and I—were the visitors, coming briskly in very soon after the signals were placed. She was always dressed in a crisp, clean, calico dress and brought some work—usually knitting, for the women whom I knew those years always knit the family stockings.

These two families shared their reading matter. They were people with limited education, and in those days there were very few magazines. I remember they used to take the New York Ledger, a story paper of the very sensational sort. The stories would run on and on, the paper coming weekly, till all the good folks got everything they wanted and all the bad people got killed or imprisoned. These good neighbors used to take turns subscribing for the paper, and, if possible, would meet on Saturday evening and read the stories together.

If one was sick, either man or woman, the other family carried on the work till the sickness was over. If one or the other family should have a lame or sick horse the fortunate one immediately took over one of his to work in its place.

In contrast with these friendly people I am reminded of an amusing incident that occurred in my childhood days.

Our neighbor on the east, whose farm adjoined ours, was a very unpleasant person to live beside. He never wanted to exchange favors, but if he did he was always more or less disagreeable about it. Both he and my father raised white hogs. Early one summer morning this neighbor came down to our house, and, meeting my father as he was going out to the chores, he said: "Your old sow got into my cornfield last night and rooted up a lot of corn and I set the dog on her and he ran her around till she is about dead, and you better go and get her." My father was very careful about his stock being securely fenced in, and he said: "I think you are mistaken about it being my hog; I am sure mine are all in the yard." The man replied, "I know it is your hog, and I want you to take care of her"; and he went away home. My father looked into his pen and counted his hogs and found them all there, and no opening where any could get out.

The next day our neighbor's young son, about 12 years old, was down to our place, and he said in his high-keyed voice: "That big old hog pa dogged so hard the other night when he thought it was yours is pretty near dead, and it's pa's own hog."

I don't believe this story needs any moral, does it? A. W. B.

Sidelights

Right Side of the Cow.

More Exactly Stated.

Jamie, having come into the possession of considerable wealth through the death of relatives, was thus addressed by one of the neighbors:

"Aye, Jamie, it was a guid thing for you that your rich freens waur bore afore ye."

"Weel," said Jamie, "I'm nae seae sure about that, but it was a guid thing that they dee'd afore me."—London Tit-Bits.

Old English Initials to Embroider

By WINIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

In padding these old English initials, different methods may be used. Some use the twilled cotton for the purpose; others make the chain stitch, while others let a skein of floss out at full length and embroider a strip of it under the thick parts while forming the letter, clipping the skein when the initial is finished. This is a splendid method, quickly done, and is suggested, too, as a help in padding all large pieces in border or crescent outline.

Initials can be made by filling in the broad space with French knots. This is used largely on elaborate pieces, such as the laundry bag, table scarfs, and ornate gifts.

REAL HOMES
at
Milan Farms

on Great Northern Railroad, only 25 miles from Spokane, the metropolis of the Inland Empire and live stock, fruitgrowing and grain center of the Pacific Northwest.

Especially adapted to dairying, diversified farming, stock and poultry raising. Free rural delivery daily, excellent schools, splendid roads, long distance telephones and near fine lakes and streams. Soil rich, with ample moisture.

Every acre put on the market last year was sold, indicating attractiveness of our proposition. Additional acreage now ready at prices from $7.50 an acre up, on terms to suit purchaser.

SPECIAL OFFER TO JUNE 1

All purchases to June 1 secure service of man with team, stump puller and carpenter for one week free.

Write for attractive folder giving exact facts about these lands and the best opportunity for securing the most attractive farm home in the northwest.

1247—Ladies' Dressing Sack, Boudoir Cap and Slipper—Cut in 3 sizes: Small, medium and large. It requires 5-8 yard for the cap, 1 yard for the slippers and 2 5-8 yards for the sack of 27 inch material for a medium size. Price, 10 cents.

Bread Keeps Fresh Two Weeks.

Bread that will keep fresh two weeks after it has been wrapped in paper and sterilized has been invented by a Paris baker.

Some New Recipes

To make oatmeal cookies take one cupful shortening, one cupful sugar, two eggs, four tablespoonfuls milk, one level teaspoonful soda, one teaspoonful ground cinnamon, half a teaspoonful salt, two cupfuls flour, two cupfuls dry rolled oats, one cupful chopped raisings. Sift the salt, soda and spice with the flour; mixing in the order given. Drop by teaspoonfuls in a buttered pan, allowing space between each cake for spreading. Bake in a moderate oven.

Make Celery Croquettes.

Cook together two tablespoonfuls of flour and two of butter. When it bubbles add a cupful of milk. When this is thick and free from lumps pour it slowly on the beaten yolks of two eggs and add a cupful of celery cut into tiny pieces (not chopped). Season with celery salt and white pepper and set aside to cool. When cold form with floured hands into small croquets. Roll them in cracker dust an hour before you finish preparing them by frying in deep hot fat.

Unnecessary.

"Are you ill? Let me see your tongue."

"'S no use. No tongue can tell how bad I feel."

For tractors, Zerolene Heavy-Duty is especially recommended.

My Dear Children of the Corner: Have you thought Aunt Nellie had deserted you entirely? No, indeed; but she has been very busy. We extended the contest for three months and your letters grew few and far between toward the last, but I suppose some of you are away on your vacations or hard at work in gardens making things grow.

Next week I will announce the prize winners of the contest now closing, will give you new subjects for the coming one and have some other announcements.

Write and tell us all about what you have been doing this summer. This is a secret, so let me whisper it to you, that this is to be one of the new subjects.

I wish my dear boys and girls who are growing up so fast would talk about our Corner, which has been such a pleasure to us—talk about it with the younger children.

With love to you all and hoping you have had a splendid vacation so far and are going to enjoy every bit and speck of August, I am, your loving

AUNT NELLIE

Lois Must Write Some Time Again.

Dear Aunt Nellie: I am sending my many thinks for the very pretty cup and saucer given as a prize during the month of December. I was visiting my grandmother in Portland, Ore., when I received it. I did not know from where it came until my return home. Then a neighbor told me that it was announced in the paper.—Lois Barnhart, Tekoa, Wash.

Two Brothers, Gerald and Ronald.

Dear Aunt Nellie: My papa takes the Farmer and I enjoy reading the Children's Corner. We have two cows, one horse, 13 chickens and a gray cat. We did have a dog and his name was Teddy. I have two brothers. Their names are Gerald and Ronald. I have no sisters. I am 9 years old and my birthday is the 18th of August. Have I a twin? I have to walk two miles to school. I am in the third grade and my teacher's name is Miss Forbes. I go to Sunday school and my mama is my teacher. I can crochet, sew and tat.—Rena Craig, Camas, Wash.

Some Funny Places in That Book.

Dear Aunt Nellie: I want to write about my favorite book. The book I like best is Dorothy on a Ranch. There is some funny places in it. I will tell you one of them. There was once a little boy who had a lamb. It was dirty. He did not like it. There was a barrel of water in the house. The little boy took the lamb, soused it up and down in the barrel. In the other room was a sick man. The sick man wanted a drink of water. The little boy gave him a drink out of the barrel. The man did not know the lamb was washed in the barrel.—Katherine Bowen, Oroville, Wash.

Will Help You More Than Anyone.

Dear Aunt Nellie: My favorite book is Elsie Dinsmore. There is a lesson in it I like. The lesson is to take your troubles to Jesus. He can help you more than any one. Even though you are not in the wrong if you bear the blame of it you will be rewarded in the end. Elsie had a sweet disposition. She had been taught to love Jesus and do right.—Elizabeth Bowen, Oroville, Wash.

Lots of Fun Picking Blackberries.

Dear Aunt Nellie: I have been reading the Children's Corner and I like it very well. The other children write so well I thought I would write, too. I am 8 years old and in the fifth grade at school and in the second grade of music. I have one brother and one sister older than myself. Last summer I had lots of fun picking blackberries and selling them to the neighbors. I hope they will be quite plentiful this year.—Lucile Bowers, box 207, Selleck, Wash.

Flopsy, Mopsy and Cotton-Tail.

Dear Aunt Nellie: I live on a poultry and fruit farm. There is a ravine real close to the house and we are making a dam and my aunt wants a pond for ducks. We have one cat, one cow, 18 horses and four rabbits named Flopsy, Mopsy, Cotton-Tail and Peter for the Peter rabbit family. Cotton-tail has five baby rabbits. I do not like it here very well for it is so lonely. I am 9 years old and in the fifth grade. I will be 10 the 20th of April. We have school across the ravine because the schoolhouse is so far away and the coyotes have rabies. —Mary Willis, Wahluke, Wash.

Peach Orchards Across the River.

Dear Aunt Nellie: My uncle takes the Farmer and I enjoy reading the cousins' letters. I live on the Columbia river. I can look across the river and see the peach orchards. My brother, sister and I came here about a year ago and we like it here very much because it is not so rainy as on the Coast where we used to live. We have five pupils in our school and it is in a little house across a ravine from us. We have school there because our schoolhouse is not finished. —Rogenia J. Willis, Wahluke, Wash.

Has Read the Corner for a Long Time.

Dear Aunt Nellie: I have been reading the children's corner for a long time. I live on a 1040-acre farm. Two of the horses and two of the cows are mine. The horses' names are Daisy and Martha. The cow's names are Lula and Rags. We have about 160 chickens. There are 24 children in our school. I am in the fourth grade. I have one sister and three brothers. My sister's name is Ida and my Brothers' names are Jake, Thomas and Robert. Our teacher's name is Miss Verna Merkey.—John Shaw, Govan, Wash.

Out of School With Whooping Cough.

Dear Aunt Nellie: I am 9 years old and in the sixth grade. Our schoolroom was built in 1915 and it is 29x39. We have a cottage for the teacher. Her name is Mrs Belles. I have three brothers and one sister. My sister's name is Lucile. My brothers' names are Melvin, Cecile and Maynard. I go to school. We have to walk one and one-half miles. When it is bad weather papa takes us, but when it is nice we walk. I was out of school one week with whooping cough.—Gladys Cary, Ritzville, Wash.

Used to Live on a Farm in Finland.

Dear Aunt Nellie: I am 12 years old and I am in the fifth grade. This is the first time I have written to the Children's Corner. I do not live on a farm but I thought I would write just the same. I lived on a farm four years ago in Finland. I like to live on a farm best. I have two sisters and my youngest sister's name is Annie. My brother's name is Frank. My teacher's name is Miss Jeans. I like her.—Nick Seivonen, Aberdeen, Wash.

Seems Good to Hear From Edna Again.

Dear Aunt Nellie:—This is the second time I have written to the Corner. I have three dogs and no cats. I have a little sister. Her name is Edith. We have three cows and one calf and 80 head of horses. I have three big sisters. Their names are Maud, Florence and Hazel. I have a big brother. His name is Lloyd. My sisters are married. One of my sisters has a little girl. Her name is Eva. She is two years old. We have a pet hen. We have 20 chickens. Florence is staying with us.—Edna Smith, Riverside, Wash.

Take Father's Lunch to Him.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am eight years old. My brother and I bring the lunch to papa. We have 12 chickens. Our baby is 15 months old. I am in the first grade. —Lucille Cox, Leahy, Wash.

Lonesome Since School Closed.

Dear Aunt Nellie: I am a lonesome little girl since our school is closed down because the measles were in school. I am eight years old. I go to school at the Springdale Buena school and my teacher's name is Miss Macoy. I like her very much. If you will permit me to join your Corner I will write more next time.—Mary Edna Wilkins, R. F. D. No. 1, Zillah, Wash.

Fed the Pigs While Papa Was Gone.

Dear Aunt Nellie: I earned my first money by feeding pigs. Papa was away and I had to feed the pigs. I fed them shorts morning and noon and at night.—Graham Potter, Hillyard, Wash.

Cousin Joyce Has Three Brothers.

Dear Aunt Nellie: My papa takes the Washington Farmer and I have been reading the Children's Corner and thought I would write. We have three horses and two little mule colts. The horses' names are Nat, Lou and Billy. I am 10 years old. My birthday is the 16th of May. I have three brothers. Their names are Warren, Lloyd and Allen—Joyce Hatch, Goldendale, Wash.

Learn More About the Violin.

Dear Aunt Nellie: This is my first letter to the Children's Corner and I hope it will be a success. I am a boy 13 years old and weigh 110 pounds. I am five feet three inches tall. I am in the eighth grade at school. I have four horses and one baby colt. The horses' names are Dutchie, Spotty, Jose and Freckles and the colt's name is Dolly. I live on a farm of 640 acres. We have about 50 acres of rye. I have one sister five years old. She has almost golden hair and light blue eyes. Her name is Evelyn. My cousin, Thelma Hinkle, is staying with me now and stayed to see the circus that was here the 18th of June. I am going to learn more about playing a violin. I can play pretty good now, but I will take more lessons this summer after haying is over. I go 10 miles to take my music lessons and six miles to school.Melvin Franks, Sunnyside, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Gertrude Ruchest, Alexander Weitz, Esther Bower, Elsie Johnson, Hazel Rose, Grace Milbrath, Mildred Rees, Hazel Saltmarsh, Florence Hang, Fannie Blackburn, Louise Blackburn, Kathleen Jump, Ruth Draper and Martina B. Pruiet.

JORDAN

(Continued from page fourteen.)

and next moment saw that the ball was composed of two twisting and straining wrestlers, each of whom was striving to pin the other to the ground.

"That's the boy, Spicer!"

The crowd around the corner, was rooting for the champion, who a moment later pried his adversary's shoulder over and pressed it and its mate against the soggy ground.

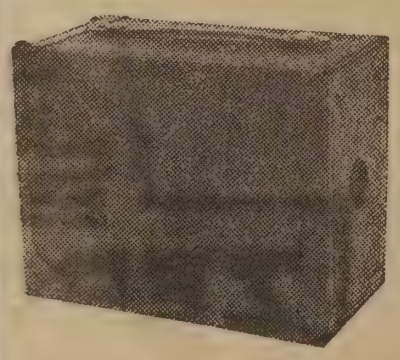
"Who's next?" the victor cried, as he sprang up and shook the gravel and bits of stick from his clothing. "Ah, here's Jordan in our midst—come, my boy, let's ses what you can do for the honor of the rural districts!"

For a moment Wally hesitated. There was something he ought to tell this arrogant young fellow who stood looking mockingly at him. Then he smiled. It was not his affair—this match was being forced upon him, and he could make his confession afterward!

Stripping off his coat and vest and laying his books and cap upon them, he turned and faced the champion. For a moment they measured one another. Then Spicer sprang forward, feinting as if to grasp Wally around the shoulders, then ducking for the under hold. Wally stood as if frozen in his tracks till he felt his adversary's arms closing around him. Then he stooped, slipped one arm around the other's neck from above, and with the other hand grasped one of Spicer's wrists and forced it around and up. As soon as he had secured this combination of chancery hold and hammer lock, he forced his opponent to his knees, shifted swiftly behind him, and next instant had changed his tactics by slipping his right arm under Spicer's shoulder and back of his neck and had twisted him over on his back. The whole thing had been done so quickly that none of the spectators had had time to utter a comment.

As Wally released his antagonist and sprang to his feet, the crowd burst into a roar of approval, and a trimly built man in a sweater and light coat stepped forward and clapped the victor on the shoulder.

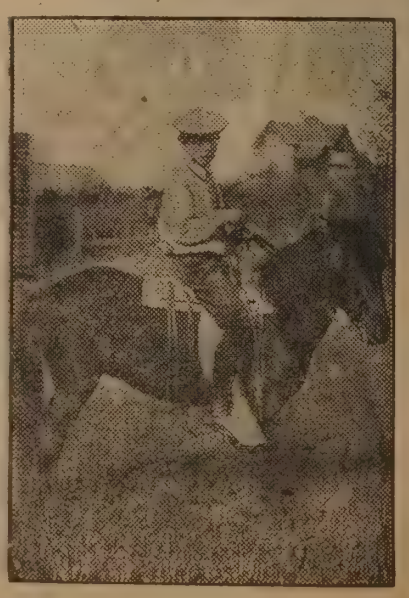
"You never learned that trick without a lot of expert teaching, my boy!" he cried. "I've taught wrestling for 10 years, and I never saw it better done—'fess up, now—who showed you how to do it?"



Wally grinned. "Farmer Burns used to train on the farm next to ours," he explained. "He taught me a lot of

TEACHERS Trained teachers are in demand—are well paid and enjoy the distinction of belonging to one of the most useful and honorable professions.

LET US TRAIN YOU TO BE A GOOD TEACHER



At Cheney, Washington, only a few minutes' ride from Spokane, we have one of the best, most thoroughly equipped training schools for teachers to be found in the Pacific northwest. Established for 13 years. As the cost for attendance is very small every young man or woman who aspires to become a successful teacher should get our catalog, sent free on request. Write for a copy today without fail.

STATE NORMAL SCHOOL

CHENEY, WASH.

BOYS AND GIRLS
You can still get this dandy Premo Junior Camera FREE!

Takes picture like this.

Now is the time of year to take pictures. Dozens of our boys and girls have had us send them cameras during the past week or so. Why don't you get one, too?

SEE HOW EASY IT IS TO GET ONE

Go to two neighbors and tell them if they will subscribe to THE WASHINGTON FARMER one year they will be helping you get a camera. Ask each of them to give you one dollar for the subscription, and when you have the two dollars send it to us and we will immediately send you the camera. If the first two neighbors you call on are already taking THE WASHINGTON FARMER, try other neighbors until you get the two subscriptions. It won't take but a little bit, and then the camera will be yours, to take pictures with for years to come.

Start out for your two subscriptions today. A renewal subscription counts just the same as a new one. Send the two subscriptions and $2 and right back will come the camera to you.

The WASHINGTON FARMER
Premium Dept. Review Bldg. SPOKANE, WASH.

holds—I used to wrestle with him every evening!"

Spicer got up, rubbing his arms and legs as if to make sure none of them was broken. Then, without a word, he turned and entered the recitation hall.

If this incident had taken place earlier in the school year, it might have resulted in Wally's being pressed into the service of the gym, instructor in forming some of the track teams. Now, however, with spring already blending into early summer and with examinations looming close ahead, no one had time for much thought upon such matters. Only Spicer plainly remembered—and changed his tactics from somewhat sneering good humor to growling ill will. Wally realized that he had not fathered his purposes of forcing his companions to understand and like him. He had gained no friends—and one enemy.

"You can't gain a man's good will by publicly humiliating him," he confessed to himself. "I shouldn't have done it—but I'll force him to like me yet! He's not a bad sort, only he isn't used to me and I'm not used to him. But I'll—"

Whatever he intended to do, the time remaining for its accomplishment was short. The week of review, preliminary to examinations, was already upon the school, and the radiant warmth of an early summer came in at the opened windows. Wally felt that failure was trailing him, laughing at him. He was stubbornly determined he would not go home and tell his father he had not been able to make these men of his own age understand him, that he had been regarded by most of them, throughout the winter and spring, as an unsociable sort of fellow. But the days crept by, with much study for those who had skimped their work during the term, and were trying futilly now to "cram" for examinations, and with long, hard hours of review for even the steady workers. Friday of review week came, and still Wally was no nearer his purpose.

He was thinking of this as he strapped his books together in the afternoon, and started for his boarding house. Others were leaving, most of them in groups of two or more. Wally alone seemed to have formed no ties of friendship.

He went out into the almost sultry heat of the afternoon. Turning the corner, he started across the campus. A straggling line of students ranged before him, while others were constantly emerging from the recitation hall.

He crossed the lawn and was approaching a know of low maple trees, among which several rustic benches had been built, when from high overhead there came a sudden whirring and singing, like the metallic whir of a million rifle bullets cutting the air. The straggling groups in front of Wally had caught the sound and were looking up. Wally did the same—and next instant he understood: the air was full of little black dots; dots which dropped with the speed of the wind, singing and screeching as they came. They drew together into a sort of black haze as they dropped swiftly toward the clump of maples.

Then Wally felt his heart stop beating for a moment, and his arms and legs went weak. For the bees—a big swarm of yellow and brown, powdery fellows—had begun to settle; and the object which formed the nucleus of the swarm was a willow switch, held in the hands of Jimmy Spicer.

Spicer had been studying out here in the open, apparently, and had fallen asleep with the switch held negligently in his hands. And as Wally saw the athlete's eyes open and caught the look of wonder, merging into alarm and terror which instantly came into them, he dropped his books and stepped forward.

"Sit still!" he cried peremptorily. "Don't move or they'll sting you to death—I'll try to get them off you!"

He was thinking fast. He had never handled bees but he knew something about them, for his father was the champion bee catcher of the township. So Wally stripped off his coat as he advanced; and as the last of the bees settled upon the seething swarm that clung to the willow switch and to Jimmy Spicer's hands and arms, the country boy stepped and laid his coat on the ground.

"Don't move!" he commanded. "They won't sting if they can help it—they're loaded with honey for the new hive. But if you try to fight them they'll kill you!"

With the coat on the ground to receive the bees, he began to work. He had never before handled bees with his bare hands, and the feeling of their clinging legs and their hard, smooth bodies against his flesh sent a shiver up his spine. But there was nothing for him to do but work, and as he worked he whistled, gently, through his teeth. The air seemed to come to him as if some one else were whistling it.

"On Jordan's story banks I stand,
and cast a wistful eye.
To Canaan's fair and happy land,
where my possessions lie."

The man in front of him shivered, and Wally spoke. "Sit still. If one or two of them sting you, don't mind it. They're stinging me, too, but we'll get out all right if we don't lose our heads!"

Jimmy Spicer's eyes were fastened upon Wally's, as if the country boy were his last hope. He sat without moving while his rescuer scraped the living mass from his hands and arms.

"Now, stand up slowly—be careful where you put your feet, for if you crush any of them they'll all be on us!"

Spicer stood up and moved a step or two away. Then he spoke. "You come, too," he said, his teeth chattering, but his eyes determined. "I won't go another step without you!"

Wally nodded. "I'm coming," said he. "Now hurry—they don't like the coat, and they may take the air again any moment."

Step for step, Spicer preceded Wally, until the latter turned and said, "Now run for it——" And they ran.

At the last meeting of the Choral club, which was held Thursday evening of examination week, Don Carlson stood up, his flaxen pompadour waving gently in the summer breeze that blew through the hall.

"Fellows," said he, "I move that we bring this meeting to a close by singing one more song—a song we all know, and which has associations none of us is likely to forget. For my own part," he added, "I intend to sing it whenver I feel my head getting too large for my hat, or my sympathy and good fellowship sinking toward zero. Now, altogether!"

And in the swelling chorus of "Jordan" which followed, Wally caught the vibrant tenor of Jimmy Spicer's voice, mingled with the rather erratic boom of Don Carlson's bass.

HAY, GRAIN, STOCK OR DIVERSIFIED farm lands in the Colville valley, reasonable. We answer. H. L. Fisk, Valley, Wn.

2120 ACRES, 800 IN CROP, 23 MILES S. W. Spokane, cheap. Address M., Northwest Farm Trio, Spokane, Wash.

SUBURBAN TRACTS—For Sale 672

EXCELLENT SUBURBAN HOME, NEAR Tacoma, on electric car line, school and church; 4 acres; improvements alone at low figure, including poultry and cow, $5300; will take $5500; place must be seen to be appreciated; good reason for selling. If interested, write Louis Lundgren, R. 4, Box 201, Tacoma, Wash.

In answering advertisements don't fail to mention this paper.

Grain and Produce Markets

Chicago Grain.

CHICAGO July 21.—Assumed certainty of the enactment of a minimum wheat price guaranteed by the federal government had a bullish effect today on the wheat market here. An advance of 5c to 9 3-4c net took place and the close was strong with July at $2.55 and September at $2.27 3-4. Corn finished heavy, unchanged to 1 1-8c lower at $1.63 to $1.63 1-8, September, and $1.15 to $1.16 1-8 December.

The outcome in oats was 1-8c off to 1 3-8c up and for provisions an advance of 5c to 32c.

Provisions rose with hogs and as a result of an advance in quotations of meats at Liverpool. There was a complete absence of the liquidating sales which have been noticeable of late.

Cash Quotations.

CHICAGO, July 21.—Wheat nominal. Corn—No. 2 yellow, $2.12@2.16 1-2; No. 3 yellow nominal; No. 4 yellow nominal.

Cattle—Receipts, 52; market slow. Prime light steers, $8@8.25; prime heavy steers, $8.25@8.75; good steers, $7@7.25; ordinary, $5.50@6; prime cows, $6@6.75; good cows, $5.50@6; common cows, $4.75@5.25; best heifers, $6.25@7; bulls, $5@7; calves, $7.50@9; stockers and feeders, $5@7.

Sheep — Receipts, none; market steady. Prime spring lambs, $12.25@12.75; prime yearling wethers, $9@9.75; prime mutton ewes, $6.50@8.

Seattle Wheat.

SEATTLE, July 21.—Due to the fact that the bins of Washington have been scraped and farmer holders of the grain are expecting higher bids, the market throughout the week remained practically stationary at 2.10@2,15 bid, and 2.22@2.30 asked for milling bluestem and turkey red. The opening was steady with the close of last week at $2.10. On Wednesday when the reports from eastern Washington wheat districts carried proof of serious damage from drought and hot winds, the market declined 2c per bushel, strengthening again the following day but getting no higher than the maximum of the week. Buyers and sellers were continually 12c@15c apart, this ratio being maintained through a market which was at the best operating with holdings of only a few thousand bushels.

Seattle buyers claim that farmers are inclined to clutch tightly all the wheat that they hold and are endeavoring to swell the carryover, confident that the state will not have more than half a normal yield. Government crop reports have been revised upward and sharply downward since July 1, due to the hot weather conditions.

Reports of drought in Montana wheat fields continue to come in to Puget sound buyers, who before the hot spell feared that state would have a big surplus to ship into terminals here in competition with Washington soft wheat. These fears are now dispelled.

Wheat stocks in the hands of Washington millers are now lower than at any time in the past ten years. Buyers did not bid to exceed $1.90@$2.00 for wheat in the country during the week. Farmers are entertaining the most bullish sentiment in the state today and will not even discuss contracts on new wheat. This disposition became more pronounced after bullish crop reports began coming in.

Millers were in the market for wheat for feed, but were unable to get hold of any quantity. Bran and shorts are now the most active end of the milling trade, as Puget sound mills and their eastern Washington branch plants are grinding out as fast as possible in order to get the storage space for the new crop.

Notice to grain and feed dealers at terminal points regarding the enforcement of the federal inspection law was posted by P. J. Sweeney, chief grain inspector, at the Merchants Exchange this week. Mr. Sweeney warns all dealers that it will be necessary to have a sampler examine every car of wheat or corn unloaded at terminal points coming from any other state, and unloading of interstate cars before notice to his office, is prohibited.

Portland Market.

PORTLAND, Ore., July 23.—The wool market remains quiet with buyers making no effort to operate and growers holding tight. It is said that not a single car has been sold since the Spaniko sale on July 6.

Prune packers are contracting with growers in a limited way on the former basis of 8 cents, but the sellers are reserved. The news that export business has been worked on the Atlantic seaboard encourages holders to believe that an outlet will be found for the big American surplus and that prices will go no lower than the opening basis.

Wenatchee apricots are a feature of the local market and are quoted by jobbers at $1.50 a crate. The raspberry season is nearly over and the indications are that the loganberry season will also be a short one.

Oregon new potatoes are coming on the market freely and selling at 3@3 1-2 cents. California new potatoes will not be quoted by dealers after this week.

All lines of country produce are firm, especially creamery butter and eggs. Receipts of the latter have become small and the quality is of the usual hot weather sort, which increases the premium on candled stock.

The heavy marketing of poultry, anticipated by dealers, has not yet materialized, and prices are easily maintained. The hot spell has materially cut down the consumption of veal and pork.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $45@45.50 per ton.

Corn—Whole, $30; cracked, $81 per ton.

Millstuffs—Bran, $33 per ton; shorts, $36.

Barley—No. 1 feed, $43; brewing, nominal; rolled, $49.

Hay—Buying prices: Timothy, eastern Oregon, $26; alfalfa, $16@18; grain, $12@15.

Eggs—Oregon ranch, case counts, 34@34 1-2c per dozen; candled, 37@39c.

Poultry—Hens, 15@17c; ducks, 15@22c; turkeys, alive, 20c; geese, 10@12c.

Butter—City creamery, prints, 42@43c per pound; cubes, 38 1-2@39c.

Cheese—Tillamook triplets, 23c; young Americas, 24c.

Dressed meats—Veal, 15c; pork, 19 1-2@20c.

Hops—Nominal.

Potatoes — New, 3 1-4@3 3-4c per pound.

Wool—Eastern Oregon, fine, 58@61c; coarse, 58@65c; valley, 72 1-2@75c.

Beans — California small white, 16 1-2c; large white, 16c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 18c; green stags (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Day-a-Week Market.

One-day-a-week public market has been inaugurated at Port Angeles, Wash., according to a report of the county agriculturist, O. T. McWhorter, who adds: "Considering that not much produce is ready for market, it made a fair start. At any rate, the plan will be thoroughly tried out. The manager of the public market issues a four-page newspaper bulletin on Monday of each week. This bulletin will be issued for several consecutive weeks, or until the market succeeds or fails. It carries the market quotations on farm products, "ads" of local merchants, and timely "write-ups" and editorials of interest to farmers. It is mailed to the farmers of the county free.

Eight shelter sheds open on one side were erected along one of the streets of the town for the use of farmrs with produce to sell. Each shed rents for 25 cents per day, or 10 cents per day if rented by the season. Rentals are not charged except to pay the person who cleans up the street after market day."

Japan's Last Rice Crop.

Japan's last rice crop broke all records for that empire, having amounted to 298,466,706 bushels, which beat the former official high record (1914) by 6,630,270 bushels.

Seattle Market.

SEATTLE, July 21.—The apricot market next week, the flush of the season, is expected to be higher due to authentic reports that growers of eastern Washington have contracted the bulk of their later crop for eastern shipment. Reaction on these reports set in today with the market stronger for the weekend at $1.25@1.50. Growers are getting 75@80c f. o. b., which is the equal or better than returns on consignments to Seattle.

The local potato market is weak, but the weakness is due more to poor quality than a lack of demand or support for the market. All Puget Sound offerings are selling at 2@2 1-2c. Kennewicks are scarce, but the quality has been poor, and California is still getting the big end of profits because of superiority and adaptability to shipping trade demands. The dry weather has been too pronounced for the welfare of even the potato. Locals are too green and hard to attract buyers, and jobbers are selling them for what they will bring.

Activity in the apple market has been one of the features of the week. Buyers are able to find fair stocks and good quality of Washington transcendants, yellow transparencies, red astrachans and duchess brands in peach box packs at $1, with transparencies leading in popularity. In competition with these are California gravensteins in standard boxes at $2.50@3.

Eastern Washington Bing cherries are cleaned up. The valleys have completed shipping, and the hill and canyon stock, not of great volume, will begin moving next week simultaneously with locals.

The first shipments of Yakima new honey arrived today and cleaned up quickly at $4 per case.

The big week in local currants has passed, with closing prices at $1.10@1.15. The volume will fall off from now on.

Cabbage is very dull at 3c. Local cauliflower is popular at $1.25@1.50.

Jobbers will quote this week's buying prices Monday to poultry shippers, the strike of the express companies, which compelled dealers to look to shippers on the steamboat lines for their supply, cutting down the receipts to more nearly equal the demand. The market is generally steady.

The butter market weathered the week without change, although sentiment is almost wholly on the bull side.

Fresh ranch eggs are very firm. Jobbers are expecting to life the buying price next week. One more advance of this nature will start the movement of storage eggs, about 30 days earlier than normal.

Cheese is dull and the movement very light. Quotations are firm at 23 1-2@24c for Oregon and Washington triplets.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transaction by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 35@36c per dozen.

Poultry—Live hens, fat, over 4 lbs., 18c per lb; 2 lbs. and under, 13@16c; old roosters, 10c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; broilers, live, 15@17c per lb.

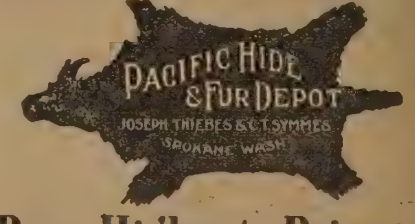
Butterfat—46c per lb.; dairy butter, 28@31c.

Beef—Buying price: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 14@15 1-2c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 30c per lb.; green hides, 17c per lb.; salted bulls, 16c per lb.; dry hides (short trim), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 13c per lb.; dry butcher full wool sheep pelts, 38@42c per lb.



Butter and Eggs.

SAN FRANCISCO, July 21.—Butter—Fresh extras, 40c; prime firsts, 39 1-2c.

Eggs—Fresh extras, 35c; fresh firsts, 34 1-2c; fresh extra pullets, 34c.

ELGIN, Ill., July 21.—Butter, 38c bid; 100 tusb offered; no sales.

CHICAGO, July 21.—Butter higher; creamery, 34 1-2@38c.

News for Breeders

The Brown Swiss cattle breeders of the United States held their first consignment sale at Pottstown, Pa., June 26. It resulted in 37 head selling for a total of $10,556, or an average of $288. Top price was paid for the great bull Milton K. of Laurel Locks, that went to Walhalla Farms, Middleburg, New York, at $1,550.

A Clackamas county, Oregon, Guernsey Breeders club is an early likelihood. Quite a number of breeders already have registered herds, some with only a few head and it is believed much advantage will accrue from organization. Professor Westover of the O. A. C., who has charge of cow testing for the college, is lending his assistance to the plan.

At the Mitchell Brothers' dispersal sale of Shorthorns at Burlington, Ontario, June 29, 39 head sold for $34,125, an average of $827. Another Canadian sale, that of J. A. Watt and J. M. Gardhouse, jointly, at Elora, Ontario, on June 28, resulted in 61 head selling for $47,125, an average of $772. A large proportion of the cattle in both sales were purchased by breeders from the United States.

J. A. and J. B. Riches, Guernsey breeders of Boring, Ore., plan to begin official testing this fall and winter, when about half a dozen of their registered heifers and cows with second calves freshen. Their herd bull, Emigrant Lad, is of May Rose breeding and is a good individual. They will probably exhibit at the Pacific dairy show at Portland, but owing to scarcity of labor, hardly expect to have any stock at the state fair.

The Walla Walla college at Park Place, near Walla Walla., Wash, recently purchased 10 head of registered Holsteins from A. Bendler, Cornelius, Ore. The consignment consists of cows, heifers and calves, all of the Dora Veeman strain. The college is a member of the Walla Walla Cow-Testing association. They have stood high in the fat-production records, one of their cows consistently leading the association. She is a New York bred cow and was purchased from Mr. Bendler six years ago. Her work and the good records being made by other kin back in New York caused the purchase of her progeny from Mr. Bendler. They will all be given official records, which pleases Mr. Bendler very much.

The Harris dispersion sale of 260 Herefords at Harris, Mo., June 26 and 27, brought prices that smashed all records. The bulls averaged $3198 and the females $1220, the general average being $1525. The great show bull, Repeater 7th, brought $27,500 and Gay Lad 16th sold for $20,000. He went to George G. Moon of New York city, while Repeater 7th was bought by W. A. Pickering of Kansas City, Mo., who has more of the Repeater family than any other breeder. He also got Repeater 8th at $10,000 and paid $10,000 for Princess 31st, the dam of Repeater 7th. Top price for females was $13,000, Repeater's Model going to M. M. Marshall of Los Angeles, Cal., at that figure. John Booze of Parkman, Wyo., was a heavy buyers at long prices and several animals went to Colorado and South Dakota, but none to the three northwestern states.

Bull Calf From Illinois.

A letter to The Farmer from C. B. Austin, secretary of the Avalon Orchard Tract company of Kuna, Idaho, says that that company has just brought out a fine bull calf from Illinois, a son of King Segis Pontiac Chicago (the $20,000 son of King Segis Pontiac and Johanna De Kol van Beers), and a 22-pound three-year-old heifer. The calf's four nearest dams have seven day records averaging 32.5 pounds butter.

PIONEER BREEDER QUITS.

L. K. Cogswell of Chehalis, Wash., a pioneer breeder of the Pacific northwest, as well as a charter member of the American Red Polled Cattle club, is retiring from the stock business. His reason for doing so is advancing age. He is now disposing of his holdings.

RED POLLED CATTLE

Red Polled Cattle

A car load of well bred cows, heifers, bulls and calves at a bargain, for quick sale.

L. K. COGSWELL, Chehalis, Wash.

Registered Stock Pays.

Six years ago W. A. Hall of Caldwell, Idaho, purchased six registered Shorthorn cows for $750, while Shorthorns and all beef cattle were cheap. Last fall he held a sale at which three of the cows and offspring from them and some of the others were sold. The sale totaled $3600. Mr. Hall has three cows left and eight heifers or young cows and one bull calf. These could not now be bought for $2500. "Is this not reason enough," Mr. Hall asks, "for the keeping and raising of purebred cattle, rather than scrubs, or even of good grades, especially when Shorthorns are the breed kept: the breed that adapt themselves best to farm conditions and are most profitable under almost any conditions?"

Mr. Hall uses as a herd sire Donald No. 359930, the bull shown on this page,

Donald 359930.

bred by Thompson Brothers of Kansas. Donald is by St. Clair, dam Daisy of Valley Grove by Lavender Prince, going back in four generations to Imp. Daisy of North Oaks—straight Scotch breeding. For two years Mr. Hall used Aberdeen of Walnut as his herd sire, a bull that W. O. Minor brought from Iowa and used for a time. He has one daughter of Golden Goods, that won first for her breeder, Mr. Minor, at the Pacific International as a senior calf. She also won first as a yearling at Caldwell and Boise for Mr. Hall. Mr. Hall's cow, Jessie Linwood, was three years grand champion at Caldwell and Boise. She is by Imp. Ruddington Star, dam Maggie Linwood by Baron Linwood.

Mr. Hall now has 33 head of registered females. He has six acres of corn, which will be used for silage.

H. A.

A Profitable Producer.

A. L. Wileon of Wilson Bros., Poland China breeders, at Greenleaf, Idaho, own Pet, a Poland China sow, now 11 years old, that has a record of profitable production not often equaled. She has farrowed two litters every year and never had less than seven nor more than nine pigs. She showed in the under six-months-old class, as a yearling, and as a two-year-old and was never defeated in class. One year at three fairs Mr. Wilson won 56 ribbons with her and her produce, including six championships. She is dam of the boar with which Mr. Wilson won second in his class of 28, and the boar that beat him was grand champion. Pet had eight pigs this spring, but only saved one. She is not profitable any more, but on account of her past performances Mr. Wilson can not find it in his heart to kill her.

H. A.

Champion Shire.

The above is a photo of Wilson Idol, the Shire stallion that won championship of the breed and then won the O.-W. R. & N. trophy for the best groomed, best mannered and best finished horse of the show all breeds competing at the Union (Ore.) Stock Show, June 12 and 16. He is of good size, but not an extremely large horse for a shire, but has that symmetry and finish known as quality, that makes him a great horse. He is owned by W. R. Ledbetter, Alicel, Ore.

Breeders' Department

Berkshire Boars for Fall Service

I have a number of thoroughbred Berkshire boars sired by W. S. C. champion boar, brother to Reserve Champion at Panama exposition. Sows from Masterpiece strain. Large, smooth, prolific type.

Delivered f. o. b. your station. Registry papers complete.

R. W. SNYDER, Washtucna, Wash.

KNOLLIN RAMS--BETTER LAMBS

Largest purebred Shropshire flock in U. S.
World famous—thirty years standing.
Hundreds of prizes won.

Address A. J. KNOLLIN, Pocatello, Idaho

HOLSTEIN CATTLE

Registered Holsteins

A FEW BRED A. R. O. YOUNG COWS and a fine lot of young bulls, some about ready for service. Herd sire an undefeated Grand Champion, backed by a wonderful array of world-renowned high-producing ancestry.

Write for pedigrees and terms.

H. R. BOOMER. New Plymouth, Ida.

We Have for Sale

The best of registered in grade Holsteins, all ages. Will sell singly or a car load. Heifer calves, crated, $15, f. o. b. Everett. Satisfaction guaranteed.

KOOISTRA & DYKSTRA. Everett, Wash.

HOLSTEIN CATTLE

Young stock by richly bred grandson of King of the Pontiacs, out of high-producing advanced registry cows.

A. E. SMITH. Sumas, Wash.

WAYSIDE RANCH HOLSTEINS.

Am offering 13 heifers for sale, sired by my herd bull Buffalo Duke Doede, a half brother to the world's champion cow. An opportunity of a life time to the man wanting No. 1 stuff.

H. H. Styer. Buhl, Idaho.

HOLSTEIN BULL CALVES.

One from 20-lb. cow, another from a 16-lb. jr. 2-yr.-old. Herd headed by Model Fobes of Idaho, whose four nearest dams average 27.25 lbs. butter 7 days.

EARL BEEBE, R. F. D. 2, Rupert, Idaho.

POLAND CHINA SWINE

Fruitland Stock Farm

Poland China Hogs.

Herd headed by Idaho Expansion (541305), assisted by Superba Jr. (241305) and Sammy (79833). Top for size and quality. I have for sale extra good spring pigs. Correspondence solicited.

J. M. ROYSTON EST., C. ROYSTON, MGR.
Payette or Fruitland, Idaho.

BIG TYPE, BIG LITTER

Easy feeding, eligible to register. Poland Chinas, foundation stock. If interested write for prices, description and booklet.

J. N. SCOTT, Naches, Wash.

DOGS

Fox and Wolf Hounds

of the best English strains in America; forty years' experience in breeding these fine hounds for my own sport and protection of sheep, hogs and poultry. Send stamp for catalog.

T. B. HUDSPETH.
Sibley, Jackson County, Missouri.

HEREFORD CATTLE

HIGHLAND STOCK FARM

offes for sale 10 yearling bulls and eight two-year-old Polled heifers, sired by Polled Premier and bred to herd sires Majestic Fairfax 437657 by Corrector Fairfax and Western Fairfax 461126 by Fairfax 16th.

PLATT BROS., Props., Roy Jacobs, Herdsman, Genesee, Idaho.

GUERNSEY CATTLE

West Lea Guernseys

Two choice yearling bulls out of Island dams by Gold Finder's Western Boy, a bull of choice breeding and a very fine individual. Also a few choice Lincoln rams.

HAWLEY & SON McCOY, ORE.

Take Up Arms Against Grain Fire Hazard!

Harvest and Warehouse Crews Urged to Form Into Volunteer Fire Departments

By N. W. DURHAM

Farmers and other producers should remember that in organizing local auxiliaries to their county defense councils they are organizing for their own defense and welfare. They are throwing protection around their homes and families, their crops and live stock.

Take, for illustration, the single activity of protection against fire. As Chairman Suzzallo of the Washington state council of defense points out in a special letter to the various county councils, "the very rapid ripening of grain increases the fire hazard and makes prompt action necessary." Chairman Suzzallo urges that active committees be organized as follows:

First, a committee in each town or community center to organize a volunteer fire department.

Second, a committee in each district to see that each threshing crew is organized into a volunteer fire department.

Third, a committee in each district to see that night patrols and night watchmen are provided.

Much will depend on the selection of the chief of the volunteer fire departments. All volunteer fire fighters will immediately drop work and proceed to the fire the instant the alarm is given. Plenty of automobiles or other conveyances should be arranged for to carry the fighters and their appliances to the fire.

There should be an assistant chief appointed, whose duty it shall be to see that all necessary apparatus and appliances are provided and kept in order ready to be carried by the vehicles available to the scene of the fire.

The state council of defense recommends the following equipment for the protection of grain crops:

1. Automobile or trailer.
2. Box to hold 20 sacks kept wet down at all times.
3. Four 10-gallon milk cans filled with water for keeping sacks wet; two buckets to carry water from cans to fire fighters.
4. Twelve sharp-nosed shovels.
5. Six large garden rakes to use in case of fire in headed and stacked grain.
6. Two large hoes.
7. At least one-half dozen water bags with drinking water for fire fighters.
8. Two 2½-gallon chemicals.
9. One 50-foot auto tow line steel cable.

Continued on page fifteen.

What Fishback Says

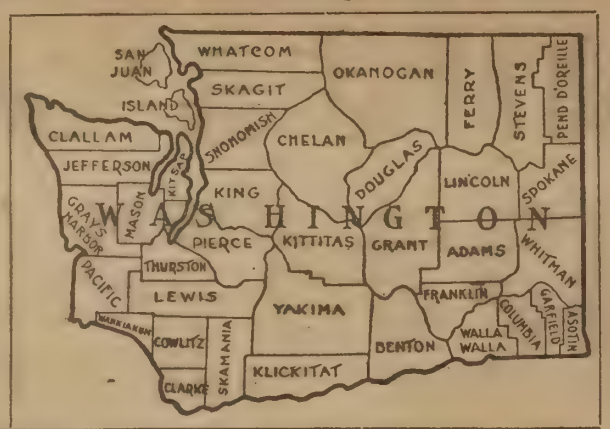
H. O. Fishback is state insurance commissioner, and as such is ex officio state fire marshal which gives him authority to take in hand vital problems arising out of fire menace.

Commissioner Fishback is warning farmers throughout every district of the state against fires. "Fire is an absolute destroyer of wealth," he says. "An unnecessary fire means the robbing of some hungry mouths of the food they need."

H. O. Fishback.

A special representative of the insurance department has been placed in eastern Washington to cooperate with the farmers and others in a great campaign of carefulness to prevent farm fires during this harvest season. W. A. Groce is the man, and may be reached by letter or other message addressed to the Grand hotel, Walla Walla, or to the Colfax hotel, Colfax; these two cities being his headquarters.

What Is Sabotage?



Sabotage, a word associated with the operations of the I. W. W., appears to mean anything "necessary to gain the end," using the words of one leader of that anarchistic order. Read in this issue what the I. W. W. believe and promise to do.

"Under the Black Canopy."

It is not often that people of the northwest are privileged to read a story by a northwest author. The Farmer is giving its readers that unusual privilege. Begin reading "Under the Black Canopy" in next week's issue.

City Gardens Cut Country Business

Every Vacant Lot is Growing Something To Eat; Truck Gardener Has No Show With His Products This Season

PROSSER, Benton County, Wash., July 22.—The weather is dry and hot around here. The thermometer has registered 110 for the last week. The hot weather has damaged the wheat quite a bit. Some farmers have started to harvest their grain. The only increase in crops in the county is in potatoes and lots more have been planted this year. In the town of Prosser there is quite an increase in the garden truck. Every vacant lot is planted to some kind of vegetables. A country truck man can't sell anything in Prosser. All crops are good, except wheat, which will be a poor crop. Labor, machinery and work stock in this community is adequate for harvest. Six or eight of the farmers are using the 12-horse combine. As the harvest will be late this year the farmers are trying to get along with community help. G. W. WILGUS.

Many Town Gardens.

COLVILLE, Stevens County, Wash., July 20.—The agitation for increased crop production has had beneficial results in increasing the amount of cereal crops on thin meadow land, in increasing the acreage of beans and of gardens in both country and towns. The most noticeable feature is the large number of gardens in the towns.

Prospects for yields are not the best. The dry weather during June and July will materially decrease the cereals, and while the first cutting of hay crops was nearly normal, the second cuttings in some cases will be impossible and in others greatly decreased. The yield of timothy hay in most districts will be materially decreased.

There is no report of labor shortage, or shortage of work stock or machinery. Quite a few farmers have purchased side delivery rakes to decrease the labor of hay harvest.

A. R. HAHNER.

Irrigated Wheat Fine.

GRANDVIEW, Yakima County, Wash., Juy 21.—More gardens in the town have been planted this year than before. More beans and more wheat have also been planted. Wheat on irrigated land is fine. So far there is plenty of help by the farmers changing work. We exchange and don't have to hire many more men. The weather has been very hot, up to 104 degrees, but is cooler for putting up the second cutting of alfalfa. There are not many men here to be had, but there are enough and we get along.

E. H. FAULKNER.

Scare Away Workers?

COLFAX, Whitman County, Wash., July 19.—Great effort was made last spring to increase the crop production, but the season has been unfavorable, and production will fall short of last year. Potato acreage is easily double that of last year, and prospects for spuds are good. Wheat, oats and barley are a disappointment. They are heading too short, and if present hot weather continues will be a poor crop. Labor is inadequate now, but unless commercial clubs and "citizen committees" succeed in terrorizing the workmen into staying out of the country I believe it will be adequate at harvest time.

E. C. HUNTON.

Fear Harm to Crops.

GARFIELD, Whitman County, Wash., July 25.—There was more spring wheat planted, but it is burning up very badly. A few more potatoes have been planted than usual. There has been no shortage of labor so far, but high wages are paid. Farmers are agitated over the necessity of protecting their crops from wilful destruction by anarchists and idlers. Two years ago many threshers were destroyed and some grain fields burned, and there is apprehension of greater danger this year. Peaches and late cherries were damaged by frost. Small fruits are plentiful, but everything is drying up. There has been no rain since June 23. Hay is good. Winter wheat is ripening prematurely. Ten acres on Cora farm planted to beans and corn last year, tended well, will have about half the crop of the rest of the same field.

MRS. MARILLA KIDWELL.

Yields Cut in Half.

METHOW, Okanogan County, Wash., July 24.—As the season progresses the results from the agitation for increased crops gives 25 per cent more grain to cut, but the hot weather has cut down the yield from one-half to two-thirds. The bean crops seem to have suffered less than grain or potatoes. Wheat and beans and potatoes are most noticeable in increase. The prospect for a yield are the poorest I have seen here in eight years. I have only seen one poorer year in the 29 years farming here. The labor and stock are sufficient for the grain crops. No new methods of harvesting the grain will be found.

CHARLES GRANT.

Beans Stand Hot Weather.

LEWISTON, Nez Perce County, Idaho, July 19.—The crop conditions in this territory at present are far from satisfactory. June and July as shown by the government weather bureau are the driest in 17 years. Winter seeded grain, of which there was a very small acreage, is in fairly good condition, I would say 95 per cent government basis. Spring wheat, of which there was a very large acreage as compared with former years, is in very poor condition. The straw is very short and the heads are not filling out. A rain at the present time would not increase the yield over 20 per cent. The last week has been extremely hot, with unusual hot winds, which have burned the grain badly.

The bean crop, of which the acreage will be 75 to 100 per cent greater, is standing the hot weather remarkably well. The growers who have been handling beans for the last several years have purchased new bean cultivating machinery, by which they are enabled to take much better care of their crops than at any time in the past, and it is shown that the intensive cultivation of beans holds the moisture in the ground and is going to be very profitable to such as have followed this method. I am informed by reliable bean experts that an increase in acreage of 100 per cent will not result in more than 40 per cent greater yield. A portion of this increase is on new ground which has not yet become innoculated to bean growing, it having been demonstrated by practical growers as well as by the agricultural schools that the yield increases from year to year on the same ground up to a certain point.

There has been a considerably greater acreage of corn, which to date is in first-class condition, but a much longer duration of the dry hot winds will cause great damage.

J. J. WILSON.

Irrigated Crops Are Good.

IDAHO FALLS, Bonneville County, Idaho, July 20.—The agitation for increased crop production in this vicinity has resulted in a greatly increased acreage of potatoes and wheat. It has also resulted in a great increase in truck gardening in and around the towns in this vicinity.

The season has been very favorable, and crop conditions in the irrigated portion of the valley were never better than at the present time. The grain on the dry farms has suffered greatly from the drouth during the last 30 days and possibly will make about 65 per cent of a normal crop, but all irrigated land will run a strong average.

The farmers have experienced little or no difficulty in securing labor and are well supplied with work stock. A great many tractors have been purchased, which have been of great assistance in reducing labor and the amount of work stock necessary to the farms. We anticipate no shortage of labor or machinery during harvest.

On the irrigated farms the harvesting is done principally with binder and thresher, while on the dry farms the harvesting is done with headers and combined harvesters.

The upper Snake river valley will do more than its share of relieving the shortage of the nation.

W. L. SHATTUCK.

New Section Opening Up.

BOARDMAN, Morrow County, Ore., July 18.—The people in this locality are striving to get their places under cultivation as fast as possible. Alfalfa is the principal crop being planted. As I have stated before this is a new section that has been opened by United States reclamation service and there is nothing fully established. I was in Gilliam county, west of here, last month and I found that quite a portion of the grain was badly hurt by drouth and hot winds. One well-posted party told me that in his opinion there would not be a 10-bushel harvest throughout the county. They were preparing to use a number of small combines or harvesters, to be operated by two men and 10 or 12 horses. We are having rather warm weather, more than 100 degrees in the shade every day.

S. A. BARNS.

Irrigated Crops Satisfactory.

GRANTS PASS, Josephine county, Ore., July 21.—The results obtained from the agitation for increased war production have been very satisfactory in Josephine county. Perhaps the increase in beans is more noticeable than that of any other one crop. There has been a considerable increase in vegetables, particularly in the towns of the county. The prospect for a large yield of beans is excellent and in irrigated portions of the county all crops are looking very well. The non-irrigated areas, however, have very poor crops; in many cases the crop will not be worth harvesting. Indications at the present time are that we will have sufficient labor, machinery and work stock for all harvest work unless possibly at fruit picking time. There are practically no changes in the proposed method of harvesting for this year. Possibly some better means will be provided for harvesting and threshing beans.

C. D. THOMSON.

GOING TO SPOKANE?

Farmers, stockmen and fruitgrowers and their families, who intend visiting Spokane, will find desirable stopping places listed on the classified page of this paper.—Adv.

Opportunity for Owner of Rig or Automobile

THE publisher of **The Washington Farmer** wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are offering these positions only to farm owners or renters and are paying good salaries to workers who had no experience in this line before accepting our offer. In almost every neighborhood there is an opportunity for building up a successful business. Perhaps this is the very chance you want to earn some extra money.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month, or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter.

Time to Fight Famine Right Now

Food Producing Facts Discussed at Vrooman Conference in Spokane

At a meeting of the county agricultural agents, members of the faculty and extension workers of the state college of Washington and prominent business men and citizens, held at the Davenport hotel in Spokane, July 23d, Assistant Secretary of Agriculture Carl Vrooman spoke in part as follows:

"In all our war food work throughout the country one of our most difficult problems is to get the food that is produced to the people. In Denver they have under consideration a plan involving the establishing of a municipal market to supply food at cost to poor people. In passing through Denver recently, I was asked concerning the feasibility of this plan. I told the Denver people that I did not think a plan of this kind should be so used as to replace the grocers and dealers already established. Of course, if the time should come—which I have no idea will come—when it becomes apparent grocers, and vendors have seased to be patriotic and are taking advantage of the war situation, and are running up the cost of food, there would be but one thing to do: start and conduct a wholesale and a retail establishment.

"I must say, however, that in traveling through many states and meeting many people, I have failed to find grocers, bakers, millers, canners or anyone who is unwilling, after this matter is put up to them on a patriotic basis, to conduct their business on a basis of reasonable profit. They do not want to get rich out of the slaughter of our young men on the European battlefields."

President Holland of the state college asked R. N. Miller, farm demonstration agent of Washington, to tell facts concerning the farm labor situation in Washington. Mr. Miller spoke in part as follows: "For two months I have been in the field endeavoring to see what the labor conditions are. There had been, during the early part of the season, a good deal of fear on the part of farmers on this ground. Also the season has been late, which added to their anxiety. They had found it difficult to find enough labor to put in the crops.

"As the season advanced, the farmers began to cast abount among themselves, and, I am glad to say now, they have taken the matter in hand and have recruited their harvest labor from their own ranch. Much has been done by the purchasing of labor-saving machines. At Ritzville 28 of the two-man type of combined harvesters have been taken out into the harvest field. I think as many as one hundred more will be installed. This will help to eliminate outside labor. The same is true in all parts of the Palouse country—more labor-saving machines will be used for harvest than ever before. I do not believe that the farm labor situation is serious in all parts of the state at this time. There is plenty of farm machinery on hand now.

"Meetings have been held throughout the state and farmers have been advised that it is a good practice to pay a little higher wage than before, owing to the advanced cost in living. They have responded in the proper spirit and there has been a horizontal advance in farm labor amounting to about fifty cents a day.

"We do not expect a shortage of labor in the Inland Empire."

Mr. Vrooman asked concerning the prevailing prices of farm labor. Mr. Miller informed him that $3.50 per day for common labor was being paid generally, but that in the Palouse country they had need to pay $4.00 per day.

> "We can not throw many troops into the trenches for months to come. We can do this thing: we can furnish food, more food, and still more food to those peoples and those armies today on a thousand battle fields dying by the thousands, fighting your battle and mine and fighting the battle of democracy throughout the world."

That the threshing of wheat will be higher than last year—probably 22c to 25c a sack as against 18c to 20c last year. A man and team is paid averaging $5.50 per day.

E. F. Benson, state commissioner of agriculture, said in part: "In order to get the farms into the highest possible condition of production, many of the farmers are finding it necessary to borrow money to purchase seed, additional farm implements, horses, harness, and farm equipment in general. There has not been any shortage of funds due largely to the willingness of bankers to advance money in this emergency. Many of the farmers needing money are not able to give the best of security and it is possible that banks, through their public spiritedness may fail to realize on their notes.

"It seems to me that the great problem confronting us in agricultural production is for next year, not this. The weather difficulty in many parts of the state has helped take care of the labor situation. The harvest will be somewhat short. The burning question before us is to put land into cultivation so that there will be no idle acres in this state next year. It seems to me that while we are all engaged in this war preparedness campaign, we ought not to overlook the importance of the preparedness of business.

"In building our foundation, we should have in mind that it is not a temporary structure whose usefulness will cease at the end of the war, but we should buid permanently so that at the end of the war agriculture in the state will be stronger than ever before and we can keep on building and making it stronger. Whether we are in war or peace what we are doing should be done with the view of permanence."

Professor E. J. Iddings of the University of Idaho, discussed the labor situation in that state. He said that the lumber camps throughout the state had volunteered to close down sufficiently long to enable their employes to go into the harvest fields and help take care of the crops. Similar proffers of help have come from residents of the cities who had offered to do all they could to help take care of the crops.

Following the talk by Professor Iddings and others who gave information desired by Mr. Vrooman, he replied by saying that the government found these first-hand facts of extreme importance in planning its work to meet the national crisis. He said in part: "One of the most interesting facts in connection with our present so-called war stimulus to agriculture is that this war situation gives the opportunity to interest the people in a more vital way than before in the things we have been trying to teach for a quarter of a century. nI other words, the war stimulus to agriculture is putting steam in your boilers. It is making the people receptive to our message. We have been campaigning for greater agricultural production for years and now the people are increasingly alive to the importance of this thing.

"The fact of the matter is the nation must now go on a war basis. Formerly we were on a peace basis as concerned our industry, our commerce, our military and our psychology; and when you talked about war and its camp followers, which are starvation and famine, it sounds strange to American ears in this land of plenty. The gaunt spectre of famine is already abroad in Europe. A dozen hungry hands, a dozen hungry eyes, are reaching for and looking at every ounce of food we waste in America. It is hard to realize that this is anything more than a rhetorical statement, but the fact is that already there are places on the earth where millions of people have starved to death. The roads are lined with bones where they will remain until made into fertilizer. There are stretches of country in which there are few children now living. They have starved. Today there is a world shortage of food. Any one who will take the trouble to study figures can see this shortage.

"Our primary military necessity is to put back this food famine. If we do not succeed in producing and saving more food more people will die in Europe of starvation in years to come than have been slaughtered in battle in the years that have gone. This is a crisis which should appeal to your patriotism if you have any manhood or womanhood or any humanitarian sentiments. Here is a task into which even the pacificist can throw himself heart and soul.

"We can not throw many troops into the trenches for months to come. We can do this thing; we can furnish food, more food, and still more food to those peoples and those armies today on a thousand battlefields dying by the thousands, fighting your battle and mine, and fighting the battle of democracy throughout the world."

Farm Bank Active

Continues to Rush Making of Loans

The northwest district federal farm loan bank at Spokane continues rushing the work of chartering local loan associations, approving loans and sending out to applicants the money to which their holdings entitle them. Fourteen new local associations were chartered last week, three in Washington, six in Oregon, four in Montana and one in Idaho. The following are the new associations and the amount of loans asked by the charter members of each and approved by the land bank officials, subject to the filing of abstracts of title to the land on which the borrowings are to be made:

Washington.

Maple Valley, King county	$55,230
Kiona, Benton county	27,250
Winlock, Lewis county	44,230

Oregon.

Beaver, Tillamook county	43,100
Cloverdale, Tillamook county	55,400
Thurston, Lane county	46,900
Sisters, Deschutes	38,100
Baker City, Baker county	84,700
Salem, Marion county	49,200
Eugene (additional loans)	30,150

Montana.

Park City, Stillwater county	39,800
Dunkirk, Toole county	59,400
Terry, Prairie county	48,600
Union, Dawson county	35,700
Additional loans in state	23,800

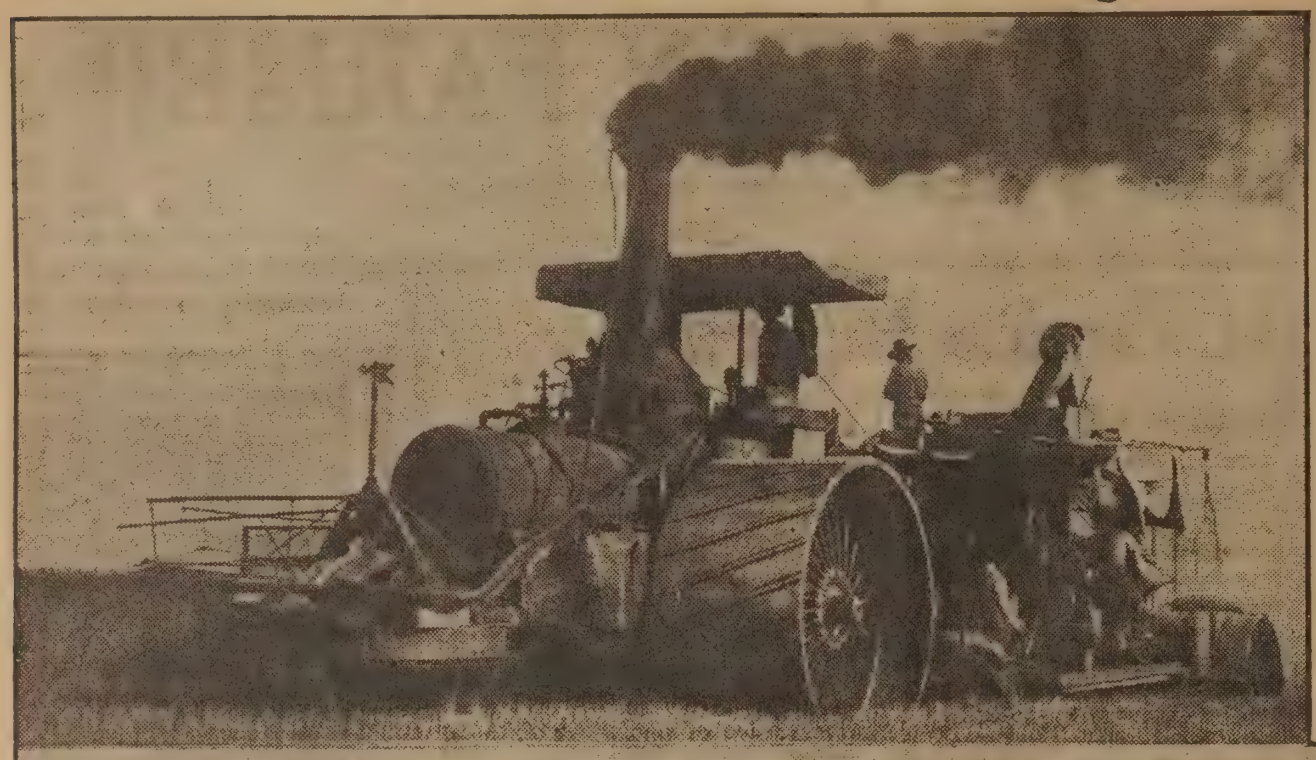
Idaho.

Melrose, Nez Perce county	51,100
Additional loans in state	11,000

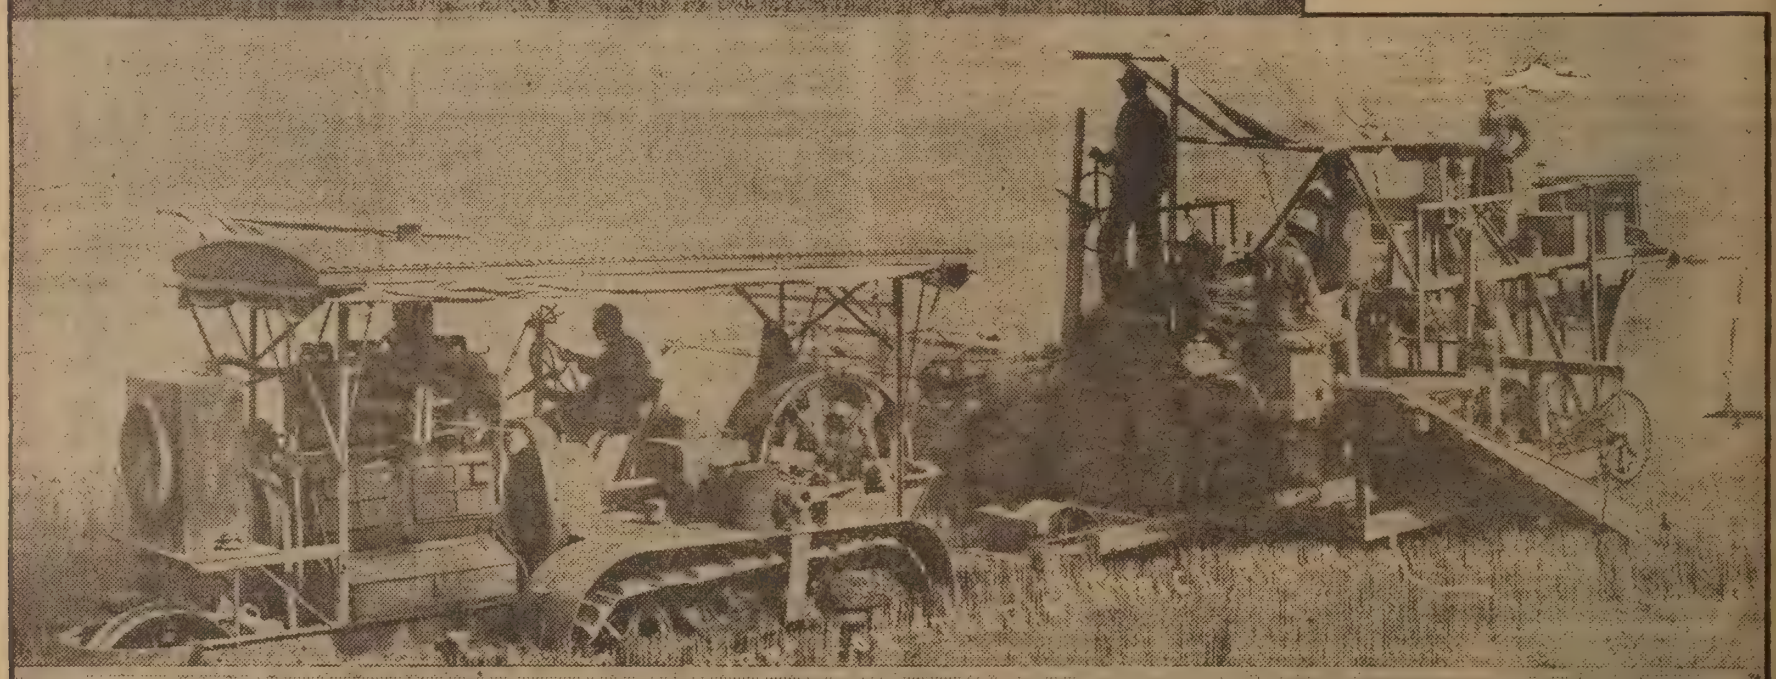
Washington Portrait No. 26.

B. E. Smead.

B. E. Smead of Opportunity spent the first 10 years of his life in St. Paul, and then his parents moved west to Portland, Ore. The next three years were spent at Blalock on a fruit ranch. It was there he decided to become a cowboy, to which his mother objected and sent him off to Pullman to school. From that time until 1907 his time was devoted in the winters to acquiring an education in electrical engineering. The summer months, which were the happiest of the year, were spent on the ranch.



In 1907 he began to serve an apprenticeship with the Westinghouse company at Pittsburg. He arrived at that concern just at a time when it passed into the receiver's hands, and the dirt, grime, grease and multiude of bosses combined to sicken him of the work; so at the end of a year he turned west again.



Pure-bred live stock had always held a great attraction to him. To start in with cattle or horses required large capital, so he turned to Duroc hogs. The first purchases made at the Spokane fair turned out very fortunate, proving all to be prize winners at the fair one year later. The third year brought many prizes, the fourth year the old exhibitors all had to take a back seat. It looked as if his future as a breeder was secured. But starting with this year came the slump in pork values and the falling off in the demand for pure-bred stock. In the meantime dairying was carried on in a small way with pure-bred Jerseys. Owing to the fact that all the calves born were males, the herd increased disastrously slow.

Mr. Smead would advise youg men in the country to take a course, if possible, at the nearest agricultural college. He believes that one of the most valuable things a young man can learn is the ability to mix well and take well with his fellow beings. The crying need in almost every rural community at the present time is for some young fellow to organize it as a social center. That some young man with winning and boundless enthusiasm, high vision and the will to do, bring his neighbors into the spirit of cooperation, social recreation and education, It is by no means necessary that a bright young fellow go to the city in order to be of benefit to his fellow man. There is a wonderful field at nearly every young man's door if he will but see it.

The next in the series of Washington portraits will be that of John H. Quick of Castlerock, and will be given in next week's issue of The Washington Farmer.

Northwest Wheat Growers Conduct Big Harvesting Operations

Typical Big Methods.

The three photographs here illustrate three types of harvest power in use in the northwest. All three are scenes in the harvest fields of Umatilla county, Oregon, one of the world's great wheat-raising counties.

The top picture shows the steam traction engine pulling a combined harvester outfit on the George Peringer ranch, near Havana.

The middle picture shows a gas traction engine pulling the big harvester on the Sturgis and Wyrick place, between Havana and Cayuse.

In the bottom picture 30 horses are pulling the big combine on Charles M. Wright's ranch at the southern end of the Umatilla reservation.

Notwithstanding the great reduction in grain crops throughout the northwest by the long dry and hot spell, the sound of the big harvesters is beginning to be heard. Already the shuffle of the header and binder sickle, the hum of the thresher cylinder and the triple voice of the tractor-pulled combine are in the air, and in some of the earlier districts the wheat wagon is beginning to deepen the dust of the roads.

The photographs herewith indicate in some degree the picturesque immensity of the harvesting operations in the northwest and also the customs in practice. Steam, gas, horse flesh! Not many years ago it was horse flesh only, but today the steam and gas are playing a big part. But even at that, the horse is still the leading element of farm power. He is more numerous today than ever, notwithstanding the thousands of tractors that are doing duty in the fields of the United States, indicating the great increase in farming operations. Two conditions have contributed to the development of the tractor in farm work, the inability of the horse breeder to keep pace with the need of farm power, and the wonderful adaptability of steam and gas.

Use Diligent Care in Canning Fruit and Vegetables; Follow Directions and Be Successful

The United States department of agriculture has issued a warning to the housewives of the country against carelessness in canning their vegetables and fruits. The subject is so timely and of such vital importance that The Farmer gives it herewith. Canning directions have been given in previous issues of The Farmer.

The faithful following of approved methods and directions is the only safe road to success in canning. Housewives who carelessly practice methods that are new to them, or who attempt to "improve" on the methods, or to make short cuts, are taking a risk of spoiling good food. Canning is essentially a scientific process, however much it may have been simplified for home use.

In the canning methods which the department advocates careful study has been made of the essentials for the preservation of food products, and all steps not absolutely necessary have been eliminated. There is good reason, therefore, for each step which is advocated. If home canners profess to follow a department method, they should follow it in detail; and if they fail so to follow it, they should frankly recognize that not the method, but the application of it is at fault. Especially there should be no mixing of methods, whether those of the department or others. One method should be adopted and followed carefully in canning any given batch of products.

In the one-period cold-pack method of canning in particular, canning has been simplified greatly as compared with some other methods. For this very reason, every step called for in the directions is essential, and not one should be omitted or performed otherwise than as indicated. Specialists who have worked out and demonstrated this method of canning for the last five years, have investigated all reports of the spoilage of products, and have found in every case that the trouble was due to faulty equipment, including poor rubbers and containers, to failure to follow the directions carefully, to the use of old or spoiled vegetables or fruits, or to the local occurrence in certain vegetables of unusual spores, which prove troublesome even under commercial canning practices. By following the simple directions exactly the specialists themselves have put up with home-made water-bath outfits, without loss, thousands of jars and cans of various products.

The following points especially should be kept in mind when canning by the one-period cold-pack method:

Test jars, and use only those free from flaw.

Skagit Milk Prices Higher Than Ever

Over Half the Cows in County Included in Dairymen's Association

By PAUL E. TRIEM

The Skagit County Dairymen's association, which is the pioneer organization west of the Cascades, has already achieved the major portion of its task by bringing into the fold more than half of all the cows in the county. In other words, the association herd is now the "big herd," and as such its owners, collectively, are able to demand for themselves as favorable treatment as is accorded any one in the territory. Milk prices are higher in Skagit county than they have ever been before, and apparently the end is not yet reached.

Whatcom county is rapidly perfecting an organization, along lines very similar to those worked out in Skagit. President John Kill and Secretary Joe Hall, of the Skagit association, have done much to aid the Whatcom dairymen to build up an efficient producing and selling machine.

Snohomish county will soon be completely organized. Meetings have been held in various parts of the county, a constitution and bylaws similar to those adopted in Skagit county have been passed, and contracts are rapidly being signed by the dairymen.

King county has departed somewhat from the lines followed by the counties to the north, in providing for a sinking fund to be raised by levying on each cow. This feature of the organization calls for the investment of considerable money by members, and for this reason the work of organization has possibly been a little slower than in the other dairy counties. A meeting will soon be called at which to consider these and other practical matters, and at this meeting prominent members and officials from Skagit county will be present, to advise with the King county men.

Must Help Themselves.

John Kill, of Skagit county, Washington, is the fighting president of as aggressive and determined a body of dairymen as ever organized. Mr. Kill is a producing farmer, rather than a book farmer, and upon the latter type he looks with feeling of unmixed contempt.

"It is no good for the dairymen to look for help from any one but themselves," he declares. "What are the various agricultural colleges and departments trying to do? Principally to teach the farmer to raise bigger crops. What good does that do? We understand the production end of our business better than any man from the outside can possibly do. Every farm is an individual problem, and it is absolutely ridiculous for these so-called 'experts' to come in here and try to show us how to run our business. Let me tell you one thing—the only failures in the farming business we have had up here have been book farmers—men who sat on the fence, looking from a text book on agriculture to their crops, which according to theory should be growing, but which didn't grow right because they didn't have enough know-how and elbow grease applied to them.

"At a recent meeting up in Whatcom county," Mr. Kill continued, "I was called upon to express my opinion on these and similar matters. For instance, the subject of testing came up. I said: 'Gentlemen, I will be strong for the testing idea when the tesfer is able to make his figures official, so that the condensers will have to accept them. As it is now, the tester tells you that your test runs 3.8 or 3.9, perhaps, but when your milk reaches the condensery it is tested by their man who tells you that your test is 3. And that is what you get paid for. Until the testers whom the associations hire are able to make their tests stick, I am not in favor of making more fancy jobs to be paid for out of the farmer's pocket.'"

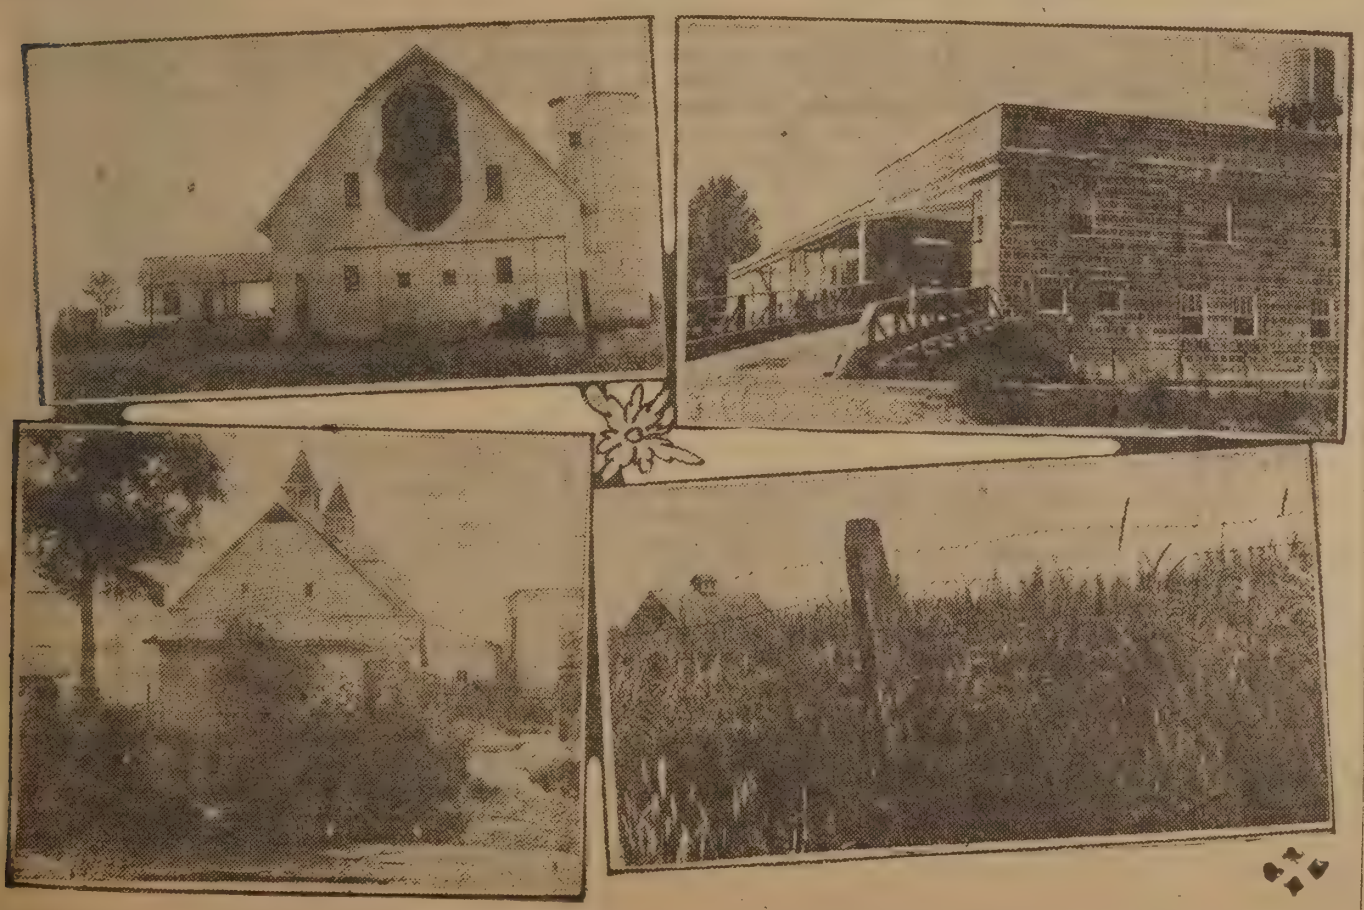
Mr. Kill takes issue with the statement made at various public dairy meetings that certain cows in the county are paying their owners a handsome profit. "Half of these things that are worked out all right on paper won't work at all in actual practice," he comments. "High yields are often secured at such a tremendous price for feed, care, etc., that if the dairyman figured his own wages in, he would come out in the hole. And because we won't agree to all these things which are said to us, certain elements in the community are opposed to us. We had a meeting scheduled in a town not far from here the other evening, and when the mayor heard of it, he found suddenly that he must call a special session of the council. The result was that when the dairymen had come into town for their meeting, there was no place for them to assemble—the city hall was occupied. One of the local lodges heard of our trouble, however, and turned their hall over to us. So we had the meeting, in spite of our friend, the mayor.

"Mr. Stuart, of the Carnation company, says that if he pays us what we ask for our milk this summer, he himself will come out on the wrong side of the ledger next winter," concluded Mr. Kill. "How about the farmer, who has been coming out on the wrong side of the ledger, winter and summer, for years? Does Mr. Stuart worry about him? Not a bit—he told me that if he really felt about this matter as we expressed ourselves to him, he thought perhaps it would be best for him to take his machinery out of the local plants and move it elsewhere. And I said to him: 'Mr. Stuart, when you were thinking of coming in here, the local dairymen called a meeting and subscribed enough to buy your location. If you want to pull out of here now, it will be just as easy for us to call another meeting and subscribe funds to build our own condensery. It's up to you—we're not begging you for anything!"

As a final indication that the Skagit county milk producers are determined to secure all that they are entitled to, President Kill said that the association is now so widely and so favorably known that applications for membership are coming in from all over the county by mail. This has rendered active field work unnecessary.

J. B. Hall, secretary of the Skagit County Dairymen's association, is one of the most active missionaries in carrying the new gospel of organization into other west side counties. Mr. Hall is one of those likeable fellows who can stand up for his rights without holding malice against any one, and it is safe to say that his good humor and his willingness to put himself out for the common good have been big factors in the success of the Skagit association.

Secretary Hall reports the business of the dairymen's organization in flourishing shape.



"This movement is one of the biggest things western Washington has ever seen," he declares. "All that is needed is the loyalty of our members, and that we are sure of—they are sticking and doing their share in great shape."

"We're for It."

Lutro brothers, of Skagit county, are among the successful experimenters with alfalfa. One field has been in three years, and is doing well. The Grim alfalfa seed was obtained in Minnesota, and was innoculated with a pure culture obtained from the state college at Pullman. Three cuttings per year are obtained. The biggest problem has proved to be weed control—a problem which probably is best solved by raising several cultivated crops before seeding to alfalfa, combined with thorough preparation of the ground.

The herd of pure-bred Holsteins belonging to this farm are all signed up with the Skagit County Dairymen's association.

"Do we believe the association is a good thing?" repeated one of the proprietors. "There's not much room for doubt about that—compare this year's milk prices with last. Of course, the association is young, but it has already shown what it will be able to do. We're for it."

The picture in the upper left corner shows the dairy barn on the farm belonging to the King brothers. The picture at the right is a part of the new federal condensery at Mount Vernon. The lower left picture shows part of the farm buildings on Otto Rundgren's stock farm, and the picture at the lower right corner shows a sample of Skagit county oats, photographed July 18.

Kill Potato Bug With Arsenicals

Use Arsenate of Lead or Paris Green as Dust or Spray

Last week The Farmer published an article relative to the apeparance of the Colorado potato beetle in the northwest, and sent out inquiries to county agriculturists and others asking for information as to the extent of the invasion, and means of combatting the pest.

Interesting replies have been received indicating that the potato bug is to be found in several parts of the northwest, in some of which it is threatened to become a serious pest, but in others of which it is under control.

The replies, together with information from scientific authorities and experimentors, indicate that the three successful remedies are arsenate of lead spray, paris green spray or dust and arsenate of zinc spray. The lead and paris green appear the most common.

The spraying should be done about the time the eggs hatch, and if investigation is careful, only those plants where the red, spotted-sided larva (look like slugs) appear need to be sprayed.

W. C. Edmundson of the agricultural department of the University of Idaho writes as follows:

"In north Idaho the potato beetle is a very serious pest and one that is causing a great loss to the growers every year. This pest has not yet made its appearance in south Idaho, and the potato growers should do all in their power to prevent it from getting a foothold in that part of the state.

Use Arsenical Poison.

"The best and most practical remedy is spraying with some arsenical poison. In the larger fields the best machine is a special made power outfit drawn by horses. In garden patches a small hand pump does good work. Arsenate of lead and paris green are the two stomach poisons commonly used. The arsenate of lead does not kill as quickly as the Paris green, but it sticks to the leaves better and will do effective work even after a rain.

"If applying arsenate of lead, use one pound of the powder to fifty gallons of water. If applying Paris green add two pounds of lime, 3-4 pound of Paris green to fifty gallons of water.

"Potato plants should be sprayed with an arsenical poison as soon as all the plants are well out of the ground. By so doing, many adult beetles will be killed before they deposit their eggs.

"It might also be a good idea to mention the hand picking which is used in small gardens. The insects are killed quickly by dropping them in a can of kerosene, but this is a slow process at best. Spraying or even dusting is much easier and far more effective."

The following reports have been received from county agriculturists in response to The Farmer's inquiry regarding the potato pest:

CHARLES GRANT, Methow, Okanogan County, Wash.: I have not seen one of the potato bugs here, although

Subscription price: $1.00 a year—special 3-year rate $1.50. Canada and foreign, 1 year $1.50.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Style Costs More Than Food

A good deal of the railing against the high cost of food is misdirected. It is the high cost of style that is pinching many people who unjustly blame the farmer.

Congressman Madden of Chicago, in a speech in congress the other day, gave an interesting analysis of prices on the bills of fare of some of the high-class hotels in the national capital. For 46 cents worth of food the man who wants to dine in style is charged $6.55, according to the Illinois congressman. Here are his figures:

	Menu price.	Cost price.
Lobster cocktail	$ .90	$ .03
Clams	.50	.01
Olives	.30	.03¾
Half broiled duckling	1.75	.12½
Beans	.60	.05
Cauliflower	.50	.02
Grapefruit salad	.50	.06
Green peas	.50	.03-.04
Peaches	.50	.05
Cantaloup	.50	.06-.08

It is also to be remembered that the producers got only a part of that 46 cents. A portion of it went for transportation, and assuming that the hotel bought directly from the wholesaler, at least one middleman took his "bit."

But much the greater part of that $6.55 was paid for style, and a congressman does not have to dine at the top-notch hotels. Washington has hundreds of cheaper hotels and restaurants that serve pretty good meals at reasonable prices. Thousands of clerks and other employes in the various departments and bureaus get pretty good "eats" for 25 or 35 cents. The waiter in a high-toned hotel expects that much in way of his tip.

Style comes high, and many buy who can not afford it.

Attack the Big Things Everywhere

Most of the mistakes of men and women grew out of thoughtlessness. A glaring case in point was narrated by Miss Elizabeth Jones, assistant state leader of boys' and girls' clubs, at the conference in Spokane by members of the state and county defense organizations, county agricultural agents, State college professors and representative farmers.

Miss Jones, who takes a keen and practical interest in the big work of home conservation of foods, told of organizing boys' and girls' canning clubs and asking the high schools to specialize on this work in season in their domestic science teaching.

"Imagine my consternation," said the speaker, "to learn that in some towns this request had been overlooked or ignored; that girls were being taught sewing instead of cooking and canning, and that some classes were at work on tatting and crocheting. I told them that if they must teach sewing now when they should be teaching canning, for goodness sake to drop fancy work and apply their labors to Red Cross sewing of a practical and patriotic nature."

However, these incidents are only the amusing exceptions to the rule, for The Farmer is satisfied that school authorities generally will have the good judgment and the thoughtfulness to coordinate their work with this vitally important labor of conserving the food supplies of the land.

Our readers will be pleased to know that Miss Jones reports that 820 boys' and girls' canning clubs have been organized in Washington state, with an average membership of about 12. Here is a fine little army of 10,000 boys and girls, responding right loyally to the president's call for service to help America win the war.

Revoke License of Dr. L. F. Wagner

Petitions to the state board of medical examiners, asking to have revoked the medical license of Dr. L. F. Wagner of Harrington, have made their appearance in Harrington, Lincoln county. The petitions assert that Dr. Wagner, convicted of grossly immoral conduct toward a 16-year-old girl, is unfit to retain a physician's certificate.

The restoring by the state board of medical examiners of a license to Dr. Wagner remains without satisfactory explanation. The manner in which Spokane county and state officials handled the Wagner case is also hard to understand. Although Wagner pleated guilty to the charge of contributing to a young girl's delinquency, the county prosecutor urged that he be let off with a fine. The superior court overruled the request for leniency and sent Wagner to the county jail, whence he was released a week before the completion of his sentence. Then the county prosecutor appeared before the state medical board and told the board that "Wagner was a man who had been persecuted rather than prosecuted."

Every father and mother of daughters in the farming districts, in the rural towns as well as in the larger cities, has a public duty to perform in this lamentable matter. Write a letter of protest to Dr. Royal A. Grove of Tacoma, Wash., president of the state board of medical examiners, which board gave Dr. Wagner the license. Write a similar letter to Governor Lister, Olympia, Wash., telling him what you think of all these dastardly proceedings which have resulted in permitting Dr. L. F. Wagner of Harrington to resume the practice of his profession under state authority, which he should be forever disqualified from doing. Demand that the state board revoke the license to Dr. Wagner; otherwise demand that the governor remove the state board and create a new board, which shall meet the demand of an outraged public.

The Council of Defense

The people of the United States are being organized into one great council of defense. Very soon every village and country district will have its local organization designed to play its little part in the great movement for national efficiency in every line of industrial production and distribution. The council of defense is as simple as it is practical.

Several weeks ago President Wilson appointed several members of his cabinet to act as his advisers and assistants in carrying out the great problems before the nation. Since that time the governors in the various states have appointed committees of responsible citizens as state councils of defense to serve within the states as the national council serves with the president for the whole country. The state councils are organizing county councils to serve within the county as the former does within the state, and the county council is assuming the still greater task of organizing every community in the county for specific, personal effort in the great, nation-wide movement.

The national, state and county councils have a great work to perform, but the success of the entire movement depends upon what the individual citizens do in their own homes and localities. America's greatest problem is that of arousing an individual, personal interest on the part of each of its citizens in the issues that confront it. We are 100,000,000 people, and 100,000,000 acts of loyalty will win the war for humanity, while 100,000,000 acts of disloyalty or mere disinterestedness may well lose it.

Washington Gleanings

A large evaporator plant is being rushed to completion at Yakima.

Prescott is organizing a home guard to protect its wheat crops. It is in the midst of a large bluestem district.

Irving West of Colfax has purchased the J. O. McClung farm of 595 acres, four miles west of Palouse, for $60,700, or a little more than $100 an acre.

An exhibit of agricultural products as grown or prepared by the school children of Garfield county will be held next fall, according to plans soon to be made public by Miss Belva Ball, county superintendent of schools.

Work on a $13,000 elevator to be erected by the Superior Milling company at Winona has been started. Besides the elevator the mill company will erect a flour warehouse to cost $2500 and install new machinery to cost $2500.

J. N. Livingston, well-known rancher of Belmont, has sold his ranch of 500 acres to A. L. McCauley of Dayton, Wash. The Livingston ranch is known as one of the finest in the Palouse and brought the price of $50,000 cash.

An effort is to be made to promote a school for the instruction of Leavenworth people in the packing of apples. This is being done to overcome the trouble experienced in the past by the growers being unable to secure packers for their crops.

The report of the department of agriculture states that the total amount of fruit expected for this year is slightly in advance of last year's crop. It is expected that the total fruit crop this year will be 21,750 carloads, in comparison to 21,506 of last year.

George Goranson of Centralia has purchased the Richard Jones property on Fords prairie, which he immediately traded in on a big dairy ranch near Olympia owned by F. P. Crawford. The deal included the stock on the place. The consideration is said to be in the neighborhood of $13,000.

J. P. Stevenson of Burlington closed negotiations recently for the purchased of the 60-acre Pettet farm, situated a mile and a half west of Burlington. It is improved and considered to be one of the most fertile tracts of land in the valley of the Skagit. The consideration is said to have been $20,000.

Never in the history of the Pacific coast has there been such a demand for hogs and other live stock as at the present time, and packers are a unit in declaring that conditions are such that live stock growers will be able to reap fortunes during the next five or six years, according to the Burlington Journal.

What Others Say

Republic, Palouse: The fellow who is constantly looking for failure invariably finds what he is looking for.

Record, Neppel: Unless we protect the production of labor-saving farm machinery and the supply of skilled farm labor we, too, must soon face a shrinkage of food supplies.

Express-Progress, Pasco: It is to a careful marketing of the surplus perishable products of the farms that community organizations, boards of trade and business men all over the country should direct their attention.

Tribune, Oakesdale: The sensible economy and the true patriotism is for each to exert himself to keep the business of the country normal. Buy and sell, earn and spend, as only by such a course can business be kept healthy and on the up grade.

American, Anacortes: Opportunity has never knocked louder at the gate of our young men than at the present time, and it is to those who have the capacity to discern opportunity and power to take advantage of it who will be among those who will control the destinies of the country 10 and 20 years hence.

No News Is Good News

Movement of U. S. Troops to Be Secret

The navy and war departments have announced that hereafter strict secrecy will be followed, so far as publication of news concerning the movement of vessels and troops is concerned. This includes the arrival of American troops on foreign soil. No longer will the war department allow publication of the fact when a detachment of soldiers lands in France. This ruling is made because it is deemed advisable to keep Germany and her allies in as total ignorance of the plans, preparations and operations of this country as possible.

The department has promised, however, that if any disaster to U. S. troops en route to France occurs, the American people will be allowed to know of it. This means that "no news is good news." It is believed that newspaper publication of reports of battles in which the American soldiers take part will be allowed, so that the people of this country may know of the actual participation of its army in the war.

Gigantic Cost of War.

The war and navy departments, and minor branches of the government taking part in the war and preparations for it, have asked congress for a total of more than $11,000,000,000 for the expenses of the first year—July 1, 1917, to June 30, 1918. This huge sum will be raised by various forms of taxation, including the income tax, and by the issuance of government securities, such as bonds and treasury certificates. The actual expenses of the year are calculated to reach $10,735,000,000, but the additional amount is asked in order that there be no danger of stint in carrying out the big plans of the government for participation in the war. This means an average expense of approximately $30,000,000 a day, which is about 30 cents a day for every man, woman or child in the United States, or more than $500 a year for every family of five persons. Owing to the use of the income tax, the sale of bonds and the use of various forms of revenues, including customs duties and internal stamp taxes, the rank and file of the people will pay their share only indirectly, the system being so planned as to distribute the burden where it will be least felt.

Food Bill Difficulties.

The impossibility of the committees of the house of representatives and the senate in congress to agree on certain of the problems involved in the food administration measure that has been pending so long, and for which the administration and the producer and consumer have so long been asking, has resulted in the calling of a conference between the joint committees and President Wilson. The two greatest difficulties appear to be the question of a single food controller or a board of three food controllers, and the question of a single supervisor of national expenditure or a congressional committee of supervision. The president is an advocate of the one-man idea, having urged from the beginning the placing of the food control movement in the hands of Herbert C. Hoover. It is probable that the food control measure will be agreed upon before the end of the week, and be passed in some form within a few days.

Call Men to Colors.

With the drawing of the numbers completed, determining the order in which the 10,000,000 registered men in this country will be called into the army service, the second step is now being taken—that of calling the first unit for examination. At the time of the drawing of the numbers at Washington, photographs were taken of a blackboard on which the numbers were written as they were drawn from the great lottery jar. Reproductions of these photographs have been sent to the examination board in each registration district and that board in each district is now calling the men whose numbers were first drawn for examination. The examination board passes upon the physical fitness of the registered men and upon the question of their exemption from the standpoint of dependents. A special board, one in each federal judicial district, is created to handle the question of occupational exemption. This latter board will determine whether a man who is called to the colors shall be exempt because his occupation is of more value to the government than would be his service as a soldier.

The first unit of the great new national army is to total 500,000 men. In order to fill up the national guard and the regular army, an additional 187,000 men are called in the first drafting, making a total of 687,000. Because nearly half of the men examined will be exempted for one reason or another, principally physical reasons, however, this means that more than 1,350,000 men will be called for examination as rapidly as the boards can pass upon them.

Need Naval Warfare.

The possibility of a united and formidable naval campaign against German control of the Baltic sea is affording thought for English newspapers and others more personally interested in the conduct of the war. The complete control of the Baltic sea and its entrances by the German navy is the "insurmountable obstacle" that the allies would like to overcome with "an irresistible force." Were it possible to break this control, it would probably be the greatest disaster that could befall Germany, for it would afford an opportunity to the allies to destroy the German navy and get at the submarine bases. The task is so stupendous, that but the highest flights of imagination can conceive its possibility, yet there is strong agitation for a more aggressive naval policy on the part of the allies. This policy would of necessity involve the creation and the operation of a giant navy of airships to collaborate with the warships, submarines and submarine destroyers.

Strikes Are Numerous.

Strikes are menacing industry in many localities. In the northwest the I. W. W. has been fomenting industrial disturbances for many months. Through its activities many lumber camps and mills have been closed down and others greatly handicapped. Farm harvest operations are threatened. In Seattle a strike of streetcar operatives has tied up the entire car system, necessitating that those doing business in the large city walk long distances or use autos and jitneys. Failure of the car company to recognize the operatives' union is the cause. Two thousand fruit and vegetable canners in the San Jose, Cal., section, have been on strike for higher wages and better conditions. This strike is reported about settled. Probably the most disastrous strike is that of the railroad switchmen of Chicago, by means of which they have tied up practically all rail operations through Chicago. An embargo has been placed by the railroads on all perishable freight, including live stock, billed to or through Chicago. Serious problems confront the committees trying to end the strike. Mine strikes are reported from several districts, including that of about 5000 miners in Michigan iron mines.

Send In Your Questions.

It is our business as a farm paper to be of the greatest possible assistance to our readers. Any question of a practical nature that interests you or the answer to which will be of special value to you—send it in. It is for us to give you the best possible answer. There will be no charge for this service. All questions must be signed with your name and postoffice address and will be answered by personal letter. Replies of general interest may be published in The Farmer, your name being omitted if you so desire.

Kill Potato Bugs With Arsenicals

(Continued from page five.)

they were plentiful in Ontario, Canada, while I was farming there. We used paris green regular or there was no potato crop.

M. E. SCHRECK, Lacrosse, Whitman County, Wash.: The Colorado potato bug has made its appearance in this locality, but there has been no action taken to fight it.

JOHN B. Peterson, Montborne, Skagit County, Wash.: There are no Colorado potato bugs in Skagit county.

Let Them Win the War.

MARILLA KIDWELL, Garfield, Whitman County, Wash.: The Colorado potato bugs have appeared in Whitman county. They began about three or four years ago, and although there are many nice potato fields in the country, all farmers spray the plants. One man who planted a sack of potatoes said he got a gallon of bugs in two pickings. Picking and spraying are both good methods of fighting the pest. But we may make the potato bug a valuable ally to help win the war. Ducks eat the bugs and thrive on them. A few acres of potatoes, bugs and ducks ought to keep a family. We find that even when the leaves are all eaten the vines can be saved by spraying if it is not too dry.

J. F. McCURDY, ZiMah, Yakima County, Wash.—No potato bug has appeared in this section that I know of.

LEE M. LAMPSON, Kennewick, Benton County, Wash.—The potato bugs have not appeared yet in Benton county.

G. W. WILGUS, Prosser, Benton County, Wash.—I have not seen any appearance of the potato bug in this county.

A. R. HAHNER, Colville, Stevens County, Wash.—Have heard no report from this county indicating the presence of the Colorado potato beetle. It is possible that it may be present in the southern portion of the county, but in extensive travels in the northern in extensive travels in the northern portion have not seen it.

MARTIN PENHALLICK, Neppel, Grant County, Wash.—We have none of the potato bugs yet, but four years ago I found some in a potato field that had been seeded from potato seed from Rosalia. I was able to put out a clear crop by cleaning them as fast as they appeared.

A Serious Pest.

H. W. REAUGH, Ephrata, Grant Copnty, Wash.—The Colorado potato bug has not invaded Grant county as yet. As a boy I remember picking potato bugs in Illinois and I trust that they will not gain a great foothold in the west. However, owing to the appearance in the different sections of the northwest, they are apt to become a very serious pest and cause the growers of potatoes thousands of dollars each year in combating them. The old adage, "an ounce of prevention is worth a pound of cure," could be applied to the potato bug situation very easily. If each individual that has potato bugs in his fields would work to eradicate them he would not only be saving himself much money but would be doing a duty worth while to the whole northwest.

C. C. BROWN, Castlerock, Cowlitz County, Wash.: In the southern part of the county the Colorado potato bugs have appeared. Those that have found them are taking the proper precautions to exterminate them, as they have combated with this pest in the eastern states and know what they are up against. The same methods are used that are used in New York state, where there is not much ground to go over a small amount of paris green or arsenate of lead is used regardless of the cost. The paris green is used by diluting with water, a small teaspoonful to a bucket of water, or the same proportion in a small sack of plaster, sprinkled on the vines when the dew is on and the vines are moist. Arsenate of lead can be used in the same manner. The impression has been heretofore that the nights were too cold for the bugs' eggs to hatch, but this ought to be forgotten, for where tomatoes and corn will mature the potato bugs' eggs will hatch. In many instances the vines have been stripped of their leaves in a short time by the pests. Several have saved the vines with the paris green, either the water method or plaster, sprinkling three or four times a week, and if showery have taken a pan and knocked the slugs or red young ones from the vines, getting a pan full from a few hills. We are going after the pest here in Cowlitz county and with each farmer watching his fields carefully for the first appearance and doing away with them. It will be several years before they will be a menace to the potato grower.

J. G. WOODS, Omak, Okanogan County, Wash.: The potato bug has not appeared in this section and every effort should be made to exterminate them as soon as they make their appearance. Paris green was extensively used in Minnesota and was very effective. I have never experimented with other sprays.

Inland Empire Wheat Going to Market in a MACK Truck.

PERFORMANCE COUNTS

in Motor Trucks

THAT'S why it will be a very wise course to investigate MACK TRUCK performance before you buy a truck. MACK TRUCKS make money for you on the farm by their economy of operation, ease of handling, ability to take "hard knocks," low upkeep cost—in other words, "PERFORMANCE." There's just the right size MACK TRUCK for you—you can buy to suit your needs—1 to 7½ tons. Look around you—inquire of your neighbors—see what MACK TRUCKS are doing right here at home. Learn more about MACK TRUCK performance.

FAMOUS COW IS DEAD
Clover Bloat Takes Costly Animal.

Gertie's Fern Princess, the fine Jersey cow for which Frank Doerfler paid $820 at the McArthur & Stauff sale June 27, is dead. She bloated on clover pasture July 10. She had two register of merit records, the first made when she was 2 years old. The second was over 700 pounds of butter in a year, and she would have been put on test again, with every prospect of entering the gold medal class, by producing over 800 pounds.

The loss is most discouraging to Mr. Doerfler, who lost her daughter some time ago, after paying a long price for her. Moreover, he had contracted her next calf, by the McArthur & Stauff herd sire, Holzer, to W. A. Forrest of McMinnville, Ore., for $440 if it should be a bull. Mr. Forrest made this announcement at the sale.

Mr. Doerfler has paid high prices for all his foundation stock; he has selected well, and, in spite of misfortune, has shown not only the ambition, but the ability, to build up a high-class Jersey herd. His herd led the Marion County Cow-Testing association the last seven months. It is yielding a good profit, a nice lot of young stock is coming on and Mr. Doerfler will continue to successfully breed Jerseys. H. A.

Ferndale Cow Testing.

Whatcom County Agriculturist H. B. Carroll Jr. reports: July 5, 1917, meeting called by county agent for purpose of completing organization of a cow-testing association. O. E. Gibson and I secured the names of 26 men who were interested in a cow-testing association. Of this number 14 were present at this meeting, held in Ferndale. The by-laws and constitution furnished by the dairy department were read and adopted; a board of seven were elected. This body then elected the following officers: President, H. B. Doughas; vice president, Jay Vail; secretary, F. C. Johnson; treasurer, B. S. Hillier; board of directors, Miss Anne E. Radford, H. J. Evans, J. A. Porter. The association has about 560 cows and expects to sign up a few more. We are now waiting for a competent man to do the testing. The organization will be known as the Ferndale Cow-Testing association, Ferndale, Wash., and is the first one of its kind to be organized in Whatcom county.

Boise Valley Cow Testing.

The Boise Valley Cow Testing association was reorganized at Meridian, Idaho, July 13.

F. O. Johnson of Meridian was chosen president, David Betts of Nampa vice president and Chesley F. Jenness of Meridian secretary of the old association was reelected to the same position.

Dr. John Pipher of Nampa and Bernard Lee of Meridian were chosen directors.

As soon as a competent tester can be secured the work of keeping tab on the production of the cows of the members will be taken up.

The meeting listened to helpful talks from Project Adviser H. A. Ireland of Caldwell, Project Adviser E. F. Rinehart of the Minidoka project, County Agent R. H. Musser of Canyon county and County Agent F. L. Williams of Ada county.

Figures From Ahtanum.

During the month of June the Ahtanum Wide Hollow Cow Testing association of central Washington produced a list of 76 cows with a record of 40 pounds. There were 564 cows in the association, 21 of which produced 50 pounds or better of butterfat. The high herd average went to C. B. Marks, with a herd of 17 pure-bred Holsteins, which gave an average production of 1462 pounds of milk and 48.27 pounds of butterfat, according to the report of Roy Larsen, the official tester.

GOOD NEWS FOR RENTERS AND FARM OWNERS' SONS.

You can get a rich 160-acre farm free this spring, excellent for growing grain and mixed farming. Write for copy of "The Home Seekers' and Settlers' Guide." It gives full facts and tells what others are doing. Address Canadian Northern Railway, A. A. Brostedt, D. F. & P. A., 605 Hastings st., Vancouver, B. C., Canada.—Adv.

Butter and Cheese Scoring.

At the O. A. C. in Corvallis June 27 was held the third monthly butter and cheese scoring contest of the year. Due to the hot weather and the rush season, there were not as many entries as had been the case during the two previous contests. L. B. Ziemer of the state dairy and food commissioner's office, E. B. Fitts and P. S. Lucas of the college acted as judges of the butter and C. E. White, O. G. Simpson and P. S. Lucas were judges of the cheese. There were nine entries of butter and one entry of cheese.

There was not the variation in quality between entries of butter at this as there was at the last scoring contest. The entry of cheese was of good quality, but rather soft in body and somewhat open in texture.

The following creameries received a score of 90 or over: The Oregon City creamery, Oregon City, Ore., 93.16; Albany Creamery association, Albany, Ore., 92.25; L. S. Leach, Carlton Creamery company, Carlton, Ore., 92.08; McMinnville creamery, McMinnville, Ore., 91.5; Hudson Bay Cooperative creamery, Umapine, Ore., 91.

The entry of cheese by W. J. De Boer of the Red Clover Cheese factory, Tillamook, Ore., scored 90.83.

Build Up Holstein Herd.

Morehead & Hobson of Outlook, Wash., a little over three yeafs ago decided to go into the dairy business and selected registered Holsteins as their oreed. After carefully looking over the different herds, studying the different types and milk records, they decided the King Segis family was the one that came the nearest to meeting their ideal. They purchased five granddaughters of King Segis, all were large, roomy cows, with plenty of capacity and constitution. To cross on these cows they purchased Model Annie De Kol Segis, a grandson of King Segis, with a double cross of King Segis blood i nhis pedigree. This is over a ton bull, with all that could be asked in form, strength and masculine ability. His four nearest dams had an average seven-day butter record of 29.64 pounds. From this foundation stock they have built up a herd of about 40 head, and it is doubtful if in any other herd there can be found a greater per cent of King Segis blood. Their herd is mostly young heifers, but they stand at the head of the list in Yakima valley for production.

Washington Guernsey Record.

For the best 2-year-old Guernsey record made west of the Missouri river we must now look to the state of Washington, is the report from the American Guernsey Cattle club. Sammamish Topsy 46992 A. R. 5094, recently gained this distinction by producing 11424.6 pounds of milk and 629.66 pounds of butter fat in one year. As her name indicates, Sammamish Topsy 46992 is a Washington product, born and bred. This fact makes her record all the more to be admired, and her owner and breeder, Dr. Park Weed Willis, an eminent physician of Seattle, justly feels proud of his cow and her accomplishments.

She was sired by Imp. Sequel of Sarnia 19171, a son of the Advanced Register sire Imp. Galaxy's Sequel 16904, and out of Pixie 3176 F. S., a foundation stock cow on the Island.

Water Power in U. S.

Secretary of the Interior Lane said recently that there is 35,000,000 undeveloped horsepower in the streams of the United States.

Hugh L. Cooper, a former resident of Washington state and a water power authority of national reputation, in an article in the Electrical World, estimates that with 5,000,000 additional water power in the United States, only one-seventh of the power now running to waste, the country could save more than $50,000,000 in power bills, and the railroads would be able to divert $274,000,000 worth of railroad equipment to other uses than supplying coal for steam power plants.

Government development of some of the larger power sites is under discussion at Washington, and even the conservative Wall Street Journal views the proposition favorably.

GUARD AGAINST FIRE
Special Effort Should Be Made.

No more important problem confronts the grain growers of the northwest than that of preventing fires.

This is the belief of the state council of defense, which is cooperating with the growers, the county authorities, the state insurance department and the large insurance organizations to reduce the menace of fire.

From the farmer's point of view the necessity for conserving the crop has not only the incentive of patriotism, but fear is expressed that if grain losses become out of proportion the insurance companies may be compelled to cancel all grain insurance as a matter of self-protection.

With the complete organization of local, county and state forces escape will be extremely difficult for any wilful trouble makers.

Preparation to combat fires necessitates the cutting of hay strips along the roads and around farms, and a fire-fighting equipment that can be brought instantly into action. One method is to equip an auto or light wagon with wet sacks, a number of 10-gallon milk cans, filled with water; plenty of shovels, a plow for quickly running furrows, and other fire extinguishing equipment to make a whole fire department, when properly manned.

No threshing machine should be allowed to operate without full fire fighting equipment, including at least two two and one-half gallon fire extinguishers and every "setting" should be protected by half a dozen plowed furrows.

Canadian Field Crops.

Out of the total estimated wheat production of 1916, in Canada, 21 per cent, or 45,638,000 bushels, remained in farmers' hands at the end of March. In 1916, at the corresponding date, the proportion was 23 per cent, in 1915 it was 12 1-2 per cent and in 1914 it was 16 1-2 per cent. Of the remaining field crops, the proportions and quantities estimated to be in farmers' hands at March 31 are as follows: Oats, 39 per cent, or 136,179,000 bushels; barley, 26 per cent, or 10,559,000 bushels; rye, 28 per cent, or 813,500 bushels; buckwheat, 18 per cent, or 1,103,000 bushels; corn for husking 13 per cent, or 814,000 bushels; flax, 20 per cent, or 1,413,000 bushels; potatoes, 26 per cent, or 15,969,000 bushels; turnips, etc., 14 per cent, or 5,843,000 bushels; hay and clover, 32 per cent, or 4,802,000 tons.

CUTTER'S
BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:
10 dose pkge. Single pills $1.00
50 dose pkge. Single pills 4.00
10 dose pkge. Double Pills 1.50
50 dose pkge. Double Pills 6.00
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

Pure Bred Beef Cattle

By E. L. POTTER.

Many people are now becoming interested in the production of good pure bred beef. Many small herds have been established in the last year or two. The Shorthorn and the Hereford were never so popular as at present. Prices are high as compared with what they have been in the past, but there is a perfectly good reason, several of them in fact. In the first place everything is high and a dollar does not go as far as it used to. Commercial beef is scarce and high and this makes it unusually profitable for the beef producer to use good pure bred bulls. Then the country is awakening to the benefits of pure bred cattle. The man who a few years ago made fun of pure bred cattle now uses only pure bred sires. The beef breeds and especially the Hereford and the Shorthorn have so thoroughly demonstrated their value that there is no longer any question of the very great improvement that is brought about by the use of bulls of these breeds.

Twenty years ago the most progressive had all been convinced, but the rank and file of the cattlemen still felt that the native stock was hardier and the newer kinds might be subject to all kinds of disease besides being unable to make their living unless it was brought to them in a pan. Now the beef producer who denies the profit and advantage of pure bred sires is the exception. These are absolutely sound economic reasons why the demand for pure bred cattle has increased and why many new herds are and should be established. The breeding of pure bred cattle is bound to have its booms and its depressions, but the fact remains that the demand has increased and that it will increase still further. Twenty years ago only the few had telephones. Now every one has them. They are considered indispensable. Pure bred sires are just as indispensable as telephones and the cattlemen are coming to realize it. The time is not far distant when all of our commercial cattle will be sired by pure bred bulls and unless we increase our herds there will not be enough bulls to fill the bill. Only a little farther on we will be producing all of our commercial beef from cows that are pure bred or practically so. This, however, can not take place within the lifetime of any one now living, since it is impossible for our herds to increase that rapidly.

Prices in the future will fluctuate as they have in the past. There will be times when great progress is being made and there will be other times when apparently things are standing still. There will be times when it is impossible to supply the demand and there will be times when sales will be slow. But to say that there are, or that there will be any time soon, more pure bred beef cattle produced than the country needs at remunerative prices would be utter nonsense. The breeding of pure bred cattle in the United States is only well started.

BOYS ARE ORGANIZED

Form Junior Stock Association.

The formation of a junior live stock association in Pend Oreille county, Washington, has been effected under the leadership of County Agriculturist M. J. Newhouse.

Mr. Newhouse is instructing the boys in the rudiments of stock judging and otherwise inspiring them to take an active and practical interest in the live stock business. The parents of the boys are also taking a live interest in the movement.

It is planned to have the association take a leading part in the junior agricultural work planned by Agriculturist Newhouse for next winter.

Veterinary

Dr. S. B. Nelson

Must Conquer Animal—I have a mare, gentle to handle, ride or use anywhere except in harness. Just as soon as one starts to drive her she begins to kick and keeps it up until she gets the harness off. What will cure her? J. W. B.

Auburn, Wash.

Answer—The breaking of a kicking horse is entirely a matter of horsemanship. There are several systems used, but the principle of all of them is that the animal must be conquered. First she is to be taught that she is not to be hurt; and second, must be handled where she can not hurt anybody or anything. Most professional horsemen begin the treatment of an animal of this kind by personal acquaintanceship, and then gradually lead up to what they wish to break the animal of. Many use the system of some soft material which may be swung to the tail, and allow the mare or animal to kick at it. Or, as in your case where the harness is the offending material to the mare or animal, that it is so thoroughly fast that she can not get it off and that she is broke to find out that it does not hurt her. Generally, these animals have been ruined by either being hurt or frightened at some time. The third system of breaking consists in hooking the animal up to the type of wagon where the driver is far away and where the animal can kick until she gets tired, and at last she finds out that the harness and the cart will not hurt her. These are the principles that are used. There are many variations and the chief and important thing which the breaker must have is patience and time with the animal.

Leaky Teats and Warts—Will you please tell me what to do to stop the teats from leaking, as I have a cow that loses milk by leaking teats? I would also like to know what is good for small warts on teats.—S. O., Ione, Wash.

Answer—For leaky teats try wrapping the end of the teat with a piece of cotton—not too tight, but sufficient to cause it to stap leaking, and the tissue may contract so as o stop leaking.

For the warts, use the following, applying twice daily: Chloral hydrate, one and a half gram; acetic acid, one and a half gram; salirylia acid, one gram; spirit of ether, one gram; callodeon, four grams.

Proud of Her Young Family---Has Right to Be

The above is a picture of a fine Duroc mother, belonging to C. G. Sprong of Grandview, Wash.

A Bigger Yield From the Same Field.

From any field that you have been manuring by the hand method you can get a bigger yield if you use the spreader method—and save much time and labor.

A good spreader tears up the manure into small particles and spreads it evenly. The manure goes farther. It can be worked well into the seed bed so that the plant roots get all of its valuable plant food. *Wasting manure is like wasting money—a good spreader makes every particle of manure count.* A Newton County, Ind., farmer testing the spreader and hand methods of applying manure on two ten-acre tracts found that the *spreader method gave 120 more bushels of corn, 140 more bushels of oats and 9 more tons of clover.*

The John Deere Spreader

The Spreader with the Beater On the Axle

has special capabilities for increasing your crop yields. Its exclusive features make it the ideal implement for the best method. Ask any owner of the John Deere Spreader about the way it increases crop yields and saves time and labor. After you have operated a John Deere Spreader of your own for a year, you will fully appreciate how much these gains really mean. *You'll find that the Spreader with the Beater on the Axle more than pays for itself in one year from the gains it gets on even a fair-sized farm.*

The beater on the axle construction *eliminates all chains, clutches and scores of other trouble-making parts. Does away with half the types of castings otherwise necessary. Does away with adjustments. Puts upkeep at minimum. Makes the John Deere Spreader exceptionally long-lived.*

Beater is all steel—practically indestructible—runs on roller bearings, aiding light draft. Beater teeth spirally arranged—tear up manure perfectly and distribute it evenly. Deliver manure close to the ground—wind does not affect spreading.

Revolving rake feeds manure to beater evenly, aiding in uniform distribution. Shock - absorbing spring relieves spreader and horses of sudden strains.

Spreader only hip-high to top—easy to load. Big drive wheels—light draft. Ball-bearing apron drive—apron travel frictionless. Simple gear attachment keeps weight of load from making apron race when spreading up hill.

Easy to operate—only two levers—one lever determines number of loads spread to the acre; the other starts and stops the spreading. It's so simple, a boy can operate it.

Wide-spread attachment for extra wide spreading.

Write for booklet on the John Deere Spreader.

Reduce the Cost of Handling Grain

Get the big profit from your crop. Save the cost of high priced sacks. Save the time and labor of sacking and tying. Handle your grain in bulk. Do all this with the

John Deere Tubular Steel Portable Elevator

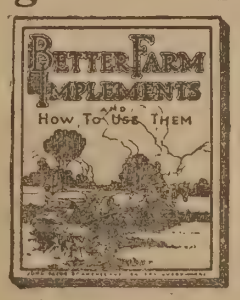
Elevates All Kinds of Small Grains

Elevates wheat, barley, oats, rye, flax, shelled corn, etc., into granaries, tanks, cars or cribs.

Readily transported. One man and a team can handle outfit. New settings quickly and easily made.

Operated with horses or engine.

Feed is adjustable. The volume of grain elevated can be accurately controlled to conform to power used.



Big receiving hopper prevents spilling. Wagon can be emptied from either side of hopper.

Built for years of service. Made of steel almost entirely. Will not decay or warp. Elevator proper made of 3/16-inch steel well casing, 6-1/4 inches in diameter.

Big elevator book free. Tells all about the complete line of John Deere elevators. Tells how to build a granary to the best advantage. Write for this book.

Big Book Free

Better Farm Implements and How to Use Them

America must produce more food. Labor-saving implements will play an important part in increased crop production.

This book tells all about a full line of labor-saving farming implements. Tells how to adjust and operate many of them. A practical farm implement encyclopedia. Worth dollars. Illustrates and describes the following machines: Walking and Riding Plows, Tractor Plows, Disc Plows, Disc Harrows, Spring Tooth and Spike Tooth Harrows, Corn and Cotton Planters and Drills, Listers, Alfalfa and Beet Tools, Grain Drills and Seeders, Riding and Walking Cultivators, Lister Cultivators, Mowers, Side Rakes, Loaders, Sweep Rakes and Stackers, Hay Presses, Grain and Corn Binders, Corn Cutters, Stalk Cutters, Kaffir Headers, Manure Spreaders, Portable and Inside Cup Elevators, Corn Shellers, Wagons, Farm Trucks and Buggies. This big book will be sent *FREE* if you state the implements in which you are interested and ask for Package X—1670.

Uniformity in Implement Manufacture

means much to you. You want to feel safe that every implement you buy is up to standard. Getting implements whose quality and workmanship is up to standard is a matter for your serious consideration.

Specialization — different factories for different classes of tools, each directed by specialists pre-eminent in their particular line—control of all the processes in the manufacture of implements from the leading raw material used to the finished product; and rigid adherence to exact duplication of trial implements whose qualities have been fully tested in actual field work, all combine to make John Deere implements uniform in quality and design.

JOHN DEERE, MOLINE, ILLINOIS

JAMES DRYDEN
Editorial Contributor

Strange Chick Ailment

To the Editor of The Farmer: I have been raising chickens more or less for over 20 years. At present I have 500 old ones and about 350 young ones. I am writing you for help, as some kind of sickness I have never seen before has attacked my young White Leghorn chicks. They are nine and ten weeks old, and the trouble started a little over two weeks ago. They are fed four times a day. At three feeds they get equal parts of scratch and whole wheat; at the other feed they get a moist mash of three parts shorts, two parts bran, one part middlings, one part fine corn meal and one and one-half part beef scrap, and plenty of fresh water, grit and shell all the time, and free range from 9:30 in the morning till night. At the first sign of sickness the chick will stand and stretch its neck, then draw it down as if trying to crowd something large down. The wings begin to droop, but the chick eats at every meal. After a day or two the chick stands with head under wing and sleeps most of the time, gets very pale about the head and sets its feathers on end. They usually live about a week, but get very weak the last few days. The most of them eat a little to the very last, but a few will not eat the last day or two. I opened three that died this morning, and in each case the flesh was dark and the chick very thin. The heart, lungs and bowels were all right, the liver was good, but the gall was a little larger than it should be and was filled with a bloody-like liquid. The liver where the gall touched it, also the part of the bowels where the gall touched, were stained a greenish yellow and were a little foamy, as if the gall had leaked on them and then filled up with the other liquid. There was also a small spot of the same color on the flesh where the gall lay nearer to it. Where the large place is where the throat enters the gizzard it was larger than it should be, being more than half as large as a walnut and white in color, and on being opened had what seemed to be thick, white pus in it. There was no looseness of the bowels throughout the sickness, they seeming normal all the time.—J. E. S., Toledo, Wash.

This correspondent has given an unusually clear description or history of her chief troubles. The feeding methods are very well given, but a little information as to how the chicks are brooded and housed would enable us better to locate the cause of the trouble.

Many chicks at that age are lost because of improper methods of feeding and brooding and housing. I suspect that the whole trouble is due primarily to some mistake in either feeding or brooding, or to both.

As to feeding, chicks at that age should not be fed four times a day. They may, under certain conditions, stand it if a very little is fed at a time. I would suggest that at least one of the feeds be cut out and that the chicks be let out in the morning at least two hours earlier, unless there is some special reason for keeping them confined. The morning is the best time for them to be out. Two hours' exercise on the range in the morning will be worth as much as one feed of grain, perhaps more if the range is good. Lack of activity and heavy feeding is the bane of the growing chicks. I would change the mash by giving double the quantity of bran, more during the warm months would be better, leaving the other ingredients the same. Give one feed a day of the scratch grain and wheat, or cut out the wheat altogether if the scratch grain is cheaper and of good quality. Feed the mash in the morning and one feed of grain in the afternoon or evening. Give them just as much grain as they will clean up and no more. Give a liberal feed of mash in the morning mixed with milk or buttermilk, if possible, all they will clean up in half an hour.

There should be, of course, an abundant supply of green food, all they can eat all the time. Let them range or rustle for the rest of their feed and for their exercise, which is as important as feed. By "the large place where the throat enters the gizzard" is no doubt meant the chicken stomach. The description and location about fits the stomach. The condition of the contents would indicate some digestive disorder or a catarrhal condition of the stomach.

In the way of treatment, a dose of Epsom salts would be good for the whole flock. Starve the chicks for half a day or more or until they are very hungry, then give them the salts. The dose is about a teaspoonful to half a dozen chicks of that size. Dissolve the salts in water, then mix in a mash of bran and shorts. Have plenty of troughs or boards to spread it on so all the chicks will get their share, and spread it out quickly. Feed lightly on whole grain for a while and make no mistake about green food. Feed also charcoal and grit. J. D.

Cut Worms in Grain

To the Editor: Please tell me as soon as possible if there is anything to stop cut worms in grain. I have about 300 acres of grain and they are working in it fierce. They have as high as two acres in a patch that they clean. My place is a sub-irrigated place. The sub isn't quite up yet. It lacks about 10 feet. If there is any cure let me know. H. C.
St. Anthony, Idaho.

The above question is answered as follows by M. A. Yothers, assistant entomologist of Washington experiment station:

Much damage is done annually by cut worms to all kinds of garden crops. These worms work at night and hide in the soil in the daytime, a few inches below the surface, where it is often difficult to find them owing to their close resemblance to the soil.

There are many different kinds of cut worms, but their work is much the same and to the untrained eye they look very much alike. When full grown the larvae average about an inch to an inch and a half in length and about one-fourth of an inch across. The adults of the cut worm are the ordinary gray mottled winged moths so commonly seen in all parts of the country flying about the light at night in summer. The eggs are laid in the spring by the adult female moth. They are deposited on a great variety of plants, depending much on the species of moth. The eggs hatch out into tiny cut worms which grow to maturity feeding the while on most kinds of garden crop, field crops and many kinds of weeds. They pass the pupa stage under ground, the dark brown chrysalis being enclosed in an earthen cell.

There are several broods during the year, depending upon the climate, and more or less upon the local weather conditions. The winter is passed usually in the pupa stage underground, but some of the adult moths are often seen in winter especially in our houses. Sometimes the winter is passed in the partly grown larva stage, and when spring comes they are ready to feed upon the first vegetation that appears.

Although many control measures have been from time to time devised for the control of this pest there seems to be none that gives perfect results. Clean culture is one of the most effective measures, however, and if consistently followed will give a good measure of success. Plow infested land in the fall to break up the pupa cells and destroy the over-wintering caterpillars. One of the commonest treatments, however, and a very effective one, is to poison the worms with a poison bran mash. The poison mash should be planted along the row and not around the field, for the worms are in the soil in the field. The following formula has given the best results:

A. 1 pound of Paris green; 20 pounds of bran. Mix thoroughly in a washtub while dry. Then stir in the following (B) well mixed:

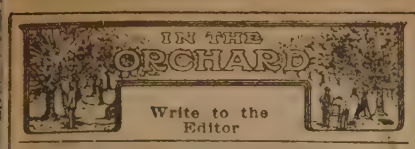
B. Two or three lemons or oranges, chopped fine; three pints of cheap syrup; three and one-half gallons of water.

The fruit juice may be squeezed in the water and the rind and pulp run through an ordinary meat chopper.

The poison bran serves best when sown broadcast late in the evening, for then the mash retains its moisture longer and the worms care less for it when it is dried out. From five to 15 pounds of the wet mash is sufficient to the acre, but it is best to apply it here and there to the worst infested areas. After a few days the poison may be again distributed if deemed necessary.

Poisoning Squirrels.

Several farmers from different districts report excellent success in the use of poisoned oats for poisoning squirrels following the demonstrations conducted by W. E. Crouch, in cooperation with the Kootenai county farm bureau. Three men report, by the expenditure of $7.50, that $100 has been saved them. Several farmers, too, report that the squirrels will eat the poisoned grain at this late season even though green food is plentiful.



GET READY, FOLKS! FOR A CORKING GOOD STORY OF OUR OWN WESTERN WOODS

UNDER THE BLACK CANOPY

This story will surely please you. It is strong with the thrill of clean, wholesome adventure—rising to a most stirring climax while a mighty forest fire rages through one lurid, stifling night of smoke and flame.

Every one of you will enjoy this splendid story of the great western woods that we live always in sight of. There isn't a slow paragraph in it—and the outcome is both pleasing and unusual.

It Will Appear in Next Week's Farmer

Codling-Moth

"I Wonder What I Am Here For"

"I wonder what I am here for?" said a codling moth egg as it stuck fast to the leaf on which it had been deposited, swirled in the breezes as the tree tops swayed in the winds and the bright sunshine glistened upon it. It was a little speck, scarcely one-twentieth of an inch in diameter, translucent, semi-transparent, scattering like a prism the rays of light that passed into it and through it, making itself almost invisible because it seemed a part of the air and sunshine that permeated it.

"What am I here for?" I am not sure that I can give a much better answer to the question than a codling moth egg could give. Yet my mind is never satisfied without a logical answer, and I keep trying to solve the mystery. But here am I and here is the codling moth egg; a tiny speck, an atom in the universe; yet because it possesses all the fundamental substances out of which life, mind and matter are formed it may be the universe itself in miniature, a microcosm in a macrocosm, a little world in a big one.

"What is this strange feeling?" and it seemed trying to examine itself; but a scientist put it under th emicroscope and found that filaments were forming, tender as the downy threads woven by the minutest insects. He could discover impulses to move, to expand, to respond and react to changes of heat and cold, light and darkness, aridity and humidity in much the same way as the nerves of the human organism react to the forces that play upon them, or the strings of the violin respond to the touches of the master musician.

"I want to live," said the egg, but it spake not in the terms of human speech that expresses by means of relations and variations in tones. Rather, it spake by means of its impulses and the forms it was building; through its manifest likes and dislikes its energy and inertia; its tendency to grow and to remain static; its shrinking to protect itself from cold and its expansion to receive the warm rays of sunshine. It spake a language more difficult than Egyptian hieroglyphics or Assyrian symbols; it was building its thoughts into the forms of matter; organizing the atoms; manifesting mind and life and speaking a language that could be read only by the aid of the microscope, and that was eloquent only to the lover of nature.

"I want to live," repeated the egg, as a hummingbird came flitting by and picked off one of its mates on the same leaf, and another on an apple nearby. A large bird appeared, the small bird flew away, while the large bird fed upon the eggs of the hummingbird, as she called frantically to her mates for help, and made strenuous efforts to save her young. A strange world this, in which everything that lives survives because others die.

Egg Dies.

Seven to 10 days had passed since the egg had taken its place on the leaf. Minute creatures were busily at work organizing what seemed to be lifeless substances into forms. There were living organisms that could be discerned with a microscope that would multiply 200 diameters, and ranging down in size until they became so small that they could not be seen with the largest instruments that multiply 4000 diameters, but only seen in masses of hundreds of thousands collectively. Yet all seemed busily engaged doing something, and when a day was passed it was plainly seen that they had worked according to an apparent plan. There were positives and negatives, radicals and conservatives, builders and destroyers, and a continuous struggle was going on, much like the conflicts of human society, especially the war that is now being waged on the battle fields of Europe, into which the world of mankind is being drawn to break the crust of the old autocracies, as the living thing in the codling moth egg breaks its shell and comes forth into a larger life.

Worm Is Born.

"Who am I," said the worm as it looked about upon the new world into which it had been born as if to inquire "what am I here for?" A scientist examined it and found it was made of the materials contained in the egg. "But is it the egg?" No, it has sense organs; it feels, moves, has head and eyes, mouth and grinders, feet and legs, digestive and excretory organs. The scientist released it to watch its movements. The sun was rising and its hot rays seemed to scorch its tender skin; it sought protection by chewing a hole in the leaf upon which the scientist had placed it, but as the sun seemed changing its position and growing hotter it crawled out upon an apple, bit a hole in the skin, but this seemed too hard for its tender jaws of only 24 hours' growth. Moving about, it found the blossom end of the apple, crawled into it, found protection, and, as it grew, gradually worked its way farther and farther until it found the heaven of its desires in the core. Thousands of other worms were looking for similar places in the millions of apples in the orchards.

Two men came into the orchard to spray.

"I wonder why God ever made a codling moth " said one of the men. "I suppose for the same reason he made you," said the other. "Well, but I guess I am different from a codling moth?" "Yes, but you both eat and sleep and struggle and die." "Sure, but this is too big a question to argue about here, we've got to do this spraying, the eggs are already hatching and for every hour we lose enough eggs enter the apples to spoil fruit enough to more than pay our wages, see?"

"All right," was the response, "crank up the engine, turn on the juice and I'll play the rod," and he began to move the nozzle about over the tree in a kind of rhythmic fashion as he sang a jingle of improvised words to a tune he had learned in the primitive revival meetings of a generation ago. Very slight changes were necessary to suit these words to his humor and he sang.

"Oh, the good old way is to watch
and spray,
And to live and die in the good old
way.
Oh, the good old way is to watch and
spray
And to live and die in the good old
way.

"If you get there before I do,
Look out for me; I'm coming, too.
Oh, the good old way is to watch and
spray,
And to live and die in the good old
way."

"Aw, give us a rest," said his helper; "in the good old days they didn't spray at all. The good old way was to watch and pray; and they ate their apples, worms and all."

The Pupa.

When the larva entered the apple it was only about one-sixteenth of an inch long, but it had grown to 12 times its former size and longed for a larger sphere. It knew not whither nor what of the future; but there were the impulses, the instinct, the intuition. It therefore left the apple, came out into the "unknown and unknowable" and began to explore.

The winds were blowing, the sun was shining, birds were singing and flitting from branch to branch of the trees in search of food, and insects were to them sweet morsels. Instinctively it felt that it had come into new conditions of danger; and by the same indescribable instinct it sought a protected spot, hollowed out a cavity and proceeded to weave for itself a garment made of silken threads sput of materials taken from its own body and mixed with the dust-like particles formed in the process of excavating a place in which to live. Is it really building a new and better home, or weaving for itself a funeral shroud and digging its own grave?

The Moth.

Approximately three weeks had passed since the larva entered the pupa state, enshrouded in its silken cocoon, a chrysalis; unconscious, inactive, taking no food absorbing only the substances of its own body, or possibly a few atoms from the materials that environed it. Is it death?

There are signs of life; the silken threads are broken, the materials with which they were interwoven, interlaced, glued and cemented are torn asunder and there emerges a moth, colored with a modest greyish brown, the fore wings when fully expanded measuring about three-fourths of an inch, with transverse wavy lines; the hind wings clothed with long hairs; it had feet, head, eyes, sex organs, a larger and more beautiful form of life than ever before.

The coloring was so nearly that of the outer bark upon the trees that they were seldom seen; when disturbed, they flew a zigzag motion making it difficult for the eye to follow them; they generally deposit their eggs at night, when birds and other natural enemies are asleep; but a robin feeding her young carried it away

"Why did God ever make a codling moth?" or what is its place in the order of nature? G. L.

Cherries at Hood River

"I want to show you a Lambert cherry tree," said J. R. Nunamaker, known as the cherry king of Hood River. As a matter of fact, Hood River is not famous for its cherries, more attention having been paid to other fruits, but those who have trees have found that they do wonderfully well, bear heavily, need comparatively little attention and bring in a good profit.

The tree in question is about 20 years old and has a fine even spread. The cherry tree is a tree of upright habit, but this one bent heavily down and seemed about to break under the load of its dark red fruit, almost ready to pick.

"That tree," continued Mr. Nunamaker, "is my best tree. It bears heavily every year. It is always healthy and the fruit is the best there is, in my opinion. I like them better than the Royal Annes. That is my choice."

Mr. Nunamaker said he estimated the yield of this one tree at 800 pounds, which was approximately what it bore last year. He has about an acre of Lamberts and four acres altogether in cherries. An average cherry yield for the place is about 48 tons. The cherries net the ranch somewhere around $1250 per annum.

"These Anjou pears," continued Mr. Nunamaker, "bore well last year for their age. They are only 6 years old. I was offered $2.25 a box and refused, and that is more than I got."

He has seven acres in pears and the trees look promising. He says there has never been any pear blight in his orchard, nor, so far as he knows, in the Hood River country. For that reason he believes more pears should be planted there. The trees appeared healthy, but have a light crop on this year.

Mr. Nunamaker's pickers camp out in the oak grove on the place. There were at cherry picking time about 60 on the place at work. H. H. B.

Cold Storage of Fruit

E. H. Shepard, editor of Better Fruit, at Hood River, declares that cold storage of fruit is not a matter of merely putting the fruit in a cold place. The man who expects his fruit to hold up properly must know when to pick it.

"It must not be underripe or overripe," said he. "You might call it firm ripe. When carefully graded for this stage, it will keep much longer when undisturbed. To show this to be true I put several boxes of Spitzenbergs in cold storage October 1, 1915. I took the last of them out July 18 this month, and they were in perfect condition. So far as I know, that is the longest period on record for keeping Spitz apples perfect.

"I am now using Newtowns which have been in for a year, and they are exactly as they were when put in—just as green and just as firm. When apples are cold-storaged when not at the right stage of ripeness the skins scald and come out off in color and texture. If put in right and maintained at the right temperature the development is merely arrested and held just as it is to start with."

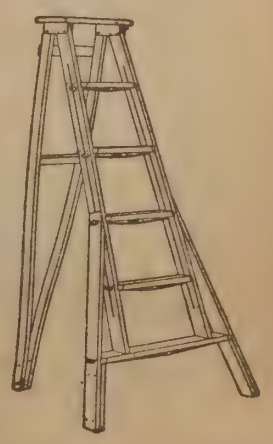
Mr. Shepard reported that the strawberry crop, while extremely short, was most profitable this year on account of the high prices. The yield was a fairly good one, too. Last year there were about 100 cars of strawberries shipped out of the district. This year the shipments were about 80 cars.

The cherry croo is about over now, the Lamberts being the last to be picked. The unfavorable weather conditions interfered to some extent with cherries, though some report about the same yield as last year.

The pear yield will vary widely. In general the Bartlett pear crop will be good and the Anjou quite light.

The apple crop he estimates at from 60 per cent to 75 per cent of last year. Last year the yield was quite large, 1,343,000 boxes being shipped out. Last year the division between Newtowns and Spitzenbergs was fairly even, there being 385,408 boxes of Spitzenbergs and 335.324 boxes of Newtowns.

Imported Fruits.



Fruits valued at $27,081,396 were imported from foreign countries during 1915. Bananas constituted 50 per cent of the imports, having a valuation of $13,512,960. Imports of lemons were valued at $3.730,085, and the imports of currants, figs, grapes, olives and pineapples amounted to more than a million dollars each.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XXI.

While my father was building his twelve by fourteen shanty on our bunchgrass claim in the Coulee country of eastern Washington the Johnson boys were building habitations on their claims two miles north. Disinclined to haul lumber 75 miles, they burrowed into the earth; that is, they made dug outs.

The dugout habitation was the most unpretentious human habitation that you found on the Washington bunchgrass of 30 years ago. It was made of poles, tules, earth and big flat stones. The builder of the dugout began by digging a hole in the ground four to five feet deep and as wide and long as desired. Then he hauled poles, the larger of which he used for uprights to support the still heavier and stronger ridgepole and the crosspoles from the side. The roof poles he laid closely together and over them piled tules which were covered with eight inches or a foot of earth. An opening was left at one end for a door. In the side of the roof there might be a window. If the man had a stove the pipe stuck up through the roof of earth, poles and tules, and it was in order to pack stones and mud next to the stove pipe so that it could not set the roof afire. Lacking a stove, the pioneer made a fireplace at the back end or side of the dugout, using big flat stones for this purpose, which often exploded and blew up his frying pan or kettle of beans when the fire was unusually hot.

In this dugout the bunchgrass plainsman lived on an earthen floor summer and winter. When the floor got soft or dusty under the action of tramping feet, he threw water on it and patted it down smooth and hard. Usually the earthen floors of the dugouts were smooth and hard and dry. The dugouts were dry and cool in summer and warm in winter, though in seasons of prolonged rain they might become damp.

The Johnson dugouts were two, and they were beside the bunchgrass road which we had made from our place to Bundschue's, give miles distant. Over this rough road father hauled water in 50-gallon whisky barrels three times a week. The Johnsons had plowed around their place and put up a light fence of cottonwood poles, which they had hauled from the brush patches down on the Deadman. We drove by their place the first time when they were putting a washing out on their family clothes line; and I remember how they came racing out of their dugouts to the pole fence near which father drove as we passed their place. They leaned against the pole fence and talked eagerly as long as father and mother would stay. They hadn't seen anybody for weeks, were hungry for gossip, eager for us to stay, hoped we would like the country, and so on.

The Johnson boys left the country that summer and never came back. In the years that followed "The Dugouts" came to be a definite landmark in our scantly populated neighborhood. For a long time I feared to go past them alone, imagining that ferocious animals were hiding in them. During the summer when the mountain fires drove animals down on the plains I was absolutely certain that the dugouts were headquarters for all the bears and mountain lions that passed through. As I grew older I became bolder. By this time the fence of cottonwood poles which the Johnsons had put up was a dismal thing, the long poles sagging between the posts which were leaning this way and that. The white bark had long since peeled off under the action of sun in summer and wind in winter, and hung in tatters that fluttered and rattled in the prairie breeze, or hung inert in hot, still weather.

One day I mustered courage to tie Rowdy to a sagging fence post and make my way through the rank sagebrush which had grown up on the Johnson plowing, to the dugout nearest the prairie road. The door was open; in fact, I doubt if it had ever been closed.

Because right is right, to follow right
Were wisdom in the scorn of consequence. —Tennyson.

Large flat stones served as steps down to the dugout doorway, and the stones were partly covered with earth that had carried down into the dugout by wind and rain. Gingerly, alert as a squirrel, I trod the big, flat stones down to the doorway of the dugout and peered into its shadowy interior. The first object that caught my eye was a small shelf on the large post which centerwise in the dugout supported the main roof-pole. It had been used as a clock shelf, undoubtedly; but no clock was upon it. Instead there was a robin's nest, and Mother Robin was at home. She flattered past me as I stepped inside. I found a rickety bench, pulled it beside the post, stepped upon it and peered into the nest. There were two eggs! Columbus discovering America, or Balboa sighting the Pacific were no more elated than I. I tiptoed out of the dugout, and in following days visited it often with offerings of breadcrumbs and water carried in a mason jar. When the baby robins got out of their shells I shared responsibility with their feathered parents.

That spring I had quite a family of birds. Father commenced plowing early, and the small, prairie birds built nests under the pieces of sod which lay partly overturned or rested on another sod with small, cave-like, grass-lined shelters beneath. These tiny sod houses certainly were ideal nesting places for the birds, and they were quick to perceive this fact.

As soon as I discovered what the birds were doing I spent much of my time in hunting for nests. When I was walking barefooted across the sod and a bird fluttered up from my feet in a startled way. I was sure a nest was near; but they invariably were concealed remarkably well, and it was a feat to find one. I had a half dozen bird families on my hands that spring, including the robins two miles away. Every other day I made the rounds with bread crumbs and water or grain, which I believe the birds gratefully received.

The Johnson fence finally fell down in places, and passersby, having learned that the Johnson boys had "thrown up their claim," took the fence for firewood. Then the range cattle took possession of the dugouts. A cow ventured upon the roof of one of them and went through. Presently other cows did the same thing; and eventually the dugouts ceased to be dugouts and were only holes in the ground.

Before their complete demolition I had a near-adventure in one of them. By this time I was 14 and had conceived an intense animosity toward coyotes which had stolen many of our chickens. Often I had chased them on horseback till either they or Rowdy reeled with exhaustion. One day Elam Rice and I chased one in a circle for three hours, taking the beast around the circle by turn. Finally the coyote got so tired that it staggered and fell and then sat uncertainly on its haunches with its red tongue out and saliva dripping from its jaws. Elam dismounted and dropped a noose over the exhausted animal's head. As he was tightening the noose it snapped him on the hand and brought blood. We had no way of killing it there so hauled it over the prairie till we found a club with which Elam rapped it on the head so soundly that it kicked a few times and died.

Often we found their dens which most usually were enlarged badger holes in the banks of water-worn gullies. In such cases we dug in from the top and struck the hole and kept on digging till we reached the end of the burrow where the "nest" was. Once we dug down into the nest from above, guessing the length of the burrow back from the bank where it began, to a foot. Cal Steele was helping me this time; when we broke into the nest he stood on his head in the hole we had dug while I hung to his feet, and reached back into the nest and snatched out the baby coyotes which were of the suckling age, but showed fight. As he passed them up to me they snarled in babyish fury, their eyes green and glistening.

The summer before the dugouts were completely demolished a family of coyotes took up their abode in one of them. I decided to raid their den. A badger had dug a burrow in a corner of the dugout, which the coyotes enlarged and inhabited. It was a fairly simple thing to dig down from the top, outside the dugout, and strike this burrow at the point near the nest, but I conceived what I thought to be a less laborious plan. Examining the burrow, I noticed that it was unusually large. I peered up into it and as far up as I could see it was no smaller. It seemed sufficiently large to admit my body so I decided to crawl up into it and get at the young coyotes in that way.

The crawling was easy, I wormed forward in the dark till I was in a couple of yards I suppose, and then I got the scare of my life. From the inky darkness ahead of me came a low, menacing snarl. In the pitchy blackness I could see nothing; but I could hear the low snarling, and in it there was a quality of menace that made my hair leap on end and my blood run cold. I saw, in another instant, the greenish flash of a pair of eyes—and those eyes were set too far apart to be in the head of baby coyote! I had blundered.

I suppose that all of us in finding ourselves in danger that appears suddenly and entirely unexpectedly are less terrified than when we can see it approaching gradually. I had no fear of a coyote; but reason told me at this point that if the mother coyote were up there with her babies that she would be an ugly customer.

Cautiously I began to back out of the hole, and doubt if I breathed more than twice while I did so. I recall taking my time, thinking that if I displayed panic the coyote might be encouraged to attack me with all the advantages in her favor.

Outside in the dugout I began to get thoroughly scared. I noticed for the first time that the hole which I had so unceremoniously and so recklessly entered was rather large for a coyote burrow. I noticed also that about its mouth were some pretty big tracks—autogether too big for a coyote, I thought. I suppose it was what you would call an optical illusion that made those tracks get bigger every time I looked at them. By the time I had looked at them three times they had expanded to the dimensions of cougar tracks.

With quaking knees I made my way out of the dugout, and by the time I was out of it, I was positive that I had blundered into the den of a mountain lion. The further away from the dugout I got the surer of this I became, and by the time I reached Rowdy I expected to see a cougar head rising above every sagebrush in the Johnson plowing. I actually do not remember untying Rowdy or mounting him; but when I began to see and think coherently I was on his back with a hand wound into his mane and my knees gripping his sides for dear life. I fully expected to see two infuriated mountain lions, a whole pack of them, maybe, charging out of the dugout and coming for me.

What I did see presently, was two pointed ears rise in view over the bank at the open end of the dugout. The ears rose higher till I saw unmistakably the head of a coyote—and a very much alarmed coyote, as I could see, at the first movement of my pony the head dropped from view. A few days later I attacked the den again, this time coming at it from above with a spade; but when I struck the nest I found that the creatures had broken up housekeeping.

Horned lizards and stink bugs were thick in the bunchgrass about Blind Springs. While the bunchgrass boy was watching the prairie sunrise he detected a movement of some sort down under the covers near his bare leg. Could it be a rattlesnake? Next chapter tells of that night's adventure, when the bunchgrass boy, with his father and mother and Dave Reavis, camped at Blind Springs.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University)

Rest, Sunshine and Fresh Air Best Cure for "Summer Colds"

Your friends who often have "a sure cure for a summer cold" are more or less likely to promise more than they can perform. Whenever you hear of a multitude of remedies for one and the same ailment, you may also be sure that but one of them may be the real cure. This is on the same principle as a lock without a key. If one key fits, you are not apt to try a legion of others to turn it.

Dr. Hirshberg.

Perhaps the very fact that there is no certain specific treatment for a "cold" makes its victims too anxious and restless to await quietly the few days necessary for its disappearance. Patience, even in health, is, according to a poet, the virtue of an ass that trots beneath his burden and is quiet. Therefore, in the name of justice and action, the man with a "summer cold" must attack his arch enemy with some weapon.

Professor Dochez and Dr. Gillespie, twe research workers, have discovered that the germ of pneumonia, the pneumococcus, occurs in four distinct types. This led to the invention by Dr. Rufus I. Cole of the Rockefeller institute of Medical Research of four different kinds of antisera with which to combat pneumonia.

The Germs Isolated.

It seems now that at least one bacteriologist, Dr. George Lyons of Marseilles, has taken the hint, and isolated three separate and distinct racial forms of a micrococcus associated with colds. He claims that the "colds" which arise in warm climes and the summer season are due more or less to his type C bacterium. This microscopic coccus burrows down into the membranes of the nose, eyelids and throat, beyond the reach of air and light. There it establishes itself to flourish like a green bay tree precariously for a few days' time, and simultaneously to irritate the tissues.

The upshot of this unwelcome irritation is to incite the rebellion of the membranes in the recognizable output of mucous, serum, lymph or matter. Dr. Lyons maintains that all three of his "foculative anaeroties," as these atmosphere-hating germs are called, die a natural death in the tissues which harbor them, unless the individual attacked is very weak or in ill health from other causes, such as physical excesses.

All three of these "cold" bacteria may be harbored by some persons in their mouths and on their skins without any outbreak of a "cold." These prove to be "carriers" and sources of contagion to other more susceptible gentry.

Type C, the one held to be the origin of "summer colds," dies within a brief period if exposed to air, sunlight or oxygen. It seems to survive longer during damp, hot, soggy, sultry days than in dry weather.

Avoid All Excesses.

Cultivated artificially in the gelatin or beef tea of a bacteriological laboratory these "cold" microbes will only grow and fructify if all oxygen is excluded. In order to plant and obtain them as a pure race all air is forced out of the flasks and tubes in which they are incubated by the maintenance of a stream of hydrogen or other neutral gas.

Since a precise, scientific mode of treatment is as yet not to be had, the victim is to possess his soul in patience and his body in bed for the few days required to overcome a cold.

All the World's a Stage, and All the Men and Women Merely Players

Training Junior Naval Scouts to Shoot.

Copyrighted by International.

Boys of the American junior naval and marine scouts are shown receiving instruction from Major Korn, a scout officer, and former chief quartermaster in the navy, in the use of a Hotchkiss revolving gun. The photograph was made on board the United States ship Recruit, the wooden battleship in Union Square, New York, erected as recruiting headquarters for the navy.

Welcome Sound to Soldiers.

The mess call on the bugle is the most welcome note that cuts the air at Fort Myer, Va., where a number of our best young Americans are learning to be officers.

Fights to Save Mother.

This picture is merely a little group of French officers engaging in a quiet little game in a dugout back of the first line trenches at a point which is frequently subjected to gas attacks by Germans. The soldiers take no chances.

Girls in France Help the Airmen

Copyrighted by International.

Women have been pressed into service as mechanicians at the French aviation stations. Here are seen two French women mechanics at work on a battleplane which has just returned from a successful raiding expedition over the German lines.

The Motor Car
On the Farm

Three Million Autos.

In 1916 there were 1,067,332 more motor cars registered in the United States than in 1915. This was an increase of 43 per cent. The gross total of registered cars, including commercial cars, was 3,512,996; the number of motor cycles registered was 250,820. The several states collected in registration and license fees, including those of chauffeurs and operators, a total gross revenue of $25,865,369.75. Of this amount 92 per cent, or $23,910,811, was applied directly to construction, improvement, or maintenance of the public roads in 43 states, according to figures compiled by the office of public roads of the United States department of agriculture, in circular 73, "Automobile Registrations, Licenses and Revenues in the United States, 1916."

The figures for 1916 correspond very closely with the annual percentage increase of motor car registration of the last three years. This yearly increase has averaged 40 per cent in the number of cars and 50 per cent in revenues.

When viewed over a period of years, the increase in motor car registration and gross revenue has been remarkable. In 1906 the total state registrations were approximately 48,000 cars, on account of which the several states collected in fees and licenses a total gross revenue of about $190,000. Only a small part of this was applied to road work. In 1916 the $25,865,369.75 collected formed nearly 9 per cent of the total rural road and bridge revenues of the states.

Recent years have shown an increasing tendency to put the spending of the motor car revenues directly in the hands of the state highway departments. Of the total amount applied to road work in 1916, 70 per cent, or $16,411,520, was expended more or less directly under the control or supervision of state highway departments. Only 13 states did not exercise any direct control over the exepending of the net automobile revenues.

Horse or Tractor?

The other day we ran across a man who is a real downright tractor enthusiast. He has been farming with a tractor for two seasons. In many respects his story is typical of scores of others we have heard this summer in various parts of the Pacific northwest from men who are applying the tractor intelligently to farm work. Here is the substance of what he said:

"I used to laugh when I read or heard about using tractors to plow and seed and harvest crops. I figured that it was a new fangled idea and that horses were plenty good enough for me. My argument was that you could depend on horses while it would always be a tossup whether the tractor would work or not.

"But I was open for proof and I made it a point to watch the iron horse work whenever I got a chance. Finally a man from Iowa bought the place next to mine and part of the machinery he brought was a light tractor. He had one piece of about 20 acres right across the road from a piece of mine about the same size. I had about five acres of mine plowed when he commenced. When he started in with his tractor I felt sort of sorry for him because the season was well along and I didn't figure it wise to waste any time experimenting.

"I was using four horses on a riding plow, and just to show my new neighbor how it ought to be done, I put on an extra team. But law! I was beat, as the saying is, before I started. He had his piece plowed, disked and seeded before I had finished plowing.

"Now, I don't need a brick house to fall on me before I take a hint. I saw right then and there that that little old machine was better than two six-horse teams, and I began to get down to comparing costs.

"Well, sir, I just sold myself a tractor as slick as a whistle. And now that I've used one for two seasons I feel toward a man who is trying to farm without a tractor just about like most of us feel for the neighbor who has to depend on a horse and buggy to travel.

"The question with me is what will become of the horse as tractors improve and get cheaper in price? Of course, I don't think horses will be done away with—but I look forward to the day when reliance on horses for the heavy work about the farm will be a thing of the past—on a majority of the farms at least."

EDITOR'S NOTE—We are not at all pessimistic about the future of the horse, even when the tractor becomes universally, an important part of modern farm equipment. Rather we look forward to a lightening of the hard work this noble animal has necessarily been made to perform, with plenty of lighter jobs for him that he is so well adapted to do.

Minor Farm Equipment

Few farmers realize the extent of their investment in small items of equipment or the time and inconvenience involved in buying them singly or in small lots, says a bulletin on "Minor Articles of Farm Equipment," issued by the department of agriculture. If possible, these tools should be purchased all on one order. This will save time and, usually, money. Also it will entail a total expenditure sufficiently large to impress the farmer with the importance of giving systematic care to his small tools.

The experts investigated the minor equipment of 33 general farms in Ohio and found on one or more of the farms the following list of general-purpose minor equipment:

Anvil	Paint brush
Auger handle	Pick
Auger bits	Pinch bar
Ax	Pliers
Ax (hand)	Pincers (carpenter's)
Awl	Plane
Barrel	Punch
Basket	Post-hole digger
Bell (farm)	Rasp
Bench screws	Sand sieve
Brace and bits	Saw (buck)
Brush hook	Saw (compass)
Cant hook	Saw (crosscut)
Chain (log)	Saw (hack)
Chalk	Saw (hand)
Chisel (cold)	Saw (set)
Chisel (wood)	Scale (counter)
Compasses	Scale (farm)
Ditch cleaner	Scale (spring)
Drawing knife	Scale (steelyard)
Drill press	Scratch gage
Drills	Screwdriver
File (flat)	Screw plate
File (round)	Shovel (D)
File (taper)	Shovel (round point)
Forge	Tinner's snips
Grindstone	Spade (tile)
Grubbing hoe	Square (bevel)
Hammer (claw)	Square (steel)
Hammer (rivet)	Square (try)
Hammer (sledge)	Tape line
Hatchet	Trap (rat)
Hoisting block	Trap (steel)
Jackscrew	Trowel (brick)
Ladder	Trowel (plastering)
Ladder (step)	Tongs
Lantern	Tool grinder
Level	Vise
Machine oil	Wedge (iron)
Mallet (wood)	Whetstone
Mattock	Whitewash brush
Maul	Wire splicer
Nippers (farrier's)	Wire stretcher
Oil can	Wrench (pipe)
Padlock	Wrench (monkey)

In selecting the minor tools to equip a farm provision must be made for the articles needed for the care and repair of buildings, fenses, machinery, etc., the care of live stock, the production of crops and the various other interests of the farm. With every change in the type of farm involving a new combination of enterprises, a change in minor equipment will be necessary. For each of the many specialized types of farms certain articles will be needed which will not be found necessary on general farms.

The authorities found that for a general farm of 160 acres in the middle western states the necessary minor tools range from a husking peg to a grindstone, and will cost from $100 up to the neighborhood of $200.

Discard Sack System.

The various grain growing states of Australia will adopt the bulk system of handling grain. Plan has been developed by which the elevator system is to be established generally throughout the whole country. The bag or sack system has been found expensive, inefficient and wasteful.

New South Wales has decided to install a system of elevators and the government has committed itself to spend for this purpose $9,733,000. This system is to be developed until it is capable of handling 15,000,000 bushels, including elevators along the railways, as well as terminal elevators on the sea. It has also been decided by the government of South Australia to expend $4,866,500 for the construction of elevators.

The government of Victoria, likewise, is looking very favorably upon the proposition of establishing the elevator system. The minister of railways in the state of Victoria has urged that the proposal for bulk handling in this state be immediately pushed through.

The Farmers' Union in New South Wales has passed a resolution unanimously requesting the state government to push through with its utmost vigor the scheme for handling wheat in bulk.

A Good Sign.

Sponge—I think that a street car has just passed.

Blotter—How yuh know?

Sponge—I can see its tracks.—Chaparral.

Sidelights

No Crop.

"Planted anything in your garden yet?"

"Both rubbers, two pencils and a fountain pen."—Buffalo Express.

What He Took.

Lawyer (to witness at a blind pig trial)—Did you take cognizance of the man who sold him the liquor.

Witness—I took the same as the rest.

Convenient Delivery.

Customer—Send up 25 cents' worth of boiled ham.

Butcher—All right, sir. Anything else?

Customer—Yes. If my wife isn't at home, tell the boy to put it through the keyhole!—Life.

Saving the Youngster.

"Oh, hubby, such an instructive lecture. The gentleman told us that what you eat, you become."

"Huh?"

"What you eat, you become."

"Take that all-day sucker away from Tommy."—Courier-Journal.

A Valuable Dog.

The minister delivered a sermon of but 10 minutes' duration—a most unusual effort for him.

At the conclusion of his remarks he explained: "I regret to inform you, brethern, that my dog this morning playfully ate the portion of my sermon that I have not delivered. Let us pray."

After the service a man who was a member of another church shook the preacher's hand heartily and said: "Doctor, I should like to know whether that dog of your has any pups. If so I want to get one to give to our minister."

From Headquarters.

William had just returned from college, resplendent in checked trousers, silk hosiery, a fancy waistcoat and a necktie that spoke for itself. He entered the library, where his father was reading. The old gentleman looked up and surveyed his son. The longer he looked the more disgusted he became.

"Son," he finally blurted out, "you look like a silly fool!"

Later the old major who lived next door came in and greeted the boy heartily.

"William," he said, with undisguised admiration, "you look exactly as your father did twenty-five years ago, when he came back from school.

"Yes," said William, with a smile. "So father was just telling me."

World's Production of Tea.

The world's production of tea in 1915-1916 exceeded the figures of all other years recorded. India, Ceylon and Java produced 100,000,000 pounds more than in the previous year, the Indian harvest alone surpassing that of 1914-1915 by 55,500,000 pounds. Shipments from Java reached 96,000,000 pounds, an increase of 12,000,000 pounds over the previous year. Shipments to China showed a steady diminution.

Parrots.

There are 350 species of parrots, chiefly confined to the warm parts of America, Asia, Africa and Australia. There is none in Europe and none in Asia west of the Indies; and, while numerous in the Malay archipelago, they are wanting in China Cochin China and the Philippine islands. The only species native to the United States is the Carolina parrot.

The faster this Bread goes the more I save

That is the judgment of the careful, discriminating **home manager**—the woman who makes her bread by using Sperry Drifted Snow Flour.

She knows it gives economical food service.

DRIFTED SNOW FLOUR
A SPERRY PRODUCT

supplies nutriment at lowest cost. To get the same food value out of meat as you do out of Sperry Drifted Snow Flour bread the cost would be three times as great. Order a sack.

SPERRY FLOUR CO.

Buy Sperry Quality Cereals.
They Come in Red Packages.

Take Up Arms Against Grain Fire Hazard!

(Continued from page one.)

Thresher Equipment—Every threshing machine outfit should carry the same equipment as specified for automobile or trailer.

Combines—Every combine harvester should be fitted with a two and a half gallon chemical fire extinguisher, a box of wet sacks and two sharp-pointed shovels.

Other Equipment—As the principal appliances consist of wet sacks and sharp-pointed shovels, we suggest that a great many equipments be provided for individual automobiles, these equipments to consist of a box of 20 wet sacks, a 10-gallon milk can filled with water and a dozen sharp-pointed shovels, these to be distributed in the most accessible places where they can be obtained by any automobile going to the fire.

Fire Detection—A fire starting in the day time will always be quickly discovered, but not always so with a fire starting at night. It has been suggested that guards be stationed at elevated points so as to readily see over a large area and thus be able to detect a fire the minute it starts. These guards should be provided with phones so that the alarm can be given promptly. It is believed that one guard placed at an elevated point can in most cases detect a fire within a radius of about three miles, thus covering a district almost equal to a township. By this method, and also by having guards placed at the principal cross-roads at night, it would be almost impossible for a man to start a large number of fires and escape.

Finances—The council of defense has no funds except what may be received through voluntary contributions. If the home guards would volunteer their services for one night in the week during the short period when the grain is combustible it would doubtless make a suficient number to give all needed protection. Without such protection our grain crop is certainly in danger. It is hoped that sufficient funds will be raised locally to cover the necessary cost of equipping the guards with telephones.

The telephone wires can be run along the fence to the nearest telephone line at very small expense.

State Fire Marshal—Under the present law the insurance commissioner is state fire marshal with power to require property owners to adopt all necessary safeguards. He is now placing deputies in the field to see that all reasonable precautions be taken by the individual farmers. We ask that you give your best assistance to the state fire marshal and his deputies. Among the requirements he is making are the following:

Plowed Strips—Every threshing machine setting is to have a strip at least 12 feet wide plowed around it as soon as the threshing machine moves from the place.

Hay Strips—A hay strip not less than 12 feet and preferably 15 feet wide, is to be cut along all roadways. Such a strip is also to be cut whenever there is any possible danger of a grass fire communicating with the wheat.

In organizing each threshing crew into a volunteer fire department it should be made some one man's duty to see that all fire is thoroughly extinguished after each moving. Another man should follow behind the engine and see that no fire is dropped.

Matches and Smoking—Harvesting crews should be supplied with safety matches and should be strictly prohibited from having any other kind. Smoking by threshing crews should be strictly prohibited while in the field, unless within 12 feet of the engine while at setting or some other safe place specially designated.

Through the cooperation of the state insurance department, the state council of defense is enabled to send organizers for fire prevention throughout the state.

Heavy Draft Horses.

A. B. Riddell, late of Spokane, the well-known importer and dealer in registered Belgian, Clyde, Percheron and Shire horses, has recently moved to a 640-acre ranch 70 miles north of Spokane, near Addy, Wash. It has been his desire for some time to become a breeder as well as a dealer in heavy draft horses. His new location is an ideal place in which to extend this line of business, 450 acres is bottom land, seeded to alfalfa, timothy and oats. The remainder in pasture is sufficiently broken to develop heavy bone and strong muscle. It is supplied with water by springs and mountain streams,

Princess d'Uyt, imp. 2924, one of the brood mares on the breeding farm of A. B. Riddell.

Dwelling of A. B. Riddell, near Addy, Wash., on his breeding farm of registered draft horses.

one running between the house and barn. About 300 yards above there is a dam, creating an artificial lake, on which are boats. It has been stocked with trout and is a fine place for boating and fishing. This lake furnishes both water and power supply for all the buildings. When asked what was the idea in choosing this place he said: "This is a good distributing point. I have sold two carloads of stallions in the last six months, but aside from the profit in dollars and cents my desire is 'better horses.'"

When shown four Belgian brood mares, each weighing over a ton; two Clydesdales equally as good, two fine fillies, one 2 and one 3 years old, each good for a ton at maturity, it was plain to be seen Mr. Riddell's ideals were going to materialize. We have since learned he was induced to part with the fillies to Messrs. Huguenin & Holt for the sum of $2500, with the understanding they are to remain in the valley and help develop the breed.

D. G. S.

What Is Sabotage?

Official I. W. W. Definition

The Farmer in a recent issue quoted from the official publication of the I. W. W. such declarations as:

"We are not satisfied with a fair day's wage for a fair day's work."

"We are going to do away with capitalism by taking possession of the land and the machinery of production. We do not intend to buy them either."

This is open warfare on the farmers of the land. It means that I. W. W. members who work for them are taught by their leaders to look upon their employers as enemies to be fought. It means that the avowed purpose of the I. W. W. is to take away the farmer's land, his buildings, his machinery, his live stock, his crops and every other vestige of his industry and thrift.

This purpose, already clear, is made yet clearer by this extract from the "Advancing Proletariat," page 17, an official publication of the I. W. W.:

"He (the I. W. W. member) finds that he must attack the structure of a society based on private property, and his point of attack is at the point of production, the point where he daily meets his enemy. His whole attitude is one of opposition; opposition to the property of the master class—an attitude subversive of all modern ethics, morals, religions and laws—an utterly revolutionary attitude."

One page 16 of "The I. W. W., Its History, Structure and Methods," another publication of that organization, appears the following:

"Failing to force concessions from the employers by the strike work is resumed and 'sabotage' is used to force the employers to concede the demands of the workers."

What is sabotage? Official publications of the I. W. W. define it as follows:

"Any conscious and wilful act on the part of one or more workers intended to slacken and reduce the output of production in the industrial field, or to restrict trade and reduce the profits in the commercial field, in order to secure from their employers better conditions or to enforce those promised or to maintain those already prevailing when no other way of redress is open."

"Any skilful operation on the machinery of production intended not to destroy it or permanently render it defective, but only to temporarily disable it and put it out of running condition in order to make impossible the work of 'scabs' and thus to secure the complete and real stoppage of work during a strike."

Elizabeth Gurley Flynn, the noted I. W. W. agitator, describes sabotage under several heads, among which are:

"Adulteration.

"The slowing down of work.

"A general reduction of efficiency.

"Placing kerosine in ovens to make food unfit to eat.

"Intimidation, coercion and any means necessary to gain the end."

In North Dakota the slogan of the I. W. W. in the harvest fields is $3.50 per day, heads down, $4 per day heads up." This means that unless they are paid $4 per day of eight hours bundles of grain will be shocked with two in the center heads down.

These methods, wrong, mischievous and destructive at any time, become vicious and disloyal now that the nation is at war.

Women Do Fine Work

A group of patriotic New York women are rendering valuable service by probing and exposing the woeful waste of food by commission dealers of that great metropolis.

They have brought out the startling fact that there is a weekly loss in New York of 220,500 pounds of food which, through one cause or another, is condemned by the department of health.

The New York Journal of Commerce, a daily newspaper that specializes on business news, says that besides this loss at least as much more, and possibly as much as 400,000 pounds, "goes to waste through the lack of organization at food terminals. The complete disregard for economy at some places, and the apparent effort to keep the price up by destroying overproduction, have combined to embitter many housewives familiar with the situation."

Long ago this method of "keeping up prices by destroying overproduction" embittered millions of farmers who saw their produce rejected or destroyed after they had consigned it to commission dealers. The Farmer is glad that at last consumers are awakening to this monstrous evil.

These investigations were made by a subcommittee of the mayor's committee of New York women interested in the food problem. The subcommittee has started a city canning and drying kitchen.

Mrs. W. H. Lough of Bronxville, general manager, said that the department of agriculture at Washington had promised an expert to help with the canning and rehydrating.

"Our idea," she added, "is to put our food on the market at cost." The pier manager, Miss A. Sheehan, cooperates with the board of health. If a third of a box of oranges is spoiled the remainder is not allowed to go on the New York market until it is conditioned. Sometimes it is cheaper for the buyer to throw it away than to recondition it. In this case Miss Sheehan gets it for nothing.

"We wish to prevent waste. We do not wish to handle food which otherwise would go on the market at a reduced price." Under Miss Sheehan are the captains who inspect the food on the various piers. Each captain has 10 helpers.

"Look at this," one woman said as she picked up a specimen of salvage cabbage. "On Park avenue this morning I was charged 15 cents for a cabbage not so large as this—and the city permits these to be thrown away!"

The committee employes Boy Scouts to go around to the different city docks and sort the good from the bad in each container of condemned vegetables.

Table Sirup From Sugar Beets.

Sugar beets are grown in large quantities for sugar making, but their value as a source of the family sirup supply has been overlooked. Sugar beets suitable for sirup making may be grown wherever soil of reasonable fertility is available. The sweetness of the beets may be greater in one locality than in another, but all sugar beets contain sugar enough to make sirup, say specialists of the United States department of agriculture. The sirup may be made by a very simple process, and a few rows in the garden will produce beets enough to give a family all the sirup needed.

A bushel of beets will produce from three to five quarts of sirup. As the beets when mature should weigh from 1 to 2 pounds each, 30 or 40 of them will make a bushel, and as the beets after thinning stand about 10 inches apart in rows about 20 inches apart, it is easy to determine how much ground to use for sugar beets if a particular quantity of sirup is desired. A few rows in the garden generally will be sufficient.

In making sirup the toppled beets are cleaned by soaking a few minutes, then scrubbing with a coarse, stiff brush. The next step is to cut them into slices as thin as one-sixteenth of an inch if possible. A butcher knife may be used, but a kraut cutter or some other slicing device is easier.

The sliced beets are placed in a tight barrel and just enough hot water to cover them—boiling water if possible—is poured in at once. The barrel is then covered with several thicknesses of canvas to hold the heat. The sliced beets are allowed to soak for about 60 minutes. The barrel is agitated from time to time without being uncovered. This process brings out the sugar from the beets. The liquid is then drawn off, strained through several thicknesses of cheesecloth and placed in a kettle or other vessel, in which it is boiled slowly until it has evaporated down to the thickness desired. It is important that the boiling be slow and the process will take several hours. The work may be done out doors if desired. Care should be taken not to scorch the sirup. The scum which rises to the surface of the liquid is skimmed off, to remove the strong, beetlike flavor.

The sirup is bottled or canned while hot and sealed to prevent molding. It is dark in color, but has a pleasant flavor.

Party Entertainment

By GLENTWORTH RUBINS.

We are sometimes in a real quandry to know what to prepare as entertainment for an expected company of guests—something that will be new, entertaining, amusing, or will set wits to working. It is not necessary to award prizes to add zest to say of the games which entertained us at some parties I have recently attended.

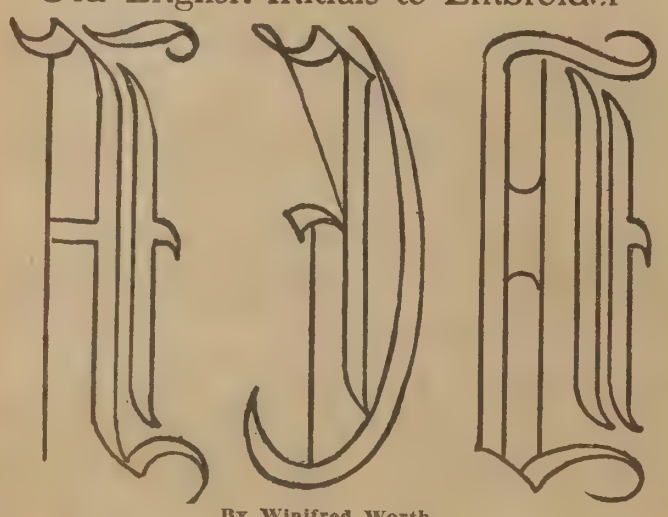
The hostess handed each guest a sheet of paper on which were written 19 different puzzles, the answer to each being the name of a tree. We shortly discovered we could not so easily recall the names of our forest friends as some of us might imagine. This game was concluded by the hostess reading the right answer to each puzzle.

She next gave each of us 10 soup beans, and took turns trying to drop the beans into a quart-size milk bottle, holding the arm straight out from the shoulder. Two succeeded in getting 10 beans apiece into the bottle, so they were given another trial to decide the real winner of the game. This game is not as easy as it sounds.

On another occasion, after we had played a lively game or two to get us on our feet and break up any little groups, the hostess brought in a dish of English walnuts, the shell of each having been opened enough to hold firmly a scrap of paper on which was written some stunt for each of us to do—sing a song, whistle a solo, talk to your neighbor without saying anything, imitate a public speaker, make a rag doll (this fell to the only minister present), tell the most ridiculous thing that ever happened to you, etc.

After we had all "performed" the hostess brought in another dish, this one filled with different kinds of blossoms, one of which we were invited to take. When we were all supplied with a flower she told us that we would find our places at the table in the dining room by matching our flowers with a leaf of their own foliage which would be found beside the plates. As many of the blossoms and most of the foliage were unfamiliar to us it was a merry hunt and effectually abolished all selfish seating, with no blame or responsibility on the part of the hostess.

One summer evening a company was entertained by completing a "vacation" story. The hostess had composed the story, leaving out words that could be supplied by names of furnishings or objects in the room, such as rug, pictures, lights, etc. Some of the completed compositions were quite ingenious.



Chinese writing is a puzzle to the unitiated, which is apparently done on the floor with the aid of a cane or stick. One of the company is sent out of the room while the rest decide on some word. Suppose they choose chair. The one sent out comes back and the "writer" gets busy making passes as if writing on the floor. "Can you see?" should give a clue to the first letter, then more passes with the cane. "How do you think you like this game?" may then be asked, followed by more motions with the cane. The vowels are indicated by thumping the cane, thus one thump for a, two for e and so on—so one thump would indicate the a, more passes, three thumps for i, more passes, then "rainy weather just now?" and the spelling is complete and the "reader" is supposed to be able to tell the word. Any word may be chosen, and the questions asked depend upon the ingenuity of the "writer."

Save Your Bit.

Stale bread and left-over skim milk can be made into an appetizing dish of milk toast. This makes a good dish for breakfast, luncheon or supper, especially for children.

Bits of lean or fat meat can be run through the food chopper, well seasoned, and wrapped in pie crust to make delicious meat finger rolls; served either hot or cold.

Old English Initials to Embroider

By Winifred Worth.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

In padding these old English initials, different methods may be used. Some use the twilled cotton for the purpose; others make the chain stitch, while others let a skein of floss out at full length and embroider a strip of it under the thick parts while forming the letter, clipping the skein when the initial is finished. This is a splendid method, quickly done, and is suggested, too, as a help in padding all large pieces in border or crescent outline.

Initials can be made by filling in the broad space with French knots. This is used largely on elaborate pieces, such as the laundry bag, table scarfs, and ornate gifts.

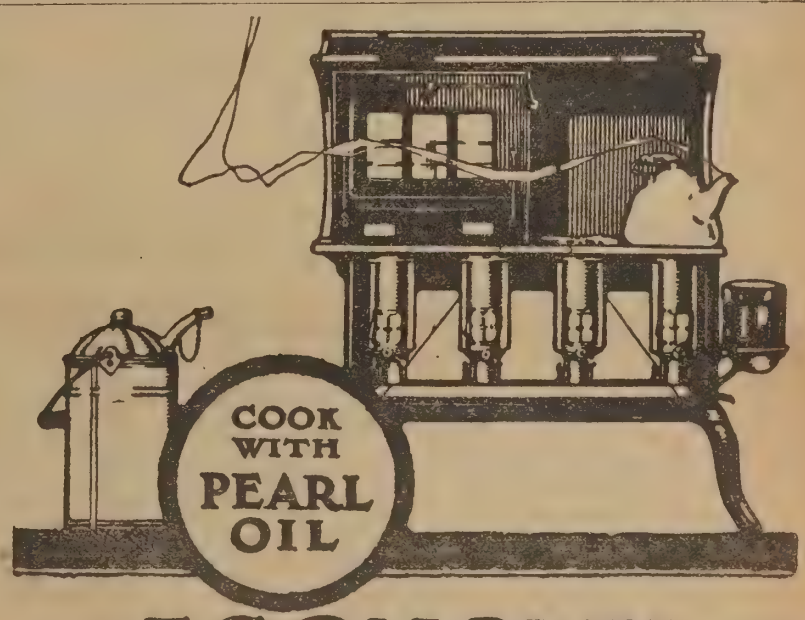
Sirup of Grapes.

The great scarcity of sugar in the district of Turin, as well as in the entire kingdom of Italy, and the government prohibition of its use in wine-making processes, has effectually drawn attention to the sweetening methods which were employed during the economic crisis of 1790-1800, when it was found that syrup of grapes furnished a fairly satisfactory solution of the problem. The experiments carried out at the period mentioned, although of great benefit, did not meet with the success desired, on account of imperfect elimination of acids, and the unpalatable character that the process of extraction imparted to the syrup. Although it is now recognized that syrup of grapes can not take the place of sugar for general purposes, it is an excellent sweetening for jam, marmalade, etc., increasing their nutritive value.

Cress Grows Quickly.

It is said that cress is the quickest growing of plants. Under perfect conditions it may be made to flower and seed within eight days of planting.

So Simple A Child Can Use It.



Make Money on Your Surplus Products

Allow nothing to go to waste. With a Burpee Home Can Sealer you can put up all the fruits, vegetables and meats for which you have no immediate use.

ECONOMY

An oil cook-stove is cheaper to buy than a wood or coal stove and it's much cheaper to operate. Meals in a jiffy, and a cool kitchen in summer.

All the convenience of gas—economical for all the year 'round cooking. Bakes, broils, roasts, toasts. Steady, evenly-distributed heat, the best for cooking.

The long blue chimneys prevent all smoke and smell.

In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

NEW PERFECTION OIL COOK-STOVE

STANDARD OIL COMPANY
(California)

My dear children: Vacation time is here and while you may not know it, Aunt Nellie has just returned from a most wonderful time in the hills, at the beach, where the waves roll and toss and where the little ones play in the sand and the mothers and older sisters sit and watch them envious, wishing the time had not passed so quickly and that they might do the same things once again. Such a good time, and here we are back again to our work and we hope that our boys and girls have not forgotten to write while we have been gone. I see there are many letters here and I shall sit up nights reading them and wishing you had all been with me.

As I wrote you last week, our contest had been extended for three months and I find that it does not meet with success and so we will not do it again. However, there are many fine letters and many responded to the sending of pictures. Your letters were very fine and some excellent ones on the subject of "My Country."

The next contest will begin August 1 and end October 1, and the subjects are:

My vacation.

What I want to be.

How can I help my country?

The prize winners for the contest just closed are:

Esther M. Bower, Roy, Wash.

Beulah Weyrich, R. 1, Mount Vernon, Wash.

Alexander Laurence Weitz, box 51, Endicott, Wash.

Roll of Honor.

Esther Eastman, Valley, Wash.; Lucy Jackson, Turner, Wash.; Barnetta Bartholomew, Tekoa, Wash.; Anna Fowler, Rochester, Wash.; Eva Boud, Valley, Wash.; Ora Jane Hayden, Mold, Wash.; Selena Dero, Spokane, Wash.; Leona Jacks, Raymond, Wash.; Warren Keith, Colby, Wash.; Esther Victoria Dale, East Stanwood, Wash.; Hilma Anderson, Olympia, Wash.; Harvey Norris, Goldendale, Wash.; Ethel Harriman, Monroe, Wash.; Lois Barnhart, Tekoa, Wash.; Nettie Johnson, Friday Harbor.

I want to have you do your very best; better than ever before, and I know you can. You can have your teacher or father and mother help you with advice, but the thoughts must be yours and you must write your own letters. The best way is to write it with a pencil first and then copy it.

Be careful of your spelling, punctuation marks and capitals, and be sure to write your name, address and age on every letter.

Aunt Nellie has a great deal of confidence in you and she knows that every one of you can write a splendid letter. Won't you ask your little friends to write, too, and make our little corner a big one and so overrun with letters that we will have to have two corners? Yours lovingly.

AUNT NELLIE.

The River Rises When It Is Warm.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. We take the Farmer, and I enjoy reading the cousins' letters very much. I am 9 years old. My birthday is July 4. Have I a twin? I have one brother. His name is Edgar. He is 7 years old. We have three head of horses. Their names are Jenny, Birdy and Maud. We have one cow and calf. The cow's name is Roney. The calf's is Jersey. The wagon road and railroad go through our land. I was down to the river yesterday. Whenever it gets warm the river rises and the wood begins to run. Snake river runs past our place. —Delma Fouts, Penawawa, Wash.

Had a Race This Winter.

Dear Aunt Nellie: I have often read some of the letters in the Children's Corner and enjoyed them very much. My sister wrote you a letter this evening. Her name is Clara. I think it would be nice if we could have picture printed on our page or Children's Corner. I am going to tell you about a race we had this winter. One evening as school was about to close our teacher said, "Listen, children, The Washington Farmer is going to offer a fine library for the ones who get subscriptions to it. Now you will have two sides or teams in this and the team who gets the most subscriptions has to give the other team an entertainment." We all thought that it would be great fun and as soon as school was out I got our teacher to subscribe and that was the first one on our side. I was leader of one side and my sister of the other. We ran a race up to the house and made all the men subscribe. My sister beat me three subscriptions. We got 13 altogether. It sure was fun. I have two brothers in the army. One is at Everett, Wash., and the other is on his way to France. He is in the aerial squadron. He is in New York now. I wish some girl of my age would exchange postal cards with me. Mine are all views and picture of houses and beautiful buildings. I would like to exchange them for comic postals. I have about 400. I am 12 years old.—Lucy Jackson, Turner, Wash.

A Ride Around Rattle Snake Hills.

Dear Aunt Nellie: This is my second letter to the Children's Corner. I am in the seventh grade at school now. Our school was out the 25th of May. I have been doing some crocheting lately. I like to crochet pretty well. I am making a yoke. Two weeks ago Thursday my aunt and cousin and myself rode up around the Rattlesnake hills on horseback. We rode till we came to a large spring, around the spring there were lots of pretty flowers, some yellow snapdragons and some little blue flowers and many different kinds, so we got off our horses and picked some of them. Then we went down the canyon a ways following a stream of water and we found a good sized pond. It was just full of tadpoles. They were swimming around in the dirty water. It just happened we found an old bucket, so we caught some and brought them home with us. Then as we followed the stream down a little farther we saw one of the nicest things and you can't guess what it was. It grew under a tree where it was nice and shady and the ground was very moist. It was a little violet. They are dark purple with pretty green leaves. We could hardly see them. Then we looked for some more and under every shady place we saw some violets. We took some violets and yellow snapdragons up by the roots and brought them home and planted them in a box and they are growing nicely. The tadpoles we have shut up in a jar and we are watching them turn into frogs. —Thelma Hinkle, Prosser, Wash.

Summer's Full of Gladness and Mirth.

Dear Aunt Nellie: This is the sixth time I have written to the Children's Corner. My subject this time is "In Summer Days." I like summer better than any other season of the year. In the summer time the birds are singing, the woods are green with foliage, and nature is in the very atmosphere. In summer Mother Nature paints designs more beautiful than any skilled artist could. The air is scented with the perfume of the roses, tulips and violets. Here and there you see a squirrel frisking about, very busy preparing for winter. In summer the buzz of the bee can be heard and the chirp of the cricket. Summer is a season full of gladness and mirth. This is the reason why I like summer best.—Harvey Norris, Goldendale, Wash.

Eva's Birthday Comes in May.

Dear Aunt Nellie: I am 9 years old. My birthday is May 14. I have two brothers and one sister. Their names are Louis and Bill. My sister's name is Frances. My brother, one of my girl friends and I were coming from my friend's place. After we got home we went to pick flowers out in the pasture. Then my dog came. My dog went in the brush and there was the coyote. My friend's dog was with us. The two dogs pounced upon him. We saw the coyote, so we ran to the house. I told my mother. She looked through the window. My friend's brother, Edwin, got the gun. By that time the coyote and the dogs were down the road. Then the coyote went in the pig pen and bit the two pigs. The coyote came toward Edwin. Edwin shot and killed him. The coyote bit the dogs. Edwin killed his dog when he and my sister went to town. Neighbors came and killed my dog, too, then they burned the coyote and the two dogs. I would like to correspond with some one my own age.—Eva Bond, Valley, Wash.

Pretty View of Mount Rainier.

Dear Ant Nellie: This is the second time I have written to the Children's Corner. We live in the country about two miles from town. Mt. Rainier is about 60 miles west of our home, but we have a pretty view of it. It has three points which are snowcapped the year around. In the summer many visitors climb it, although I have never had a chance to do it. I think it would be great fun. I wouldn't like to trade with a city girl at all.—We will soon have cherries to pick, while city girls have to buy theirs, and they never have the fun that a country girl has. I am 12 years old and would like to correspond with some cousin of my age. —Florence Spoolman, R. F. D. 7, Box 160, North Yakima, Wash.

Loves the Baby Best of All.

Dear Aunt Nellie: I am a girl 10 years old. My birthday was the 13th of June. We have a calf, and her name is Nellie. We have a horse. His name is Bill. Our cows are named Nigger and Rosa. I have three brothers and one sister. The boys' names are Clarence, Frederick and Edward. My sister's name is Gladys. Edward is the baby. I like him best of all. My school was out the 15th of June. I help mama do the work. I make the beds. I have two beds to make, and sometimes three. We have a big garden. I help mama in the garden. Papa is working on the road. My little brother goes with him.—Pearl Droullard, Prevost, Wash.

Raising Garden Is Favorite Work.

Dear Aunt Nellie: I am 11 years old and in the third grade. This is the first time I have written to the Children's Corner. My favorite work is to raise garden. I have a little one of my own. I have four rows of peas and some beans. I live on a big farm. We have 22 head of mules and four cows and three ponies. Their names are Peanuts, Daisy and Nancy. I like to ride best of all.—Anna Budig, Waitsburg, Wash.

George Killed 22 Rattlesnakes.

Dear Aunt Nellie: This is the first time I have written to the Corner. We live on a farm of 520 acres. I ride six miles to school. We have 19 head of horses, six colts, three cows, two calves and one dog. I have killed 22 rattlesnakes this year, as they are very thick up in the hills. I have one swarm of bees.—George Nichols, Wallula, Wash.

Snowball Hae Four Baby Kittens.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. My birthday is the 30th of June. I would like to correspond with any girl who is my age and whose birthday comes on the same day as mine. I am 9 years old. We have two cats named Fluff and Snowball. Snowball has four little kittens, one gray one and three white ones. We had a dog, but he went with the cows and never came back. His name was Billy. My aunt Helen is spending the summer with us. My grandpa and grandma have an antomobile. They are going to Seattle in it. I enjoy the Children's Corner very much.—Hazel Casberg, Clayton, Wash.

Loves Country With All Her Heart.

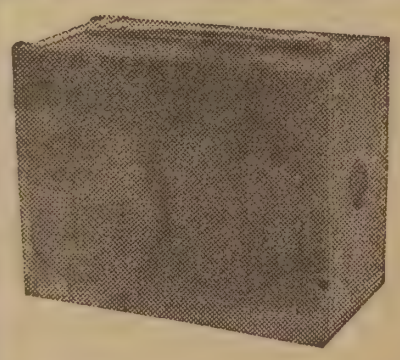
Dear Aunt Nellie: I received the nice book as first prize. I thank you very much for it. I was much surprised to see my name in the Farmer as a prize winner. We are very busy these days. We are trying to do a lot of building this summer. We are also going to raise more garden than we generally do. It seems slow working on our place because it is half a mile from where we live. But the tortoise was slow, too. I am 12 years old and will be 13 the 8th of September, 1917. Have I twin? I love my country with my whole heart and I hope all the cousins do, too.—Annie L. Hutsell, Mora, Wash.

Mary Lives Near the Columbia.

Dear Aunt Nellie: I like to read the Children's Corner very much. I am in the third grade and I am nine years old. We live on a 290-acre farm and close to the Columbia river. We have 400 little chickens and are going to set 360 eggs more. They are almost all white Leghorns. I like to watch the little chickens. We have 60 head of cattle and are milking 20 cows. We have three lambs and one cat and two kittens. The North Bank railroad runs through our place. I have four sisters and one brother. Their names are Frances, Gladys, Edna and Dolly and Leland.—Mary Heot, Greer, Wash.

Visiting in the Country Now.

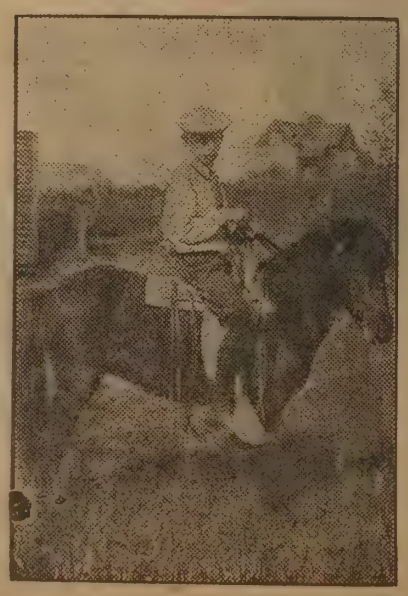
Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. My father takes the Washington Farmer and I like the children's letters very much. I am 12 years old and I am in the seventh grade. My birthday is August 6. Have I a twin? My father is the mayor of Pomeroy. I am out in the country visiting while my father and mother are at Seattle. I like it very much. My friend has 17 pet lambs and seven rabbits. He feeds the lambs with a bottle.—Ruth Matthies, Pomeroy, Wash.



Goes After the Cows With Sister.

Dear Aunt Nellie: I am a boy and my name is Buster. I have an old hen and her name is Biddy Black. Last winter both of her feet and bill froze off. I can catch her anywhere and any time I want to. I have two dogs. Their names are Bruno and Bingo. I go after the cows with my sister. I like to tease my cousin and smallest sister.—Buster Miller, Mayview, Wash.

Ina Has Planted Beans and Tomatoes.



Dear Aunt Nellie: This is my first letter to you. I planted three rows of beans for myself and two rows for papa. I also set out some of my own tomato plants. I live on a farm of 80 acres. I am nine years old, but will be 10 the second of October. I would like to correspond with any one my age. —Ina Stewart, Chewelah, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the past week: Lois Carmichael, Helen Anderson, Vesta Johnson, Effie Luddington, Victoria Chevalier, Catherine Borden, Alice Duncan, Esther Hergert, Leona Machlied, Eunice Libbey, Lela Perkins, Beulah Shaw, Marie Haven.

BOYS AND GIRLS
You can still get this dandy Premo Junior Camera FREE!

Takes picture like this.

Now is the time of year to take pictures. Dozens of our boys and girls have had us send them cameras during the past week or so. Why don't you get one, too?

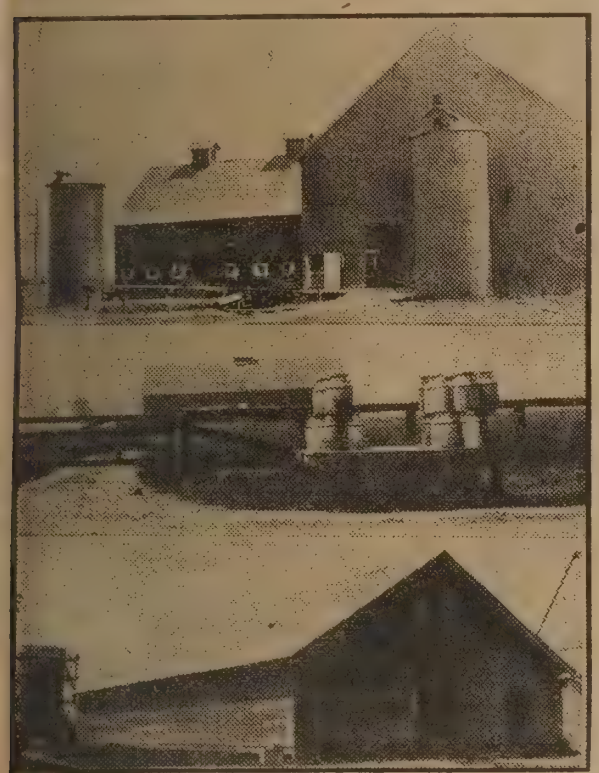
SEE HOW EASY IT IS TO GET ONE

Go to two neighbors and tell them if they will subscribe to THE WASHINGTON FARMER one year they will be helping you get a camera. Ask each of them to give you one dollar for the subscription, and when you have the two dollars send it to us and we will immediately send you the camera. If the first two neighbors you call on are already taking THE WASHINGTON FARMER, try other neighbors until you get the two subscriptions. It won't take but a little bit, and then the camera will be yours, to take pictures with for years to come.

Start out for your two subscriptions today. A renewal subscription counts just the same as a new one. Send the two subscriptions and $2 and right back will come the camera to you.

The WASHINGTON FARMER

Premium Dept. Review Bldg. SPOKANE, WASH.



Pioneering in White River Valley

When the Nelson family moved into White river valley, back in 1884, there were more pests of one kind and fewer of another, according to N. C. Nelson.

"Things didn't look much as they do now," Mr. Nelson admits. "Back toward the bench where our hay land is now there was a swamp. Grazing horses used to get mired in there, and we'd have to pull them out with a long rope and another team, working on the solid ground some distance away. There were elk horns, overgrown with alder trees, in that swamp. I suppose the bears had driven the elks down out of the hills, and they had mired in trying to cross the valley. If a man fell off a log in those days, he would go down just the same as a horse or an elk.

"When my father bought this farm he dug a small ditch through the swamp land. A neighbor told him he never could drain the land, as it was a natural swamp, but it wasn't long before the ditch had washed deeper and wider, and was carrying off a lot of water. Clearing the brush and woods and draining the land did what you see—the ground is solid enough now.

"The pests we had in those days were different from those of today. There were mink and wild cat, but those made rather good sport for the boys of pioneer years. Now these animals are gone, and we have root maggots and cabbage woorms. One of the most serious of all this new generation of pests is the wire worm. On the roots of one kale plant, last year, I counted 26 wire worms, and in addition to that there were a lot of root maggots, with cabbage worms and aphids on the part of the plant above the ground. It's enough to discourage a plant, trying to grow under modern conditions. The wire worm is getting worse in some ways, too; in the beginning I never knew this insect to bother carrots or beans, but now it will attack both. Root maggots still stick to the roots of plants having a volatile flavor, like turnips, radishes, cabbage, etc."

Showing two dairy barns in the White river valley. The top one is the barn and silo on the H. C. Green place. Mr. Green recently installed a milking machine. The second picture gives another view of the barn. The lower picture is the barn on the Nelson place at Kent.

Mr. Nelson states that in his household considerable canning and drying is practiced every year, and that this year the quantity of food so preserved will probably be increased. He is thinking of buying a pressure cooking outfit for home canning, though he emphasizes the point that canning can be done successfully with the common utensils of the kitchen.

Problem of Food Supply

To the Editor of The Washington Farmer: The Washington Farmer has started something going when they call for expressions from the readers of their paper to tell why they thought Uncle Sam ought to take charge of the food supply of the country, and what effect it would have on the farmers.

The noted economist, lecturer and preacher, N. Dwight Hillis, addressing the graduating class of Ames four years ago, said that in two score years we shall have 250,000,000 people, and, at the present rate of consumption and progress we shall not be able to maintain ourselves. This statement bears out the predictions of the lamented James J. Hill that "if the present method of agriculture shall be pursued for another generation the American people will not be able to produce enough to feed themselves."

The amount of advice handed out to the farmer these days is tremendous. Many of the advisers know nothing from personal experience about agriculture. A great deal of futile and foolish advice is given. It is no wonder that the farmers get irritated by it. It is foolish to think that they will take it in good part when they are called unprogressive and unbusinesslike. Now the suggestion is made for a great army of college boys to be turned loose on the soil this summer. Naturally the farmer looks with considerable doubt on the feasibility of this plan, for we know from experience what a school boy is on the farm. However, let him not look sneeringly on the boys' capacity. He lacks the experience, but he will put more muscle and enthusiasm into it than three old-time skilled and sluggish farm hands.

The way to adjust ourselves to conditions is to increase production by universal gardening and fruit culture. Use evaporators for curing and saving the crop; raise more poultry; engage in high-class dairying; improve the bungling way that we now have in distribution; abolish the illegal practices of syndicates organized for the restraint of trade. We should get away form the paper sack and tin can way of living. Practice home cooking, can, dry and save all you can. If the government is going to take over the food supply problem it should guarantee farmer a living wage, say $1.50 per bushel for wheat. Cutting out 75 per cent of the useless distribution would do more good than tons of literature that are flooding the mails telling the farmer what he should do.

C. C. BROWN.

Castle Rock, Wash.

Hired Help on Farm.

For obvious reasons the writer of this article withholds his name for publication. The Washington Farmer is glad to publish letters on this subject from farmers as well as from men who work on farms.

To the Editor of The Washington Farmer: May I say a few words on the farmer's side of the hired help question? We note the way our unknown friend feels on the subject. We came to the Big Bend 16 years ago. We had more than $10, but unlike the rich farmer he mentions, we could not cash in for $100,000 as he could. We have been a farmer from boyhood, have worked for 75 cents per day and $22 per month, and did more hours work at those wages than the average hired man does on a Big Bend farm. We have hired men by the month for many years. It is our policy to have a good spring cot and mattress for each man's use, as it is more satisfactory than to crowd the boys. We have much more satisfaction in taking young men under 25 than older ones, as they are better satisfied and lack the feeling of jealousy that prevails among the older men; besides, they are more apt to be strong enough to eat pie; and all good housewives are sure to put pie to us occasionally. We make it a practice to tell each young man when he comes, to try to make himself at home. He has free access to our library and to practice on the piano. We like to hear his voice raised in song, and if he is able to sing he generally does before being on our farm very long. We are acquainted with many farmers who hire men, and I can not call to mind a single one who gives his men a board for a bed or that would keep his men from taking a bath, neither do I know of one that has a separate room for each man and private bath for his royal highness, and furthermore, I never will. Such a class are not hired men to do honest work for an honest wage, but time-killers.

A READER.

Fires in National Forests.

Lightning caused 23 per cent of the fires in the national forests of Oregon and Washington in 1916. Careless campers were responsible for almost as many.

Many Home Gardens.

More than 2,000,000 home gardens have been planted in the United States this year. Their product will add $250,000,000 worth of vegetables to the normal supply.

DISTRIBUTE CATTLE.
Stock Yards Are Clearing House.

Reports from Pasco say that the new Pasco union stock yards are acting as a clearing house for the distribution of cattle not fat enough for market among farmers with pastures capable of putting the finish on them.

The excessive dry weather has caused the upland pastures and ranges in the vicinity of Pasco to dry to such degree that many cattle are reported as being turned onto the market in poor condition. They are being distributed by the yards to farmers in irrigated districts who have alfalfa or other pasture for them.

PROTECT AMERICA'S BREAD-BASKET

FIRE IS THE ROBBER THAT WOULD STEAL YOUR WHEAT

Patriotism and Pocketbook demand that you "move heaven and earth" to save your grain from fire.

Call to your aid all the forces that are ready to give you cooperation—but ACT and ACT PROMPTLY!

The State Insurance Commissioner's forces are in the field to aid you; the State Council of Defense is enlisted; the Northwestern Mutual, with its strong organization all through the grain belt, is offering you every assistance in its power.

But after all the main responsibility is up to YOU!

Organize your own fire-fighting forces. Provide quickly movable equipment—milk cans filled with water, sharp-pointed shovels, plenty of wet sacks, etc. Conquer the fire before it has time to gain way.

Insurance will lessen your personal loss, but it will not restore lost grain or feed hungry mouths.

Save the Grain for Uncle Sam!

If a Northwestern Mutual fieldman is not in easy reach write us today for further suggestions on protecting your grain.

Grain and Produce Markets

Chicago Grain.

CHICAGO, July 28.—Anxiety over shipping complications due to the switchmen's strike did a good deal today to cause an all-around advance in value of grain and provisions. Corn finished strong, 3-4c to 3 7-8c net higher, with September at $1.63 3-4 and December $1.19 1-8 to $1.19 1-4. Wheat closed unsettled, 3c to 8c up at $2.60 July and $2.29 September. Oats showed a jump of 11-4c to 15-8c and provisions 10c to 27c.

Unfavorable crop news from North Dakota and western Canada increased bullish sentiment regarding wheat. The chief other bullish factor aside from the indirect influence of the strike was the prospect of final agreement on the terms of the food control bill with a provision for a generous minimum fixed price to be paid for wheat at primary centers.

Cash Quotations.

CHICAGO, July 28.—Wheat—No. 2 red, $2.65; No. 3 red, No. 2 hard and No. 3 hard nominal.

Wool Market.

BOSTON, July 27.—The commercial bulletin will say tomorrow:

The improvement in the tone of the wool market which became apparent a week ago has continued into the present week with a continuance of fair buying of new territory wools in the original bags at fully firm prices. There also has been some demand for fine and half blood foreign wools. Buying in the west has become rather limited although recent purchases are at full prices.

Stored basis: Texas fine 12 months, $1.65@1.70; fine eight months, $1.45@1.50; California, northern, $1.70@1.75; middle county, $1.40@1.45; southern, $1.15@1.20; Oregon eastern No. 1 staple, $1.75; eastern clothing, $1.50@1.55; valley No. 1, $1.45@1.50; territory fine staple, $1.75@1.77; half-blood combing, $1.45@1.50; 3-8 blood combing, $1.30@1.35; fine clothing, $1.55@1.65; fine medium clothing, $1.40@1.50; pulled extra, $1.80@1.85; AA, 1.70@1.80; A supers, $1.45@1.50.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., July 28.—Hogs—Receipts, 9200; steady to strong. Heavy, $14.35@15.35; mixed, $14.50@15.60; light, $14.60@15.60; pigs, $12@14.75; bulk of sales, $14.50@14.90.

Cattle—Receipts, 100; market, nominal. Native steers, $9@13.75; cows and heifers, $7@9.50; western steers, $8.50@11.50; Texas steers, $8@9.50; cows and heifers, $7@9; canners, $5.50@7; stockers and feeders, $6@9.50; calves, $9@13; bulls, stags, etc., $6@9.50.

Sheep—Receipts, none; market, nominal. Yearlings, $9.50@10.75; wethers, $9@10.50; ewes, $8.50@9.30; lambs, $14.75@15.25.

At Chicago.

CHICAGO, July 28.—Hogs—Receipts, 10c lower than the opening, which was 11c lower than the opening which was strong and 20c to 25c above yesterday's average. Bulk, $15@16; light, $14.75@16.05; mixed, $14.65@16.10; heavy, $14.45@16.20; rough, $14.45@14.65; pigs, $11.75@14.60.

Cattle—Receipts, 700; weak. Native beef cattle, $7.60@14.15; western steers, $8.40@11.50; stockers and feeders, $5.80@9; cows and heifers, $4.50@11.65; calves, $8.75@13.25.

Sheep—Receipts, 7000; steady. Wethers, $7.50@10.75; lambs, $9.75@15.60.

At Seattle.

SEATTLE, July 8.—Receipts, none; market, steady.

Hogs—Prime light, $15.60@15.70; medium to choice, $15.25@15.45; smooth heavies, $14.75@15.90; rough heavies, $14.25@14.65; pigs, $14.20@14.65.

Cattle—Prime steers, $9.25@9.50; medium to choice steers, $8.50@8.75; common to good steers, $6@7.50; best cows and heifers, $4@4.50; best bulls, $6.50@7; common to good bulls, $3.50@6.50; calves, $6.50@9.50.

At Portland.

PORTLAND, Ore., July 28.—Hogs—Steady; receipts, 244. Prime heavies, $15.50@15.60; light, butchers and packing, $15.40@15.50; bulk of sales, $15.35@15.50; rough heavy, $14@14.50; pigs and skips, $13.50@14; stock hogs, $12@13.

Cattle—Steady; receipts, 5. Steers—Prime to light, $8@9; prime heavy, $8.50@9; good, $7.50@8; cows, choice, $6.50@7; medium to good, $5.75@6.25; ordinary to fair, $5@5.50; heifers, $5@7.25; bulls, $5@6.50; calves, $7@9.

Sheep—Steady; receipts, 14. Spring lambs, $11@11.50; spring lambs, culls, $6@9; best wethers, $7.50@8; heavy ewes, $3@6.50; best yearlings, $8@8.50.

Spokane Union Stock Yards.

Hogs — Receipts, none; market, steady.—Prime light packing, $15.20@15.35; prime heavy packing, $15.35@15.50; smooth heavy, $14.20@14.50; pigs, $13.25@14.25.

Cattle—Receipts, 29; market, weak—Prime light steers, $8@8.25; prime heavy steers, $8.25@8.75; good steers, $6.75@7.25; ordinary to fair, $5.25@5.75; prime cows, $5.50@6.50; good cows, $5@5.50; common cows, $4@5; best heifers, $5.50@6.50; bulls, $5@7; calves, $7.50@9; stockers and feeders, $5@6.50.

Sheep — Receipts, none; market, steady.—Prime lambs, $12@12.75; prime yearlings, $9@9.75; prime wethers, $9@9.75; prime mutton ewes, $6.50@8.

Seattle Market.

SEATTLE, Wash., July 28.—Western avenue merchants, almost without exception, complained today that the street car strike now in its second week here was responsible for a decrease of 20 to 33 1-3 per cent in the volume of business done, in withheld orders for Washington fruit and produce, and in lower prices beyond what would have been paid by buyers. Scarcely any of the seasonable commodities escaped breaks as a result of inability of consumers to get to the retail markets.

The fresh ranch egg market has advanced to 43 cents, due to lighter receipts. Storage stocks of eggs are practically normal, although some of the dealers deferred storing until late and paid a high price for their holdings.

Poultry prices will be steady next week.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transaction by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 36@38c per dozen.

Poultry—Live hens, fat, over 4 lbs., 18c per lb.; 2 lbs. and under, 13@16c; old roosters, 11c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; broilers, live, 15@17c per lb.

Butterfat—47c per lb.; dairy butter, 31@32c.

Beef—Buying prices: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 14@15 1-2c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 30c per lb.; green hides, 17c per lb.; salted bulls, 16c per lb.; dry hides (short trim, 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 13c per lb.; dry butcher full wool sheep pelts, 38@42c per lb.

Portland Market.

PORTLAND, Ore., July 30.—Butter prices were advanced another cent by the city creameries in the latter part of the week. Production is small and the demand is good.

Cheese has weakened and Tillamooks are quoted a cent lower.

Egg trade drags, but prices are holding fairly steady.

been offered for 1917s.

Potatoes are firmer, as the dry weather is keeping back new Oregons and jobbers have been obliged again to order California stock.

Walla Walla onions are arriving in car lots and the quality is entirely satisfactory. They are quoted on the street at $1.25 per sack.

There is a good demand for large hens at 16 and 17 cents and light hens are weak at 15 cents. Springs are steady. Ducks, geese and turkeys are slow sale. Moderate arrivals hold dressed meats steady.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $46 per ton..

Corn—Whole, $80; cracked, $81 per ton.

Millstuffs—Bran, $34 per ton; shorts, $37.

Barley—No. 1 feed, $45; brewing, nominal; rolled, $49.

Hay—Buying prices: Timothy, eastern Oregon, $26; alfalfa, $18; grain, $12@15.

Eggs—Oregon ranch, case counts, 35c per dozen; candled, 38@39c.

Poultry—Hens, 15@17c; ducks, 13@17 1-2c; turkeys, alive, 18@21c; geese 8@9c.

Butter—City creamery, prints, 43@44c per pound; cubes, extras, 40c.

Cheese — Tillamook triplets, 22c; young Americas, 23c.

Dressed meats—Veal, 15 1-2@16c; pork, 19 1-2@20c.

Hops—1916, nominal; contracts, 10@12c.

Potatoes — New, 3 1-4@3 3-4c per pound.

Wool—Eastern Oregon, fine, 58@61c; coarse, 58@65c; valley, 72 1-2@75c.

Beans — California small white, 16 1-2c; large white, 16c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 18c; green stags (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Seattle Wheat.

SEATTLE, July 28.—The suggestion from Washington that farmers should get $2 per bushel for their new crop wheat so effectually cleared the atmosphere in local grain and milling districts this week that contracts for new crop bluestem and turkey red went forward briskly.

During the week numerous sales at $2 have been reported for quick delivery and with speculation eliminated by federal control trade is settling slowly down to known normal conditions, a state of affairs that has been devoutly wished for more than 90 days. The gloom that surrounded the wheat and flour trade is gradually being dispelled and operators are turning much more hopefully to the future than they have been able to do since the country entered the war.

Heartening crop reports have had much to do with the healthier undertone. In place of half a yield, as feared during the hot winds of a week ago, Puget sound millers, basing the forecast on authentic reports from country stations, are able to outline a yield of from 60 to 70 per cent in spring wheat as the facts appear today. Washington milling bluestem is being harvested and first carload lots are promised much earlier than previously supposed. Millers now say they will be able to warehouse bluestem and turkey red between August 1 and 5.

According to the expressed and specific desire from Washington, there will be no futures, but cash sales of new wheat will prevail throughout the year. Members of the Merchants' exchange are now discussing the project of listing new crop wheat on the early August sessions.

Carload receipts at Seattle, Tacoma and Portland for the last six seasons, including the fiscal year closing June 30 last, were as follows:

	Seattle.	Tacoma.	Portland.
1916-17	5,637	7,665	6,520
1915-16	8,157	7,055	10,466
1914-15	8,144	9,245	16,630
1913-14	6,909	9,373	15,789
1912-13	7,630	11,815	17,433
1911-12	6,500	10,821	13,500

Milk Price Boosted

Producers and Distributors Raise

Another development in the dairy situation in eastern Washington was recorded last week when the milk distributors in the city of Spokane, where a keen fight has been under way for several months, announced a raise in price to 14 cents a quart for bottled milk, an increase of practically two cents a quart.

The increase to the producers is 1 1-3 cents a quart, so that the increase made by the distributors of two cents a quart means a raise to the distributor of about two-thirds of a cent. This means that the cost of the 16,000 quarts of milk consumed daily in the city of Spokane will be increased about $320 to the consumer, of which increase the producers will get a little more than $200 and the distributors a little more than $100.

Under the new schedule of prices for the milk producers, to become effective August 1, they will receive 24 cents a gallon for milk testing 3.6 per cent butterfat, with a one-third of a cent increase for each one-tenth of one per cent increase in the butterfat test. Thus milk testing 4 per cent will bring 25 1-3 cents. On the same sliding scale milk testing below 3.6 per cent butterfat will be subject to a discount of one-third of a cent for each one-tenth of one per cent decrease.

Railroads Boycott Lamb

Lamb Producers Boycott Railroads

Certain railroads, with a view to assisting in the conservation of foodstuffs, have announced what is virtually a boycott on lamb, though the announcement is made from the best of motives. It is planned to eliminate lamb from the menus of the dining cars.

In return, the growers of lamb have announced that they will boycott any railroad that puts this order into effect, declaring that the sheep industry has been built up in recent years to supply a demand for young mutton, and that the increase in amount of meat from a lamb to a yearling mutton is insufficient to pay for the additional cost of wintering over.

This is an interesting situation, and one of vital concern to the sheep industry of the northwest, as well as to the consumers of mutton. Developments and arguments on both sides will be followed up in next week's issue of The Farmer.

Cannonball Tree.

A native tree of South America, the cannonball tree, bears round, woody fruit which closely resembles baseballs.

Use Care in Canning

(Continued from page four.)

Use only good quality live rubber rings.

Use only fresh, sound vegetables or fruits.

Wash products thoroughly.

Blanch in boiling water or live steam—hot water or vapor will not do.

Dip quickly into and out of cold water—do not soak.

Pack into jars immediately—do not let the dipped products stand uncovered while you attend to something else.

Be sure the jars are hot when the product is put into them. They can be kept hot in vessels of boiling water.

Place the top and rubber on each jar as it is filled—do not wait until all the jars are filled.

Place the jars in boiling (not merely hot) water deep enough to cover them entirely (not merely part way up the side of the jars.)

Sterilize for the full time indicated in the directions. Count time after boiling point has been reached.

SAVE YOUR PAPERS.

For several weeks The Farmer has been publishing information on canning and drying fruits and vegetables. If you have not filed our papers away, hunt them up now, before they are destroyed, and keep them for reference. The general information, recipes and time tables given in these recent issues are valuable to you.

After sealing, turn jars upside down to cool, so that those with leaky seals may be found easily, and so that their contents may be resterilized in tight-sealing containers.

Above all, plan so that you will not be interrupted. Then work quickly, and devote your whole attention to the work in hand. Let all other housework go, if possible, until all the jars are in the sterilizer. Any delay in performing the steps between blanching and sterilizing means risk of loss.

Railroads Fight Fire

Relative to the dangers of fires along the railroads during the dry summer season, J. P. O'Brien, general manager of the O.-W. R. & N. company, has issued a statement outlining methods of prevention used by the railroad companies, and calling upon all farmers along the rail lines to cooperate as fully as possible in the work of fire prevention. Extracts from his statement follow:

"While we have had fire patrol service for years, and our section crews and trainmen are always on the alert to prevent destruction of property, we are adding to our protective measures. On all trains operating through territory where the danger is greatest, particularly through wheat sections, a watchman is stationed on the rear car. His duty is to keep careful lookout, and if smoke or blaze appears the train is stopped and the fire extinguished.

"Our right of way is kept as clear of inflammable material as possible. Adjoining this, we work in cooperation with the owners of the land. It is essential that a safeguard for grain fields be provided. The cutting of a swath, the plowing of a furrow and the burning of the stubble are things that should be looked after. Here is where the farmer can assist.

Chimes Make Cannon.

Hamburg has just bidden a touching farewell to the noted chimes of two principal churches, St. Nicholas and St. Peter's, from which the bells have been expropriated under a general order seizing all German church bells to be melted into cannon. Great crowds assembled around the churches and joined in hymns which organists played for the last time on the bells. The chimes are composed of 43 and 50 bells, respectively, and will provide about 30 tons of gun metal.

Control Peanut Market.

Marseilles, France, is the great central market for peanuts, more than 120,000 metric tons of peanuts in the shell and 240,000 tons of shelled nuts being crushed there in a single year.

Want Ad Rates 30c Per Line

Want ads are run at this rate in The Washington Farmer and its associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

Want Ads

How to Figure Cost of Ads

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

EXCELLENT SUBURBAN HOME, NEAR Tacoma, on electric car line, school and church; 4 acres; improvements alone at low figure, including poultry and cow, $5800; will take $5500; place must be seen to be appreciated; good reason for selling. If interested, write Louis Lundgren, R. 4, Box 201, Tacoma, Wash.

The department editors of this paper are anxious to be of service to you. Do not fail to write to us if they can be of help to you.

News for Breeders

E. C. Vahlberg & Sons of Emmett, Idaho, pasture their Holstein cows in their orchard. To keep the cows from browsing off the trees they use ordinary wire netting calf muzzles made in cow halter form. Whenever the animal raishes its head the muzzle falls down over the mouth, but when the cow grazes the muzzle slips back, and the cow soon learns to eat grass with it on. As long as she eats with her head down the muzzle does not interfere in any way, but it is a complete protection against browsing, and if the knowledge helps any one the Vahlbergs are glad to pass it along.

C. C. Bales & Sons, who are breeding Herefords three miles from Caldwell, Idaho, have used as a herd header for the last two years Sir Beau Donald 3d, by Perfection 9th, from the A. B. Cook herd. He is a full brother to Woodford, the $12,000 bull of E. H. Taylor Jr. They have also used Hopeful, by Debonair 26th, from the George Chandler & Son herd. This bull has great bone and broad back, and his calves show the same quality to a remarkable degree. They find a ready sale for their Herefords in Idaho, but sell some in Oregon and Washington. They will show at the state fair of Idaho at Boise this fall. The Bales farm of 400 acres has 230 acres in pasture and 200 in hay and grain. The herd consists of 94 registered Herefords and some grades.

George Chandler of the firm of Chandler & Son, Baker, Ore., Hereford breeders, returned recently from an extended trip through the Mississippi valley, bringing back with him eight cows and four 2-year-old heifers, purchased at long prices. For one cow Mr. Chandler paid $1125. He paid $875 for one cow and calf, but sold the calf for $800 before he returned. One of Mr. Chandler's cows was purchased at the Cassidy sale at Whiting, Iowa; six cows and two heifers at the Galbert dispersion sale and two at the Blue Ribbon sale at Kansas City, out of the Luce & Morely consignment. Mr. Chandler reports great interest in Herefords in the east and hardly knows where high prices will stop. The Messrs. Chandler now have a herd that ranks with the best in the entire country. They will probably not be on the fair circuit this fall, although it will probably be shown at the Pacific International, and some animals will be consigned to that sale. Neither does Mr. Chandler think the A. B. Cook herd will be on the fall circuit and he suggests that it is a good time for new breeders to exhibit.

R. E. Tanner of Sumas, Wash., who purchased one animal at the Zorn Jersey sale held recently, also bought three head from Ed Cary of Oregon. One was a bull calf out of Poppy's Maiden, for which he paid $400: the others heifer calves out of St. Mawes Landseer and St. Mawes Retta. Poppy's Maiden is a daughter of St. Mawes Poppy, 1120 pounds, by Conan's 23d grandson, sold by Mr. Cary to Burt Pease when a heifer and repurchased at the Pease dispersal sale for $400. So she had already paid for herself and will greatly increase her already good Register of Merit record, while furnishing profit at the pail.

St. Mawes Susie, that already has an official record of 938 pounds of butter in a year, has started on an official test at 10 years old, with 96 pounds of fat or 114 pounds of butter for her first month, and gives every promise of making a 1000-pound cow or better. St. Mawes Susie Pet, that Mr. Cary bought back at the Zorn sale, has been sent to the Tillamook ranch. The Tillamook climate seems to agree with her. She has already milked up to 40 pounds and at her next lactation will be fitted and put on official test. H. A.

Zila's Pride.

Zila's Pride. This cow was sold at the Forrest sale at Whiteson, Ore. She was bought by Carl D. Irwin of Kimberly, Idaho, for $400. She is a Register of Merit cow with a record of 600.98 lbs. of butter.

Davis Sale of Jerseys

By HORACE ADDIS.

The prices received at the W. B. Davis sale of 80 head of Jerseys at Shedd, Ore., recently, was not only a great disappointment to Mr. Davis, but should be a disappointment to fanciers and well wishers of the breed. The condition in which some of the cattle were offered was against them; the catalogue was issued very late—too late to draw buyers—and lacked some information it should have contained, besides havinga few manifest errors. But all this, and the fact that there was a large percentage of calves and young stock, does not satisfactorily explain an average of less than $100 for the females and still more ridiculously low prices for the bulls, from a herd as well bred and as well known to be a good working herd as that of Mr. Davis.

While there were a few buyers from a distance, neighbors took most of the offerings. T. M. La Mond of Wolf Creek, in southern Oregon, came up and got two good ones at a bargain. The cows sold at $215 each, the top price, and both worth considerably more. J. H. Samuelson of Brownsville, Ore., took one and L. M. Allen of Shedd the other. Mr. Allen also got three good ones at bargain prices, including the good old register-of-merit cow, Smith's Pogis Belle. E. E. Dent of Jefferson was the heaviest buyer. He secured 12 head at very low prices and has now a good foundation herd. Professor McPherson of the O. A. C. bid in six for $410, mostly young stock and worth far more than he paid. Colonel Hughes and Colonel Sudtell did their parts well and secured all that was possible from the crowd present.

PRINCE BOOTH, PRIZE BULL.

William Mulhall of Fenn, Idaho, a little over 15 years ago purchased his first registered Shorthorn cow. Three years later he bought another. These two cows proved to be all and more than he expected, they were both very heavy milkers, regular breeders and the calves were the type of animals he desired. One cow raised him 15 calves and was then sold for beef for $87.50. The other raised 12 calves and is still in the herd suckling a fine calf this spring. He has purchased different herd sires, but his ideal cross on these cows was reached when he got Prince Booth, shown above. He is over a ton bull. The third crop of calves is now coming on. They are uniform in size and conformation and mostly roans in color. He expects to keep Prince Booth to use on the old cows indefinitely. To use on his calves he has purchased Types Model, junior yearling champion at the Chicago International in 1916, also champion at Minnesota, Montana, North and South Dakota state fairs and at the Pacific International in 1915. The purchase price was $2300. He weighed 1750 pounds as a junior yearling. The entire herd now numbering about 80 head are the descendents of these two cows and a large per cent are sired by Prince Booth. Mr. Mulhall believes in sticking to what has been tried and found good. His ideas have produced a herd that shows a very distinct type of breeding and no doubt will produce like in form. The father and two sons are going to make Shorthorn breeding their special business. They will erect a large new cattle born this summer and will conduct regular annual sales.

Live Stock in Denmark.

On February 20, 1917, a special census was taken of the live stock in the kingdom of Denmark and, contrary to expectations, the result of the investigation was very favorable and indicated that the number of animals had not decreased.

The number of horses and colts is set at 538,000, as against 515,000 at the same period last year.

There were 2,453,000 head of cattle, as compared with 2,290,000 the previous year. These figures are nearly as large as at the beginning of the war.

The number of swine is reported as 1,981,000, while in the spring of 1916 the total was 1,983,000. During the period 1914-17, however, the kingdom's swine have decreased one-fifth.

Sheep and lambs totaled 270,000 head, as against 254,000 last year. The statistics for 1914 and 1915 show that at these same periods the kingdom had over 500,000 of those animals.

The number of chickens in the kingdom was 8,250,000.

England Limits Stock.

Here are some of the "dont's" to farmers, issued by the British board of agriculture:

No more farm stock shows must be held.

The number of cattle must be substantially reduced before Christmas, but the milking herd must be kept up. Fat stock shows must not be held.

Auctioneers must not sell animals brought to "prime" condition by cake-feeding.

No corn must be given to pleasure horses.

Cattle should be sent to market leaner than usual.

Sheep must be killed earlier.

Next season's lambing must be deferred until more grass feed is available.

Corn must not be given to pigs.

No more poultry should be kept than can be maintained on scraps and waste food.

$8000 for Guernsey Bull.

A new high price is reported for a Guernsey bull. B. E. Nixon of Yountville, Cal., has secured from Florham Farms of Madison, N. J., the bull Itchen Daisy's May King of Langwater 17349 for an $8000 consideration. Imp. Itchen Daisy 3d 15630, the dam of Itchen Daisy's May King of Langwater 17349, was sold a number of years ago for $4000 and her son, Imp. King of the May 9001, as a calf sold for $2000. Langwater Dairymaid 26377, a daughter of Imp. Itchen Daisy 3d 15630, sold at the Langwater sale last fall for $6150.

All first class in every respect, mostly our own breeding, reserved for our own special use.

On account of the death of one of the partners, must sell to close estate.

FOLLETT & SCHOOLER, Genesee, Idaho.

THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. NO 32. AUGUST 9, 1917. ** WEEKLY.

President Pleads for Personal Efficiency

Complete Concentration of All Effort Is Necessary if United States Would Win

Describing this as an "hour of peril," President Wilson has again issued a public statement urging the individual citizens of every part of the nation to prevent waste of foodstuffs and to increase the country's efficiency in food production and conservation. Especially is the appeal made to the women of the nation.

Woodrow Wilson.

Twenty-four states, of which Washington is one, have asked the administration to assist them in insuring the conservation of these foods by canning, preserving, pickling, drying and storing. With the help of a large volunteer committee, including many of the most prominent industrial leaders of the United States, the department of agriculture is concentrating its efforts to stimulate the conservation of food in every community in the nation.

The President's Appeal.

"In this hour of peril, I am concerned, as I know you are, with the necessity of avoiding waste," President Wilson says in his official statement, issued to and through Secretary Houston of the department of agriculture.

"Every bushel of potatoes properly stored, every pound of vegetables properly put by for future use, every jar of fruit preserved, add that much to our insurance of victory, and that much to hasten the end of this conflict. To win we must have maximum efficiency in all directions. We can not win without complete and effective concentration of all our efforts.

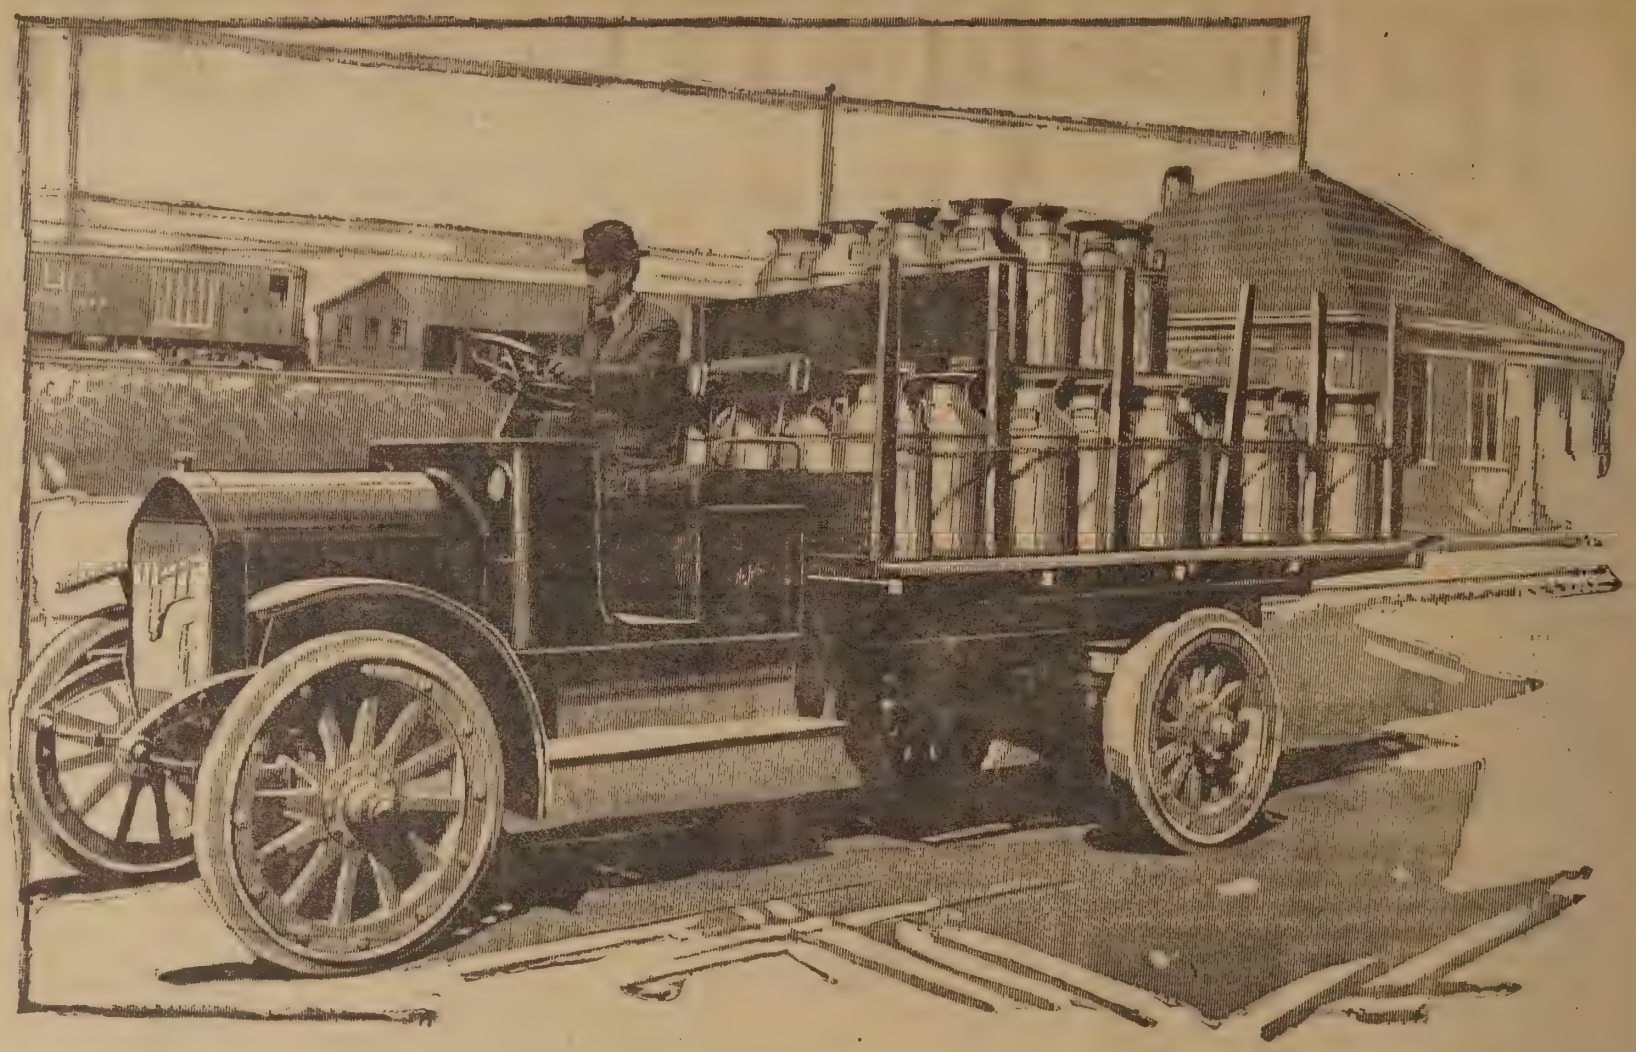
We can all aid by increasing our consumption of perishable products. Such of them as we can efficiently utilize, we must utilize, and, by so doing, relieve the strain on our store of staples. We must aim to consume these things locally so far as possible and thus relieve the pressure on transportation agencies, freeing them for the more efficient handling of products required for military purposes. What we can not presently consume we must conserve.

"The service we are asking the people to render in this matter is a public service. It is one primarily for the household. Upon the housewife much of the burden of the task will fall. I join you in your appeal to the women of the nation, whether living in city, town or country, to devote their time, so far as it may be feasible and necessary, to the performance of this very essential work."

Here Are Some Things Each One of Us Can Do

Europe will continue to starve next year just as thousands of its people are starving now, unless we each shoulder responsibility of conserving food. That is the message that the federal food administration is trying by every means at its command to impress upon the American people. Most people fail to understand the gravity of the world food problem, and those who do find it difficult to understand how to reduce home consumption or how to save valuable foodstuffs that are now criminally wasted. The food administration has sent out some suggestions, among which are the following:

1. Eat at least one wheatless meal a day. This means just what it says—wheatless. No wheat bread, no wheat cakes, no wheat breakfast food, no anything that is made out of wheat. Wheat is the great staple food, the one most indispensable to give life and energy to the peoples who are fighting in Europe or otherwise suffering the hardships and privations of the war. Therefore, eat corn bread, corn cakes, oatmeal mush, potato bread—any of the less desirable foods for exportation.



2. Eat beef, mutton or pork not more than once a day. We eat too much meat in this country anyway. We positively, most of us, would be better men and women if we reduced our meat rations—and Europe would be better if it had enough meat to keep soul and body together and half way fit for the struggles that it is enduring. Therefore, deliberately deny yourself these meats part of the time. Eat more vegetables—things that are perishable and not suited for exportation—eat more fish and more poultry. Supply your needs with the kinds of food that can't be made useful in Belgium or France or England.

3. Save sugar. Too much sugar is injurious to the health. We are stealing from a starving child when we put two spoonfuls or three lumps of sugar in our cup of tea or coffee and dissolve and use only half of it. Get along with your fruits and preserves and cakes and so on just a little bit less sweet than you are used to having them.

4. Save butter and lard and other fats. Never throw away the butter left on the plate. Cook with it if it is no longer fit for table use. Save the odds and ends of fats and oils. You will have to buy less and the dealers will have more to turn over to the government to export.

5. Don't think that the ounce or pound you save will never reach a country that needs it. Maybe that particular ounce or pound will not, but the food administration will see to it that the ounce or pound that is left in the warehouse or storage plant because you did not buy it or, if you are a producer, because you sold it, instead of eating it, will get to the mouth that needs it.

While the Smoke From the Forest Fires Settles Over the Northwest, Begin Our New Story, "Under the Black Canopy," in This Issue. It Is a Northwest Story

Garford MOTOR TRUCKS

This Garford Cuts Hauling Time In Half

"I am using my two ton Garford on a twenty-five mile milk haul.

"It formerly took all day with horses.

"I now make it in half a day at less expense."

—Says Scott Armstrong of Mt. Vernon, Wash.

The Garford factory is the largest in the world devoted exclusively to the building of a complete line of motor trucks.

Grasp that fact! Hauling time *cut in half!* Efficiency practically *doubled!*

Think of the saving a half day effects for the dairyman.

Think of the saving it will effect for *you.*

Modern farming demands modern methods of transportation.

Your problem is greater than merely *producing.* You must get your products to market in the *shortest* possible *time*—at the *lowest* possible *cost*—with the *least* possible *wastage.*

It is in the accomplishing of these things that Garford Motor Trucks play *their* part—and where they *make money for you.*

Farmers who are making real money are employing motor trucks—Garfords in hundreds of cases,—for the hauling of hogs, cattle, grain etc.

Garford Motor Trucks are *specially adaptable to farm use* because of their short turning radius and scientific weight distribution,—their economy, their power and their downright dependability.

Any type of body can be furnished on any chassis from the one ton to the 6 ton model. Get in touch with one of our dealers *today* or write direct to us for information.

Write for our booklet, "Roads—Their Influence on Social and Economic Conditions."

Garford Motor Truck Co., Inc.
1701 Broadway Seattle, Washington

The Fancher-Larson Company
1201 First Avenue Spokane, Washington

Oregon-Oakland Motor Company
522 Alder Street Portland, Oregon

The Garford Motor Truck Company, Lima, Ohio
Manufacturers of Motor Trucks of 1, 1½, 2, 3½, 5 and 6 ton capacity
4½, 7 and 10 ton Tractors
The Garford Road Builder
Distributors and Service Stations in all Large Cities

FOR GOOD FARMING, ATTRACTIVE COUNTRY HOMES AND HAPPY COUNTRY PEOPLE

Vol. 40. No. 32 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF August 9, 1917

Farmers Can Help Avoid Car Shortage

Economic Crisis in America Requires Cooperation of All Shippers

By O. O. CALDERHEAD

Traffic Expert, Washington State Public Service Commission.

It is only by concerted action on the part of every one looking to the economic conservation of car capacity that a disastrous shortage of cars to handle the crops, fuel, munitions and manufactures this year can be avoided. Unless every bit of available car capacity is used there will be a shortage that will seriously cripple the national government in this crisis.

By the word "capacity" I mean the utilization of the cubical space in the car where the commodity handled is of greater bulk than will permit of loading the car to its weight capacity.

For instance, wheat can be loaded to the full weight capacity of the car without occupying the full cubical capacity; on the other hand, hay will fill the car to its full cubical capacity without approaching the weight capacity of the car.

Load to Full Capacity.

It must be understood that the loading of cars in their capacity will result in a reduction of operating expenses to the carriers, but the prime and first consideration is that there is actual shortage of equipment if said equipment is only loaded to the minimum provided by the tariffs of the carriers; but if cars are used to capacity and loaded promptly and unloaded promptly there should be sufficient equipment to move all of the tonnage of the country without serious delay or inconvenience.

The farmers and warehousemen of the country can materially assist in bringing about the desired results by more carefully considering requirements when placing orders for cars and loading cars when furnished as quickly as possible after the same are placed, without taking the full 48 hours' free time provided in the tariffs of the carriers. Also, the farmers and warehousemen should see that shipping instructions are furnished immediately upon the completion of the loading. Farmers can materially assist warehousmen by advising in advance the approximate amount of the shipment, and wherever possible combine their shipments with others in order to secure a full loading of the cars. It may be possible, for instance, that hay can be compressed to a greater degree than at present. It is true that hay shipped to Alaska, where measurement governs instead of weight, is compressed to a much less bulk than when shipped locally. The farmers in this matter could render great assistance in allowing the hay to be thoroughly cured and then double compressed with a view of getting greater tonnage in the car. It is true that loading cars to capacity will mean some additional time and expense in placing the commodities in the cars, but this will be more than offset by the promptness with which shippers can obtain cars—if all confirm to the ruling of loading to capacity.

Facts Are Undeniable.

In some manner an impression seems to have been developed that the appeal for the capacity loading of cars is simply one of the methods of increasing the net revenue of the carriers. This is far from the actual facts. The truth of the matter is that cars can only be moved a certain number of miles in a day. The average distance the average car is moved in 24 hours is a fact known, as is also the time required for the placing of cars for unloading. The public service commission has also the figures showing the average length of time that cars have been detained under load. This means the number of hours elapsing from the time the car is placed for loading until it is released at unloading point. We know the average amount of tonnage placed in the cars. We know the actual average amount of space and weight carrying capacity of cars not utilized. Consequently, knowing approximately the number of tons to be moved, the number of tons that care will carry and the average length of time required to load and unload same, it is a simple matter of mathematical calculation to know that unless cars can be loaded more heavily, moved more rapidly and loaded and unloaded with greater dispatch, a car shortage that will greatly hamper all of the industries of the United States is a certainty, and it is this reason that is compelling all who know the facts to urge capacity use of cars and promptness in use of them.

New Cars Can Not Be Had.

It is impossible for the carriers to secure new cars to take care of the increased tonnage that will be offered. Manufacturers of cars are absolutely swamped with orders; and, except by direct command of the government, new equipment can not be secured in time to relieve the situation. Consequently it is a matter of using available equipment, which would appear to be sufficient if used to capacity.

The lumber industries, the mining industries and the manufacturing industries can all give important assistance and have responded wonderfully to the call for full loading; and the farmers and warehousemen of the interior can add greatly to car efficiency by using all means at their command in seeing that every car is loaded to its full capacity, even though some additional expense is incurred. By the more careful loading of such commodities as are liable to injury, and holding such vegetables and fruits, etc., as would be damaged by full loading until they have fully matured, thereby increasing the load and decreasing the liability to injury, a great saving can be obtained.

GRAIN STANDARDS
State Adopts Federal Rules.

The Washington state public service commission has adopted for this state the grain standards rules that were adopted last winter for interstate shipments by the federal government. The new standards are different from the old Washington state standards in only a few minor points. Under the standards fixed by the government, grain will be graded from the standpoints of weight, smut, foreign material in it, moisture, and so on, and will be the same anywhere in the United States. The federal standards, however, govern only wheat for exportation or shipment from one state into another. The state rules were made necessary to govern wheat not exported and not shipped out of the state.

First Wheat at $2.

–The Centennial Mill company of Spokane purchased its first carload of the 1917 crop of wheat recently at the price of $2 a bushel on board the cars at Trinidad, in Grant county. It was of the early Bart variety and was pronounced first class milling wheat.

Grain Farm Raises Corn, Peas, Potatoes, Alfalfa, and Stock

By PAUL CLAGSTONE.

It is a real pleasure for the traveler through our Palouse farming district to go over a ranch where not only well kept and highly productive fields testify to the efficient methods adopted by the owner, but where fine live stock, in up to date and convenient buildings hold out the promise that not only is there a certainty of an income from something besides a straight grain crop, but that the fertility of the land is being maintained. Such a ranch is the one owned and conducted by H. S. Curtis, a few miles from Palouse, Washington, on the road to Garfield, and few farms in this fertile region present as thrifty an appearance.

While primarily a grain ranch, a large portion of the 800 acres farmed by Mr. Curtis is devoted to producing feed for high grade and pure-bred milk cows and other live stock. About 100 acres is in high land, non-irrigated alfalfa, which officials of the Whitman Testing association have pronounced the best in the county. That this statement is not far out of the way is proved by the fact that Mr. Curtis' alfalfa produces an average of two and one-half tons per acre. Practically all this hay is fed to livestock on the place.

Mr. Curtis is one of the increasing number of Palouse farmers who for some time have felt that more use must be made of summer-fallow land, and each year sees an increase in crop production from this source. Corn, peas and potatoes are the main crops raised by Mr. Curtis on this class of land. He states that these methods, combined with the hauling of manure, have resulted in an improvement in the soil instead of the deterioration found on many Palouse farms, and this is borne out by the fact that many of his fields produce 45 bushels of wheat per acre.

There are two large silos on the place, and these are filled first with peas and oats, finishing then with corn. About 40 cows are milked, and the dairy barn, as well as all the other buildings on the place, is admirably neat and conveniently arranged. Plenty of hay barns, farrowing houses for the hogs, feed houses, etc., make life comfortable for live stock during the exceptionally long winters that have come during the last few years. Mr. Curtis finds that most of his land is too valuable to be used for pasture, and his milk cows are fed practically all the year round. He began grading up his herd of cows a few years ago with a fine Holstein bull, and by this method succeeded in obtaining a very greatly increased milk production. Of late years Mr. Curtis has been acquiring a number of pure-bred Holstein cows of exceptional quality, and is becoming well known in the breeding world. He expects to have a strong list of entries at the fall or winter stock shows this season. His hogs are Chester Whites, and some exceptionally good ones were seen on the place, and a number of these, also, will be seen in the show ring during the year.

Here is a view of the H. S. Curtis place near Palouse, showing harvesting operation as well as the farm improvements.

There Is Only One Brand of American Patriotism

By CARL S. VROOMAN, in Address Delivered Before a Spokane Audience During His Recent Efficiency Trip Through the Northwest

The spirit manifested today is exactly the spirit which the government at Washington, D. C., expects to find, and it is the spirit that will win for us in the great war. Our problem—and it is the problem everywhere in this country, a problem to which all others are secondary—is that of putting this nation on a war basis. What does that mean? It means, first of all, to get the right spirit. Without the right spirit we can do nothing. It matters not what intelligence we have, what technical competence we have, what sort of mechanical efficiency we have—if we have not the right spirit we can do nothing; and if we have the right spirit all other things will be added. Out of that spirit will come, as a cornucopia, every other desirable thing.

The Spirit of Service.

The spirit we need, and which is growing hourly in this land, is the spirit of service. The president struck the key note when he said: "Any man whose patriotism is not of the same high standard as the boys' in the trenches has no patriotism at all!" We have only one brand of patriotism in this country—the brand of patriotism which the boy in khaki takes over to the trenches when he makes a bullet mark of himself. This is the patriotism which you and I must have; which business men must have in their offices; which farmers must have on their farms; which government officials must have; which citizens must have; which housewives must have in their homes. It is the American spirit—the spirit of service first.

Now, if we are going to bring this war to as speedy a finish as we hope—if we are to gain victory for democracy in the near future, we shall have to send several armies in the field.

Our first army in the field was the army of food producers. The day war was declared that army began its work to fight the battles of democracy and free government. They have been fighting in an effective way. In some states they have increased the food production 10, 15, 25 or 33 per cent.

The second army in the field was our so-called army and navy. We voted enormous funds of money to make of our fighting army efficient. We have given them all of the money they need. We now have a half million men under arms and more; we will have a million within another six weeks. We are turning out rifles, cannons, munitions without a limit. That work has progressed as fast as any similar work ever progressed in the history of the world. There is not one of us but has been astonished at the snap and punch and efficiency that has been put into the work by the army and the navy; but that is not sufficient.

We now have two armies in the field. We must have a great army of food conservers among the women of the country that will be as large as the list of men of military age in this country, 10,000,000 strong—

> Without the right spirit we can do nothing. It matters not what intelligence we have, what technical competence we have, what sort of mechanical efficiency we have—if we have not the right spirit we can do nothing; and if we have the right spirit all other things will be added. Out of that spirit will come, as a cornucopia, every other desirable thing. The spirit we need, and which is growing hourly in this land, is the spirit of service.—Vrooman.

nothing less than that will do. Ten million American women must put the homes of America on a war basis.

Must Have Women's Help.

This work is going on now throughout the country. However, as soon as congress passes the bill giving authority this work will be pushed 10 times as fast, 100 times as fast as in the past. It is too bad that the work has been delayed. As a matter of fact, this delay of weeks is nothing less than a national tragedy; but this will soon come to an end. As soon as we are able to get this organization completed we will have this army of 10,000,000 women at work, and their work is as important as the work of the farmer or as of the soldier—as important as that of any other individual in this nation. This war can not be won as it should be won without the help of the women. We are going to have that help. They are going to put the homes of America on an efficient basis and on a patriotic basis.

There is still another army, and it is fully as important as any of the others. This is the army of the business men of this nation. Many of them are not young enough to take their places in the trenches. I have heard many men who are too old for service say—and you could tell by the fire in their eyes that they were not stalling, but they were speaking from the heart: "How I wish I were young enough to go out and take a place on the firing line."

I am here today, above everything else, for the purpose of saying that business men as well as the boys in khaki have a duty to perform. What is it? The president outlined it in his wonderful letter to the business men published recently. It is merely to put business on a war basis—a basis of efficiency, a patriotic basis, patriotism above profit. Now, there has never been a time in the history of the world when business men of this or any other nation showed as great a patriotism as they are showing in this country to utilize the war as an opportunity for service rather than as an opportunity for extortion. I am reminded of the story of the little boy who went to church with his mother for the first time. After the contribution box had been passed around he said to his mother, "I got a quarter. How much did you get?"

There may be a few business men in America who have misinterpreted the present crisis in just that way, looking on the war as an opportunity to gather to themselves illegitimate profit. These men are hopelessly in the minority. The great majority, the very best and most capable in this nation, are heartily and loyally serving in this crisis. It is hard for some of our people to realize that this great business revival of patriotism has taken place, but it is there. I have in mind an illustration.

There is a man in Washington, D. C., who is working for the government without a salary. He is a man who during his past life has been proud of his ability to hammer down labor to the lowest possible notch and push up prices to the highest possible notch in his industry, which is coal. He has grown rich, and has made his stockholders rich. He is a powerful man. He is now working on the problem of coal.

The other night there was a little dinner given in honor of a representative of the National Council of Defense, and he was called upon to speak. Many who were present knew him quite well, and he knew that they were conscious of the humor in the situation. They knew his record as a business man. He mentioned this in his talk, saying:

"My Boy Has Enlisted."

"Gentlemen, it may surprise some of you to hear me talk of ways and means to bring down the price of coal to the lowest notch that will leave a reasonable profit. Reasonable profits are as necessary to business as food is to a human being. I do not suppose you could cross the nation in normal times and find a man with any less desire to reduce the price of coal than I would have had, but this is not a normal time. My boy has enlisted. I have made a spiritual sacrifice. It would have been easier to go myself, but I was not fit. The question of whether I make a big profit or a little profit is a matter of indifference. I do not want to get rich out of war. The great Agassiz was once urged to go on a lecturing trip. He was told that he could make much money by doing this. His reply was, 'Don't bother me. I have no time to make money.'

"Business men in this country have not time to get rich quick. Every one of us ought to make it a point of honor during this period to give the cream of our energies to the public service. Every business man of this country will do that—if they will put the business army on the same basis of patriotism that the nation is putting the army of soldiers upon, they will perform a great service in an hour of need. They will add luster to the glory which our boys in khaki are going to throw around the Stars and Stripes during the months to come."

Five Per Cent Money

Bank Officer Shows How to Get It

The exact steps necessary for the farmers of the northwest to borrow half the value of their farms from the government through the federal farm loan bank are told by Secretary George C. Jewett of the northwestern district bank in an interview given The Farmer. While the farm loan bank is doing a great mass of business, furnishing money to large numbers of farmers throughout the northwest, its field is almost limitless.

In making applications for loans and in supplying the bank with the papers necessary, the borrowers can do much to speed up the work of the bank by exercising great care to see that every detail is correct and every necessary step correctly taken.

"There must first be associated together not less than 10 prospective borrowers whose loans when finally approved will total at least $20,000," says Secretary Jewett. "They form a national loan association under instructions which are fully furnished by the bank at Spokane. Each application for a loan must be appraised by a committee of three members of the association. When this has been done, all papers are sent to the bank in Spokane, where they are checked over, and if found in order, arrangements are made for appraisement by an appraiser from the bank at Spokane at the earliest possible date. On the completion of his appraisement, his reports are submitted to the executive officers of the bank, who allow the loan for the full amount of each application, or for a reduced amount which, in their judgment, the security will allow, or it may be disallowed entirely.

"If allowed, and there are sufficient other loans allowed to make up the minimum of at least 10 borrowers in the association, whose loans will total not less than $20,000, the association is granted a charter by the Spokane bank. At this time the Spokane office writes to the secretary of the local association notifying him of the bank's action on each loan applied for, and he is instructed to have all those whose loans are allowed to forward their abstracts of title to their farms at once.

"From this point each loan is taken care of separately, and does not have to await action on any other loan. On receipt of the abstract of title it is examined by the legal department of the Spokane bank, and if there are material corrections required in the title the legal department takes them up with the abstractor and secures the corrections. When this is done, the written opinion of the legal department is submitted to the office of the secretary, where the note and mortgage required to secure the loan are prepared and sent to the secretary-treasurer of the local association with instructions to have them executed by the prospective borrower and returned to his office.

"On their return the mortgage is placed on record direct from the secretary's office and through the abstractor. At the same time the abstractor is required to continue the abstract, showing the mortgage or sign a certificate furnished him showing the condition of the title from the date of the last continuation of the abstract to the day following the recording of the mortgage. On receipt of this information from the abstractor all prior encumbrance against the property is paid from the loan by the Spokane office. Then 5 per cent of the amount of the loan is deducted as the stock subscription which each borrower is required to make, and which makes him a stockholder in the local association. If there are any unpaid abstracts or recording fees, the amount of these is also deducted so they may be paid, and a bank draft for the remainder is made payable to the secretary-treasurer of the association and the borrower, and is sent to the former with instructions to turn it over to the latter. This closes the transaction, and the borrower may cash his draft and have the actual money with which to conduct the business of his farm."

Questions Must Be Signed.

Please remember that we can not answer questions directed to our information bureau unless the name and postoffice address of the one asking the question is given. This is not necessarily for publication. As we are answering questions by letter and only publishing those of general interest it is necessary that we should have the name and address of the writer in every case—not only this, but it is a law of all newspaper offices that all communications must be signed. We can not notice questions sent in without a signature.

Australian Mice Plague.

A plague of mice, probably never before equalled in the history of Australia, has practically besieged the southeastern portion of the continent during the last few months, says the correspondent to the Northwestern Miller. The greatest sufferers from the ravages of the invading army are the farmers and the Australian wheat pool. Many thousands of pounds of damage has been done to the wheat stacked on the farms, at the railway stations and ports.

Washington Portraits No. 27.

John H. Quick.

John H. Quick, one of the substantial and progressive farmers of Cowlitz county, has an up-to-date farm of 154 acres near Castlerock. Mr. Quick located on this farm in 1902, when the land was in a poor condition for farming, as little of it could be cultivtaed, but with perseverance and hard work he has succeeded in clearing 60 acres from stumps and the balance for grazing, which will keep 40 head of cattle in splendid condition.

The next in the series of Washington portraits will be that of Roy Allenbaugh of Malaga, and will be given in next week's issue of The Washington Farmer.

Stockmen in Arms Against Boycotters

Declare Movement Against Use of Young Animals to Be "Dead Wrong"

Live stock men of the northwest, especially the sheep men, are little less than in arms against what they declare to be unwarranted agitation against the marketing of young meat animals. They argue that the judicious use of the younger animals is more economical both to the producer and the consumer than is the use of the mature meat.

E. F. Benson, state commisisoner of agriculture at Olympia, is one of the vigorous opponents of the widespread movement against the use of lamb, veal and young pork. "The safe and sensible rule is that no animal should be produced if it consumes more food that human beings would eat than the animal makes when finished," says Commisisoner Benson.

"If we are not to sell lambs, then it is necessary for us to breed an entirely different strain of sheep, because the ewes that are to be kept for breeding purposes must of economic reasons produce more wool than the Shropshire and Hampshire sheep that are sold as mutton lambs," he says concerning the lamb problem.

Should Winter the Ewes.

"If the wether lambs that will sell in the fall at 75 to 90 pounds must be carried over until the next spring and fed hay, grain, silage, etc., in order to make a gain of only 10 or 15 pounds and produce a clip of seven or eight pounds of wool, it will reduce the number of ewes to just about the extent of the lambs that are kept over. That means that instead of feeding a ewe that will produce a lamb that will make 80 pounds of meat in the fall, we have kept over a wether lamb or a ewe lamb, as the case may be, at a very serious loss to the sheepman and a serious meat shortage for the public."

Meetings of protest against the movement that has gained much headway in the country have been held in many parts of the northwest within the last few days, and words of denunciation of lamb and other young meat boycotters are coming from stock men everywhere. A considerable gathering of producers in the vicinity of Spokane met recently and adopted a strong resolution for presentation to the railroads and to the national food administration at Washington, D. C. President Hugh Sproat of the Idaho Wool Growers' association called a special meeting of the association at Boise and vigorous action was taken.

The Economic Question.

The producers argue that the live stock business of the northwest has been built up of recent years with a view to satisfying the public demand for young meat; that quickly maturing animals have been bred up to replace the more slowly maturing animals of previous years when 3 and 4 year old beef and mature mutton were demanded by the consumers.

In his address before the special meeting of the Idaho wool growers, President Sproat touched this point as follows:

"A few years ago aged mutton at the market centers would sell at barely enough to pay the freight," said Mr. Sproat. "The stockmen, finding this an unprofitable business, changed over to the early maturing lambs, with the result that lamb is now our principal production, 90 per cent of Idaho's mutton production being in the form of lamb. Expensive lambs of the mutton breeds have been purchased and our Idaho lambs lead in numbers, size and breeding of any state of the Union. Seventy to 75 pound lambs at the age of 5 months are common in Chicago from our ranges, and it is now proposed that they should be kept till they become yearlings or older before marketing. A good yearling weighs from 90 to 100 pounds and the increase in weight has to be obtained by feeding hay or grain during the winter season."

Boycott the Boycotters.

Several of the big railroads recently announced their intention to eliminate lamb and other young meats from their dining car menus. This immediately brought the stockmen forward with a vigorous denunciation of the proposal, and with threats of boycotting the roads that put the order into effect.

"Undoubtedly those who are attempting to boycott the use of the young animals have good purposes and intentions, but they are misinformed," says one prominent grower, and the words apparently voice the sentiment of the others engaged in the industry.

The Three-Year-Old Doomed.

Cattlemen claim that the public has long since ceased to demand or accept the more mature beef, the three and four year olds, but that they are demanding "baby beef." Though stockmen are not advancing the slaughter of calves that have beef-producing possibilities, they are strong in their declarations that it is cheaper to produce a supply of meat by the "baby beef" plan than by holding the cattle till fully mature.

Pointing out that the beef animal weighing 800 to 1000 pounds at the age of 15 to 20 months is what the people want and what is most economically produced, William Hislop of the State College of Washington says:

"The heavy carcass is a thing of the past. The American public wants small joints and the American stockmen supply them because it is profitable and economical to do so. A return to former conditions would be suicidal to the interest of every meat consumer and would needlessly precipitate meatless days."

The slaughter of dairy calves is also favored by Professor Hislop in cases where the calf is strictly dairy type. He declares that there is usually an actual loss incurred in keeping a dairy calf to even veal age, and that the loss increases with the increasing age of the calf.

"The milk required to raise these calves possesses greater value as human food," he says.

Market Hogs Early.

In like manner, with the grain feed necessary for hog growing and fattening so high priced, and of such high food value for human beings, hog raisers advocate the early marketing of hogs. It is the general consensus of opinion that pigs should be ready for the market within eight to 10 months.

The wonderful development of the live stock industry in the northwest has been built up to a great extent on the principle of providing an early maturing animal—beef, mutton or pork. Not only do the people demand such meat, but it is claimed by experts and pratical breeders to be the most economical way to produce the maximum of high-grade meat.

Potato Bug Remedies

Pest Is Found in Many Sections

The investigation conducted by The Farmer relative to the appearance in the northwest of the Colorado potato beetle has resulted in the assurance that it is at work in several sections of every northwest state. Various remedies are offered, from a pan of hot water to the use of many poisons. Arsenic is recognized as the great potato bug bane, and for this reason arsenate of lead, paris green and arsenate of zinc give results.

A. W. Morris, who has a potato patch west of Spokane in Spokane county, discovered a number of the bugs in his patch and proceeded at once with arsenate of lead, with which he was successful. Mr. Morris uses a kerosene emulsion for various forms of vermin on his plants, making war on the cabbage worm with it. He takes one pound of whale oil soap, brings it to boil in a gallon of water, adds a quart of kerosene and stirs until it assumes a creamy condition. This can then be added to water in the relation of one part of the emulsion to 10 or 15 parts of water, and is ready for spraying. When biting pests like the worm or potato beetle are desired to be destroyed a little paris greet or arsenate of lead added to the emulson will get them, he says.

The following are extracts from replies received to The Farmer's inquiry sent out concerning the pests in the northwest:

BERT H. FAULKNER, Bickleton, Klickitat County, Wash.: As far as I can learn, there is no indication of the potato bug in this vicinity. I have never heard of the bug doing any damage in past years. Potatoes here now that were planted early are doing very well, but the late planted will not amount to much.

W. D. BOYNTON, Gig Harbor, Pierce County, Wash.: It is my opinion that the northwest has little to fear from the potato bug. It would have been with us a score of years or more ago had the conditions been favorable to its propagation and existence here. The nights are too cold and the late summers are too dry for it to thrive here. This is particularly true of the Coast region, where the excessively wet winters might also militate against its comfort and safe carrying over.

I do not particularly fear the bug any way. I lived 30 years in the potato regins of Wisconsin, where we grew potatoes at a cost of 12 cents per bushel, which included the cost of fighting the bug. Its presence there forced the growers to spray for the destruction of the bug and incidentally it led them to add to this spray fungicide and blight sprays which made the growing of potatoes a surer proposition than if the farmer had not been forced into the spraying work by the attacks of the bugs.

Being a chewing insect, any good stomach poison can be applied to the leaves in such volume and strength as will not do them an injury, and you may be sure that Mr. Bug will get his dose. It should be applied before the old bugs get to lay many eggs in the early part of the season. Liquid sprays are mostly used. If applied in the form of a dry powder it should be thoroughly mixed with rye flour, one to 30 parts. For liquid spraying, machines, horse-drawn, that will cover several rows at a time, have been invented and which have made the application rapid and cheap, the cost of the poison being the main item.

W. A. McGHEE, Leland, Nez Perce County, Idaho: The potato beetle is a positive pest here and a most strenuous effort is necessary to its eradication. Paris green and arsenate of lead are the chief remedies resorted to in its destruction. However, these must be persistently used if the result is satisfactory. It was here when we came four years ago this coming fall. It destroys all potato crops if not combatted to a finish.

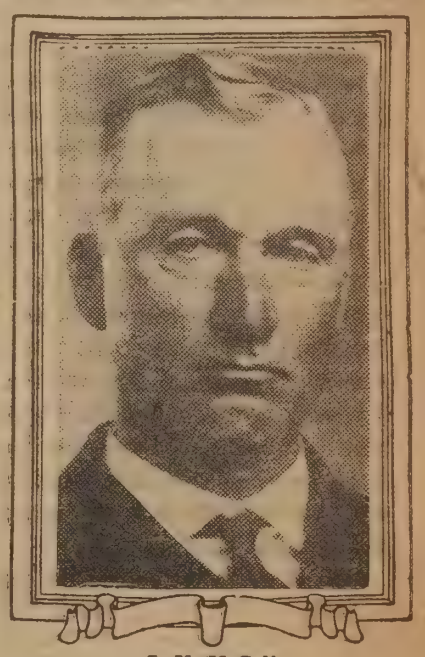
H. C. OLIVER, Stites, Idaho County, Idaho—In reference to the Colorado potato bug, will state that it made its first appearance in Idaho county about nine years ago and was as bad by the second year as it is now. Some years it seems to be a little worse than others, and it has been quite noticeable to me that it does not work on the potato vines quite as bad or is not quite as hard to combat on a late crop as it is on an early crop. The farmers here use paris green diluted with water, and some use it with flour. Sometimes one application is all that is necessary, but generally two applications bring the crop through. My observations show that if vines are given a good application of paris green about the time that the eggs are hatching, so as to be ready for the first crop of bugs, the crop will not be seriouly menaced; but if they are allowed to run until the bugs strip the vines of leaves before anything is done, then it's a slim chance that the crop makes anything.

G. M. HENDRICKSON, Paradise, Wal-lowa County, Ore.: Our community has been afflicted with a pest known as the Colorado potato beetle for about five years—only a few appearing the first year, but they have rapidly increased materially lessening the crop where they have not been effectively combatted. In our locality, a very successful method of fighting them is to watch for their first appearance, and as soon as the potato vines show that they are at work proceed to use the Paris green solution, one tablespoonful to a gallon of water, and spray the vines thoroughly. The Paris green being like flour, can best be mixed by using a small quantity of water, mixing very thoroughly, after which the full quota of water can be added, and the mixture can be applied with a common water springler. The operation may need to be repeated three or four times, at intervals of a week or 10 days during the season.

W. W. PALMER, Bossburg, Stevens County, Wash.: Potato bugs have not been found in our part of the country as far as I can learn.

I. W. ALEXANDER, LaConner, Skagit County, Wash.: Have been searching our immediate district for some traces of the Colorado potato bug, but as yet have failed to find any trace of it.

J. C. BUSH, Chehalis, Lewis County, Wash.: So far I have been unable to learn of the presence of the Colorado potato bug in the county.



CLARENCE A. LESTER, Centerville, Klickitat County, Wash.: We have not as I have been able to hear any Colorado potato bugs in this county.

E. H. FAULKNER, Grandview, Yakima County, Wash.: There are no potato bugs nor any indication of any in this part of the country.

J. V. McCall Resigns

Leaves Office to Become Banker

President J. V. McCall of the farmers' union for Washington and northern Idaho has tendered his resignation and taken up the work of conducting a banking business at Kahlotus, Wash., according to announcement just made. The resignation has not been acted upon by the board of directors and will not be until the meeting in September, says Secretary A. D. Cross.

J. V. McCall.

The duties of president naturally fall to Mr. Riley Rice, vice president, of Cottonwood, Idaho; but Mr. Rice likely will not take up his duties until the resignation of President McCall is acted upon.

In the meantime A. A. Elmore, representing the national farmers' union, will work in the interests of the organization in this territory, doing in part, at least, the work that would otherwise be done by the president.

Fair Dates.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Sleeping America Must Arise to Save Her Civilization

Not for centuries has the world been so nearly in the grasp of inhuman despotism as it is at this hour. Never has civilization so needed a savior. Barbarism as ruthless as in Nero's time is running rampant; and human liberty and human righteousness are its victims. They can be saved by America, and by America alone. If only every American citizen could shake the scales from his eyes and awaken! If only we, the rank and file in the common walks of life, could arouse ourselves to the individual opportunity and duty that is ours! If only we could realize that our very own personal privileges and rights and liberties are at stake and rise to defend them! But we are not awake!

Three years ago German armies devastated Belgium and parts of France, dragging their men and women into slavery and murdering their children. We American citizens do not even yet realize that Belgium has been devastated.

Two and a half years ago a German torpedo sank the Lusitania, a crime that would have shocked the middle ages. Hundreds of defenseless and noncombatant women and children and men, among them many Americans, were sent to graves in the sea. We have not yet rallied to avenge that wrong.

Since August 1, 1914, as many men as there are in the entire northwest have been killed on the battlefields of Europe. Yet we of the northwest go on unmoved.

Since August 1, 1914, as many women as there are in the entire northwest have been made homeless, have been butchered, have been dragged into hideous slavery. The compassion of the northwest has scarcely been stirred.

Since that fateful day when savages poured across the borders of Belgium and France, more children than there are in Washington, Oregon, Montana and Idaho together, have starved to death or have died from brutal treatment or exposure. We, the people of the northwestern corner of the country that holds inalienable the right to life, liberty and the pursuit of happiness, continue our petty, selfish lives with but a passing thought of all the horror, that humanity demands must cease and be avenged.

"The gaunt spectre of famine stalks through every country in Europe," says one who knows. We continue to eat, drink and be merry; we continue to waste what the children of Europe are pleading for and for the lack of which they are dying by thousands; we continue to take little thought for the morrow, either of ourselves or of those who are crying to us for help.

No man lives to himself alone, and no nation lives to itself alone. But we Americans thought we did. We thought—we still think, in practice, at least—that we are a world to ourselves, with little responsibility beyond our borders and little dependence upon other peoples.

But we are no longer isolated. Modern inventions have eliminated both sea and air as protecting barriers. We are part of a composite world—a burning world. The fire is destroying the lands and the lives of our neighbors, but we do not awaken to bestir ourselves in their behalf. The fire is creeping upon our own land. We see it, we hear it, we feel the heat of it. But we refuse to believe that it can reach us.

What can arouse the American people? Must a fire brand alight in our midst and destroy part of us before we will believe that we are imperiled? Must disaster overtake us to arouse us from our lethargy?

Disaster will come and come speedily if we do not rise up, every man, every woman, every child of us, and shoulder our own individual duties. For three years England and France and their allies have been fighting the battle that has become our battle. If they fail, we fail. If they are conquered, the power that humbled them will humble us, and the savagery that has desolated Belgium and Serbia and northern France will desolate our own shores.

If England and France fail, we will fail, and nothing short of the most determined resistance against German and Austrian aggression with every ounce of resource at their command can prevent their failing. Therein lies America's peril. If Germany wins a victory over England, Germany's navy and England's navy, manned and officered by Germans, will wipe American shipping from the seas, enter our harbors and destroy our shipyards and terminals, bombard and demolish our seacoast cities and occupy them with the same fiendishness that characterized the occupation of Belgium and Serbia.

The spirit of humanity alone offers reasons a hundredfold why every individual in America should think and act with no other purpose than the victory of the allied armies over Prussian militarism and despotism and barbarism. No further reason should be required. But there is another reason, and one that serves when all others fail. Self-preservation is the first law of nature. We may fail to answer the pleading of starving mothers and children in devastated Europe. We may fail to avenge the wrongs that have been committed by the central powers of Europe against peaceable, helpless peoples. But we will not fail, if we but realize that only a hungry, half-exhausted allied army and an English navy taxed to its full limit by her enemies, stand between us and the destruction of everything that civilization has made dear to us.

We will not fail to rise, but we may rise too late. The cause of the allies—our allies—in Europe is in jeopardy. Russia has fallen back into her own disorganized territory. For the present, at least, Russia is defeated, whipped, and every pound of driving power that Germany and Austria possess is available to be turned onto the allied armies in the west. The submarines continue to destroy thousands of tons of food that soldiers and civilians need and must have if they are to carry on the war successfully.

The gravity of the situation can not be overstated.

Three Weeks' Saving Campaign

President Wilson and Secretary Houston of the department of agriculture have inaugurated a great, nation-wide campaign of three weeks during which the canning and preserving of perishable fruits and vegetables is to be the object of effort. The president has issued a stirring appeal to the women of the country pleading with them to let no tomato, turnip, green beans or peas or anything of food value go to waste. Fruits must not be allowed to perish, for there are thousands and thousands of women and children and men dying in stricken countries even now for want of the staple foods that this country should be able to supply them. To permit foodstuffs to go to waste is to rob a starving child of life. Oh, if the American could but realize the tragedy in foreign lands! Would they go recklessly on eating in luxury and wasting enough daily to tide over winter the helpless peoples of Belgium and Palestine and Serbia? The heart of the American people is great, great enough for any sacrifice. But we have never known hunger. We have always had plenty. We have never had to save. And we can't realize that veritable millions are dying in want and misery for lack of what we should give them.

Washington Gleanings

Dr. D. Mulder of Lynden has sold his river bottom farm, containing 77 acres, to G. Van Weerthuizen. The consideration was $10,000.

E. A. Allen of Spangle, in Spokane county, bought the N. C. McKee farm of 142 acres, one and a half miles northeast of Palouse, for $15,000.

The Seattle-Portland Stockyards company at Kennewick announces that it will have the first unit of the new yards ready for business this fall.

The Winlock Cooperative Creamery is still putting out large quantities of butter. For the month of June the output was a little over 21,000 pounds.

Thirty-two hundred head of sheep, shipped from Leavenworth recently by H. Stanfield of Portland, will bring close to $45,000 on the Chicago market.

The Spokane Fruit Growers' company expects to save growers more than $30,000 this year in their box bills through the operation of its own box-making plant.

The first Walla Walla barley which appeared on the market brought slightly above $35 a ton. It was raised on the J. E. Short farm near Lowden on irrigated land and yielded an average of better than 70 bushels to the acre.

Construction has begun in Mabton on a warehouse and fruit-packing plant. The building is being put up for the Earl Fruit company of the northwest, with headquarters at Spokane, which has seven warehouses and cold storage plants in the Yakima valley.

Secretary W. B. Meyers of the Toppenish Potato Growers' association reports that approximately 2000 tons of potatoes have been pledged of the 2500 tons required to secure the proposed starch factory. The remaining tonnage is expected to be signed up soon.

The indications now are that the tonnage of sugar beets produced in Yakima valley will swamp the capacity of the million-dollar factory which is being built at North Yakima. "We must confess that the promised tonnage excels all expectations," said Mr. Horne. "I fully expect that the tonnage yield per acre for the district will break all records for best production in the United States. The total output will be 100,000 tons."

What Others Say

The hoe in the back yard is mighty good backing for the flag on the front porch.—Green's Fruit Grower.

What the farmer is looking for is facts more than advice. He will attend to his own thinking.—The Dakota Farmer.

It has long been known that palatable, edible, digestible food nutrients are purchasable in dairy products at prices lower than in most other foodstuffs.—Kimball's Dairy Farmer.

There is a close connection between truth and freedom. One does not exist without the other, for freedom depends on truth.—Hoard's Dairyman.

The mothers of America whose sons are selected for the training camp and the battle line can find some consolation in the thought that for nearly three years past the sons of 30,000,000 other mothers have been waging the battle for civilization, and that never in the history of the world was there a cause more worth fighting for.—Wallace's Farmer.

I. W. W. Leader Lynched

Butte Vigilantes Execute Agitator

The first actual violence occurring in connection with the wide-spread I. W. W. agitation occurred last week in Butte, Mont., when six masked men entered the room of Frank Little, leader of the agitators, early in the morning, took him to a railroad bridge near the city and hanged him. A card bearing the notice, "First and Last Warning," was pinned to the clothing of the body when found by the officers.

So far, no apparent effect of the lynching among the fellow agitators of Little has been noted, except in the form of resolutions and statements of denunciation of the lynching. It was feared that the hour of his funeral, Sunday, would be observed by the I. W. W. throughout the country as an hour for violent and lawless deeds, but reports indicate that order generally prevailed. It is reported that 3000 I. W. W. marched in the funeral procession at Butte.

Not only has the I. W. W. national organization adopted resolutions condemning the hanging of Little, but government and state officials have likewise expressed regret that it occurred. Government and state officers in Montana declare that if the perpetrators of the deed are apprehended they will be dealt with as severely as the law will permit.

Various bodies of organized labor have also expressed their disapproval of the violence meted out to Little.

Little is supposed to have been executed by the so-called vigilantes because of his near-treasonable utterances against the government. He is charged with having many times referred to the United States soldiers as "Uncle Sam's scabs in uniform."

Haywood Warns Wilson.

A message to President Wilson from William D. Haywood, national secretary of the I. W. W., making threats against the industries of the country, has aroused wide-spread indignation among loyal Americans. The message threatened the causing of strikes in the farming districts of the west and middle west, involving nearly a quarter of a million men if President Wilson did not assume control of the anti-I. W. W. situation in Arizona and insure the liberty of the members of the order recently deported in that state. So far, no reply of the president has been made public. Charges from many sources that the message from Haywood borders on treason have been heard, some recomendations going so far as to urge the president to take vigorous action against him.

No Cause to Worry.

Rumors that a detachment of American troops had met with a disaster en route to France were vigorously denied by Secretary of War Newton D. Baker last week. Mr. Baker renewed his former statement that news of any disaster to American troops abroad or en route to France would be given to the public at once. Reports of movements of the war department will be withheld, however, for strategic reasons, as previously announced.

Canadian Railroads.

The government of Canada has announced its intention of taking over practically all the railroad lines and property in that country and operating them under a system of government management. Details of the plan have not been announced. The action rises out of war shipping conditions.

Congress Wants Rest.

After spending months in the discussion and drafting of various war measures, congress is beginning to pine for a vacation, and is beginning to talk of a possible recess in September. Two big measures are still to be disposed of, the food control bill and the war revenue bill. It is reported from Washington that there is likelihood the food control bill will come to a final vote this week. Though various provisions in the measure have the opposition of various members in both houses of congress, there is no doubt but that it will be adopted when once it does come to a final vote. The war tax measure will be taken up as soon as the food bill is passed. It is proposed to raise about $2,000,000,000 under the provisions of the tax bill.

Senate Votes Prohibition.

The senate of the United States voted last week to submit to the people of the states of the Union a constitutional amendment prohibiting the manufacture, sale or use of intoxicating liquor. The house has not yet taken action on the proposed submission of the amendment. The measure would give the states six years in which to approve such amendment, though it would go into effect if approved earlier. Any constitutional amendment has to be ratified by three-fourths of the states before becoming effective.

Control Freight Cars.

The activity of the government in the movement to facilitate freight handling this season is seen in an order requiring that a total of more than 60,000 cars on various railroads throughout the country be transferred to other roads where they are more greatly needed. The government's aim in issuing the order is to direct cars into those districts where the crops or other material, such as lumber and munitions, require immediate handling. It is reported that the railroad companies are cooperating heartily with the government in making their equipment serve the country in the best manner possible during this crisis.

Would Control Shipping.

President Wilson and his cabinet are desirous of concentrating as much as possible all the ocean-going ships of the world in the traffic affecting the conduct of the war. They have taken definite steps looking toward the transfer of a large number of vessels from the Pacific ocean to the Atlantic ocean, especially in the case of Japanese ships. Japan, being an ally of the United States and of England and France in the present war, is expected to comply with the requests and greatly aid the allies in securing the supplies needed to carry on the war. It is reported possible that this country will place an embargo on shipbuilding steel to Japan, and possibly other countries, unless such countries in return furnish vessels for the allied traffic.

Examining Drafted Men.

The process of examining the men drafted for the first call to the United States colors is well under way. All over the United States the exemption boards are calling before them the men in the order of their recent selection by the drawing at Washington. In order to secure the required 687,000 men, a total of about 1,350,000 will be called before the boards, which will allow exemption of about half.

Root Back From Russia.

Elihu Root, former United States secretary of state, and who last May headed a commission from this country to Russia to assist that country in organizing after the overthrow of Czar Nicholas, has returned. He brings optimistic reports, though details have not been given out yet. In an address after arriving in this country he expressed great admiration for the spirit of the Russian people, declaring that out of the tribulations through which they were passing they would emerge in due time a free, democratic people.

May Ration Neutrals.

This country has started a clear-cut movement to learn the exact food conditions in the neutral countries in Europe with a view to aiding them in so far as aid is needed, but at the same time to preventing surplus provisions reaching them for reshipment to Germany and her allies. Such countries as Holland and Norway are especially considered in the movement. For some time it has been apparent that much of the food supplies from this country to Holland have been reexported from that country to Germany. The United States is determined that this shall cease, and will go so far as to deny everything but the barest necessities to Holland or any other country that does not respect this country's position on the matter.

Heat Kills Easterners.

While the northwest's crops have been greatly damaged by the hot and dry weather, the people of eastern districts have been suffering in a different way. In New York, Philadelphia, Chicago and many other of the large cities, many deaths have occurred. Several hundred persons died as a direct result of the excessive heat, nearly 200 dying in New York alone in one day.

Captured Germans Talk.

German officers captured in the battles of the last few weeks along the northern France frontier are declared to have openly admitted in free conversation with their captors that Germany was becoming fearful that it would yet lose the war. They are reported to have stated that their country was so pressed for men that it had brought into the service at this time all the men who had been calculated to become of military standing during next year, and that some of those not to become regular soldiers until 1919 had been required to join the colors more than a year earlier than they would were not Germany in dire need of fighting men.

For Better Shooting---

A MAN is so busy these times that when he does get a couple of days' hunting or an afternoon at the traps, he is looking for *action.*

He wants to be sure about his *gun*—and that is one great reason why everybody speaks so highly of the Remington UMC Pump Gun and Autoloading Shotgun.

And in shells, you will get Remington UMC results only from Remington UMC Smokeless "Arrow" and "Nitro Club," the *steel lined* "speed shells"—and in *black powder*, the old established "New Club."

A. B. NYSTROM, Editorial Contributor

Silo Campaign.

In his report to County Agent Leader R. B. Coglon, Klickitat County Agriculturist B. W. Cooney says: "The major part of this week was spent with N. C. Jamison, dairy field agent, in a silo campaign in the Trout Lake and Glenwood valleys. Quite a number of dairymen and stockmen were interviewed in all parts of the valleys. Eight men agreed to build silos if we would assist them in the construction and be on hand when the first silos were being filled. This we agreed to do. The silage will be made from oat and clover hay. We expect to use two loads of oat hay to one of clover. These valleys often yield a large tonnage of both these crops. One dairyman got a yield of 18 tons green oat hay to the acre, clover often yielding eight to ten tons green."

Clallam County Cows.

The Clallam County Cow Testing association ended its tenth testing period with a total number of 530 cows on test. The average for the association was 32.84 pounds butterfat and 744.48 pounds of milk, according to the report of E. W. Soper, tester. Many of the herds in the association freshen in the fall, thus the average of 32 pounds is very good.

The high cow for June, Lulu, a purebred Holstein, is owned by P. S. Govn, a breeder of Holsteins. This cow produced 2238.2 pounds of milk, testing 3.1 per cent, which totals 69.38 pounds of butterfat.

The following is a list of owners whose herds averaged above 40 pounds of butterfat for the month: Bert Simdars' 26 cows produced 922.19 pounds milk each, with 45.68 pounds of butterfat; P. S. Govan, 8 cows, produced 1257.05 pounds of milk each, with 41.97 pounds of butterfat; Edwin Pettit, 14 cows, produced 844.30 pounds of milk each with 40.88 pounds of butterfat; Roy Stone, 25 cows, produced 821.82 pounds of milk each with 40.24 pounds of butterfat.

Picnic Is Held

The Clackamas County Cow Testing association picnicked on the farm of N. H. Smith, 10 miles from Oregon City, Ore., July 28. A good sized crowd was in attendance; a sumptuous and appetizing repast was served and some very practical addresses were delivered.

Professor Simpson, manager of the Oregon Cooperative Dairy Exchange, spoke for the 17 creameries now members of the exchange, telling how the exchange helps to hold up the butter market when an excess is being produced. He said the business of the exchange is being successfully increased and that all creameries ought to join.

Mr. Finch, cow tester for the association, urged more careful selection of herd sires, better feeding and the weeding out of small producers. For the month of June the purebred cows in the association averaged a little over 35 pounds of butterfat and the grades 29. A cow in the herd of William M. Ladd at Oswego was high cow with 80 pounds of fat.

William M. Ladd spoke of the fact that no one had ever been able to go into his barn and pick out the best producer in the herd. Hence the value of the Babcock test and the cow testing association. He considered the dairymen's problem today to be the problem of the condenser and urged that the price of whole milk be not allowed to cause the calves to be killed; but that the offspring of all good producers be saved, as the time is soon coming when they will be needed.

A. I. Hughes, secretary of the association, spoke on "The Profits of Pure Bred Stock," giving figures of Jerseys, Holsteins and Guernseys, the latter breed including her own experience, which has been very satisfactory.

Professor Westover, in charge of cow testing for the O. A. C., said that there never was a time when efficient cows were so much needed, but a cow that can not produce 250 pounds of butter fat in a year should go to the butcher.

Professor Hislop of the O. A. C. told of several excellent means of conserving forage. He said thousands of acres could be used for pasture if properly seeded, and told the proper mixtures. The time to sow burned-over land is while the ashes are dry and let the fall rains carry them down into the ground. Don't burn the straw this fall. Oats and barley straw, cut early, make pretty good feed. Vetch straw not as good as vetch hay, but far better than nothing. Bean straw has feeding value, but must be stacked and kept dry. Clover is the cheapest of forage crops and the silo is one of the best ways of producing an abundance of forage for live stock.

The meeting closed with a boys' and girls' judging contest, with four of Mr. Smith's Jerseys as the subjects.

H. A.

First Months' Test

The Junction City, Ore., Cow Testing association finished its first month of testing with some very creditable records, according to the report of Linden N. Ross, tester. The six herds showing the highest average profit for the month of June are the following:

	Fat.	Profit.	Cost of Lb. B. F.
A. S. Mowbray	38.6	$11.32	$ .14
R. Q. Mills	27.4	11.02	.07
H. R. Edwards	31.2	10.57	.07
A. Benter	26.0	10.00	.03
J. A. Falk	30.00	9.48	.14
N. Nikkelson	30.6	9.33	.13
Average 6 best	30.6	10.28	.10
Poorest herd	22.7	6.69	.16

This shows an average profit of $3.59 per cow for the six best herds over the poorest herd.

The highest individual cow is a grade Jersey owned by Max Arp of Eugene. This cow produced 60.1 pounds butterfat during the month, showing a profit above feed cost of $16.71.

A Loyal Traitor.

The German nation now to aid
Will cause disapprobation;
Still we intend with hoe and spade
To assist the germination.

Settle the Spreader Question

THE farmer who uses a **Low Cloverleaf, Low Corn King** or **Low 20th Century spreader** these days is the man who makes the most money. His land increases in value when regularly fertilized. His crops grow better in quality and larger in yield when supplied with available plant food. Of all the spreaders on the market, the **Low Cloverleaf, Low Corn King** and **Low 20th Century** come nearest to doing this work as it should be done.

It is a long jump from the ordinary machine to the modern low spreader with its double beater and wide spread. Every farmer who knows the value of good spreading is buying one of these wide spread machines. As a matter of fact, no farmer can afford to buy any other kind, because the saving of time and labor and the better job of spreading done by a **Low Cloverleaf, Low Corn King** or **Low 20th Century** makes them worth more than ordinary spreaders.

Complete information about these machines is worth money to you. Drop us a line at the address below and we will show you very plainly why it will pay you to buy a **Low Cloverleaf, Low Corn King** or **Low 20th Century** spreader.

Purpose of Pig Clubs

By E. L. POTTER.

The aims and results of the pig club work now being carried on in so many parts of the country are more significant than appears on the surface. This work is not merely to increase the production of pork, as some would suppose, since the numer actually raised by the boys and girls in these clubs is not large when compared with the total hog supply of the country.

It is not merely to train the hog raisers of the future or even to inspire an interest on the part of the coming generation in modern agriculture. Worthy as these aims may be, the work has as its real aim the training of the boys and girls for the useful work of the future by showing them that there is more real pleasure in the things worth while than in play and nonsense.

Every student of education knows that the early teens is the most difficult and most critical period in the life of an individual. The child of this age is ready to put off childish things, but not yet ready to become a man. He is too old for the one, but too immature for the other. He can not be treated as a child nor yet as an adult.

The boys and girls' club work marks the first successful effort in the history of education to present a system of education—really a combination of education, work and play—that fits this critical period in the child's development. Work of this kind affords the play which the childish side of his nature craves, but which the adult part of him is ashamed to gratify. On the other hand, there is the element of useful work about it which appeals to his maturity without having the heavy responsibility and the long hours of monotonous labor which childhood finds so irksome. It starts with a child at play and ends with an adult at useful and successful work. He learns the value of real work, and, above all, he gets a taste of the greatest of all pleasures, the satisfaction of useful tasks well done.

The man who looks at this work from the viewpoint of its influence on the pig market is taking a narrow view of the situation. The pigs raised are an insignificant part of the results obtained.

But why raise pigs instead of other animals? The work is largely confined to pigs because he is especially adapted to this kind of work. The two most essential reasons are the financial ease with which the pigs and their necessary feed and accommodations may be secured, and, second, the rapidity with which the pig matures.

The need of the first in a democratic education is apparent. The second is required because the child does not see far enough ahead to hold his interest in a steer or horse.

Veterinary

Dr. S. B. Nelson

Inbreeding—Will you kindly explain to me what is meant by inbreeding in horses? If a thoroughbred registered stallion is bred to a thoroughbred registered mare and the colt is a mare, will this colt raise a thoroughbred offspring if bred back to her father? If the stallion is bred to his granddaughter, great-granddaughter etc., will any of the offspring be thoroughbred? Could any of the colts raised be registered? 2. Which is better to feed to pigs, sour skim milk or fresh skim milk?—H. A. M., Rockport, Wash.

Answer—Inbreeding in animals means that the female is crossed with the parent male or that the male is crossed with the parent female. This system of breeding has been used by some breeders when they wished to fix some definitely strong points in the particular breed of animals. In many cases, however, the weak points of the animals are exaggerated so that oftentimes the offspring is very much poorer than either the sire or dam. Inbred young can be registered; whenever a young is produced by means of a purebred sire and purebred dam of the same breed it is eligible to registry. 2. Fresh sikm milk is just as good as sour skim milk, if not a little bit better, for pigs.

Cow May Have Rheumatism—I have a cow that is stiff in her hind legs after standing in the barn, even for an hour or so. When she starts to walk she seems to drag her hind feet for a few steps, but soon walks as well as ever. She is about three and a half years old, is in excellent health, in fact has never been sick, and looks well. The trouble began last winter and disappeared for a while this spring but still has it at times yet. It suppose it is rheumatism, but I do not know what to do for her. She is in pasture at present and only kept in the barn during milking.—F. S. M., Redmond, Wash.

Answer—It is quite possible that the cow is affected with rheumatism, and I would, therefore, recommend that you give her first a pound of epsom salts, in three quarts of water. Two days later begin giving her one ounce of salicylate of sodium in about a pint of water, morning and night for three days. Rest her 10 days and repeat the treatment if necessary.

Purebred Registered HOLSTEIN CATTLE The most profitable dual purpose cattle are Holsteins, as impartial investigations conducted by experiment stations of Michigan, Iowa and Nebraska have conclusively shown. The Holsteins showed a greater gain per steer at a less cost per pound of either roughage or grain than any of the other breeds. Holstein calves are big, strong, and grow quickly, and Holstein beef is as fine in texture and taste as that of any cattle. Purebred Holsteins have firmly established themselves as the world's best dual purpose breed. There's big money in the big "Black and White" Holsteins. **Send for FREE Illustrated Descriptive Booklets, THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA, F. L. Move Your Crops at the Right Time

Money making on a farm depends on the equipment. Figure the saving of moving your crops at the right time—in big quantities—to any distance in the shortest possible time. Figure also that a truck works at the minimum expense—and is an expense only when it is making money for you.

Velie Trucks stand up under all conditions. Velie power means more power than for ordinary needs. It means sure service in emergencies—for the **heaviest** loads, over the **worst** roads.

Velie Trucks are satisfactory and economical—for the grain grower—the general farmer or for any branch of the lumber industry.

Hot weather eggs are good if kept cool.

Gather the eggs twice a day in warm weather.

The broody hen is an egg destroyer. Put her in a separate yard or in a broody coop.

Do your bit in the conservation of food by preventing eggs from getting overheated.

Provide plenty of clean nests. This will mean cleaner eggs, fewer broken and fewer heated eggs.

Infertile eggs keep better than fertile eggs. Therefore remove the male from the flock after the breeding season.

Washed eggs do not keep as well or as long as unwashed eggs. Washing removes an oily substance that protects the egg from decay.

Hot Weather Eggs

It is safe to say that the loss from "heated" eggs and "blood ring" eggs in the United States during the last 10 days of high temperature will amount to several million dollars. That is a strong statement, but when we know from reasonably accurate estimates that the loss in quality of eggs, mainly through high temperatures, is more than fifty million dollars a year, we will understand how in 10 days of the warmest weather of the year the loss will run into millions. When we know further that this loss is almost all preventable we wonder what the food conservationist is doing. Here is a chance for poultry keepers to be doing their bit.

It is high temperature that causes this loss. How? It is heat, but it works in various ways to accomplish the destruction of the egg. First, the heat has an ally in the rooster. Most of the bad eggs are due to the combination of rooster and heat. The rooster fertilizes the egg, not to produce rotten eggs, but to produce live chickens from them, so that they in turn may produce eggs to produce more chickens to lay eggs and to crow. That was the original purpose of the egg—to produce life, to perpetuate the species. But the egg has come to have a great commercial value in these later days. It has been found that when the rooster and the heat can be kept under control the egg has a high food value, otherwise its chief use is in creating unpleasantness at the breakfast table and in helping the mob to terrify the populace and carry its point without resort to bloodshed. The rooster is a munition maker for the mob.

A fertile egg, however, is not necessarily a bad egg. It is only when it has been kept for a short time at a high temperature, or a temperature that gives life to the germ and starts the development of the embryo chick that it becomes bad. Fertilization does not make it bad. A fertile egg is just as good as an infertile one. But when heat is applied, the fertile egg becomes bad; while the infertile one remains good. If the egg is kept in a cool room where the temperature does not exceed 60 degres it will keep equally well for a week or even two weeks whether it may be fertile or infertile. But if kept at a temperature approaching 100 degrees for 18 to 24 hours the fertile egg will become what the trade calls a "heated" egg and hardly fit for human consumption, while the infertile egg will be practically as good as a fresh egg. At that temperature incubation will start in the fertilized egg, in other words development of the embryo of the chicks begins, and if after this development has continued for a day or two days, the egg is cooled below incubation temperature this development is arrested and the germ or embryo dies and we have what is technically called a "blood ring" egg. These eggs are unfit for food. The heated egg may be used for certain purposes, though they have lost a large part of their value and they can not be successfully preserved in storage. When the heating is continued long enough to develop the blood ring, and this may be in a couple of days or less if the temperature is high enough, the egg is then a total loss.

The effect of high heat on the infertile egg is not very evident. There is a loss of moisture, and this is shown by a large air space. In this respect it is like a stale egg. The higher the temperature the faster the moisture evaporates from the egg. It shows also in a darker shade of yolk. The white becomes thinner, which permits the yolk to move around more. In other respects the infertile egg may be perfectly good, even though it may have been subjected to a temperature of 100 degrees for several days. Such an egg is wholesome, while the heated fertile egg is not.

The important thing to remember is that the egg is perishable, losing its value the longer it is kept, and it loses its good quality faster when kept in a high temperature than in a cool one.

First. If the roosters are separated from the hens during the warm weather it would mean a great conservation of egg food. The males are of no use in the flock except during the breeding season, and the breeding season is over during the warm weather. The males that are not to be retained another year for breeding should be marketed at once, or, if retained, put in separate enclosure if possible.

Second. The eggs should be gathered twice a day during the warm weather, and put in a cool basement or cellar at once. The egg is at incubating temperature when laid, and the sooner it is cooled the better.

Third. The broody hens should be removed and placed in a broody coop or separate yard as soon as they show inclination to sit. The broody hens spoil a great many eggs.

Fourth. Provide sufficient nests so that there will not be hens on the nests all the time and prevent the eggs from cooling.

Probably the most important of the four points is to gather the eggs twice a day and put them at once in a cool room. Gather them at noon and at night. This alone would add several million dollars a year to the value of the eggs sold in the United States.

Will the poultry keepers do their bit in this respect and conserve this food value?

In another article I will discuss methods of preventing loss in eggs from the time they leave the farm till they reach the consumers. J. D.

The Motor Car
On the Farm

War and Automobiles.

It has been estimated by government experts that there are now in this country 1,400,000 owners of passenger automobiles that cost at the time of original purchase $500 or less each; 760,000 owners who paid between $500 and $1000 for their cars; 1,219,000 in the $1000 to $2000 class, and 231,000 having cars of which the list price was between $2000 and $3000. There are also in use, of course, many thousands of cars that cost originally more than $3000. These figures measure the cumulative quantitative demand for passenger automobiles during the last several years; one for approximately every 27th person.

The standardization of materials, methods and mounting dimensions of parts, which has been the greatest factor in the large-volume production of American cars, with simultaneous decreased cost and improved quality, has convinced many European designers and manufacturers that they should take a leaf from the book of wisdom of our automobile engineers, who are now, incidentally, working together in the same organization, the Society of Automotive Engineers, with the aeronautic, automarine and tractor engineers. Large production of moderate-priced cars in England and France has been contemplated for some time. A low-priced model was brought out by an Italian firm even during the war. Russia has shown ambition to enter the automobile manufacturing world. The production of cars of the "pleasure" type has naturally been reduced in those countries that are now at war.

Tractor Output Grows.

At this time the supply of standard tractors of all kinds and sizes for delivery in 1917 will total about 67,000 This production is much ahead of the output last year even though the material situation has grown steadily more serious.

A substantial increase in the number of tractors manufactured this year is the best proof that the tractor has passed the experimental stage and is making good in actual everyday performance.

Answering the Nation's Call

IN this "supreme test" of the nation, private interests must be subordinated to the Government's need. This is as true of the telephone as of all other instrumentalities of service.

The draft for war service which has been made upon the Bell System is summarized in a recent Government report.

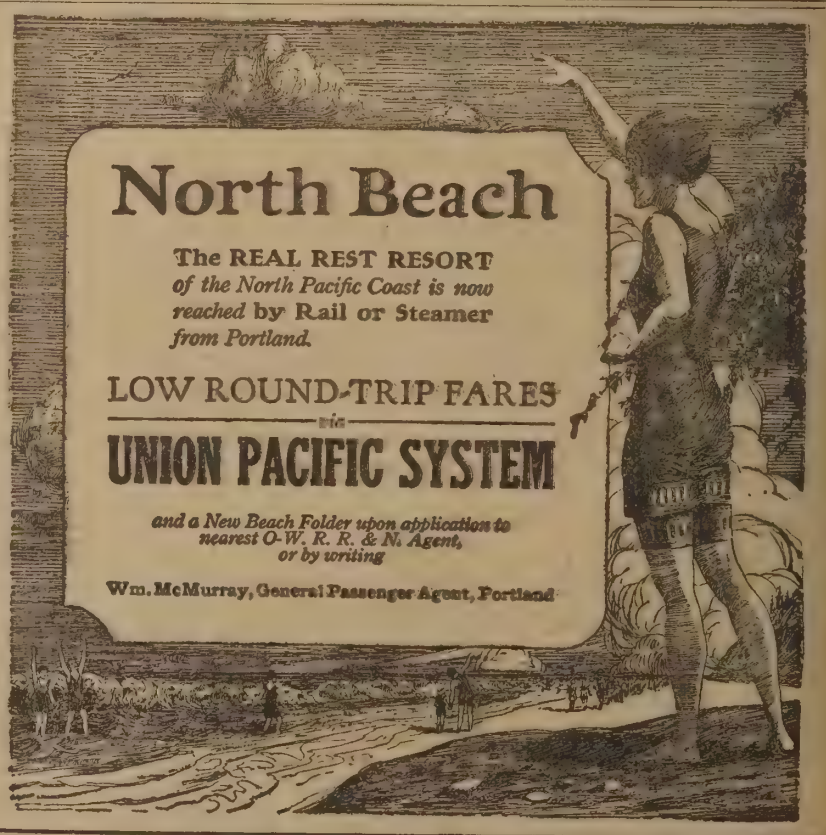
Government messages are given precedence over commercial messages by means of 12,000 specially drilled long distance operators all over the country.

The long distance telephone facilities out of Washington have been more than doubled.

Special connections have been established between all military headquarters, army posts, naval stations and mobilization camps throughout the United States.

More than 10,000 miles of special systems of communication have been installed for the exclusive use of Government departments.

Active assistance has been given the Government by the Bell System in providing telephone communications at approximately one hundred lighthouses and two hundred coast guard stations.



Communication has been provided for the National Guard at railroad points, bridges and water supply systems.

A comprehensive system of war communication will be ready at the call of the Chief Signal Officer, and extensive plans for co-operation with the Navy have been put into effect with brilliant success.

As the war continues, the demands of the Government will increase. And the public can help us to meet the extraordinary conditions by putting restraint on all unnecessary and extravagant use of the telephone.

Are Cutting Injured Wheat for Hay

Western Part of State Not As Hard Hit By Rainless Season As Is Dry Belt; Hay Crops Are Put Up Perfectly

TWISP, Okanogan County, Wash., July 24.—As the season advances, the dry weather lessens the prospect for an increased production of farm crops. Some of the dry-land farmers who did figure on from 25 to 30 bushels of wheat to the acre are cutting their wheat for hay. Fifty per cent of the upland will be threshed, but the yield will be light. Irrigated crops are good. Most of the grain harvested to thresh is cut with binders and labor, machinery and work stock are sufficient for the task. Very few changes in the methods of harvesting. This has been a very dry growing season and crops have suffered for moisture.

GEORGE LA RUE.

Threshing Will Tell Story.

LA CROSSE, Whitman County, Wash., (Aug. 1.—Many harvesting machines will start this week and by August 6 it will be general. Opinions differ as to loss from heat and drouth and they vary from 50 to 70 per cent loss from a normal crop. Until reports come in from actual threshinfi crops will be hard to estimate and it will be equally hard to say which of the varietfes of wheat stood it best and why.

M. E. SCHRECK.

Drainage Is Essential.

MOUNT VERNON, Skagit County, Wash., Aug. 1.—This season has demonstrated very plainly the value of good drainage in this country. Where the ground is well drained the crops, especially the oats, are good, but in low places and where the water has stood on the ground till late in the season the crops diminish in proportion as the water stood on the ground. It is interesting to note the difference in the crops on two adjoining fields. One of these was well tile drained a year and a half ago. In this field the oats are even and fine. The other had wooden drains put in years ago, but have gotten partly filled up, so that the drainage is poor. They were able to work the drained field fully two weeks earlier in the spring than the other. In the low places the oats were weedy and there was only half a crop. This condition prevails in parts of a good many fields throughout the Puget sound country. The value of proper drainage can hardly be overestimated.

Crop conditions generally are good. The potato crop seems especially good. The potato bug has not yet made its appearance here. The hay harvest is three-fourths done and the weather has been ideal for haying, so that the quality is excellent. There has been no drying up of crops from heat here. The past three or four days have been showery, which will help the pastures and the late oats and the gardens. There has been no serious shortage of farm labor. The farm labor situation probably has been relieved by so many of the logging camps and mills shutting down. Most of the farmers paid $3 per day and board for help during the haying season. C. S. PHILLIPS.

Perfect Haying Weather.

CHEHALIS, Lewis County, Wash., July 28.—Have had a fine haymaking season in western Washington this year, there having been no rain since before the Fourth of July. The crop is fairly heavy and has been put away in excellent condition. J. C. BUSH.

Egg Prices Are Too Low.

MONTESANO, Grays Harbor County, Wash., July 28.—The drouth of the last few weeks has been broken by a light rain. I would estimate that the grain yield might be cut down probably 10 per cent by reason of a lack of moisture, and potatoes about the same. There is probably a greater loss of straw than of grain, due to the lack of rain. Fall-sown grain crops are of course in better condition than those sown late this spring. Practically all of the hay in the county was put up in better condition than usual. The crops are at least 10 per cent above the normal, and the quality of the hay is doubtless 30 per cent better than for the last three years, owing to the good haying weather. If live stock prices hold up as well as they have the last three or four months I see no reason why the amount of live stock production will be decreased. This might not apply to poultry, inasmuch as the price received for eggs is not in keeping with the price of poultry feed.

C. F. MONROE.

Fruit Quality Is Good.

OMAK, Okanogan County, Wash., July 25.—There has been a great increase in crop acreage this season, especially wheat, potatoes and beans. Wheat is badly dried out and will be a light yield per acre. Potatoes will be a light yield also. The fruit crop is very light, but at present outlook the fruit will be of extra quality. Labor is somewhat scarce, and the crop will be harvested through community warehouses.

J. O. WOODS.

Planting 1918 Seed Crop.

LA CONNER, Skagit County, Wash., July 30.—As far as can be noticed the crops have not suffered from drouth or heat. The spinach fields were the only crop failures, but their failures occurred early enough so that the fields were replaced with other crops. The spinach failure was due to the wet and sour condition of the land in the spring. All unused land is being planted to beets, rutabagas and turnips for the 1918 seed crop. Do not think that the high prices on hay and oats will have any effect to either stimulate or depress live stock on the farm, as the price of milk seems to be taking care of the live stock. There is a feeling around here that if the war keeps up for a year or two more live stock will be on the increase.

I. W. ALEXANDER.

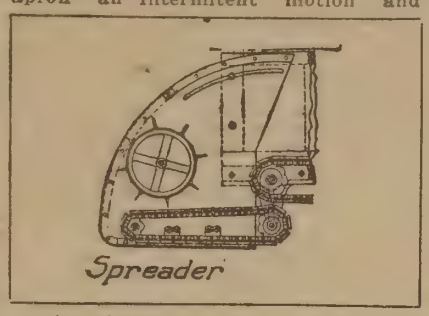
Combines Are Popular.

CENTERVILLE, Klickitat County, Wash., July 24.—So far I do not see any great advance in the crop production, only that every available acre was put into crops in the spring. Also there has been a great effort to get in something like corn and beans and the like besides the grain crop. The fall sown grain has come out fine since spring and a great many will have a normal crop of fall sown grain. The heat for the last two weeks has damaged it considerably, but the spring sown grain was damaged most. The harvest has started here, the heat having ripened the grain fast. The machinery seems to be adequate for the harvest. Several have new tractors with combines to help. Everybody has worked pretty hard to get a sufficient crew to harvest. I am afraid that it will be a little hard to get held to thresh and haul the grain at the same time on account of shortage of help. We head and combine both here, with a growing preference for the combine.

CLARENCE A. LESTER.

Dairy Herds Decrease.

PORT ANGELES, Clallam County, Wash., July 30.—Here on the Olympic peninsula we have not suffered from drought or heat. However, part of our crops have suffered some owing to an exceptionally late spring; the principal damage thus having been done is to our hay crop and I estimate it to be about 20 per cent. Peas stand exceedingly fine wherever we see them and the prospective crop, if anything, is better than the normal, thus offsetting the loss on the hay crop to some extent. The farmers complain that quotations for butter fat do not keep pace with the high prices for fodder and as a result dairy herds are decreasing. One farmer estimates the decrease in live stock to 10 to 15 per cent.



J. P. CHRISTENSEN.

Inventions

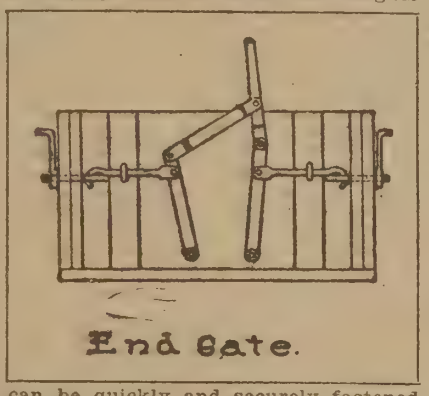
By C. J. LYNDE, Macdonald College, Quebec.

Feeding Mechanism.

The improvement described here is in the mechanism which gives the apron an intermitent motion and

carries the load back at the proper speed. It consists of four cam arms and a roller which move the sprocket wheel and apron intermittently.

Chicken Feeder.



It is stated that a feeder of this shape prevents the chickens from wast-

ing food. It can be quickly made, with wooden ends and with sides and bottom of sheet tin.

End Gate for Wagons.

We show here a simple system of levers, by means of which an endgate

can be quickly and securely fastened in place and quickly released. Any blacksmith could make it.

Heater for Fruit Trees.

This device is simply a closed wedge-shaped frame of wire netting covered

with canvas. The advantage claimed is that the heat of the lamp is distributed evenly into the tree.

Halter.

The two halves of this halter are made of stout wire and are hinged together over the forehead of the horse.

They are locked and unlocked by moving back and forth the strap holding piece under the jaw.

PROTECT YOUR CATTLE WITH

Blacklegoids

NO DOSE TO MEASURE.
NO LIQUID TO SPILL.
NO STRING TO ROT.

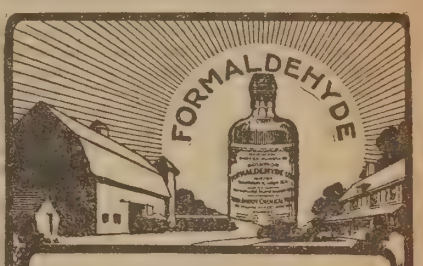
BLACKLEGOIDS are small pills. Each pill is an accurate dose of blackleg vaccine.

BLACKLEGOIDS are easily administered—simply inject them under the skin with a vaccine injector.

TAKE NO CHANCES.

Don't wait until your calves become infected. This means certain loss—there is no *cure* for blackleg. Vaccinate now—before the deadly disease shows itself.

THE COST IS SMALL.



BLACKLEGOIDS are economical. The expense is trifling compared with the loss you are liable to sustain if you do not use them.

ORDER THROUGH YOUR VETERINARIAN OR DRUGGIST.

Write for free booklets on Blackleg, with full information about Blacklegoids.

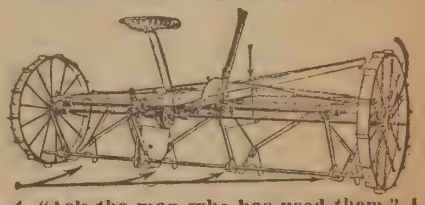
Successful Crops



You may be certain of big profitable crops if you adopt the most up-to-date method of seed grain treatment as recommended by the U. S. Dept. of Agriculture—

FORMALDEHYDE
The Farmer's Friend

This powerful disinfectant destroys grain smuts, rust and fungus growth. It prevents flax wilt, also scab and black-leg diseases of potatoes. It rids stables and chicken houses of disease germs and flies. Formaldehyde is surely a great boon to the farmer. Our Formaldehyde at your dealer, 35 cents in pint bottles will treat 40 bushels of seed. Big illustrated Hand Book sent on request—free.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XXII.

In which the bunchgrass boy is awakened by a strange bedfellow—Could it be a rattlesnake?

Blind springs rose suddenly out of a clump of rye grass growing among the rocks. The water flowing out of the ground collected into a narrow rivulet, which ambled down the gulch through sagebrush and wild rye, eventually losing itself in a mudhole which lengthened out into a strip of damp earth; then the dry prairie again, with small, warty backed, wide-mouthed, fat-bodied, short-tailed, horned lizards scooting among the gray bunches of grass and changing their color to harmonize with the ground so that you might look at one and think it was a clod.

Then there were many large black beetles that scrambled awkwardly to get out or your way if you trod near, and if compelled to act in self-defense stopped still, pointed their heads to the ground and from their upraised rear parts exuded a vile smelling moisture which was responsible for the name, "stink bugs," which the bunchgrass settlers applied to them.

Horned lizards and stink bugs were thick in the bunchgrass about Blind Springs. If you made your bed on the ground you were careful to tuck the covers under the edge good and tight, so that the bugs or the lizards would not get under the covers at night.

The night we camped at Blind Springs as we drove into the Coulee country I had an adventure with a stink bug which marked the beginning of my enmity toward that sluggish insect. It was morning; the first rays of the sun were shooting across the gray-green prairie, hitting the hilltops first and leaving the low places shady and cool. I was awake watching the prairie sunrise and wondering how near to my bed the herd of wild cattle a short distance away had come during the night. Old Prince, our big, black horse, stood near, head drooping and ooccasionally drawing in and exhaling a breath so heavy that it rattled in his nostrils, equaling in volume Dave Reavis's snores from the other side of his wagon.

Presently I detected a movement of some sort down under the covers near my bare leg. The thought flashed in my mind that it might be a rattlesnake, and if so I would do well to lie still—otherwise I might be bitten. So I lay as still as the dead.

The movement continued, and in the movement there was a crawling, creepy sensation that send a shudder all over me, but I gritted my teeth and lay still. Soon I felt something cold, clammy and shelly touch my bare leg down under the cover.

Fear of bugs was born with me, my mother used to say. It seems to be a kind of birthmark. I believe if a real rattlesnake had been in the bed I would not have been so greatly horrified as I was when I suspected that a stink bug had gotten under the covers. Cautiously, quaking with fear, I lifted the cover slightly, put my head under and sniffed like a collie. The creepy, crawling stopped. The bug had assumed a defensive attitude, likely, which I realized when the strong, repulsive, sweetish odor of the insect struck my nostrils.

I gave a wild yell and kicked covers right and left. Old Prince, startled from slumber, tugged at his rope and snorted. Dave Reavis stopped snoring with a sharp, startled exclamation, bounded out of bed and came to my rescue so swiftly that he stumbled over the tongue of his wagon, at which he swore roundly. Father and mother started up, and Dave, half way to my rescue and wider awake, retreated in embarrassment, realizing after his collision with the wagon tongue that he was clad only in a redflannel shirt.

Father was the first to reach me. As he came up I let drive at the stink bug with a stone large enough to have felled an ox, and with sufficient force, I think. Naturally, the bug, which was a monster of its kind, was mashed to paste, and its odor floated about camp and lingered till breakfast, and did not help any one's appetite. Dave said the only way to kill the smell of a stink bug was to take a big chew of tobacco. Mother scolded me for raising such a hullabaloo, and told me never to kill a stink bug as I had that one.

Thereafter, when I slew these insects I dug a hole in the ground, cautiously maneuvered the insects into the hole, and then, nerving myself for quick action and the expected shock to my nostrils, crushed them quickly with a stone, and, working at a mad rate of speed, buried them stone and all.

Dave shared my animosity toward insects of this class. One of them had spoiled his taste for coffee, he said. After breakfast he explained to my mother that one time he had made a big pot of coffee over a campfire and had drunk a lot of the coffee, thinking it was about the best he had ever made. He saved the grounds and boiled them over again at noon, and was struck by the unusually excellent flavor of that darned coffee—if he had been talking to a man he would have said "that damned coffee"; and by thunder! when he emptied out the darned grounds, a big stink bug rolled out of the coffee pot with them. The darned thing had been boiled till it had swelled up like a poisoned pup and its legs had fallen off. Maybe he had swallowed a hing leg or a forefoot for all he knew. Oosh! wow! Darned if he wasn't sick! He felt like rubbing his stomach when he thought of it. Whee!

After that he didn't like coffee any more. He used up a pound of coffee, making it every meal, and then throwing the whole mess out in the grass. Finally he threw away the pot in which the bug had been boiled and got a new coffee pot—a bright, shiny thing that wasn't worth three whoops in h——" (he stuttered). Coffee never did taste good to him unless it was made in a pot blackened by a campfire, he said apologetically.

Well, having given up coffee, he had to have a stimulant of some kind; so he went to chewing tobacco. Up to that time he had simply smoked. He was sure he never could get back his appetite for coffee. Sometimes he wished he hadn't seen the darned bug in the coffee grounds, he said. He was sure that there was nothing poison about the bugs; it was just the looks of the dam—the darned thing that had made him sick.

Blind Springs of thirty years ago were surrounded by as many miles of bunchgrass as you could see, and furnished the only water between the Wilson creek crossing south of the town now called Almira, but which was unheard of then, and the Coulee bottom 15 miles west. The springs were called "blind" because you did not know they were there till you came right upon them.

Westward from Blind Springs you struck the rocky region called "The Deadman." Why it was called by that name I hardly know. There is a legend to the effect that in the early days Chief Moses, then a bad Indian on the warpath, crept upon a man who was drinking water at Blind Springs and shot him. The man managed to get on his horse and rode west, but died finally; and the country in which he is allaged to have died, and for miles around is to this day called the Deadman. No one knows where the Deadman begins or where it ends, or where the dead man for whom it is named is now buried, or who he was, or when he was killed.

The Deadman in our early days on the farm was here and there covered with patches of big sagebrush; and if it had not been for those patches of sagebrush I do not know how we and our neighbors would have kept warm. We used it for fuel. The sagebrush grew in gnarled, twisted shapes, the butt ends often being as large around as a stovepipe, and the upper part branching in small, grayish leaved, prickly extremities. It was covered with loosely clinging, stringy bark which was excellent for kindling. You cut it, rather, beat it to pieces, with an ax. That was my job from the time I was 11 or 12 till long afterward when the incoming tide of settlers used up the sagebrush and we had to haul wood from a long distance.

The sagebrush was infested with a little insect we called "ticks." The ticks liked nothing better than to be carried into the house with armloads of cut sagebrush; then crawl up the walls of the house, and finally find their way to your person. You presently were aware of their presence by feeling an intense itch. Rolling up your sleeve or unbuttoning your waist you discovered that the tick had screwed its head into your skin. To get the tick out without leaving its head in the skin was a trick in itself, and was a trick you had to learn, or be bothered many days by the itch. We did not fear the ticks, however, though mothers were pretty careful to keep them off their babies.

But in spite of sagebrush and ticks The Deadman was a wonderfully fascinating place. I was not allowed to go into it till I was a pretty good sized boy. Riding into the Deadman, you understand, took me eight, 10, 15 miles from home into a country where there were neither roads nor trails. I rode in and rode out merely by keeping my sense of direction and this I never lost, day or night.

Since leaving the Deadman country I have been in many parts of the state and in eastern and southern states. Always I am muddled as to direction. Straight up and straight down is all I am sure of. But I believe that if now I were transported to The Deadman on a magic carpet or other lightning conveyor I would know the instant my feet struck the ground which was north, south, east and west and could strike the intermediate directions. I learned these in childhood.

There was just one exception to the unerring sense of direction I had in The Deadman country—and that was foggy weather. Anyway, there is no country in the world that is so confusing in foggy weather as a bunchgrass prairie, unless it is the ocean. The greenish gray of the bunchgrass blends exactly with the fog. As you look away you can not tell exactly where the bunchgrass leaves off and where the fog begins. The hills, if you can see them at all, loom uncertainly, and what you think is a hill may prove to be a bank of fog. You start uphill, you think, and presently, to your dismay, you discover that you are riding downhill instead. You see a herd of cattle on your right and recognize several of the individuals of the herd—and on your nearer approach discover a bunch of greasewood or sage. The grass is soggy and your horse gets discouraged in the fog quicker than in hot weather. Everything is all out of shape, you are fooled in every guess you make and presently you are hopelessly lost.

A story which went the rounds of our pioneer settlement was that William Bundschue, one of the early comers, walked out on the prairie surrounding his house to find his cow that had wandered away in the fog. He became so completely lost that when he finally wandered into his own barnyard by accident he failed to recognize his own corral, his own barn, or the cow he had been hunting that got home ahead of him. He climbed up on the corral fence to sit there till the fog cleared up and when his wife came out to milk the cow presently he failed to recognize her and she thought he had gone crazy.

One would expect small children to get lost in such a country. This happened once. It was one of Mitchell's girls that got lost, I think, and she was a mere tot of three. The word went through the pioneer countryside like wildfire—a child was lost on the prairie! Every man, every cowboy, every youth for miles around sped to the rescue and the hunt began. The baby girl had been out playing with the older children. She had lagged behind and had not been missed till they got back to the house in the evening.

The fog hung heavy over the prairie and the search was made difficult. Then the night was moonless. But all night the search continued, lanterns flickering here and there for miles around. Everywhere was calling, and the occasional firing of weapons to frighten away animals.

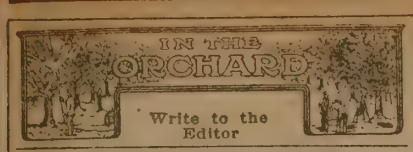
The country was hilly, cut up by deep, waterworn gulleys in the low places; and there was much wild rye scattered about in tall bunches and a good deal of prairie sage which was quite as high as the child's head and might easily conceal her. All night the search continued. All the next day it continued. It was fruitless till dusk of the second evening.

Then Old Man Deeter, 70 years old, stumbled onto the poor tot lying huddled under a sagebrush and unconscious. She was not dead—just chilled through and through like a small chick that is left out in the rain.

When warmed and fed and safe in her mother's arms the little girl told in her babyish lisp what she could of the pitiful story. She had wandered about on the prairie most of the night, it seemed, calling for her mamma. Some dogs barbed at her once and frightened her and she ran as fast as she could till she fell down. She got up and ran some more, till she was too tired to run and then she lay down and cried for her mamma. The dogs came near her again and barked and she cried at them and tried to find sticks to throw at them; so they want away. She was telling of coyotes, of course.

For years after that mothers would gather in their tots on dark nights or in damp, foggy weather and tell them of the little girl that got lost in the fog and make them promise never to run away in the fog; and the tots with eyes round with fear, would promise never to leave the yard when it was foggy or dark.

IN THE NEXT INSTALLMENT THE BUNCH GRASS BOY TELLS ABOUT THE "BLOW PROBLEM" OF THE EARLY DAYS IN THE BIG BEND COUNTRY; HOW HE REBELLED AGAINST WASHING HIS FACE AND BARE FEET MORE THAN ONCE A DAY DURING THE DUST STORM, AS HIS ABLUTIONS SEEMED TO HASTEN CHAPPING OF THE LIPS AND CHEEKS; NEIGHBOR LOANS HIM A BOOK TO READ FILLED WITH MANY PICTURES OF ANGELS WITH WHITE WINGS, ADVANCING IN HEAVENLY BANDS THROUGH RIFTS AND CLOUDS, AND WAS SURE THAT THESE PICTURES WERE A CORRECT REPRESENTATION OF HEAVEN; CLOUDS THE SYMBOL OF HEAVEN AND "DUST" THE SYMBOL OF THE OTHER PLACE.



Three Plucky Girls

Here are three of those stout-hearted girls working on the land for the good of their country, which they love dearly, says the London Live Stock Journal. They will soon have been at it for a year, and their motto is "Carry on!" as they were among the very first to respond to the nation's call. For they knew the force of example and of duty, and are they not parson's daughters?

It can not be altogether pleasant or exhilarating work, for the land is among the wettest and stickiest of the Shires, and a lonely region at the best, with its wide, undulating wodland pastures and "thickthorn" coverts. These girls work hard for a low wage, and they volunteer for the hardest and dirtiest jobs, and do them, too.

It requires some endurance to let yourself out at 5:10 a. m. and attend to cows all day, especially if you find yourself practically the only available hand at a pinch, with some 30 cows demanding insistent attention; for they work in two widely separated farms, though a girl friend is usually available also. Though the working hours are not always so strenuous as this, there are many bullocks dependent on the younger sister's efforts at the other farm, pigs to ring (if necessary), stones and manure to cart and spread. It was the last-mentioned work, if we remember right, that was their apprenticeship to farming, but they stick it well. They thatch and thresh, too, and sometimes plow. England wants more of them. Let us take our hats off to all such patriots, and England will not forget them. Here they are in their bucolic dress. It is the fine, old spirit of Mary in the cornfield of our childhood days, and the old lines take on a new significance. That noble girl is living again in history.

What we get out of life depends upon what we are.

All nature is instinct with the vital impulse toward some higher manifestation.

As rolls the sea, surge after surge,
Evolving life is endless Urge;
A radiant energy, a force
With solar systems in its course;
It leaps through space, outmeasures time,
Creating myriad shapes sublime;
From countless germs and countless norms
Expressing ever higher forms.

Evolution of Orcharding

The evolution of the orchard business is a most interesting study and every man past the middle age of life can furnish his own illustration of progress. Without going back beyond a few years I want to give a few illustrations.

Eight years ago the firm of which I was at that time a member planted 100 acres of orchard. The other members of the firm deferred largely to my judgment as to the varieties to plant. I chose first of all Spitzenburgs, second Wiesaps, third Newtowns. My argument was that the Spitzenburgs had held its place as the best apple in the markets for 100 years and was the standard by which all other varieties at the expositions and fairs were judged and compared. Therefore whoever wanted to grow the best must plant Spitzenburgs. Now, the Delicious, the Winter Banana, the Red Rome Beauty and the Winesap are better sellers and also the Arkansas Black is coming to the front as a better market apple and money maker.

There is nothing permanent; change is the law of life in all its forms and he who keeps step with the march of progress is the one who succeeds. The apples of the future will be as much better than the Spitzenburg, as the Spitzenburg is better than the wild crab from which it came. G. L.

Unique Way to Irrigate

Lieutenant John Mitchell, 82 years of age, who served in the civil war, has a garden of one lot in McMinnville, Ore., and, while the entire garden would be a credit to the work of a much younger man, his plan of irrigating tomatoes is so unique as to deserve special mention. Mr. Mitchell prepared the ground well and mulched the row heavily with fresh manure. Tomato plants and cucumbers are planted in the same row. When the dry, hot weather came on he secured gallon cans, filled them with water, bent a place on the edge to make it smooth and hung a woolen rope over the edge of the can. Once wet, this drips water all day. A piece of cloth will do, but the wool rope is better. At first Mr. Mitchell set the cans away from the plants, to draw the roots out into the rich ground, but as the plants became larger and the days hotter, the cans were moved close up. They are set by a tomato one day and a cucumber vine the next. The soil keeps moist and the plants are thrifty and have grown steadily, while unwatered gardens have dried up. Mr. Mitchell claims this is far better than sprinkling once a day, and that it takes very little, if any more, time to fill the cans and move them than it would to sprinkle with a hose. M. A.

Green Cabbage Worms

Mrs. Maude Courtney writes from Knox, Penn., as follows:

"I would like to know what is a good remedy for green cabbage worms; a good spray or any other way to get rid of them. Please let me know through the columns of your paper."

I am presuming that this pest, from the description given, is what is called the "common cabbage looper." The larva is a green worm, has the looping habit like the "span worm," is about one and one-half inches long and is lined with white. It eats the leaves full of holes. If this is the right diagnosis to spray with salt water is helpful. However the following formula is successfully used:

Formula.

Copper sulphate (blue vitriol) 6 pounds
Quick lime (good stone lime) 4 pounds
Water ..... 50 gallons

For small amounts the ingredients may be mixed in the same proportions as given.

Imported Cabbage Worm.

The so-called "imported cabbage worms" in the caterpillar form are velvety green with fine dark spots. The adult butterflies have white wings, with two dark spots near the middle and larger dark spots near the tip of the wings.

The above spray is the remedy recommended for this pest.

Cabbage Pests in General.

There are a large number of cabbage pests, and about as many remedies. Among them are the following:

Cabbage louse, so common as to need no description. The lady bug is one of its greatest enemies, and is therefore the friend of the cabbage grower.

Cabbage and radish magot is very difficult to control, but among the remedies that seem to have most favor are the "carbolic acid emulsion" mixed in the proportions of crude carbolic acid, one pint; hard soap, one pound; water, one gallon. "Kerosene and sand" mixed in the proportions of one pint of kerosene, a bucketful of sand, a handful placed about each plant.

"Powdered tobacco" placed about the plants when set and renewed every week.

"Bran and glue"—Dissolve two pounds of glue in a gallon of water and the addition of enough bran to make a thin slop. Place a handful about each plant.

"Diamond Black moth"—The larva is a very small green worm; the moth is about one-third of an inch long, and folds its wings over its back. Spray with the formula recommended for the looper.

Spray for General Pests.

I am coming to the conclusion that there is no general remedy for insect pests infesting gardens, orchards and field crops that is so effective as tobacco spray. With the exception of ants, it will kill any insect on which I have tried it, and I have been experimenting with it for the last two months One part black leaf to 800 parts water. G. L.

Northwest Apple Crop.

An estimate of 23,500 cars of apples in the principal apple districts of the four northwestern states for the 1917 season is made by L. J. Blot, secretary of the fruitgrowers' agency, a cooperative marketing organization.

Following are the estimates on the various districts:

Walla Walla, Wash., 500 cars; White Salmon and Underwood, Wash., 200 cars; southern Idaho, 2200 cars; Yakima valley, Wash., 8500 cars; Lewiston, Idaho, 250 cars; Bitter Root, Mont., 500 cars; Hood River, Ore., 1200 cars; Medford, Ore., and adjoining districts, 1500 cars; Wenatchee, Wash., 8000 cars; Spokane, Wash., 650 cars.

Good Rubber Rings in Canning.

The fate of the food material canned or preserved at home may depend upon the quality of the rubber rings used on the glass jars. If the rubbers are of poor quality, the food may spoil.

Good rubber rings for the average pint and quart jar—glass top, etc.—should be not less than 1-4 nor more than 5-16 of an inch wide, and 2 1-4 inches on the inside diameter, and be cut 12 to the inch, that is, 12 rubber rings placed on top of each other will measure one inch in thickness. They should be able to stand up under sterilization in boiling hot water or in steam under pressure for at least three hours without injury to the rubber. Good rubber will stretch and return prmoptly to place without changing the inside diameter. They should also be reasonably firm, and able to stand bending without breakage.

"Fight the Flies."

Have you ever considered the amount of damage flies do each year? If you could count up the money they cause you to lose it would probably amount to enough to buy some of the things you have wanted for a long time—live stock, paint for your buildings or new machinery. Flies breed in manure piles, garbage and other decomposing filth. To flies may be traced many cases of typhoid, hog cholera, contagious abortion and other germ diseases. Do not wait until the insects begin to pester; anticipate the annoyance. An effective and economical way to do this is to thoroughly clean up and disinfect. Use a reliable disinfectant and spray your stables, outhouses and other buildings. Don't forget the manure pile and other decomposing filth. Disinfect these places freely to kill the eggs.

The "CLEVELAND" demonstrating its thorough efficiency at the Agricultural Experiment station of Washington State College, Pullman, Wash.

BIG THINGS

and lots of them, under the most rigid conditions are performed by the

Cleveland Tractor

Geared to the Ground

The tractor for year-around service—you'll be agreeably surprised at the way it "takes hold of things." One hundred per cent traction is what you can expect in the "Cleveland," together with ample power, light weight, small size, economy and high grade construction. 12-h. p. at the drawbar, 20-h. p. at the belt, high speed, heavy duty, 4-cylinder Buda motor. The Cleveland is powerful enough to plough eight to ten acres a day with two fourteen-inch bottoms, and yet small enough for use in orchards and among small fruit trees.

PRICE $1185

F. O. B. Euclid, Ohio.

The "Cleveland" has passed the demonstration stage. Write us for information and testimonials of northwest users.

McNEFF BROTHERS
DISTRIBUTORS.
224-225 Pittock Block.
Department D.
PORTLAND, OREGON

Mr. George Severance, Acting Director Agricultural Experiment Station, Washington State College, Pullman, Washington, says in part:

We are plowing tract with a two-bottom 14-inch gang, drawn by eight horses, and they make rather hard work of it. The "CLEVELAND" drew two-bottom 12-inch gang at a greater speed, plowing same depth of furrow. The tractor was able to maintain its high speed without overheating. The tract plowed is average Palouse land, and at present is quite dry, breaking up in places quite lumpy.

UNDER THE BLACK CANOPY

By Paul E. Triem

CHAPTER I.

A strongly-built young man, dressed
n the regulation high-laced shoes,
.out trousers and woolen "wampus"
f a lumberjack, picked his way
houghtfully among the early pedes-
ians of Second avenue. Whistles
ere blowing over the town, and the
en and women whose business it is to
pen offices and prepare for the day's
ork were scurrying to their places.
n spits of the early hour the streets
ere almost dark, for a murky curtain
f smoke hung over them.

The young woodsman stopped occa-
ionally to look in at a restaurant win-
ow; and on these occasions he became
ven more thoughtful than before.
resently he addressed himself sternly.

"Joseph Dudley, my man, if you
on't quit dallying with temptation
ou're going to make a mistake and
quander your money on breakfast.
ou haven't done anything for a week
o earn the right to eat, and you're
ot going to be silly."

Whereupon he took himself firmly in
and and set off at a brisk pace down
ie street. For ten or twelve blocks
e walked swiftly, without looking to
ie right or left. Then he paused and
moment later found himself one of
group of men gathered on the side-
alk looking up at a huge blackboard.
n this board various cabilistic phrases
ad been chalked:

"Two logging foremen for South
merica; transportation paid; contract
r two years.

"Ranch hands; $35 and board.

"Bridge carpenters; contract; trans-
rtation to Alaska."

There were some other positions
hich even at this early hour had been
alked out, showing that they had
een filled. Joe scanned the list to the
ottom and turned disconsolately away.
here was nothing for him, and he
rode on down the walk congratu-
ting himself that he had not spent
ay of his little remaining money for
reakfast.

He was passing a waffle house, from
hich came a meddening odor of pan-
akes and coffee, when an orange-col-
red sign across the street caught his
ye. He paused to stare rather indif-
erently at it. Then his eyes widened,
nd he stepped from the walk to the
reet and hurried across to the door
eside which the placard had been
splayed—for it had contained the la-
onic message, "J. Dudley, please call."
e rather thought he would!

A fleshy, red-faced man with chilly
ray eyes sat at a desk. He stared si-
ntly up at Joe, as the latter crossed
ie room and paused at a railing which
ut in the desk.

"My name is Dudley," the young man
rplained. "J. Dudley."

"Mine's Schwab," the fat man replied
ruffly. "A. Schwab. What's that got
do with anything?"

"Why, you've a sign out in front
sking me to call," Joe said, strug-
ling to master an inclination to tell
ie man at the desk what he thought
his business methods. "I registered
ere for a job, you know."

An expression of interest or remem-
rance or something like it flickered in
ie employment agent's fishy eyes and
nodded.

"I remember now," he admitted.
Well, I've got a place for you across
ie Sound—Buck Harbor; one of
tevens' camps. You'll start in limbing
swamping at forty and board. Of
ourse, you furnish your own blan-
ets."

Joe nodded. "That sounds fine," he
eclared. "How do I get over to ——"

"To Buck Harbor? You take the
eamer 'Avon' from pier three. She
aves about 2 o'clock. Now, my lad,
ay your debts and make way for
me one else. This is my busy day."

Joe left comparatively opulent, even
fter he had reduced his stock of
oney by paying the agent's fee; so
pulent, in fact, that his first act on
aving the employment office was to
take himself to the other side of the
reet and order a breakfast of bacon,
gs and coffee. The cares of the early
orning had dropped away from him,
r with a good job in sight and money
nough to take him to his destination
was safe. He finished the meal in
isurely complacency and strolled up-
wn, where he spent the morning
oking into shop windows or talking
with chance acquaintances about the forest fires, whose smoke hung like a black canopy over the city and the country adjacent.

At a quarter to two he was standing in a crowd of people who were grouped around one of the boat landings at pier three. Before him the gangplank led down at a steep angle and Joe found himself wondering how it was possible to construct this movable bridge so that it would stand the daily strain of innumerable passengers. The boat was not at her slip, but her whistle had sounded out in "the stream."

A few minutes later she drove up to the slip, and with a mighty churning of water astern and a volley of crisp commands from the mate on the fore-deck was brought to a stop. There were not many passengers on board, but when these had made their way up the plank and had forced a passage for themselves among the ranks of those waiting to take their places there was a rush of stampeding feet and Joe found himself being carried down the gangplank and toward the steamer.

It seemed to him afterwards that at one instant he was stumbling along, with the crowd pushing and jamming him from every side, while the next he had been plunged a hundred feet deep into the icy water of the Sound. There must have been a warning creak or shock as the great plank gave way, but it was swept out of his memory by the swift tide of succeeding events. Luckily, he had left his blankets up in the wharf, intending to return for them after he had assured himself that this was the right boat; so that when he realized that he was indeed under the water and was still sinking he had nothing to worry about but himself.

Instantly he realized that the water above him would be filled with struggling and desperate men and women. With a skill born of many a season spent in the rivers and lakes of Michigan he checked his downward rush and thew himself backward, so that he was lying almost horizontally, facing the surface. Then he opened his eyes, and while he continued to drive himself obliquely toward the open air he peered into the murky water above him.

It seemed an age before the last of the obscure, struggling bodies disappeared and he knew that he was free to shoot straight for the surface. He came up with his ears ringing and caught a great breath of air—the sweetest air he had ever breathed. At the same moment he swung himself about and looked at the crowd.

The sight of those white, horror-filled faces stayed with him for months. Instantly he forgot his own peril, forgot that the icy water was numbing him, and that if he ventured into that swirling mass of human wreckage he was very likely to be pinioned and dragged down. He looked swiftly about and saw that across the quay a pile-driver had been moored, and that its heavy understructure afforded a refuge for all who could reach it. In the dock above men were shouting and running about; but without waiting for them to act Joe struck out and brought himself cautiously to the edge of the crowd.

For an instant he scanned the faces nearest him. A fat middle-aged man, whose moon-like face was the color of wet putty, reached out and tried to grasp him, but Joe decided that his very bulk would keep him afloat longer than some of the others, and ducked past him. He had caught sight of the pinched face of a boy. It was swept under as Joe came within reach, but he dived swiftly and caught the youngster by the shoulder. They came to the surface, and Joe spoke briefly:

"Lie still and don't try to lift your head out of the water. I'll keep your nose out."

To his surprise the youngster obeyed him implicitly, and in a moment they had passed beyond the prow of the steamer and were headed for the raft. Joe swam on his side, with one arm supporting the boy. The crew of the pile-driver had left their work and were lined up alongside when he approached, and half a dozen pairs of strong hands reached down and grasped the limp figure which Joe surrendered to them.

"Give me a rope," he commanded, speaking to one of the men in the scow. "I can hitch on to some of the women and let you haul them over here."

The man disappeared for an instant, to return with a coil of small rope, one end of which he dropped over to Joe.

"Good luck, lad," he said hoarsely. "I wish I could swim—but I'll pull 'em in for you, and throw you back the line."

Joe was already on his way back to the crowd. As he came around the end of the steamer he saw that at last the men in the wharf had gathered their wits, and were working heroically. A couple of ropes had been lowered, and a man in a stevedore's dress had clambered down one of the piling and was working expeditiously, fastening alternate lines under the arms of such of the women as he could reach. Joe singled out a middle-aged woman, who had been clinging to one of the heavy timbers supporting the wharf, but whose strength seemed to be failing, and drew the line about her in such a way that the motion of the water, as she was drawn across to the scow, would hold her head above the surface. He saw her started safely on her way, then went to the assistance of the stevedore.

Next moment the shrill, yelping whistle of a launch sounded, and the police boat drove into the quay at full speed and was brought skilfully to a stop on the edge of the crowd.

Half an hour later Joe found himself in the engine room of the "Avon," watching his wampus steam as it hung on the railing about the boiler pit. He wore a heavy, sheep-lined coat; for, although the day had been warm, his long immersion in the water had chilled him through and through. The coat belonged to the first mate, who stood looking down at Joe as the latter sat wearily back in his chair.

"The company that owns that dock ought to give you a medal and something besides, my lad," the officer declared. "It would have been the most natural thing in the world if you had got yourself out of that mess as quick as you could, and no one would have blamed you for doing it."

"I would have blamed myself, just the same," Joe reminded him. "Is everybody all right?"

"As far as we know now. The hospitals are full of 'em—some got bruised in falling, and a lot were pretty near dead from cold and fright by the time they were fished out. However, the chances are that they'll all come through in good shape. And that reminds me there's a man looking for you. He's the father of that youngster you pulled out first. You didn't happen to know him, did you?"

Joe shook his head. "I'm a stranger in this part of the country," said he.

"Just so. Well, in that case it won't mean anything to you, but that was Jerry Stevens' boy, and Jerry is one of the kings of this corner of the world. I wasn't sure you were in shape for visitors, but I'll go up and let him know you're down here."

Joe reached out and caught the seaman's wrist in a vise-like grip. "Don't you do anything of the kind," he commanded in a voice that brought the older man to attention. "If the boy's all right I'm glad of it. You're not to say anything more about me to any one, however. Any one, you understand?"

The mate stared. "Well, you're a nice kind of lunatic," he grumbled, but the admiration in his honest eyes belied the statement. He shook his head and turned again toward the stairs leading to the dock. "We'll sail in 10 minutes," he called back. "I'll have your blankets brought aboard directly."

Joe arose stiffly and walked over to the open door looking out upon the harbor. The smoke had grown thicker, so that the sun showed as a mere blotch of yellow light; whistles boomed out across the water—fog whistles, which spoke eloquently of how the big boats were forced to feel their way through the gloom.

(To be continued.)

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University)

Why You Can Save on the Sugar You Use and Improve the Body's Condition, Too

Sugar is that valuable kind of food which is a tonic and almost an "all-healing ointment," inasmuch as it is used to heal battle wounds, and to tone up weak hearts. As a glucose solution it is injected to replace lost blood or to revive a victim of shock.

Dr. Hirshberg.

Every little movement of your anatomy where muscles are present uses up sugar. Work and play, thought and motion must ask leave of sugar. If there is not available every half minute one-one-thousandth part of an ounce of sugar, the heart will miss a beat. It burns up that much with each beat.

Heat units, or energy units, called "calories," are present to the tune of 1000 in each ounce of sugar. Therefore, each time you put a teaspoonful of sugar in your coffee, if you can properly digest sugar, you give your tissues a dozen heat units or calories. Since the average person can live upon 1200 calories a day of mixed foods, a teaspoonful of sugar is one-hundreth of his needs.

How Sugar Digests.

Glucose, also called dextrose or grape-sugar, is the simplified form of sugar which the stomach can best digest. Granulated sugar must, therefore, be changed into this least common denominator of sugars by enzymes or ferments before it becomes a "conviction," as Mrs. Malaprop might say.

The digestive juice, saliva, turns starch into malt sugar, whereas "maltose," one of the other ferments, changes the malt sugar into dextrose. Cane sugar, however, is not acted upon by these juices. There is a small amount of ferment down in the lower part of the intestine called "sucrase." This acts upon the cane sugar and transforms it into dextrose and levulose, the exact kinds of sugar found in honey.

Cane sugar is not so easily and quickly digested as malt sugar. It takes exactly four times as long to digest and make an ounce of cane sugar useful to the tissues as it does malt sugar. Another objection to cane sugar lies in the fact that it is an irritant.

Indiscriminate Use Unwise.

If starchy foods are taken into the mouth the every-ready saliva quickly converts them into malt sugar, which is, in turn, changed to dextrosse and passed along into the small intestine. The process is gradual but prompt. Only a small amount is produced, which is rapidly absorbed.

Starch is soft and non-irritating to the stomach. The sugar produced from starch is carried off as quickly as it is made, and the stomach in this way is not subject to strong solutions of sugar.

Cane sugar is not a ration for human beings. The stomach of a cow is furnished with a particular ferment which acts favorably upon cane sugar, making it a good ration for the cow, but not for human beings.

Indiscriminate and ignorant use of sugar is absurd. To put sugar on oatmeal and other cereals over which a quantity of cream is poured is superfluous. Cornmeal, oatmeal and many other breakfast foods are composed chiefly of sugar or starch. What starch is present is quickly converted into sugar, making the whole dish sugar.

The wornout expression that sugar decays the teeth is not exactly true. Sugar itself does not attack the teeth. The mischief is caused by a large amount of acid gastric juice which is caused by the irritating effect of cane sugar. Thefefore, the ordinary diet should consist of foods that will give the needed supply of sugar for the tissues and lime for the preservation of the teeth. Green vegetables, spinach and turnip greens contain much of the necessary lime. The potato is the only vegetable that does not contain some amount of lime.

Bran Bread

And Other Ways of Economizing

By ALICE W. BORLAND.

There was an inquiry in The Farmer recently for a recipe for combining bran or shorts in the making of bread. I have made excellent biscuits by using two-thirds white flour and one-third graham and bran one-half of each). They seem more satisfying than all white flour for real hungry people.

Mrs. E. L. Armstrong of Charleston, Wash., very kindly tells us her experience based upon years of trial with bran in bread.

She says: "I put one-quarter bran in two out of three bakings, using all white flour the third time, and in this way the medicinal value of the bran is kept effective, and yet no one tires of it. The same proportions of middlings make delicious hot cakes or biscuits. I use no additional sweetening."

I am convinced we use too much fine flour for our good. I believe we should give young children more of the coarse properties of wheat. If we did that they would have better teeth.

These times, when every one is put upon his honor to save food in every possible way, brings to my mind a long list of things I have not done along lines of saving in the past, and I used to think I was a very careful housekeeper, too. Let me tell you what I have done this last few days. On Sunday I cooked for three of us a hen, young and tender, but fat, that weighed about three and one-half pounds I made a stew of it and had biscuits in the gravy. This we had for dinner. In the evening we went for a picnic supper in the woods, so I cut off a few pieces of what was left and put them through the meat grinder, and, after mixing in a simple salad dressing, I made sandwiches. On Monday for dinner I served some more pieces in a nice gravy, same as Sunday, adding a cup of broth which I saved from Sunday's cooking. Still there were some pieces left, so I cut them from the bones neatly and pieced out the supper Monday night. Today I put the few scraps of meat which were left and all the bones which I had saved together and boiled them for a half hour and poured the liquid through a strainer and returned it to the stove.

I then looked in the ice box to see what was there. I found about a tablespoon of macaroni and about two tablespoons of boiled rice, both of which I put in my broth. I seasoned it with salt, pepper, onion salt and celery salt, and all three of us enjoyed a most delicious soup. In years past I would never have given the matter so much thought and would not have had such good food all from one fowl.

More and more do I learn that it pays to concentrate on one's employment.

DO NOT QUIT SCHOOL.

This Is Advice to Young People.

There is a strong national movement afoot, not primarily among educators, but starting with the council for national defense itself, looking toward the continuation in high schools and colleges of the boys and girls and young men and young women of the country.

The world war is doing two things of vital interest to the younger generation: It is calling upon them to render their greatest possible service, and it is proving the great demand for trained minds and bodies.

Too often the patriotic young men and women on the farms and elsewhere believe that their greatest service can be rendered by quitting school and applying themselves to some other work—more intensive farm labor, perhaps, or enlistment in some form of military or hospital service. The leaders in this country, the members of the council for national defense, upon whom largely devolves the responsibility for the successful participation of this country in the war to its victorious end, are urging that, above all else, these young people finish their education. This movement is illustrated by a letter being sent out throughout the state of Oregon by Governor Withycombe and Superintendent J. A. Churchill of the Oregon department of education. In this letter they say:

"We are writing to urge you, as a patriotic duty, to continue your preparation this coming year by attending the college or university of your choice. We feel that you owe it to your country to make every sacrifice possible to do this, because through a continuance of your training you can render services more valuable and effective during the later years of the war and in the times of need that will follow.

"We urge that all boys and girls graduating from high schools enter college, technical school, or normal school; that all college women remain in school until they have been graduated; and we further urge that all college men below the age of liability to selective draft, and not recommended for special service, remain in college.

"At all times, but especially in our present hour of need, you should ask yourself how best you can serve your country. In deciding this question at the present time, you can do no better than to act upon the advice of those who are responsible for the future welfare and integrity of this government."

Old English Initials to Embroider

By WINIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

In padding these old English initials, different methods may be used. Some use the twilled cotton for the purpose; others make the chain stitch, while others let a skein of floss out at full length and embroider a strip of it under the thick parts while forming the letter, clipping the skein when the initial is finished. This is a splendid method, quickly done, and is suggested, too, as a help in padding all large pieces in border or crescent outline.

Initials can be made by filling in the broad space with French knots. This is used largely on elaborate pieces, such as the laundry bag, table scarfs, and ornate gifts.

BE SURE TO GIVE NUMBER AND SIZE.

Making Vinegar at Home.

Replying to an inquiry regarding the failure of cider to become vinegar after a year of waiting, Professor A. F. Barss of the Oregon Agricultural college reports that the making of cider vinegar at home is a difficult process because so many things may happen to the juice before it becomes vinegar and it is impossible to be sure of a uniform product.

Green apples or over-ripe apples will neither make good vinegar. If it is not fermented thoroughly before the organisms start to work, the vinegar test will be far below normal. If the container is not clean the product will be unsatisfactory. If the temperature is too low or too high, or if unfavorable organisms get in before the needed ones get a chance, the product may never turn to vinegar.

Even after the alcoholic fermentation is complete, other things may happen. The acetic acid bacteria may not appear, if good, old vinegar is not added or if no "mother" is put in. If the vessel in which the change takes place is not given any fresh air, or if it is jarred and moved, action is apt to stop.

Sometimes it takes as much as 18 months or even two years for good vinegar to mature. It may be that the vinegar-making process may have advanced to almost any point and then for some reason stop and deteriorate. Sometimes it is very difficult to find out why this happens.

Making vinegar at home is not an easy process and it is doubtful whether it pays to make it for sale without some investment in a plant for the purpose.

Ready-to-Serve Beets.

Rules for home canned beets are given as follows by the United States department of agriculture:

Wash your jars; wash rubbers; test rubbers for quality.

Set empty jars and rubbers in pan of water to heat and keep hot.

Fill washboiler to cover jars two inches with water.

Heat water in washboiler.

Use only fresh, sound beets.

Wash beets thoroughly; use a vegetable brush.

Cut off all but one inch of tops; can the tops later.

Place beets in colander; scald by setting over a vessel of boiling water, covered tight, for 5 or 10 minutes.

Dip quickly into cold water.

Scrape or pare to remove skin.

Pack whole beets, slives, or cross-section pieces in hot jars.

Place rubbers and caps in position; not air tight.

Place jars on false bottom of washboiler.

Submerge jars two inches.

Let water boil 90 minutes.

Start counting after water begins to boil. Remove jars.

Tighten covers.

Invert to cool and examine for leaks.

If leaks are found, change rubbers, and boil again for 10 minutes.

Wrap in paper.

Store in a cool, dry place.

Household Hints.

In sewing the tape loops on a bathroom towel take an extra minute to fasten tapes on diagonal ends so that all the wear may not come at one end. With the two loops the towel will be hung up by alternating ends.

To disinfect a sink, pour down a gallon of boiling water mixed with two tablespoonsful of soda and a teaspoonful of ammonia. This will dissolve all greasy matter in both sink and pipe.

Just What You Want

may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

My Dear Children: Many of you write me that you do not see your letters. All the letters received from you are printed. Sometimes they are not printed right away, for it takes some time for them to come to the office, to be copied for the printer and maybe other letters are ahead of them and they have to wait.

So you must not be too much disappointed if they do not appear in the very next issue of the paper. You must be patient and wait and read the other letters, knowing that yours will come, bye and bye.

Whenever I write a letter, I always try to think what would interest the one I am writing to, and not what interests me. Isn't that a pretty good rule to keep? If we merely wanted to interest ourselves, we would write letters to ourselves. But when we write to others, we want to interest and please them. So let us think of things that the rest of the Corner children will like to read about.

Have you noticed the Sunshine Lady? For the older children who are sad or in trouble, I am sure she would be a friend. But what I wanted to say about her is this:

She believes in helping others and in making them happy. Can't you remember some of our letters have come from lonely children, from children who needed cheering, from children who have been sick and would like letters? Let us keep our eyes open and when we hear of such, write them a cheerful letter. Your loving, AUNT NELLIE.

The Best Day Is Christmas.

Dear Aunt Nellie: This is the first time I have written to the Corner. I like all the letters fine. My subject is "My Best Day." My best day is at Christmas. I think every one would like Christmas. Then we can get playthings. My sister and I each got a doll that we haven't had out of the box yet. I have one sister and one brother. I got a pet cat. Her name is Kalena. She hasn't been home for a long time. I forgot to tell you about our doll clothes. We got a whole lot of doll clothes from a big girl who lives a quarter of a mile from our place. We tried them on our little doll. The sleeves were too small. Then we tried a bigger dress on her, but it was too small for her arms. Then we put an underskirt on her. I will write again. —Helen Anderson, R. R. 3, box 19, Olympia, Wash.

Tells About Her Favorite Book.

Dear Aunt Nellie: I saw my other letter in print so I thought I would write again. I want to try and win a prize. My subject is "My Favorite Book." It is the Erie Train Boy. This boy worked on a train. He sold papers and candies and popcorn. He was very poor. His father was dead and he was left to support his poor mother and his little brother, Alfred. He and his mother and brother lived in an old house in care of a cross man. He made them pay more for the rent than he should have. One day while Fred was away the man came and said to the mother that he would turn them out in the street if they did not have the money to pay for the rent. I am 11 years old and in the sixth grade. I hope my cousins will enjoy my letter. I would like to correspond with any of my age and any others who will write to me. I enjoy reading the other letters very much. I hope Aunt Nellie will like my letter.—Frances McCauley, Route 1, Box 35, Dayton, Wash.

Have One Dog, His Name Is Don.

Dear Aunt Nellie: This is the first time I have written to the Childrens' Corner so I will write. I was 10 years old the 13th of April and in the fifth grade. We have one dog and his name is Don. We have two cats, 35 hens, eight horses, 30 head of cattle and six hogs. I have two brothers and no sister. My brothers' names are Frank and Jasper. Jasper is 22 years ald and my brother, Frank, is 16. I went to Spokane and Edwall and coming home there was a dust storm. Our school was out the 22nd of May. Our teacher's name was Mrs. Boyes. We all like her very much.—Lillian A. Strong, Curlew, Wash.

Going to Can for the Soldiers.

Dear Aunt Nellie: My father takes The Farmer and I always like to read the Children's Corner. I haven't any brothers or sisters. I have a little pup and two kittens. We have four horses. Their names are Flora, Mollie, Bonnie and Topsy. I am 10 years old and in the sixth grade. I am four feet four inches in height and weigh 80 pounds. We have 36 hens and 80 baby chicks. We have seven little turkeys. My birthday is December the third. I joined the Mother and Daughter Canning club to can for the soldiers. I will write another letter to the Children's Corner. —Fern Mathena, Prosser, Wash.

Wants to Find Her Twin.

Dear Aunt Nellie: Papa takes The Washington Farmer and I like to read the letters in the Children's Corner. I am nine years old. My birthday is the 15th of February. I would like very much to find my twin. I have a little brother five years old. His name is Samuel. We live on a farm about six miles out of town. I like to help plant the garden and take care of the chickens. Our schoolhouse is half a mile from home. I am in the fifth grade. My teacher's name is Mary Turner. Our school closed the 20th of April.—Leona Jacks, Raymond, Wash.

Wishes to Hear From Cousins.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and in the fourth grade. I will be 11 the 5th of July. Have I a twin? My teacher's name is Miss Gammon. I have six sisters and one brother. My brother's name is George. He was born March 7th. I live on a 10-acre farm. We have three horses and two cows and three calves. We have about 75 chickens. I would like to hear from some of the children.—Rose Annie Kramer, Kennewick, Wash.

Cow Ate Vesta's Corn All Up.

Dear Aunt Nellie: I have not written for a long time. I joined the garden and ate almost all of it before I corn in my garden. I guess I am not going to get much from my garden, for it has been so hot that nothing can grow. My corn was about two feet high when the old cow got in my garden and at almost all of it before I discovered her. The wheat is burned, too. It sprinkled a little this morning when we were getting ready to go to church, and it is clouding up again. School starts right away again. Miss Carver was my teacher last year and is going to be my teacher this year, too. I am glad, for she is such a nice teacher. Anyway, I think she is. I will be in the fifth grade next year. I was 11 years old the 20th of June.—Vesta Ada Johnson, box 60, Mansfield, Wash.

Some of May's Favorite Books.

Dear Aunt Nellie: I enjoy the letters very much. I have four sisters and two brothers. My favorite books are: Desert Gold, A Texas Ranger, Beautiful Joe, Black Beauty, The Danger Trail, The Silent Places and The Girl of the Limberlost. Desert Gold is a story of Arizona. A Texas Ranger is a story of Texas and Wyoming. Beautiful Joe tells the story of a dog and Black Beauty is about a horse. The Danger Trail is a story about a man that went to the Hudson Bay. The Silent Places is about the northern part of Canada and the Girl of the Limberlost is a story of Michigan and its woods. There is nothing I like better than to get on my cow pony and go riding. I was 15 the 18th of July.—May Prouty, R. F. D. 1, Outlook, Wash.

Busy Just Now Trapping Squirrels.

Dear Aunt Nellie: I enjoy reading the letters in Aunt Nellie's Corner. I enjoy them so much that I though I would write too. I am 14 years old. My sister and I are trapping squirrels. We get two cents a squirrel. We caught one hundred and thirteen squirrels. I live on a 200-acre farm. I help my mama milk the cows every night. We milk four cows. My mama raised 150 chickens, 2 turkeys, but she has two hens setting on turkey eggs yet. She has 27 ducks she raised this spring. I would like to correspond with a girl of my own age.—Anna Entel, Colton, Wash.

Ruth Lives on Puget Sound.

Dear Aunt Nellie: I am in the sixth grade. My teacher's name is Miss Hjaltalin. There were 18 pupils in our school. I am 11 years old. My birthday is the 31st of October. I have one brother and one sister. Their names are Oscar and Alma. He have five cows and five calves, also one horse. Her name is Jennie. I live on a farm on Puget Sound. I have a pet cat. His name is Tommie. I hope all the children will enjoy reading my letter as I do theirs. I am going to write again if my letter escapes the waste basket.—Ruth Hagen, East Sound, Wash.

Little Dog Older Than Doris.

Dear Aunt Nellie: I have written to The Washington Farmer before and then I have read the letters ever since and liked them and thought I would write again. We have four horses and 10 cows. I have a sister 15 years old. We have a little white dog. His name is Sport. He is one year older than me. I have a big doll. Her name is Josephine. She is very cute. Thursday my school let out and I passed into the fifth grade. I am nine years old and our little white dog is 10.—Doris Streeter, box 98, Bow, Wash.

Iris Is One of Our New Cousins.

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 14 years old and will be 15 the 10th of December. I live on a farm of 200 acres. We have nine cows milking. Their names are Lilly, Spot, Jess, Darling, Rosy, Butterfly, Nellie, Peggie and Blossom. We have two little calves and one horse and two heifers and a bull and a steer. The horse's name is Midget. We have three pigs and four cats, two little ones and two big ones. We have a big garden. We have an acre of corn planted. I have two sisters and three brothers. My sisters' names are Myrtle and Freda and my brothers' names are Victor, Glen and Randolph. Freda is only seven months old and Myrtle is 18 years old.—Iris Chevalier, Prevost, Wash.

William Thinks Farm Life Is Best.

Dear Aunt Nellie: I always find The Washington Farmer in the mail box or on the sewing machine. I always hunt for the Children's Corner. I am staying at my grandfather's. I live in Eatonville, Wash. My subject is "Farm Life Is Best." I have two brothers and no sisters. My brothers are both younger than I am. Their names are Orval and Graydon. Orval is seven years old and Graydon was three years old July the fifth. I go fishing almost every day. I have caught 88 fish in nine trips. I caught one 17 inches long and another a foot long and two nine and a half inches long. I will be 10 years old the sixth of October. Have I a twin. If I have will he or she please write to me.—William David Smith, Cedargrove, Wash.

Plays Her Music Every Day.

Dear Aunt Nellie: This is the second time I have written to the Corner. I like to read the letters very much. I will be in the fourth grade this year. I play my music every day. My little kittens' names are Blackjack, Johnny Jackrabbit, Tabby and Greyeyes. Have I a twin? My birthday is the 24th of November. I wish my twin would write to me. I am 9 years old. I have three brothers and no sisters. My brothers' names are Ora, Albert and Elmer.—Effie G. Luddington, age 9, Bright, Wash.

Likes to Write to the Corner Best.

Dear Aunt Nellie: I am going to write to the Corner again. I like to write to the Corner best. I think it is fun. We have about 200 little chickens, six geese, seven turkeys. I saw Ethel Miller's letter in the Corner. I wish she would write to me, as I like to write to the girls of the Corner. I was 14 the 15th day of May. I took some of the eighth grade examinations and passed some of them.—Viola Augst, Box 30, R. F. D. 1, Beebe, Wash.

Brother Goes to School With Stella.

Dear Aunt Nellie: I am eight years old. I have gone one term to school. I am ready for the third grade. My teacher's name is Gladys Rhoads. I have two brothers, one six and one five. Brother Dale goes to school with me. We ride a pony to school. It is two and one-half miles to go. I like to go to school and learn. I stay with my grandmas some in the summer. My birthday is Christmas day.—Stella Ruark, Mayview, Wash.

Glad to Hear From Ella Miller.

Dear Aunt Nellie: We take The Washington Farmer and I read the letters in the Children's Corner and like them very much. I am 7 years old and in the first grade. We have two dogs and one calf and two milch cows. We have one canary bird. I have two dolls. One of my brothers went to war three weeks ago.—Ella Miller, Peola, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the past week: Avah Sharp, Marian Holmes, Elizabeth Fogelquist, Mary Bennett, Mary King, Margarette Williams, Jane Adams, Elzina Rogers, Violet Leachman, Anna Straube, Rachel Webb, Hilda Kuki, Augusta Chevalier, Marie Haven, Beulah Shaw, Eunice Libbey, Leona Machlied, Esther Hergert, Alice Duncan and Catherine Borden.

Three-Thousand-Mile Highway Planned

Evergreen Route Would Divert Travel Into the Northwestern States

By A. E. GIPSON

The prospects for a great highway for the purpose of leading travelers from the east into the northwest were given a boost at Nampa, Idaho, July 27, when about 100 delegates from many parts of the northwest gathered in the interests of the "Evergreen highway."

This highway is designed to run from Vancouver, B. C., to El Paso, Texas, passing through the scenic and industrial sections of Washington, Oregon and Idaho. Under highway conditions as they now stand the bulk of the travel from the east finds its way into the southwest, especially southern California, and only its overflow is directed northward into the equally attractive northwest. The proposed Evergreen highway will cover a distance of 3100 miles and will, when completed, be one of the great arterial highways of the entire United States.

Among those present were many state officials and good roads officials and promoters, including Secretary of State I. M. Howell of Washington and Ben F. Hill and A. J. Elrod, also of Washington state, and active in good road promotion.

One of the direct results of the meeting at Nampa was the formation of the state Evergreen Highway association, which will play a great part in furthering the movement for the highway's completion. C. B. Ross, chairman of the Canyon county board of commissioners, was chosen president of the new association and J. A. Lakeness of Nampa secretary and Walter E. Miller of Nampa treasurer.

All the recommendations of the resolutions committee were approved, among them being the following:

Unqualified indorsement of the proposed highway, the selection of a vice president from each county in the state, the investigation by the government of the feasibility of making the proposed highway a military highway and the beautifying of the highway by the planting of trees along it.

A second meeting will be held at Lewiston some time in October, at which time the organization will be completed and further active work in behalf of the highway taken up.

A lively and enthusiastic banquet was given in the evening, at which F. S. Stone of Nampa presided. Among the speakers were P. Monroe Smock of Payette, President Ben F. Hill of the Evergreen association, Secretary of State Howell of Washington, Secretary Elrod of the Evergreen association, Carl E. McStay of Caldwell, W. S. Parkhurst of Richfield, J. A. Lakeness of Nampa and W. E. Meacham of Baker City, Ore.

The following comprised the resolutions committee:

Canyon county, Walter Griffiths of Caldwell; Ada county, G. C. Scarf of Boise; Payette county, E. C. Brainard of Payette; Washington county, C. A. Kenyon of Weiser; Owyhee county, R. C. Massey of Grandview; Lincoln county, W. S. Parkhurst of Richfield; Minidoka county, E. C. Maynard of Rupert; Bannock county, E. A. Bremm of Pocatello; Gooding county, George W. Wedgewood of Gooding; Baker county, Oregon, W. E. Meacham of Baker City; Malheur county, Oregon, C. C. Wilson of Malheur.

Information Department.

As a preface to a question which he asks The Washington Farmer, William Erickson of Mt. Vernon, Wash., says: "I thank you for the kind greetings through the paper of the proposed Information Department. I am sure it will render a great service in the promotion of greater and smaller requisites for the attainment of personal and public welfare."

RAISE STORAGE RATE

Warehouses May Add Five Cents.

With a view to assisting the warehouse companies in providing a more adequate fire protection for their property and the grain that will soon be stored in the houses, the state council of defense recently asked the state public service commission to allow the companies to increase their charge for storage by 5 cents a ton. The public service commission granted the request.

If the producer or holder of the grain considers the rate too high he may appeal to the commission for a reduction.

A statewide campaign is under way looking toward greater protection against grain fires this season, when wheat and other grains are so greatly needed for the food supply.

Clallam County Pomona Meets.

On July 14 the first regular meeting of the Clallam County Pomona grange was held at the Fairview grange hall near Port Angeles, Wash., with a large number in attendance from the six subordinate granges. About 45 new members were initiated during the day.

In addition to the customary business of the grange, C. E. Flint of Blaine gave a talk on marketing.

There were many expressions of approval and appreciation for the efforts of the business men of Port Angeles in establishing a public market for the farmers, of which Charles R. Pollock is director.

Orin Babcock, a farmer of Eden valley, is master of the county grange.

Government Clover Thresher.

The department of agriculture of the province of New Brunswick has purchased a clover thresher which is at the disposal of any farming community within its jurisdiction which desires to be independent of imported clover seed. In one county shortly after the machine was purchased 300 bushels of red clover seed were threshed. Any agricultural society or group of five or more farmers having a minimum of 10 acres of clover intended fgor threshing may apply to the department for the use of the threshing machine.

Million-Bushel Grain Elevator

Selection of the site for the new 1,000,000-bushel grain elevator with adjoining flat warehouse and water terminal facilities has been made by the Portland dock commission at St. Johns, Ore. The site is on the east side of the Willamette River, below all the bridges, and represents a combined area of 117.55 acres, and with additional space to be reclaimed extending from the shore to the harbor line, it is said the total will be 153.55 acres. The price of the property was $137,000.

The site is one of the best in the northwest, as it is large enough to leave room for expansion of the terminals as the growth of commerce demands. It will have connection with both of the railroads which come down the Columbia river gorge from the interior grain belt. It is below all the Willamette river bridges, thus saving vessels the trouble and risk of passing through a series of draws. Then, too, the widest part of the harbor is opposite the proposed terminal, and the site will be on deep water when dredging has provided the material required for the needed fill.

The commission plans to begin work soon on the first unit of the elevator and the pier, and on the bulkheading and shore work required for the fill, so as to be able to handle the 1918 crop.

5½-Ton Mack Truck With 2½-Ton Troy Trailer, Hauling Inland Empire Wheat.

Mack Trucks

For the Big Loads

NO mistake—it takes a Mack Truck to haul the heavy loads of wheat or other grain and "stand the gaff" day after day and month after month.

Mack Trucks are built to last—to meet every requirement—to give you service. You don't have to be "considerate" of Mack Trucks; they don't expect it; they ask no odds or favors.

Your neighbors are buying Mack Trucks and are finding they do all and more than we claim for them. Coming in all sizes—from one to 7 1-2 tons—you can select just the one to meet your requirements. Tell us what you want a truck for and we will offer you a suggestion as to the best-suited type.

A truck is too important an item of farm equipment to buy without looking a long way ahead. It's the ultimate wear—two, three, five years hence—that counts.

That's why you want a Mack.

Use the coupon TODAY and get our latest literature; it's interesting, and to the point.

Grain and Produce Markets

Portland Wheat.

PORTLAND, Ore., Aug. 4.—There was a fair demand at the close of the week for old wheat, especially bluestem, and buyers offered as high as $2.35, but there were very few sellers. New bluestem was quoted at $2.25, Coast basis. There was not much disposition to operate, however, as there is absolutely no speculative interest in new wheat, pending action by congress on the food bill. At the same time farmers are not offering to sell, except an occasional small lot in the early sections. Oats and barley are firm and both are very quiet.

Flour prices were raised 20 cents a barrel to the $11.60 basis for patents. Millers are carrying very little old flour. Millfeed is also scarce and strong.

Pacific Northwest Grain.

PORTLAND, Aug. 4.—Wheat—No quotations.

TACOMA, Wash., Aug. 4.—Wheat—Bluestem, $2.25; fortyfold, club and fife, $2.23; red Russian, $2.20.

SEATTLE, Wash., Aug. 4.—No wheat market.

Car Receipts at Coast Points.

Receipts of grain and hay in car lots at Coast points for the fiscal year beginning July 1 up to Saturday night for 1917-18 and 1916-17 were as follows:

	Wheat.	Oats.	Barley.	Hay.
Seattle—				
1917-18	77	57	14	246
1916-17	417	131	13	270
Portland—				
1917-18	78	72	9	87
1916-17	344	181	19	143
Tacoma—				
1917-18	89	13	1	93
1916-17	394	21	7	99
Total—				
1917-18	244	142	24	426
1916-17	1155	333	44	508

Live Stock Quotations.

At Omaha.

OMAHA, Aug. 4.—Hogs—Receipts, 8340; market 10@15c higher; heavy, $15.25@16; mixed, $15@15.30; light, $14.90@15.85; pigs, $12.50@14.50; bulk, $15@15.35.

Cattle—Receipts, 200; market steady. Native steers, $9@14; cows and heifers, $6.50@9.50; western steers, $8@11.50; Texas steers, $7@8.50; cows and heifers, $6@9.50; western steers, $8@11.50; Texas steers, $7@8.50; cows and heifers, $6@8.50; canners, $4.75@5; stockers and feeders, $6@8.50; calves, $9@12.50; bulls, stags, etc., $5@8.50.

Sheep—Receipts, 300. Market steady. Yearlings, $9.50@10.50; wethers, $9@10.25; ewes, $8@9; lambs, $13.60@14.10.

At Chicago.

CHICAGO, Aug. 4.—Hogs—Receipts, 8000. Firm. Market 5c above yesterday's average; bulk, $15.25@16.30; light, $14.75@16.25; mixed, $14.70@16.40; heavy, $14.55@16.45; rough, $14.55@14.75; pigs, $11.25@14.

Sheep—Receipts none; market steady. Prime lambs, $11.50@12; good lambs, $10.50@11.25; prime yearlings, $8.50@9; prime wethers, $8@8.50; best mutton ewes, $5@7.

Portland Market.

PORTLAND, Ore., Aug. 4.—The hop market is becoming excited with prices advancing about a cent a day. In Oregon and Washington contracts were written last week at 12 1-2 to 15 cents, and at the close 16 cents was offered, while in California the contract market advanced to 17 cents. Early fuggles were sold here at 20 cents and later a bid of 21 1-2 cents was turned down. Dealers report only 8 or 10 crops in the Yakima valley not contracted and but 259 bales of the old crop remaining in growers' hands.

What jobbers believe will be the last straight car of Wenatchee apricots will arrive tomorrow, but local express shipments are expected for several days yet.

Walla Walla onions are coming in regularly in carlots and have the market to themselves.

The wool market continues inactive with prices firm.

There is a better feeling in the hide market, in response to inquiries from the east, but former prices are still quoted by local dealers.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $49 per ton.

Corn—Whole, $80; cracked, $81 per ton.

Millstuffs—Bran, $35 per ton; shorts, $38.

Barley—No. 1 feed, $45; brewing, nominal; rolled, $51.

Hay—Buying prices: Timothy, eastern Oregon, $26; alfalfa, $18; grain, $12@15.

Eggs—Oregon ranch, case counts, 36c per dozen; candled, 37 1-2@39c.

Poultry—Hens, 15@16 1-2c; ducks, 13@17 1-2c; turkeys, alive, 18@21c; geese, 8@9c.

Butter—City creamery, prints, 43@44c per pound; cubes, extras, 40 1-2c.

Cheese — Tillamook triplets, 22c; young Americas, 23c.

Dressed meats — Veal, 14@14 1-2c; pork, 19 1-2@20c.

Hops—1916, 10@12c; contracts, 16c.

Potatoes—New, 2 3-4@3 1-2c per pound.

Wool—Eastern Oregon, fine, 58@61c; coarse, 58@65c; valley, 72 1-2@75c.

Beans — California small white, 16 1-2c; large white, 15c per pound.

Hides—Salted hides (25 lbs. and up), 20c; salted stags (50 lbs. and up), 16c; green and salted kip (15 lbs. to 25 lbs.), 20c; green and salted calfskins (up to 15 lbs.), 32c; green hides (25 lbs. and up), 18c; green stags (50 lbs. and up), 13c; dry hides, 34c; dry salt hides, 29c.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potates, $2.75@3 cwt.

Apples—New Washington apples, $1 20-lb box.

Butter—Blanchard cartons, 44c lb; Medo-Maid, 44c lb; Cascade, 44c lb; Gold Leaf, 44c lb; Better Butter, 44c lb; Attalia, 44c lb; Diadem, 44c lb; Hazelwood, 44c lb; Solid Pack, 42c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 20c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $12@12.50.

Live Poultry—Hens, 19c lb; old roosters, 10c; ducks, 13@14c; geese, 11c; turkeys, 20@25c.

Dressed Poultry—Hens, 22c lb; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 15c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

Butter and Eggs.

ELGIN, Aug. 4.—Butter, 25 tubs at 88 1-2c.

SAN FRANCISCO, Aug. 4.—Eggs—Fresh extras, 43 1-2c; fresh firsts, 43c; fresh extra pullets', 37c.

CHICAGO, Aug. 4.—Butter unchanged.

Eggs—Receipts, 11,236 cases; unchanged.

PORTLAND, Ore., Aug. 4.—Butter—Cubes extras, 40 1-2c. Others unchanged.

San Francisco Produce Market.

SAN FRANCISCO, Aug. 4.—Butter—Fresh extras, 42c; prime firsts, 41½c.

Eggs—Fresh extras, 43½c; fresh firsts, 43c; fresh extra pullets, 37c; extra firsts, pullets, 36c.

Cheese—New firsts, 19½c; Young Americas, 24c.

Poultry—Hens, 23@24c; fryers, 27@28c; broilers, 26@28c; pigeons, $1.50@2 per dozen; squabs, $2.25@3; geese, 18@20c pound; ducks, 16@18c.

Hay—Wheat, $17@19; tame oat, $18@19; barley, $13@15; alfalfa, $13@18; barley straw, nominal.

Seattle Market.

SEATTLE, Aug 4.—With the street car trouble settled and city affairs almost back to normal, the markets are again able to control prices and free themselves of the enormous surplus that accumulated during the recent slump. Prices are now compratively steady with the Western avenue jobbing houses doing good business.

There is a big demand for apples and dealers are looking forward to the time when Yakima will flood the market. Already small shipments have been received from this district but not enough to fill the demand. Cooking stock is selling at $1.25 to $1.50 per box.

Apricots are getting scarce and the price is expected to rise from $1.25, at which they have been steady, to $1.50.

Local spuds are slow and are selling at $1.25 to $2.50 a sack. In most instances the potatoes are small and immature.

Cantaloups and watermelons are plentiful.

Eggs have advanced despite the efforts of most dealers to hold them back. Fancy ranch stock is bringing 42 to 45 cents per dozen, pullets 42 to 43 cents and checks 39 cents a dozen.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transaction by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 38@40c per dozen.

Poultry—Live hens, fat, over 4 lbs., 18c per lb.; 2 lbs. and under, 14@16c; old roosters, 11c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb.; broilers, live, 16@18c per lb.

Butterfat—47c per lb.; dairy butter, 31@32c.

Beef—Buying prices: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 30c per lb.; green hides, 17c per lb.; salted bulls, 16c per lb.; dry hides (short trim, 40c per lb.; bull and dry salts, 4c per lb. less; green bulls 12½c per lb.; dry butcher full wool sheep pelts, 36@38c per lb.; green calf, 30c.

SELLING PRICES.

Asparagus—Local, $2.25 per crate.

Apricots—$1.25 per crate.

Cherries—Local Bing, 10@12c lb.; Royal Anns, 5@6c lb.; local pie, 6@7c per lb.

Feed—Scratch feed, $80 per ton; all grain chop, $61 per ton: oats, $54 per ton; rolled oats, $55 per ton; rolled or ground barley, $52 per ton; clipped barley, $53 per ton; wheat, $82 per ton; bran, $38 per ton; shorts, $41 per ton; soy bean meal, $54 per ton; whole corn, $94 per ton; cracked corn, $95 per ton.

Hay—Eastern Washington timothy, $27 per ton; alfalfa, $22 per ton; double compressed, $30 per ton; wheat hay, $22 per ton; Puget sound, $20 per ton; straw, $15.

Raspberries—Red, $1.75@2 per crate.

Butter—Washington creamery extras, cubes, 43 c per lb.; do bricks, 44c per lb.; creamery firsts, cubes, 39c lb.; do bricks, 40c per lb.

Eggs—Fresh ranch, 45c per dozen.

Potatoes—Puget sound, 2@2 1-2c per lb.; Kennewick, $2.75@3 per sack.

Wool.

BOSTON, Aug. 3.—The Commercial Bulletin will say tomorrow:

"There has been a moderate business in wool during the last week. The market is very firm and possibly the least bit higher. Demand has entered on new arrivals of territory wools in the original bags, which are selling on a clean scoured basis of $1.80 to $1.70.

"Buying in the west has been rather weager this week, although prices keep strong."

Scoured basis: Texas, fine 12 months, $1.65@1.70; fine, 8 months, $1.45@1.50.

California: Northern, $1.70@1.75; middle county, $1.40@1.45; southern, $1.15@1.20.

Oregon: Eastern No. 1 staple, $1.75; eastern clothing, $1.50@1.55; valley No. 1, $1.45@1.50.

Territory: Fine staple, $1.75@1.80; half blood combing, $1.45@1.50; 3-8 blood combing, $1.30@1.35; fine clothing, $1.55@1.65; fine medium clothing, $1.40@1.50.

Pulled: Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.45@1.50.

CONTROL FLOUR PRICES.

Agreement Is Said to Be Reached

People who have predicted that $2 wheat—the minimum price fixed by the new food bill for next year's crop—will mean $14 flour may quiet their fears, according to reports from Washington, D. C.

The big flour millers of the northwest have been talking things over with Herbert C. Hoover. The result of the conferences has not been made public but it is stated that an agreement has been reached that when wheat sells at $2 a bushel the fancy patent brands of flour shall sell in Chicago at $11.50 a barrel and in New York at $12. The brands used by bakers will sell at $9.50 in the middle west and at $10 in New York. Western prices will be regulated on this basis.

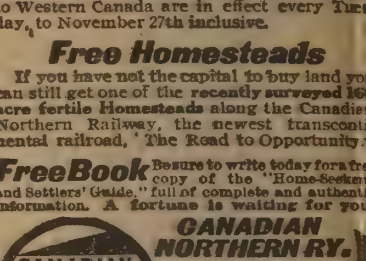
88 Bu. Oats Per Acre

Mr. A. Taylor writes: "I had 315 acres in oats that averaged 88 bushels an acre, 30 acres in wheat that averaged 50 bushels an acre, 20 acres in barley that averaged 50 bushels an acre." This is only one of thousands of good reports from Western Canada. Yet nowhere can you buy good farm land at such low cost as along the Canadian Northern Ry.

BEST FARM LANDS at $15 to $20 per acre

Here you can buy specially selected centrally located lands close to the railway, that will produce crops that can only be equaled on farms costing $150 to $200 the acre in a more densely settled community. This includes the best grain land also adapted to dairy and mixed farming. Here the man with limited cash can become the owner of one of these fertile farms through the liberal installment payment plan.

Low Fares Low round-trip home-seekers' fares to Western Canada are in effect every Tuesday, to November 27th inclusive.



Free Homesteads

If you have not the capital to buy land you can still get one of the recently surveyed 160 acre fertile Homesteads along the Canadian Northern Railway, the newest transcontinental railroad, 'The Road to Opportunity.'

Free Book Be sure to write today for a free copy of the "Home-Seekers and Settlers' Guide," full of complete and authentic information. A fortune is waiting for you.

Second-hand, but good as new. What have you to sell? Let us give you an offer. What do you want? We have it. Martin, your professional photograprer, Picture Corner, Spokane, Wash.

State Fair Sheep Sale

The Washington Farmer is glad to receive the following letter from William Hislop, professor of animal husbandry at the State College of Washington, with regard to the coming ram and sheep sale in connection with the Washington state fair at Yakima September 17-22. This is a new movement.

Professor Hislop's Letter.

To the Editor of the Washington Farmer: There will be held on the Washington state fair ground, during the annual state fair at Yakima, Wash., September 17 to 22, a ram and sheep sale. It will be conducted under the auspices of the management of the state fair authorities. However, I will have direct charge of its management. This sale will include 1000 registered rams and between 1000 and 2000 ewes, principally range-bred ewes, but there will be included some purebred females.

This is a new movement. It arose out of the need expressed by range breeders and farmers for more sheep in this state. There has been no place where our range flockmaster has been able to obtain a satisfactory class of rams. The Salt Lake City ram sale is most excellent, but it is too far away for the majority of our breeders to attend. We propose by this method to procure easily for them the desired class of rams and to offer a medium whereby they may sell a few of their range ewes to farmers who desire to start sheep raising.

Needless to say, this sale will be conducted along strictly nonpartizan lines. Sheep sales of a public nature are necessarily new things; consequently their development has not reached that of the public selling of beef cattle, dairy cattle, horses or swine.

We aim to include the following breeds of sheep: First, Hampshires, Shropshires, Lincolns, Cotswolds, Rambouillets, Oxfords and Romneys. We are doing so because each one of the above-mentioned breeds is represented more or less on the ranges of this state, as well as on the ranges of Montana, Idaho and Oregon.

The county agricultural agents, commercial clubs and the state college are cooperating with the sheepmen of the state in this movement. It can not but be a success. Inquiries at hand now would indicate that the sale already is an established affair.

I am enclosing an entry blank to show you the nature of our plans for conducting the auction.

WILLIAM HISLOP.

Entry Blank for Sheep Sale.

The entry blank mentioned for the sheep sale by Professor Hislop follows:

I hereby offer the following entries for the Washington State Fair sheep sale:

Registered Rams.

Breed .....Ram lambs .....No. .....
Breed .....1-year-old .....No. .....
Breed .....Aged ram .....No. .....
Total number rams entered in sale .....

Registered Ewes.

Breed .....Age .....No. .....
Breed .....Age .....No. .....
Breed .....Age .....No. .....
Total number ewes entered in sale .....

Grade Bucks.

Breed .....Age .....No. .....
Total number grade bucks entered .....

Grade Range Ewes.

Breed .....Ewe Lambs .....No. .....
Breed .....Yearlings .....No. .....
Breed .....two-year-olds .....No. .....
Breed .....Aged ewes .....No. .....
Total number graded ewes entered .....

1. The charges for selling will be sufficient only to cover sale expenses.
2. All entries must be in the hands of William Hislop, Pullman, Washington, by September 1, 1917.
3. No registered ram may be offered at this sale unless accompanied by the registration papers and carrying a label in his ear, if a label is furnished by the association in which he is recorded.
4. Above rule will also apply to any ewe offered as a pure bred.
5. When a consignor does not accompany his sheep, all transportation charges must be prepaid. Feed and care will be charged for at actual cost.
6. The manager reserves the right to disqualify any sheep of doubtful pedigree.
7. The manager reserves the right to change any and all rules when deemed expedient.
8. No sheep may be removed from the jurisdiction of the manager until all settlements are made.
9. The manager reserves the right to decline any entry offered.
10. The manager reserves the right to sell single entries in pens and to divide pen lots if necessary.
11. A check must accompany each entry list, amounting to 50 cents for each sheep entered. If sheep are withdrawn, the fee will be retained. If sheep are consigned and sold, it will be applied on the expenses of selling consignor's sheep.
12. All grade bucks and rams must be described accurately as to age and breeding.

I hereby agree to the above rules and regulations.

Name .....
Address .....

ADDRESS ALL CORRESPONDENCE TO WILLIAM HISLOP, PROFESSOR OF ANIMAL HUSBANDRY, STATE COLLEGE OF WASHINGTON, PULLMAN, WASHINGTON.

Canada Thistles

To the Editor: I would like to know how to kill Canadian thistle, please.
V. L., Pullman, Wash.

The Answer.

The above question was referred to the Washington State college, and F. L. Pickett, professor of botany, answers as follows:

There are two general methods which may be considered in discussing means of killing Canadian thistles. One of these is the use of poisonous materials to kill the plant; the other is a starvation process. If the plants are few, it has been found feasible to cut the indicidual plants off about three inches below the surface of the ground, and sprinkle over the top a generous handful of common salt, or better, of copperas, or iron sulphate. If each plant is treated in this way, the chances are very good for them to die out. However, this plan is not in every case successful.

The second and perhaps better method of treatment, especially where there is a considerable patch, is one or two means of starvation. These plants have stems deep under ground, in which there is stored up a considerable quantity of reserve food material. As the new leafy stem grows above the ground, more food material is added to these underground reservoirs so that they are able to grow for a considerable time without producing new green leaves. The underground stem also acts as a means of distributing the plant. Plows and harrows merely cut and break the underground stems into pieces which when carried to new soil will start plants there. In general it may be said that the more that these plants are cut to pieces, the more plants they will produce provided these stems are left under ground.

If the plants can be prevented from producing leafy stems at any time for two seasons or more, they will probably die. This may be done by careful cultivation as with some hoed crop. No half-way measures will serve your purpose in this case. It is a matter of killing every branch of the plant, if you would get entirely rid of it. Any plant in the bunch allowed to grow will renew the food supply and make necessary a fight again next season.

Persistent work will certainly win out, but you must remember that only the most persistent, careful work will give results. Sometimes this starvation process is carried on in a little different way. If the thistles are found in close, small patches, these patches may be covered over with tarred roofing paper, or roofing felt, and old straw and even soil piled on top of this paper to hold it in place. Such a treatment prevents the plant from getting out into the sunlight and producing more food, and in time it may be starved out in this way.

Personally, I am inclined to pin my faith to the careful cultivation method, feelinfi quite sure that very careful work will give satisfactory results.

Preparing for Larger Acreage.

A forehanded farmer is now considering the proportion of land to be plowed this fall. As a general thing throughout the Willamette valley, more land will be plowed this fall and a larger acreage will be put into crops than for many years.

"Results are Better"

MITCHELL
Mitchell Motor and Service Co., Seattle
"results are better and cost of operation considerably lower while using Zerolene."

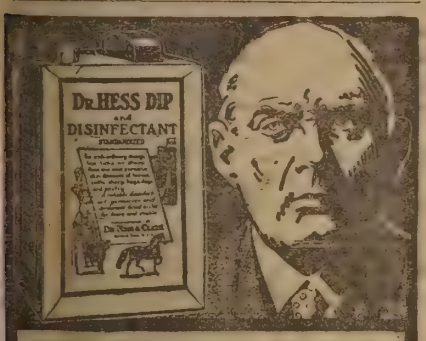
News for Breeders

Sam Wade, the Percheron breeder of Enterprise, Ore., not long since sold to E. F. Sawyer of Palouse, Wash., two yearling fillies, one 3-year-old and the 4-year-old stallion McKinley. The horse is by Malcolm, a son of the great Calypso, and is a great horse himself. McKinley was the first prize-two-year-old and junior champion at the Cascade International Stock show at North Yakima in 1915 and is a horse of wonderful quality. Another of Mr. Wade's sales this spring was to W. D. Greer of Wallowa, Ore., who purchased Nero, another good son of McKinley.



Nine years ago Mr. Wade bought Ethel, a young mare that had won first at the Iowa, Minnesota and South Dakota state fairs and was grand champion at South Dakota. Mr. Wade has shown her once at the Oregon State fair and Cascade International, and twice at the Northwest Live Stock show at Lewiston, winning first and grand champion every time. He bought Malcolm the same year, also Cerise, a yearling that won third prize at the Chicago International. Mr. Wade runs his Percherons on the hills of his 1300-acre ranch, and they have bone, muscle and nerve.

Bird, one of the grand old mares that Mr. Wade owns, is 14 years old this spring. She has produced 10 colts and has only been served 11 times, missing one year. She is the dam of McKinley and was second to Ethel when she won her championships.

Exercise Show Stock

By William Hislop.

Exercise is a most important factor in conditioning show stock. If not properly exercised, the animals get stale, their appetites pall and they soon begin to fall off in flesh instead of thriving. Horses should be exercised regularly. Cattle should be turned out over night, and hogs should be exercised by being compelled to walk from a quarter to a half mile daily. Sheep require exercise to make their flesh firm to the touch. Horses and cattle, too, should be thoroughly groomed, especially during the last two months of feeding. Sheepmen begin to trim the fleece for three or four months beforehand. Hog men usually begin to wash their animals about a month before show time. Show cattle are best not to be washed too often before show time, because their hide and hair get harsh. Likewise the legs of horses suffer (lose their freshness) by too frequent washing. The horns of beef cattle should always be polished when the animals are shown, so as to present a neat and attractive appearance. In the scraping and polishing of horns, care must be taken so as not to expose the core, and thereby cause bleeding. The shell should never be scraped and polished until a red appearance shines through it. If the horn is too long, it should be shortened by cutting a piece off with a fine tooth saw. Then file the horns at the points to their natural shape. Later use a piece of emery paper and apply some oil. The hoofs should also be cleaned before entering the show ring.

Kill Disease Germs
Purify the Air

Dr. Hess Dip and Disinfectant

Means Animal Health

Use about the barn, pens, chicken yards; use at the house on garbage cans, sinks, drains, cesspools. It cleanses and purifies—keeps down bad odors and smells and destroys disease germs. Dip your sheep to eradicate scab and kill ticks. Dip or spray hogs to kill lice.

Sold on Money-Back Guarantee

Pint bottles, quart, half-gallon and gallon cans and barrels.

Dr. Hess Fly Chaser protects animals from flies. Does not gum, blister or discolor hair.

If not at your dealer's, address

DR. HESS & CLARK, Ashland, O.

Segis Pontiac Riverside.

This picture shows the richly bred bull, Segris Pontiac Rierside, that heads the herd of Ernest Johnson, Scappoose, Ore. His dam has a record of 31.47 pounds of butter in seven days and 118.99 in 30 days, with 575 and 2746 pounds of milk. He sold in the Pacific International stock show in 1914 at just two years old for $1025. He has grown and spread since then and is a bull of good capacity as well as rich breeding. The photo was taken in his two-year-old form.

Mr. Johnson added five head of females to his herd a short time back, paying $1881 for them at W. B. Scott's sale at Woodland, Wash., and now has about 40 head. They are big roomy cows and Mr. Johnson has some good young stock coming on from his present, as well as former herd bulls.

Sale of Shorthorns.

Sensational prices were received at the Carpenter & Ross sale of Shorthorns (mainly imported animals) on June 7. The sale was held at Chicago and was attended by practically all the prominent Shorthorn breeders in America. The 108 head sold for $146,650, or the remarkable average of $1357.87. Caledonia, an imported roan bull, a year old in May, bred by William Duthie and sired by Emblem, topped the sale, going to Park Salter of Wichita, Kan., for $7000. D. Kramer of Tulsa, Oklahoma, paid $3250 for Proud Baronet, a beautiful white yearling. Owen Kane of Wisner, Neb., paid $3000 for the imported cow Edgecate Winnie, and T. T. Miller of Los Angeles, Cal., paid $3100 for imp. Brandsby's Jinny 18th. This was the only animal in the sale coming to the Coast country, except the yearling bull, Maxwalton Reformer, bid in by H. P. Whitman of Pendleton, Ore., for $525. H. A.

Eight Bulls For $13,425.

And now comes another Shorthorn sale with a remarkable price average. Bellows Brothers, of Maryville, Mo., on June 14 sold eight bulls for $13,425, an average of $1678, and 43 cows and heifers for $46,485, an average of $1081, or a total of $599,910 for the 51 head. Rosewood Reserve, a two year old son of Fair Acres Sultan, out of a Rosewood dam, brought top price of $8100. He went to Mrs. J. E. McCauley of Becket, Mont. Maxwalton Clipper 8th, a daughter of Avondale, brought top price for female, going to Jackson & White of Hurley, S. Dakota, for $2650. Arkansas buyers took several, indicating the growing interest in good cattle in the south, and T. T. Miller of Los Angeles, Calif., got one good bull for $1750. H. A.

Gue Herd of Holsteins.

George A. Gue of North Yakima is debating whether or not to dispense his entire herd of Holstein cattle. Mr. Gue is not only one of the best posted auctioneers on Holstein breeding, but he believes in them and enjoys breeding and developing the stock. He now has about 40 head of such blood lines as "King of the Pontiacs," "Pontiac Korndyke," "Hengerveld De Kol," "Paul Beets De Kol," and "King Segis."

On account of the growth of his auction business he finds he can not devote the time to his own herd he should and besides some people object to an auctioneer being a consignor or a bidder in any sale he is conducting. It will be a great sacrifice for Mr. Gue to part with his herd. It may, in the end, be for his best interests and that of the breed. D. G. S.

Printer Wanted.

Wanted—A printer to take entire charge of my weekly paper while I go to war. Job may be permanent.—Mounds, Ill., Herald.

West's Heifers to Japan.

Harry West, the Scappoose (Ore.) Jersey breeder, recently sold two very promising Jersey heifers to S. Ban, Japanese merchant and importer of Portland, Ore., and Tokio, Japan. The heifers were both out of imported dams and by Mr. West's great show bull, Fussy Fern's Noble. Mr. Ban took them, along with two Holsteins purchased from P. A. Frakes, to his plantation at Tokio, Japan, sailing from Seattle June 13.

Imported Onota, the cow that won the butter contest in the Royal Jersey show on the Jersey Islands in 1913 for producing three pounds six ounces of butter in 24 hours as a 3-year-old with first calf, when 123 days in milk, dropped a fine bull calf on July 4, by Fussy Fern's Noble. It is Mr. West's intention to keep the little fellow for a herd sire, as he has both show and type and a producing ancestry.

H. A.

Oxen on Old-Time Farms.

E. J. Searls of Castle Rock, Wash., remembers the days when the principle source of traction for the farms and logging camps of the northwest was oxen. Mr. Searls owned a team of oxen, weighing a ton each. He broke the animals when they were a few months old, teaching them at first to lead and then to work with harness. In this way no real "breaking" was necessary, and the big fellows were always tractable.

And let me tell you, they could travel," the pioneer comments. "I fed them grain, just as I would a road horse, and they traveled along with any team on the road."

Mr. Searls is of the opinion that the farmers of today will have to come back to the dual purpose cow known generations ago in the east. The old, red Durham used to hold her own at the milk pail, while at the same time she and her offspring could be finished for market so as to command the top

Breeders' Department

Berkshire Boars for Fall Service

I have a number of thoroughbred Berkshire boars sired by W. S. C. champion boar, brother to Reserve Champion at Panama exposition. Sows from Masterpiece strain. Large, smooth, prolific type.

Delivered f. o. b. your station. Registry papers complete.

R. W. SNYDER, Washtucna, Wash.

Willys SIX

L Head Type of High Power

A New Wonderfully Balanced Six

Sturdy Light Weight—Abundant Power

This announces a brand new development in Sixes.

Here it is at last!

A popular priced *Light* Six with *weight and power in scientific balance.*

Think what that means.

Economy and durability in combination with six cylinder advantages at last an accomplished fact.

Don't ask any more why you can't get a durable light weight six with real six cylinder performance.

You can—it's this new Willys Six.

By scientific designing with the aid of our great experience in building Sixes, we have produced a *lighter car* without sacrificing sturdiness.

Its forty-five horsepower motor combined with its light weight, makes it a wonderful performer.

Quick as a flash on the getaway; speedy; surprisingly economical, yet with worlds of power and the sturdiness to support it.

Think what this means figured
—in greater gasoline economy
—in additional tire mileage
—in an easier car to handle.

Now let the Willys-Overland dealer demonstrate the wonderful performance of the New Willys Six—we want you to sense what this new balance between power and weight means in an economical, durable light Six.

We want you to know, too what a wonder the New Willys Six is from the standpoint of easy riding and easy handling.

Also we want you to know what a beautiful car it is---long, sweeping graceful lines---one of the year's most advanced models---a perfect beauty.

And the price!—$1295 complete!

It's the Six you've longed for—go in and see it now—before our dealers are loaded with orders for more Willys Sixes than they can get.

Motor 3½-inch x 5¼-inch
45 horsepower
4½-inch tires
120 inch wheelbase
7-passenger capacity
Finished in olive green

Catalog on request. Please address Dept. 1151

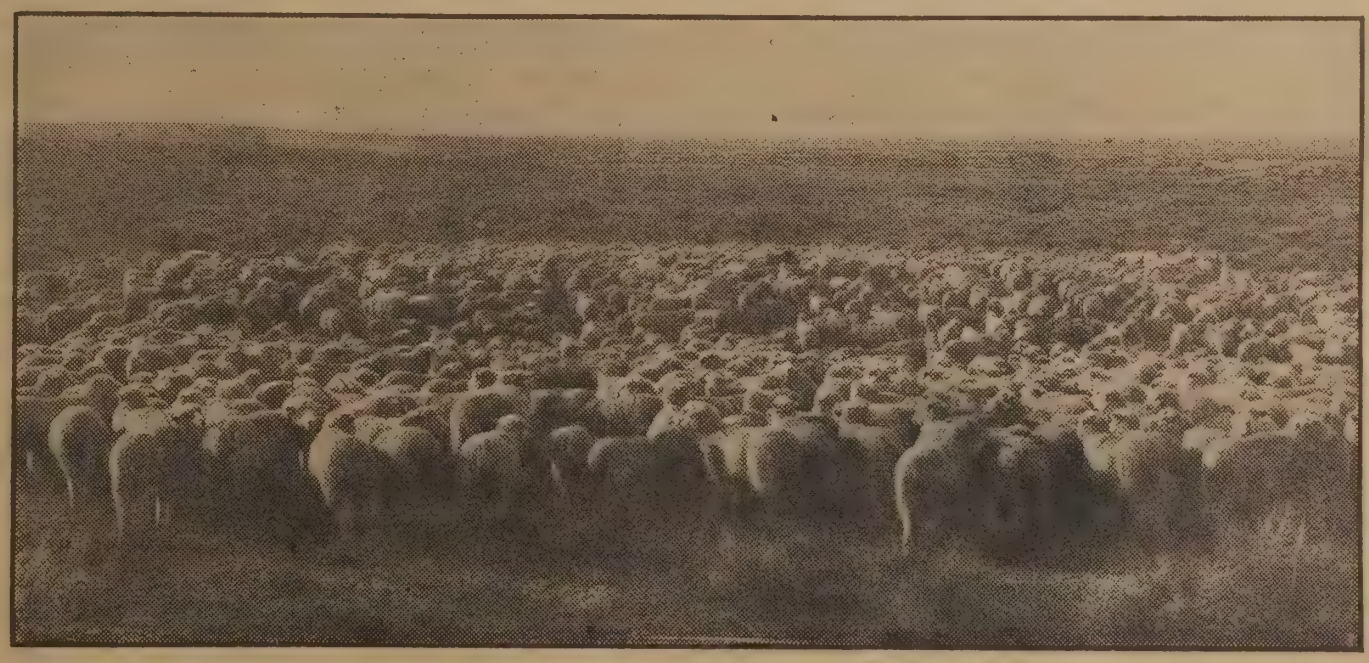
VOL. XL. NO. 33. AUGUST 16, 1917. * * WEEKLY.

Lamb Boycott Would Be Hysterical, Says Hoover

Office of Food Control Is With Stockmen in Developing the Industry

The stockmen who have developed the excellent strains of early maturing meat animals for this country have nothing to fear from the national food controller. There will be no boycott on lambs and young hogs and baby beeves. This is indicated in a message from Herbert C. Hoover, food controller, to E. F. Benson, state commissioner of agriculture at Olympia, in which Mr. Hoover says that "anything in the nature of an organized boycott against the use of young lamb is hysterical and did not originate in this office."

As reported in The Farmer last week, the stockmen have risen in arms against a movement that they believe uneconomical both to the producer and to the consumer —that opposing the use of any immature meat.



The movement grew out of the desire to conserve the meat supply as much as possible, but the stockmen immediately began to pour in evidences that the feed required to carry a lamb or pig over the winter, or to raise a dairy calf to a yearling or more, or to carry a beef animal over an 18 or 20 months' age, was usually worth more than the additional weight of meat gained.

The seriousness of the situation as viewed by the producers of the northwest was voiced in the following telegram from Mr. Benson to Mr. Hoover, which brought forth the latter's statement that a boycott was hysterical:

"The boycott on use of lamb for meat will reduce output of mutton and wool throughout the west if not throughout America. Holding over mutton lambs is uneconomical. So is keeping young cockerels until they are a year old, or feeding steers until 4 years old instead of selling as baby beef at 18 months and for the same reasons. Situation really serious and alarming. Unless boycott is raised, the damage will be far-reaching and will produce the opposite results from what you are striving for."

Controller Hoover has announced the calling of a conference to be held in Washington, D. C., this week for the purpose of working out a systematic and nation-wide plan for the conservation of the country's live stock.

The Dry Hills Along Snake River Produce Flocks Like This

Some 35 miles northwest of Walla Walla, on the hills along the Snake river, there are still considerable areas of land unreclaimed by the farmer. In the early months of the year, before the heat of summer dried up the native vegetation, it is one of the sheepmen's Edens. The photograph above shows a flock belonging to Adrien Magallon of Walla Walla, grouped and posed for the camera. Beyond them are the sagebrush stretches that vie with the bunchgrass for honors of mention. Look carefully and you will see the flockmaster standing beyond the sheep. This phototograph is similar to many that could be taken throughout the northwest, but their number and the size of the flocks are gradually diminishing. Ranges are fast disappearing. The future of the sheep industry is coming more and more to depnd on the farmer who carries a small flock on his grain or hay farm.

The Food Control Bill Just Passed Should Be Studied by Every Citizen of the Country. The Farmer Gives It in Full This Week

Adversities Bring Improved Methods

Struggles of Present Time Will Result In Betterment In Years to Come, Thinks a West Side Producer

GIG HARBOR, Pierce County, Wash., July 30.—The total injury to crops from the prevailing drought still on is not yet fully apparent. Second crops of clover, Italian rye and other forage crops, have suffered and will suffer quite severely without doubt. Strawberries very nearly escaped its effects, although a light crop from other causes. Raspberries, and loganberries will be considerably shortened in yield by reason of the drought. Upland pastures will be scant of feed, late potato and other root crops will also suffer. Oat hay is a little scant on uplands, but that and the first crop of clover and vetch cut after July 5, has been secured in such fine shape that it will very nearly offset the slight shortening of the growth by reason of the uncommonly early drought. Deep and thorough preparation of the seedbed for all spring sown crops brings its reward in such times as these.

The preesnt and prospective high prices for all cow products will undoubtedly prove a stimulant to the dairy business and check any tendency to curtail this great industry in spite of the prevailing high feed prices. If the country does not actually run short in its supply of bran and shorts the cow business will keep up. It is feared that the short wheat crop may yet take away this last crop of the northwest dairyman. The poultryman is now running heavily on bran which increases the strain on that valuable wheat product. All this must lead to better methods of farming. The thoughtful farmer who plans one, two and three years ahead will aim to cull out the star boarders in all lines of live stock as never before. The vicissitudes we are now going through will surely bring better methods to the front. W. D. BOYNTON.

Feeding Hay Already.

OLYMPIA, Thurston County, Wash., Aug. 7.—In regard to drought and heat effect on crops, all the late seeded cereals or grain crops have suffered badly and yield will range from 50 to 60 per cent. Potatoes, with lack of proper amount of cultivation, even on bottom land will yield not more than 60 per cent. Where the land was properly prepared and care taken the potato crops are good. Early seeded crops, oats, wheat and rye are all right where fertility is sufficient. All pastures are greatly injured and hay, when no soiling crop was arranged, is being fed on a large number of dairy and stock farms. Poor crops will undoubtedly cause a depression in the live stock market, then excessive sales, but only temporarily. Farmers should make special efforts to keep the best stock and not overstock in the future. This applies to small farms and local conditions. C. H. BERGSTROM.

Lectures on Canning.

SOUTH BEND, Pacific County, Wash., Aug. 1.—This county is not suffering from the drouth and heat as much as the eastern part of the state. We have had one rainfall of .30 of an inch since the first of July and the ground is only dry a couple of inches on top, although a good rain would do lots of good. We have had no excessive heat, the warmest day registering 82 degrees. The weather has been favorable to fruit and berries; wild blackberries are ripe now. The cannery located at South Bend is ready to receive beans and berries. A number of people have planted large plantings of beans for the cannery and are cultivating blackberries for this purpose. This year will be an experimental year both for the cannery and for the grower and it is hoped that both will be successful for an industry like this will not only encourage older gardeners, but will stimulate an interest among the boys and girls. Early this month the county agent has arranged for a series of lectures on canning to be given at the county seat. The lectures and demonstrations will be given by experts. Live stock prices are increasing. Looking ahead two or three years it might be well for the farmer to increase the productiveness of his cows, for help will be scarce and he will need to keep only those cows that do well and not the poorer grades. The farmer will need to study efficiency to make the most of what he has. He will have no time to care for a cow that averages only two gallons of milk a day. He will take two of this kind and sell them and buy one that yields twice the amount. The farmers need the best stock and the best seeds, if they are going to do their best raising food for the world in war times.

MRS. WINNIFED BUCKINGHAM.

Kill the Dairy Steer?

RAINIER, Thurston County, Wash., Aug. 2.—The season here has been rather peculiar, being very cold and backward and wet up to the first week in July. Since then it has been dry with the exception of two short, cloudy spells, at which times light showers fell. July was not excessively hot, with a few warm days and cool nights, making good hay weather and a good crop was put up. August has started in hot and dry with drying winds. It is getting very dry and pastures are drying up. I do not think the grain crops have been materially hurt by the dry weather; although some of them are short. Potato and garden truck need rain. The manure spreader will help for better crops. The present and prospective prices of milk and butter will stimulate the keeping of more cows. Milk at the condenser is $2.45 per hundred pounds, sweet cream is 52 cents and sour cream 44 cents per pound butterfat. There are no beef cattle. In this country hay is remaining high all the time. There is not enough to supply the home demand, as many carloads of alfalfa are shipped into this coast country. We have about two seasons, wet and dry, the latter from July 1 to October 1 to 15. The pastures are dry, compelling the farmers to feed hay from November 1 to May 1 to bring the cattle through in any kind of a growing condition. There is not much profit in feeding a ton to two tons of good hay to such cattle. Laws to prevent the vealing of calves will not work, as you can not compel the farmer to raise beef at a loss when he knows it. This is what I did as an experiment. I kept two steers calves until they were 2 1-2 years old and then sold them for less than $50 for the two. They were only of ordinary size and fed on pasture with the cows with hay as feed in the winter time and no grain. The cattle went down to almost nothing, the country being short on feed and hay was very high. That is the whole thing in a nut shell. Raise plenty of feed and feed it to the dairy cow. L. F. DAVIS.

Ideal Haying Weather.

DARRINGTON, Snohomish County, Wash., July 30.—With ideal weather for about a month the hay in this section is all in the barns. The crop turned out far better than expected, with goods of first quality. Help was hard to get with wages at $3 and $4 per day and board. Some got their hay in on the cooperative plan, one helping the other. Oats and other grains are looking fine. A good deal of the oats will be cut for hay just as soon as the weather settles again, as we have had showers for the last three days. Rain was badly needed for all garden stuff. I notice quite an increase in oats and spring wheat planted for chicken feed. We can't plant very much grain here because of the lack of cleared land and all the appliances needed for harvesting and threshing a grain crop. Owing to the closing down of all logging camps and mills around here the farmers will feel the results very keenly, as we had a good home market for practically all the beef and pork and spuds for the last two years, at fair prices.

C. B. NEIDERPRUM.

Dairy Prospects Good.

MONTBORNE, Skagit County, Wash., Aug. 2.—The dry weather has done no injury to the crops yet. Farmers are increasing their dairy herds, as they have a bright future before them. The farmers are breeding a higher and better class of live stock here in this county the past few years, and within the next three to five years, every herd will have first class males at their head. JOHN B. PETERSON.

Increased Sheep Holdings.

SALMON, Lemhi County, Idaho, Aug. 6.—The season has been extremely dry and hot, but no damages to crops have resulted, as all crops are irrigated in this county. The water for irrigating has been more plentiful than usual. The yield of hay has been short from the effect of the early freeze last winter while there was no snow. Alfalfa and clover were damaged by the freeze which came while plants were green from late irrigations. The increased acreage of hay about equals loss from the winter effects. There is a tendency to decrease the holdings of cattle on account of the high price of hay. The sheep holdings will be increased about 25 per cent. Hay is valued at $15 a ton. An effort should be made to influence the farmers to raise more hogs. Nothing but the modest American hog can avert a meat famine which is threatened within two years. The production of pork could be increased 500 per cent in two years by a campaign of education and financial aid. One billion dollars loaned to the farmers to promote hog culture under competent direction would have more effect in winning the war than $10,000,000 used for any of the proposed purposes. Why not dress the pig in red, white and blue and give him the place in society that is now occupied by the poodle dog—even give him a place in the parlor?

NEWTON HIBBS.

Hay Crop Short.

SANDPOINT, Bonner County, Idaho, Aug. 2.—The hay crop is short about one-third on account of the hot, dry weather and all root crops have stood the drouth the best. In my opinion it will depress the live stock busines as it is almost impossible to buy hay now at any price and prices will be so high most every one will think at least that they must sell, so less live stock another year.

WARREN M'CURTAIN.

RECENTLY SURVEYED HOMESTEADS NOW OPEN.

Every reader of this paper should write at once for a free copy of "The Home Seekers' and Settlers' Guide." It tells all about the rich 160-acre free farms, excellent for growing grain and mixed farming, also what others are doing. Address Canadian Northern Railway, A. A. Brostedt, D. F. & P. A., 605 Hastings st., Vancouver, B. C., Canada.—Adv.

Ford Cars Increase Mileage and Cut Fuel Bills One-Half

By equipping the motor with our new device for burning kerosene. The price of kerosene on an average is about 50 per cent less than gasoline and is guaranteed to give as good if not better results with a **Burn Oil Device.** The Burn Oil converts the kerosene into a highly explosive, powerful gas, giving greater efficiency than ordinarily obtained with gasoline.

One gallon of kerosene will run a Ford car 25 to 35 miles when operated

THE BURN OIL WAY.

Insures your motor running coolly, quietly and efficiently. Simple in construction. Positive in operation.

Easy to install. Guaranteed.

The Burn Oil Device is a demonstrated success.

The present list of over a thousand users who are saving more than 50 per cent on their fuel bills is rapidly increasing each day. Join the list now.

Cut your cost of operation. Fear not the coming shortage and high prices of gasoline.

Live agents with Ford cars wanted to work territory in Washington, Oregon and Idaho.

Every Ford car owner is a prospect.

Make your application NOW.

Opportunity for Owner of Rig or Automobile

THE publisher of **The Washington Farmer** wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are offering these positions only to farm owners or renters and are paying good salaries to workers who had no experience in this line before accepting our offer. In almost every neighborhood there is an opportunity for building up a successful business. Perhaps this is the very chance you want to earn some extra money.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month, or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter.

War Calls Each Community to Do Bit

What the Auxiliary League of the County Council of Defense Can Do

In accordance with the spirit of volunteer work by which the work of councils of defense are carried on, the offer of The Washington Farmer has been accepted by N. W. Durham, chairman of the Spokane County Council of Defense, to publish a statement and explanation of the work before the auxiliary leagues in the county. This saves the expense of having circulars printed.

The editorial staff of The Washington Farmer volunteered and is now doing the clerical work for the Spokane County Council of Defense. Morever, the secretary of the Spokane County Council of Defense has volunteered his efforts free of charge. The State Council of Defense and the County Councils of Defense are now giving their time, and meeting their own expenses in this great work.

It would be well for each member of the Spokane County Council of Defense who receive a marked copy of this issue of The Washington Farmer to cut out and preserve Mr. Durham's article. This article gives a most admirable summary of the work before the auxiliaries of the county councils of defense, and is also worthy of preservation by every member of county councils and auxiliary leagues throughout the state of Washington.—EDITOR.

By N. W. DURHAM

Many people are asking: "What will be expected of the members of auxiliary leagues of the County Council of Defense? What kind of service can we render to our country?"

It is the purpose of this article, so far as possible, to answer these questions.

Broadly speaking, the county council is asked by the State Council of Defense to have "the auxiliary organize with a pledge of adult members who promise to help the government in any way they can."

Every right-minded American citizen is moved by a desire to do his or her part toward supporting the government in war and sustaining our brave boys who are going into the army, the navy and other branches of the national service. To that end the government is urging its citizens to help in—

FOOD CONSERVATION.
RED CROSS WORK.
ORGANIZATION OF HOME GUARDS.
FIRE PREVENTION.
LAW ENFORCEMENT.
DEVELOPMENT OF PATRIOTIC SENTIMENT.

Food Conservation.—We are urged by Mr. Hoover, who has been appointed food controller by the president, to—

Eliminate all waste of food. To eat less meat. To eat substitutes for wheat flour, that we may have more wheat to send to our allies in Europe. To be especially saving of fats. To can or dry every available surplus pound of vegetables, berries and fruits.

On this latter subject, Mrs. Ruth Karr McKee, member of the tSate Council of Defense, says: "It is suggested that drying rather than canning for public use should be emphasized because of greater ease in shipping and a possible shortage of cans * * * As far as possible, every family should supply its own table from its own garden. Then the canning clubs should preserve surplus from home gardens—part of this to be canned or dried for home consumption, either by sale or gift; a part dried and sent abroad for war relief work."

Red Cross Work.—On this subject Mrs. McKee says: "Country women sometimes feel that because of the distances they can not have Red Cross sewing circles. Point out to them in this connection that they can give just as much help by canning extra supplies of fruits and vegetables which can be given through the Red Cross for war relief. Every country housewife can have a 'war cabinet' of her own for jellies, preserves, fruits, pickles and vegetables. She can thus find an outlet for her patriotism and be of real service, too.

"In the sewing classes, as far as possible. Red Cross sewing should be taught. To this end, consult with the local Red Cross and act in conjunction with them. Another line of sewing should be remodeling of old garments for war relief and charity. These two lines of work should receive attention in every school where sewing is done."

Fire Prevention. — Probably no better directions can be given on this subject than those contained in a recent report from E. V. Kuykendall, chairman of the Garfield County council. Mr. Kuyendall reports to the state council:

"I had all the rural telephone lines tested out, and found that 16 out of 31 were in bad repair. Some entirely out of commission, and others with impaired efficiency.

"I prepared circular letters stating the defect to be remedied in each line, calling attention to the importance of efficient telephone service, in safeguarding against fires, and mailed such a circular to each person whose name appeared in the telephone book as a patron of any rural line. At the same time I mailed out a circular urging each farmer to keep on hand certain fire-fighting equipment.

"As an adidtional safeguard, I appointed a special committee to look after fire-fighting and equipment therefor, and fire patrols.

"We have selected four of the highest points with the most commanding view in the county, and will station patrols on these points at night, as soon as the grain is ripe enough to burn.

"The telephone company has promised to furnish phones, and where no rural phone is close we will install telephones on the lookout points.

"We took up the matter of paying the patrols with the county commissioners, and they have agreed to permit the sheriff to appoint the patrols as deputy sheriffs to be placed on the county payroll while their services are required. We will try to arrange with the farmers living nearest the lookout stations to board the patrols free, in consideration of special benefit to their own fields. We think every county in eastern Washington should follow this same general plan."

Development of Patriotic Sentiment.—One of the most necessary, continuous and persistent lines of effort that we should engage in is the arousing of patriotism among all classes—not the few—and the forming of public sentiment and the informing of public opinion on the whole situation.

Other duties may be suggested by the government from time to time.

How to organize home guards will be told in next week's issue.

Community Cooperation

Live Farmers Help Out Activities of Town

Any American farmer who is worthy of the name likes to be associated with a good, clean, up-to-date, enterprising business town as his postoffice and trading center. It's an asset to the farming community to have good churches, good schools, a good commercial club, and good business houses within easy reach. The growth and prosperity and service which such a town can render to its country neighbors depends much more largely upon the farmers themselves than they are apt to think. The more you trade with the town merchant the better stock he can keep. The more you help out the creamery or the cheese factory or the grain warehouse company or the grange or the farmers' union, or any other organization that is helping out the town and country alike, the better town you will have.

Your town is sure to have some sort of a moving picture show. It is far better that you should have a good, reputable movie than a low-class picture show. Farm fathers and mothers can exert a great influence in the matter of clean amusements in the town.

If the town has a public library, it can double its value and efficiency by the cooperation of the surrounding farming families.

If the business men of the town help out in the matter of good roads, why should not the farmers cooperate in town betterment?

The fact is that the rural town is a farming town and depends not only upon the production of the farms within its territory for its own success, but this rural town is of itself an index to the farmers who live within its territory.

Community cooperation, community development, means that the farm women join with the town women as members of the commercial club, as they do in Garfield, Whitman county, Wash.; it means a community cooperation in caring for and beautifying the local cemetery, as at Oakesdale, in the same county; it means that the town people unite with the farm people in the community clubhouse, as at Oroville, in Okanogan county, Wash.; it means that the farmers and the townspeople unite in making an institution of the annual picnic, as on the irrigation project a few miles out of Caldwell, Idaho; it means that the townspeople and the farm people unite in that marvelous institution, the children's fair, as at McMinnville, Ore.

Wherever you find the farmers cooperating with the townspeople you have a good town, and when you have a good town you are pretty sure to find good people living on the farms around that town. You can not build up a successful social life without community effort. Good stores, good churches, good schools, good roads, good farm organizations must have the cooperation of the farmers as well as of the townspeople themselves.

Washington Portraits No. 28.

Roy Allenbaugh.

Roy Allenbaugh, who has been farming in Chelan county, near Malaga, only one year, has had very marked success with his farm. He plowed and seeded 100 acres last year with the tractor, and this season intends to use it in harvesting the crop.

Special Message to Alfalfa Growers

Tell Us of Your Own Experience in Raising and Feeding Alfalfa

The most valuable alfalfa knowledge comes from the alfalfa growers themselves.

Will you not write and tell us some of the points which you have found out from your own experience in

RAISING,
FEEDING,
SELLING ALFALFA?

What is your acreage of alfalfa this year and how it is yielding?

To what extent do you pasture alfalfa?

What is your experience with alfalfa as feed for

Horses,
Beef Cattle.
Dairy Cows,
Sheep or Hogs,
Poultry?

Have you had any experience with alfalfa silage?

Any experience you may have had in

Raising alfalfa,
Preparation of seed bed,
Inoculation,
Alfalfa pests,
Alfalfa and crop rotation,

Growing alfalfa for seed, will be welcomed by the readers of the Farmer.

Your failures may be fully as important as your success, as other growers of alfalfa will thank you for saving them from like failure.

We know that this is a busy season, but any point or suggestion you can write us will be welcome, and then tell us more later on.

Write today.

Tell Others What You Know of Canning

Little of the Stem Makes Trouble in Canning Tomatoes--Other Pointers

By ANNA BUCHANAN

"Mrs. Housewife, are you canning and preserving perishable fruits and vegetables now?" is the question sent out from the nation's capital by Secretary Houston of the U. S. department of agriculture.

It is being urged by the department of agriculture and by the agricultural colleges throughout the country that not only every home assist in the conservation of the surplus perishable fruits and vegetables, by canning, preserving, pickling, drying and storing, but also that every experienced woman place her knowledge at the disposal of her neighbors, and what promises to be an endless chain in the movement among women for this purpose has been started in Washington.

On July 30 there was started a week's canning school in each of the following cities: Seattle, Tacoma, Bellingham, Wenatchee, Walla Walla, Goldendale, Kelso, North Yakima, Okanogan and Spokane. Ten experts from the state college and from the Western Washington experiment station were sent out, one to each of the above places. It was their aim to train women, not only how to conserve food and preserve food to the best advantage, but also how to teach other women in their own communities who were unable to attend these meetings, and urge them to pass their knowledge along.

Mrs. Elizabeth Jones, assistant leader of boys' and girls' club work in Washington, came to Spokane and conducted a school for a whole week. She was assisted by O. S. Fletcher, assistant county agriculturist, and Miss Ida May Wilson, who will help carry on the work in the rural districts during the rest of the canning season.

This is the plan worked out by Mrs. Jones and Mr. Fletcher for Spokane county:

It was thought that if schools were carried on in 18 rural towns throughout the county and the women who attended these schools would tell the women in their own communities about what they knew and had learned, that a great many women of the county would be reached, so six women who listened to Mrs. Jones' lectures and saw her demonstrations, volunteered to devote three weeks, working three days each week, in the following communities: Moran Prairie, Valleyford, Freeman, Rockford, Fairfield, Waverly, Spring Valley, Medical Lake, Four Lakes, Deep Creek, Chattaroy, Colbert, Peone Prairie, Orchard Prairie, Opportunity, Otis, Vera and Greenacres. Work began in the first six towns named, on August 8, and the other 12 will be visited the two following weeks.

Mr. Fletcher, Miss Wilson and County Deputy Superintendent Yeager have volunteered to visit each of these places and make preliminary arrangements for work.

One-Period Cold Pack.

In her demonstrations, Mrs. Jones uses exclusively the one-period cold pack method, directions for which have been fully given in a previous issue of the Farmer.

The term "cold pack" refers to the practice of placing the vegetable or fruit in the jar before sterilization, in a wholly or partially cooked condition, and the "one-period" means that it is boiled without ceasing until thoroughly sterilized. This method has rapidly come into general favor, since it preserves more of the natural color, appearance and flavor of the fruit and also saves the time, energy and labor of the operator. It requires no special equipment other than a wash boiler with a tightly fitting cover, and a false bottom of light wooden slats nailed to cross pieces and cut to fit into the bottom of the boiler. This false bottom should be an inch or two inches in height. Never place jars on the bottom of the boiler because the water can not properly circulate if this is done. A wire netting bottom could be used if preferred.

Points to Remember.

The following are some hints gleaned by watching Mrs. Jones can fruits and vegetables:

A practical cherry pitter is made by filing the head off a good-sized nail and making grooves crosswise through the end. A wire hair pin or a coarse crochet hook are also good.

For the hot and cold dip, a square of cheese cloth or a sugar sack is good to hold the fruit or vegetables, or a wire basket could be used.

When sealing the jars before placing them in the boiler, screw them up tightly and then turn back just a little. You must leave a little room for expansion. Upon their removal from the boiler, the jars must be sealed as tight as possible. Leave plenty of room between the jars in the boiler.

After taking the jars from the boiler, do not place to cool in a draft because it is liable to cause them to crack.

Wrap jars in paper to prevent bleaching, and store in a cool place.

Never let berries or soft fruits stand in water before canning or you will lose the valuable juices.

The reason so many women have trouble with tomatoes is because a little of the stem has been left on the fruit when put up. Be sure to dig all the stem out.

Farm Loan Bank Lends $40,000 a Day

Nearly a Million Dollars Are Already in the Hands of the Farmers

The farmers of the four northwestern states are now receiving from the federal farm loan bank an average of $40,000 a day. Some days the amount of money actually sent out to borrowers is considerably less than this sum, but other days it is much greater. The daily average is gradually increasing.

Already the bank has sent out money to the farmers of Oregon, Washington, Idaho and Montana totaling almost $1,000,000. At even the present rate of loans, which will be greatly increased as time goes on, a total of more than $12,000,000 would be loaned in a year.

Financed by Bond Issues.

While the government made an appropriation of $750,000 to start the work of each of the 12 district farm banks, the large total of the loans made and to be made is secured through the sale of government bonds issued with the mortgages given by borrowers as security. The Spokane bank, which handles the business for the four states of the northwest, has already loaned considerably more money than congress actually appropriated for it. It has therefore had to sell bonds to raise the amount. Two issues of bonds have already been sold and a third issue of $250,000 is to be offered immediately.

"We expect to make loans regularly from now on in such volume as to require a bond issue of $250,000 weekly, with a gradual increase on these figures," says President D. G. O'Shea.

"Notwithstanding all that has been said and written explanatory of the federal farm loan act, we find people from day to day whose conception of the law is that the federal land bank is operated with government funds and works under government appropriation," he continued, by way of explaining the system. "While it is true that the government furnished the original capital with which the business was started, it should be remembered that the government expects that money to be returned to it; and while the land banks are operated under government supervision and direction, they do not work under an appropriation, but are expected to be operated on a thorough business basis and earn their current expenses from the operations. The land bank makes a charge of 5 per cent interest per annum, payable semi-annually (with a small amortization payment on the principal). It sells its bonds, bearing 4 1-2 per cent interest, payable semi-annually, leaving it a margin of profit of one-half of 1 per cent, out of which it is expected to meet all the expenses incidental to its organization and operation. It therefore should be remembered that the land bank does not draw on government funds, and that it needs must operate economically."

Many New Charters Granted.

The Spokane bank has chartered a total of 131 local farm loan associations and is daily adding new ones. The loans sought by the members of these associations total more than $6,500,000. These loans are approved by the land bank, and are being made as rapidly as the titles to the land on which the loans are sought can be perfected and the work of completing the loans done.

The new associations chartered during the last two weeks, together with the amount of money sought by each association, are as follows:

Oregon.

Lower Bridge, Deschutes county	$ 25,650
Imbler, Union county	51,500
Marion, Polk and Marion counties	115,000
Bandon, Coos and Curry counties	68,800
Grande Ronde, Union county	60,200
Additional loans to new members of associations formerly chartered	117,550

Idaho.

Weiser, Washington county	49,200
Coeur d'Alene, Kootenai county	22,450
Plummer, Benewah county	28,950
Nampa, Canyon county	48,000
Orofino, Clearwater county	55,820
Additional loans to new members of associations previously chartered	9,250

Montana.

Dagmar, Sheridan county	29,300
Bozeman, Gallatin county	123,400
Three Forks, Gallatin county	32,200
Nickwall, Richland county	29,800
Additional loans to new members of associations previously chartered	17,300

Washington.

Richland, Benton county	82,250
Burlington, Skagit county	33,150
Benton, Benton county	31,250
Elma, Grays Harbor county	70,600
Bayview, Skagit county	35,300
Calispel, Pend Oreille county	34,050
Peshastin, Chelan county	33,400
Davis Lake, Pend Oreille county	30,500
Wolfred, Pend Oreille county	21,250
Sumner, Pierce county	38,500
Cashmere, Chelan county	57,400
Central, Franklin county	79,600
Additional loans to new members of associations previously chartered	14,900

Wealth of U. S. Negroes.

Negroes in the United States have a taxable wealth of about $500,000,000.

For the Best Dual Purpose Cow

Here is a photograph of the Pacific Northwest Farm Trio cup, to be awarded for the best dual purpose cow exhibited at the Spokane Interstate Fair and Live Stock show, September 3-8. Specialization is to be desired, but in this crisis the cow that produces both meat and milk is greatly to be honored.

Information Bureau

It is our business as a farm paper to be of the greatest possible assistance to our readers. Any question of a practical nature that interests you or the answer to which will be of special value to you—send it in. There will be no charge for this service. All questions must be signed with your name and postoffice address and will be answered by personal letter. Replies of general interest may be published in The Farmer, your name being omitted if you so desire. Address Information Bureau, Washington Farmer, Spokane, Washington.

Stable Disinfection.

A subscriber writes: "I would like to know how to cleanse a barn after tubercular cow have been in it."

Answer.

The Farmer replied to this inquiry as follows:

"Clean your barn thoroughly, sweeping the walls and ceilings to remove dirt and cobwebs, collecting all floor dirt, manure and the like and removing all decayed or decaying matter such as old floor boards or feed wastes. Keep all the sweepings and cleanings where it can be burned or treated with a solution of chloride of lime. For this treatment, use six ounces of chloride of lime to one gallon of water, and thoroughly saturate the waste matter.

"There are several common disinfectants, among them being bichloride of mercury, chloride of lime, formaldehyde, carbolic acid, crude carbolic acid, cresol and compound solution of cresol.

"It is probable that the last mentioned, the compound solution of cresol, is the most satisfactory when all points are considered. It is a coal tar product, and as such possesses a persistent odor that is somewhat objectionable in a dairy barn, however.

"The following formula, by which both a lime disinfection and a cresol disinfection are secured at one application, is recommended as effective: Slake 7 1-2 pounds of lime in enough water to make a creamy solution when stirred. Stir in 15 fluid ounces of cresol at least 95 per cent pure. Add water to make a total of five gallons of the solution.

"Another formula is similar: Slake the lime exactly as above, and stir in 30 fluid ounces of compound solution of cresol (known commercially as liquor cresolis compositus). Add water to make five gallons.

"Either of these solutions can be applied with a brush or with a pump spray, the latter being better, as it is more rapid and permits the application of the disinfectant into the niches and corners more completely. Every possible nook, cranny and crack should be reduced if thorough disinfection is desired.

"Another formula recommended by the government is that of a good lime wash made by slaking lime to a milky consistency, to which has been added one part of formalin (a solution of formaldehyde obtainable at any good drug store) to 30 parts of water. This may be sprayed on or applied with a brush the same as the solutions previously referred to.

"We wish to call to your attention the fact that all disinfectants rely for their efficacy on poisonous characteristics. Some of them are poisonous to animals, including human beings, the same as to disease germs. Especially is this true of the bichloride of mercury mentioned on the previous page as a disinfectant sometimes used. It is an extremely violent poison. Whatever disinfectant is used, exercise the utmost care to prevent injury to persons or animals."

Food Control Bill Has Become Law

Vital War Powers Are Given the President and Food Administration

Here is a summary of the food control bill just enacted by congress, approved by President Wilson and now in effect. An act of such far-reaching effect to the agricultural interests, The farmer believes to be deserving also of more extended treatment. So many important and extraordinary powers are conferred by this bill upon the president and upon the secretary of agriculture, that the only satisfactory method of learning just what these extraordinary powers are is for the reader to have the complete act before him; to read it section by section and to preserve it for future reference. With this view of the importance of this great war measure, The Farmer has obtained from its special representative at the national capital a complete copy of the measure as finally passed by congress, and prints it in full in this issue, beginning on page 13.

The purpose of the food control bill as finally passed by congress and approved by President Wilson August 10, is to provide further for

National security and defense by encouraging the production, conserving the supply and controlling the distribution of food and feed products and fuel.

The act aims to assure an adequate supply and equitable distribution and to facilitate the movement of

Foods,

Feeds,

Fuel, including fuel oil and natural gas,

Fertilizer and fertilizing ingredients,

Tools, utensils, implements, machinery and equipment required for the actual production of foods, feed and fuel,

To prevent scarcity, monopolization, hoarding and speculation in these necessities.

To establish and maintain government control of such necessaries,

To authorize the president to make regulations to carry out the provisions of the act.

In carrying out the purposes of this act the president is authorized to create and use any agency, to accept the services of any person without compensation or to utilize any part of the government.

All persons having pecuniary interest in contracts on behalf of the United States, either as voluntary or paid agents, are prohibited from cooperating in carrying out the purposes in this act, without making a complete disclosure in writing of such pecuniary interest, nor shall they participate in the awarding of such contracts. A fine of not more than $10,000 or imprisonment of not more than five years, or both.

The president is authorized to issue licenses and prescribe regulations when he shall deem it necessary for the importation, manufacture, storage, mining or distribution of the necessaries affected by the act.

Farmers Can Hold Products.

Any person who willfully hoards any of these necessaries shall, upon conviction, be subject to a fine of not more than $5000 or imprisonment of not more than two years, or both, "provided, however, that any accumulating or withholding by any farmer or gardener, cooperative association of farmers or gardeners, including live stock farmers or any other person of the products from any farm, garden, or of the land owned, leased or cultivated by him, shall not be deemed to be hoarding within the meaning of this act."

A fine of not more than $5000 or imprisonment of not more than two years, or both, is provided for willfully destroying any of the necessaries named in the act for the purpose of enhancing or restricting the supply thereof.

A fine not exceeding $10,000 or imprisonment for not more than two years, or both, is provided for any person who enters into any combination to restrict the supply of necessaries.

The president is authorized to

Requisition foods, feeds, fuel and other supplies.

Purchase, store, sell for cash at reasonable prices wheat, flour, meal, beans and potatoes, the price paid being not less than the minimum price which the president may have established.

Requisition for operation by the government any factory, packing house, oil pipe line, mine or other plant, making just compensation for such.

Prescribe regulations governing any exchange or board of trade in order to prevent undue enhancement, depression or fluctuation of prices.

Establish a minimum price for wheat, the act itself without any action on the part of the president guaranteeing prices for the several standard grades of wheat for the crop of 1918 based on No. 1 northern spring, or its equivalent, at not less than $2 per bushel at the principal interior primary markets.

The act further provides that 30 days after the approval of the act no foods, fruits, food materials or feeds shall be used in the production of distilled liquors for beverage purposes; provided that under regulations prescribed by the president such materials may be used in the production of distilled spirits exclusively for other than beverage purposes or for the fortification of pure sweet wines. A maximum penalty of $5000 or two years' imprisonment or both is provided. Moreover, the president is authorized and directed to commandeer any or all distilled spirits in bond or stock for redistillation for the manufacture of munitions and hospital supplies.

The president is authorized to fix the price of coal and coke.

It is declared a felony, with maximum fine of $5000 or two years' imprisonment, or both, to destroy any of these necessaries for the purpose of limiting the supply and affecting the market price thereof in interstate or international business.

The president is authorized to procure such stock of nitrate of soda as he may determine to be necessary for fertilizer for increasing agricultural production during 1917 and 1918, and to dispose for the same for cash at cost, $10,000,000 being made available for this purpose.

An appropriation of $150,000,00 is made for the purposes of the act during the time it shall be in effect.

The provisions of this act are to cease when the war between the United States and Germany is terminated.

The full text of the bill begins on page 13.

August Crop Report

Wheat Prospect Cut 25,000,000

According to the government crop report, the August forecast of the total production of wheat this season in the United States is 653,000,000 bushels, 25,000,000 bushels less than the July forecast. Here are the figures for the leading crops of special interest to the Pacific northwest:

Winter wheat—Total production, August forecast, 417,000,000 bushels (preliminary estimate), against the July forecast of 402,000,000 bushels, and a 1911-1915 average of 542,000,000 bushels. Yield per acre 15.1 bushels (preliminary estimate) against the December estimate of 13.8 bushels and 1911-1915 average of 16.3 bushels.

Spring wheat—Total production, August forecast, 236,000,000 bushels against the July forecast of 276,000,000 bushels and a 1911-1915 average of 264,000,000 bushels. Yield per acre 12.4 bushels, against the December estimate of 8.8 bushels and a 1911-1915 average of 14 bushels. Condition August 1, 68.7 against 63.4 on August 1, 1916, a 10-year average of 76.9 and 83.6 on July 1, 1917. Acreage 19,039,000 or 106 per cent of 1916.

All wheat—Total production, August forecast, 653,000,000 bushels against the July forecast of 678,000,000 bushels and a 1911-1915 average of 806,000,000 bushels. Yield per acre 14 bushels against the December estimate of 12.1 bushels and a 1911-1915 average of 15.4 bushels. Acreage 46,692,000 or 88.5 per cent of 1916. Price per bushel August 1, $2.28.

Corn—Total production, August forecast, 3,191,000,000 bushels, against the July forecast of 3,124,000,000 bushels and a 1911-1915 average of 2,754,000,000 bushels.

Oats—Total production, August forecast 1,456,000,000 bushels, against the July forecast of 1,453,000,000 bushels and a 1911-1915 average of 1,230,000,000 bushels.

Barley—Total production August forecast, 203,000,000 bushels, against the July forecast of 214,000,000 bushels, and a 1911-1915 average of 197,000,000.

Cotton—11,900,000 bales.
Rye—56,000,000 bushels.
Buckwheat—19,900,000 bushels.
White potatoes—467,000,000 bushels.
Flax—60.6 per cent, 12,800,000 bushels.
Hay—84.6 per cent, 100,000,000 tons.
Sugar beets—90.3 per cent, 7,820,000 tons.

The total production of apples was estimated at 188,000,000 bushels compared with 214,000,000, the 1911-15 average.

Additional figures from the August crop report for this state will be found on the market page of this issue.

Fair Dates.

Pendleton, Roundup—Sept. 20-22.
Boise, State—Sept. 22-29.
Salem, State—Sept. 24-29.
Helena, State—Sept. 24-29.
Lewiston, N. W. Lvst.—Nov. 16-23.
Portland, Pac. Nat. Dairy—Nov. 16-23.
Portland, Pac. Int. Lvst.—Nov. 19-24.

Washington Fairs and Shows.

Chehalis, S. W.—Aug. 27-Sept. 1.
Spokane, Interstate—Sept. 3-8.
Elma, County—Sept. 5-9.
Mabton, Hay Palace—Sept. 11-15.
North Yakima, State—Sept. 17-22.
Woodland, County—Sept. 19-22.
Rosalia, Lvst.—Sept. 20-22.
Lynden, County—Sept. 25-29.
Garfield, Roundup—Sept. 26-29.
Shelton, County—Sept. 27-29.
Burlington, County—Oct. 1-6.
Puyallup, Western—Oct. 2-7.
Palouse—Oct. 4-6.
Port Angeles, County—Oct. 11-13.
Colville, Live Stock—Oct. 17-19.

First Submarine Cable.

The first submarine cable was laid in 1853.

Wool Men to Help

Services Offered to the Country

The National Sheep and Wool bureau has officially tendered to Herbert C. Hoover, national food commisisoner, its assistance in any way possible to meet the unusual demand of the country for wool and mutton. In common with other live stock organizations, the bureau is making special effort to build up the industry to meet the needs of the present crisis.

The demand for wool is indicated by reports from various sources of high-priced sales. Recently a total of 150,000 pounds in the Calgary district sold for an average of 60 cents a pound, while a small quantity of extra fine clothing wool brought 74 cents.

The government has just placed an enormous order, probably the largest in the history of the wool trade, for the navy. The order is for cloth requiring a total of 15,000,000 pounds of wool. This will make a million shirts, 800,000 trousers and 350,000 overcoats, it is stated. The total cost will approximate $16,000,000. The contract will be distributed among some 35 manufacturing concerns.

The Red Cross has purchased 1,000,000 pounds of wool for knitting.

More Live Stock

Record Exhibits at S. W. Fair

By HORACE ADDIS.

The greatest lot of live stock ever exhibited at the Southwest Washington fair, midway between Chehalis and Centralia, seems assured, and Secretary George Walker is now satisfied of its success. The dates are for next week, August 27 to September 3. It may sound strange that a large part of the stock is coming from Oregon. Clifford F. Reid, with his great show herd of Jerseys; Ray J. Fox, Poland Chinas; J. G. S. Hubbard, at least three breeds of sheep, and probably Alex. Chalmers' Shorthorns and Middledale farm Guernseys are among the Oregon fine stock that will be shown. William Bishop and Carnation Stock farm will each exhibit Holsteins and, despite these show herds, the local breeders, Hamilton, Sveenth, Framm, Bevington and Busch will probably all exhibit a few of the black and whites. George Bertrand's Shorthorns and L. P. Schumacher's Percherons are only a unit of the local fine stock. Several hog breeders are expected.

The best exhibit of grains and grasses, in which this fair always excels, seems sure, and the poultry and other departments are promised a good list of entries.

Canning Club Contract.

County Agriculturist C. H. Bergstrom of Thurston county reports that several clubs are canning commercially. One club was given a large contract for canned chicken, fry size, all material being furnished the club, who received a fixed price per can for this work. Others have taken contracts from local merchants and families to can vegetables.

This Is No Time for False Philanthropy

Germany has been drawing heavy food supplies from Norway, Sweden, Denmark, Holland and Switzerland. At the same time those countries have drawn extensively on the United States for food commodities. They have bought from us and resold to Germany at a handsome profit, or have sold off their own products to the Germans and then supplied the deficit from American markets.

Indirectly, therefore, we have been helping to feed the German armies. Now that we are at war with Germany, this practice must cease, and to that end congress has passed a law authorizing the president to lay an embargo on any or all food shipments to these German-trading countries.

Full discretion is vested in the president, and these neutral countries are exerting strong pressure on the White House for a continuance of the traffic. They have sent, or are sending, delegates to Washington to plead with the president, and are declaring that their people will suffer destitution and starvation if he shuts off food supplies from this country.

The extent of this neutral traffic with Germany is glimpsed by a reading of the export statistics of Holland, for example. In the first three months of 1917 Holland sold Germany 1847 tons of butter, 9216 tons of cheese, and 3433 tons of eggs.

Furthermore, last year Germany received 130,063 tons of Dutch butter, eggs and cheese, while England only received 9758 tons; Germany received 122,009 tons of potatoes, England, 3137 tons; Germany 49,314 tons of meat, England 9957 tons.

With oats, corn and other foodstuffs bought in America, Holland is producing butter, cheese and eggs for the German markets.

It is obviously the president's duty to shut off this traffic. Our first duty is to our own people and our allies, and it is apparent that after these needs have been met little or nothing will remain for export to countries that notoriously are supplying the Germans.

If we supply them, we must stint ourselves and deny our allies. We shall be withholding food from the soldiers that are fighting our battles in order to send it indirectly, but none the less effectively, to German soldiers, who are fighting our troops and the armies of our allies.

This is no time for false philanthropy. The president's path of duty lies plainly before him.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Do Not Misjudge Pea Possibilities

Last year in several districts of the northwest, especially in parts of eastern Washington and northern Idaho, was an ideal year for pea growing, and many farmers both improved their land and made large profits by growing them. As a result of this successful year, which followed a few years of successful experimenting with the crop, large numbers of farmers seeded peas this year. But an unusual period of hot, dry weather hit them at the wrong time. Reports from pea-growing districts indicate that great damage has been done, and that many who are trying out the crop are discouraged.

This discouragement should not lead to a misjudgment of the value of the pea as a northwestern crop. It has proved its value. It has been shown to be adapted to the northwest. It has been shown to be a great soil builder. It has been proved that in normal seasons it is a profit-maker, turning idle summerfallow lands into good crop fields and leaving the land improved rather than impoverished as successive crops of wheat or other grain would leave it.

The pea, even this hazardous year, is making good in some localities under some conditions. Farmers will make a great mistake if they allow this year's experience to lead them to abandonment of the pea as a part of their farming scheme.

Farm Loan System Is Simple

In last week's issue of The Farmer there appeared an interview by Secretary Jewett of the federal farm loan bank in Spokane. A careful reading of the interview should be sufficient to convince any one that the system whereby farmers may secure loans is not bound around with "red tape." The system is as simple as can be consistent with sound business.

All the delays that occur are due to the determination on the part of the bank officials to live strictly up to their motto, "Safety first; then service." They decline to allow loans that their appraisers feel are larger than a mortgage on the land will properly secure. They decline to make loans until the titles to the land are letter perfect, so that they will form unquestionable security.

The mortgages given to secure the loans are the foundation of the bank's fund. Built upon them, the fund may grow and grow until thousands of farmers will be able to borrow money at 5 per cent interest. But if these mortgages are ever allowed to be questioned the security of the bank totters. These mortgages are given by the bank as collateral to secure government bonds, which are sold to provide cash for further farm loans. Let the mortgages appear imperfect and the bonds will thereby have imperfect security and therefore no market and the farm loan system fails.

That's why the officers of the bank at Spokane require absolutely perfect papers before they will make a loan. And that's why the farmers of the northwest should rally all the more loyally and confidently around the system and not be impatient when they have to wait a few weeks for their 5 per cent money.

The Live Stock Problem

The crop situation in many sections of the northwest, where certain crops are severely injured by the drouth, puts a new problem up to the farmer—how best to get returns out of his injured crops.

In some instances it is reported with seeming reliability that crops will not be worth cutting for grain. Where this is true, there is a very immediate need of determining what will bring the most out of it, and the possibilities of turning stock into it should be considered.

While grain is greatly needed this year above all years, farmers should carefully figure before they cut a crop for grain that is too badly damaged. The cattle ranges have dried up unusually early this year, and there are many cattle being placed on the markets in second class condition. Stock yards are ready to turn them back to anybody who can give them proper finish. Conditions vary so much as to the pasturage a burntup field of grain would make and the conditions of the cattle that might be placed on it, that it is impossible to offer any definite figures as to possibilities. But if cattle on the market at secondary prices could be given 50 pounds each additional finishing weight and thereby be made to bring a top price, it would be something worth considering. For instance, say there is a thousand-pound animal worth 6 cents a pound in unfinished condition. He puts on 50 pounds finish, and in his better condition is worth 6½ cents. The increase in his worth is $8.25. These are purely fictitious figures, used only for purposes of illustration. Ten such animals would increase $82.50 in value. Fifty would increase over $400.

Here is a possibility worth thinking about if you have any crops that are about to prove a loss. It is a problem for each man to figure out with his own exact conditions in mind.

"Scotch Topped Shorthorns"

E. K. K. writes: "I am thinking of going into the Shorthorn business and I want to know what you mean by Scotch topped Shorthorns. What difference is there between Scotch Shorthorns and any other kind?"

Scotch topped Shorthorns are those sired by bulls of Scotch breeding. A Scotch bred animal is one that traces directly to the herd of Amos Cruickshank in Aberdeenshire, Scotland. One hundred years ago there were two types of Shorthorns: The Bates type were very stylish, dual purpose animals. The Booth Shorthorns were big tallowy beef animals. The Bates strain gradually became the more popular and by 1870 was the only one considered worth while either in England or America. In the meantime Amos Cruickshank was developing a hardy, vigorous beef type, much thicker fleshed and smoother than any other cattle of the day.

During the '70s Herefords and Angus were introduced into America, and many of these were better beef animals than the Bates Shorthorns then so common. The Shorthorn men began to look for something that could meet this competition, and they found it in the Cruickshank cattle. Some of these cattle were brought to America and made a great success in the show ring. In 1893 the great bull, Young Abbotsburn, was champion of the World's exposition at Chicago. This was probably the greatest show bull of the breed, and he demonstrated beyond question that Scotch blood could and did win. Cruickshank's herd was sold in 1890, but he had many followers, and by 1900 all of the leading herds in America were headed by Cruickshank bulls.

Of course there are other cattle in Scotland than Cruickshanks, but they are practically unknown in America where "Scotch cattle" always means descendants of the Cruickshank herd, or of herds very closely related and bred along similar lines. Nearly all of the Cruickshank females in 1890 were purchased by William Duthie of Collynie, Scotland, and J. Dean Willis of Bapton Manor, England, and these two herds are today perhaps the fountain sources of "Scotch" cattle, although, as you will note, one of them is located in England.

E. L. POTTER.

Washington Gleanings

Washington state grain standards have been made uniform with those adopted by the government by the state grain commission.

About 50 men are employed at the new box factory at Everett, with prospects of extending employment to from 75 to 100 within the next couple of weeks.

Klickitat sheepmen are expecting to get $10 a head for lambs now fattening on the summer grazing grounds of the Columbia national forest reserve around Mount Adams.

L. J. Sticklin of Chehalis has purchased the Wall farm of 142 acres, situated five miles east of Bucoda, on the Skookumchuck river. The consideration was approximately $10,000.

D. J. Zylstra of Lynden, Wash., has just finished the erection of a new poultry house constructed entirely of cedar. Mites and vermin will be prevented by the cedar, he believes.

There will be 65 per cent of a wheat crop in Columbia county this year, according to John Brining of Dayton. One farm in Whitestone valley seeded to barley is yielding 25 sacks to the acre.

Unsettled conditions arising through strikes and disturbances on the Sound have driven scores of workingmen inland, and present indications are that there will be more than enough labor to handle the harvest.

Trail blazers are laying out the Evergreen highway from Vancouver to Augusta, Maine. It is agreed by the federal and state authorities that $150,000 will be expended between Delany and Clarkston within the next two years.

Only through the most strict conservation of food will this country be able to send any considerable amount of grain to her European allies this fall, is the belief of Edwin T. Marchetti, Spokane field agent in charge of the bureau of crop estimates, working under the department of agriculture.

The Earl Fruit company is building fireproof warehouses at 10 points—Stemilt, Tieton and Grandview in the Yakima valley, Brewster, Entiat, Chelan Falls and Cashmere in the Wenatchee, and Otis Orchards in the Spokane valley. At Lewiston, Idaho, Mabton and Terrace Heights will also get one structure each.

Sixteen hundred acres of logged-off farming lands in the Humptulips valley, 14 miles west of Hoquiam, have been sold to 15 Slavonians of Cle Elum, Wash., who plan to establish a farming colony on the land in the spring. All 15 men are married and have large families, the aggregate of the 15 numbering 100 persons.

Under the direction of O. S. Fletcher, assistant county agriculturist of Spokane county, "mother and son" and "mother and daughter" clubs are being formed in rural districts of Spokane county. The object of the clubs is mutual upbuilding and education in home products on the farms. Three clubs already have been organized and others are to be chartered soon.

What Others Say

Gazette, Reardan: Every bushel saved from this year's crop may save the life of some one.

Gazette, Colfax: It is wasteful to eat food of the staple, easily preserved kinds and allow the perishables to spoil.

Journal, Shelton: The chief opportunity for economy is in avoiding waste of food, and, within reasonable limits, the consumption of the cheaper forms of food.

American, Anacortes: It makes no difference where the community may be or what conditions prevail therein, it may only enjoy growth and development by engendering the community spirit—that unity of action that invariably accomplishes results in every undertaking of whatever nature.

Governors Plan Defense

Six State Executives Confer in Portland

A meeting of six governors of western states was held in Portland late last week to consider home defense plans and further prosecution of the food production and conservation campaign. Col. Charles E. Dentler, comcander of the federal troops for Oregon, Washington, Idaho, Montana, Utah and Wyoming, was also present. The six governors were Lister of Washington, Withycombe of Oregon, Alexander of Idaho, Stewart of Montana, Boyle of Nevada, and Bamberger of Utah.

No definite statement of the home defense plans agreed upon was made public, but it was stated positively that the western states would deal vigorously with the I. W. W., and that there would be no policy of arbitration or conciliation followed toward the organization. On the other hand, the governors expressed readiness to work for such policy with regard to regular labor organizations. Col. Dentler assured the governors that in all cases where federal troops were actually needed to quell I. W. W. distrubance or menace, they could be depended upon, but urged that the states individually control the situation in all possible cases. There was considerable talk that special sessions of the legislatures of some or all of the states might be necessary to empower the authorities to proceed vigorously in the control of the I. W. W. situation.

Optimistic sentiment prevailed among the governors concerning the results of the food campaign. While great results have been noticed this season, the most effect will be shown next season, as the campaign did not begin this year until the season was well advanced.

The Eight-Hour Day.

The government is openly advocating the adoption of the eight-hour day rule throughout the industries of the country as a means of stabilizing working conditions and reestablishing normal conditions of industry in so far as possible where they have been disturbed by the activities of the I. W. W. and other malcontents. Especially is the recommendation for the eight-hour day directed at the lumbering industry throughout the northwest, where many camps and mills are shut down because of strikes. As a member of the council of national defense at Washington, D. C., Secretary of War Newton D. Baker has sent out messages to interested parties asking that they do what they can to secure the adoption of the eight-hour day. In like manner, local and state officials in some instances have been urging the adoption of the plan. It is argued that to put into operation an eight-hour day rule would rob the agitators and malcontents of their one hold on the sympathies of willing workers and legitimate labor organizations, and thereby result not only in restoring more nearly normal conditions in the industries, but in virtually destroying the power of the I. W. W. and like elements.

Nation Not Yet Accused.

The large number of men who have sought exemption from army service when called before the exemption boards during the last several days indicates that there is still a widespread feeling that this war is a foreign war, not one in which the very life of this country is at stake. It is impossible to calculate at this time the per centage of justifiable claims for exemption, but it is evident that large numbers of enrolled men are anxious to avoid army service by securing exemptions on various grounds. As a result, the government has announced a more stringent regulation governing exemptions, designed to prevent exemptions that are not well grounded. Actual dependence of the wife must be shown before marriage can be accepted as ground for exemption, and it is reported that in cases where the wife may readily be supported by her own people or by her own work the husband will not be relieved of army duty. The work of examination has been going on rapidly throughout the entire country, and many thousands of persons have been examined and passed. It is not yet known the percentage that is being rejected, but it is running probably about half of those called.

U. S. Will Control Food.

As an immediate result of the final passage of the food control bill, the food administration has announced that if it is found necessary the government will buy the entire 1917 wheat crop in order to insure its proper distribution and guarantee the consumer and the producer against unjust prices. The $2-per-bushel minimum price fixed by the food control bill does not apply to the 1917 crop, but only to that to be produced next season, but the measure does give the administration sweeping regulatory power over the present crop. The threat of the government to take over this season's crop, even though the plan is not finally carried out, will undoubtedly do much to stabilize the marketing and distribution of grain. The elimination of the speculator is one of the principal aims of the government in taking the action which it promises.

Vote on Food Bill.

After months of wrangling over details of the government food bill, when it did finally come to a vote in the senate after overwhelming passage in the lower house of congress, it was adopted by a vote of 66 to 7. Questions of prohibiting the use of grain in the manufacture of liquors and of whether or not there should be a food control commission or a one-man board were the cause of the long-drawn-out controversy over the measure.

New Export Record.

Figures have been issued by government officials showing that for the fiscal year ending June 30 last, this country's exports totaled $6,294,000,000, an increase over the previous year of nearly $2,000,000,000. The previous year had been the banner year. This is taken to indicate the importance of the German submarine campaign, as the export of goods from this country has been the object of the most determined attack by Germany. The same report says that the English commerce has maintained nearly normal figures, in spite of the destruction of British shipping vessels. It is also shown that Great Britain, the United Ctates, Japan, Holland, Norway and Canada are building ships today at the rte of probably more than 5,000,000 tons per annum, compared with losses of about 7,000,000 tons or less. As the world tonnage is about 40,000,000 the chances of submarine success are growing less and less in view of the rapid increase in shipbuilding and the more efficient methods of dealing with the submarines.

Japanese Mission Here.

For the purpose of discussing cooperation with the United States in the conduct of the war against Germany, especially from the viewpoint of commercial and industrial activity, an official commission of Japanese has arrived in this country. This is the first like mission ever to come from the orient to America, and is heralded as marking a new epoch in the relations of this country and the Nipponese. It is looked upon as a part of the great movement in cementing the friendship of these nations for all time to come, and wiping out for all time the talk of war between them.

Want Corn Regulated.

The Chicago Live Stock exchange has adopted a resolution asking the food commission to fix a minimum of 75 cents a bushel and a maximum price of $1 a bushel for corn next season. The resolution also asks the government to exempt from army service stock feeders.

THE ORIGINAL

2-WHEEL TRACTOR

That Does All Farm Work

WITHOUT HORSES

When you come to buying a tractor, whether for a farm of 80 acres, 280 acres or more, there are a number of questions you will need to ask yourself before you buy. Here are some of them:

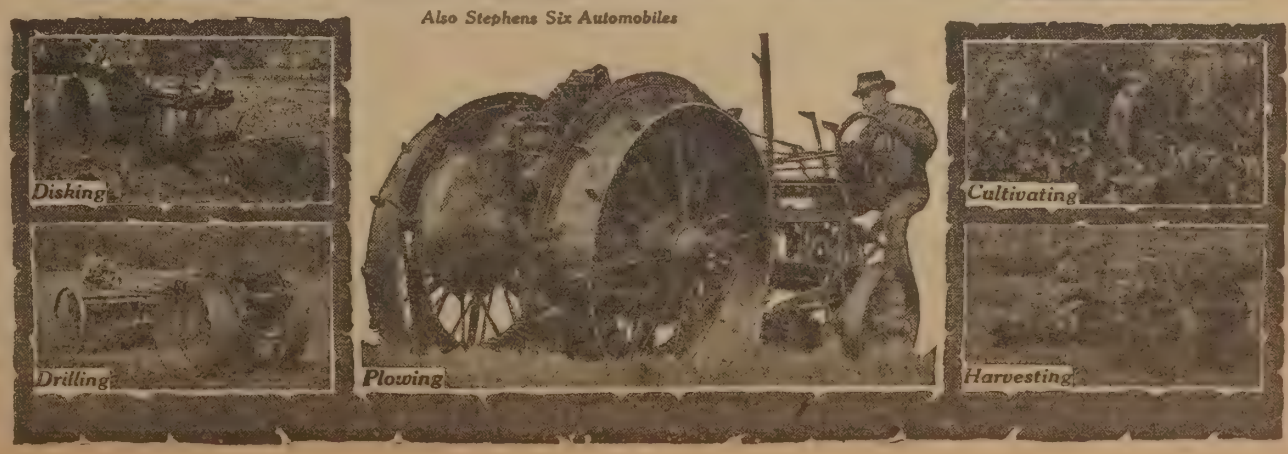
—Will it CULTIVATE as well as plow?
—Will it do ALL my farm work without horses?
—Will it work on plowed ground without packing the soil?
—Will it do the work quicker; easier; and save on hired help?
—Is it really a ONE-MAN tractor?
—Will it handle as easy as a team of horses, rather than be too heavy, clumsy, and inconvenient?
—Do I ride on the tool where I can see the work I am doing, or will I have to have someone run the tractor while I am operating the farm implement?

The tractor that answers these and all other farm power problems most practically and profitably is the

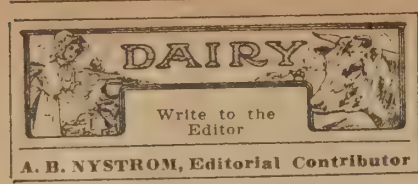
MOLINE ORIGINAL 2 WHEEL UNIVERSAL TRACTOR

This is the original Two-Wheel Farm Tractor. It pulls two 14-in. plows; will disc, harrow, plant, CULTIVATE all hill and row crops, pull mower, binder, manure spreader, fill your silo—and do all belt work on the average farm. In fact, it will do anything you can do with horses; do it quicker; easier; and with less hired help. It weighs only 2,800 lbs., but all its weight being on its two wheels—*all its weight is traction weight.* The tool you hitch it to forms the rear wheels and you do not have to pull around a ton of needless weight. It will back up with tools attached easier than a team will back. You can turn around in a small space; get close to the rows and the fences. It is the ideal tractor for the farmer because it costs less than four horses; is as powerful as five horses; does more work than seven horses; is inexpensive to operate; and eats only when it works.

Write for our new Tractor Catalog and read how farmers everywhere are solving the power and hired help problems on their farms; how they are changing the drudgery of farming to a profitable pursuit. Learn how you can make your work easier and get it done on time and grow bigger, better crops. Write today.



MOLINE PLOW CO., Dept. 51, MOLINE, ILL.



The Moline Line includes: Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Spreaders, Mowers, Manure Spreaders, Plows (Chilled and Steel), Reapers, Scales, Seeders, Stalk Cutters, Farm Trucks, Vehicles, Wagons.

THE KAISER AGAIN?
He's Blamed for High-Priced Milk.

Loton Norton, president of the Sheffield Farms Dairy company of New York, declares that the rise in milk prices in this country is due to the German kaiser. He claims that Germany intrigued with concerns in Switzerland whereby American milk products may be shipped into Switzerland and from thence on into Germany and that the American people are paying the costs, thereby, of feeding the enemy first-class milk.

This claim, the proof of which was not presented, was made following the charge by John J. Dillon, food commissioner of New York state, that the Sheffield farms were destroying buttermilk with a view to elevating the price for their other milk or milk products.

Mr. Norton replied to this charge that the farms were feeding 150 head of hogs on the buttermilk and that when they had an oversupply they placed it on the land as fertilizer.

Milking Shorthorn Cow, $4150.

At a recent dispersal sale of milking Shorthorns at Bedford, England, the high average of $935 was received for the 92 head. Top price of $4150 was realized for Primrose Dairymaid, a 4-year-old cow of the most approved milking strain. Dairy Shorthorn men are feeling very much elated both in England and America.

JERSEY BREEDERS' PICNIC.

In an entrancing spot in the Waldo hills the Marion county Jersey breeders picnicked last month. Frank Doerfler was host in a beautiful grove on the place he has recently purchased from his father. The big dairy barn, 110x40, the foundation and frame of which are up, was one of the day's attractions and its features were much discussed. Some fine Duroc Jersey hogs and Shropshire yearlings owned by Doerfler Bros. were penned in the grove and before leaving the crowd went to the pasture and viewed the very fine herd of Jerseys owned by Frank Doerfler that have led the Marion County Cow Testing association in production of butterfat the past seven months.

A Few Jerseys in the Behrmann Herd

The above picture shows part of the Behrmann Jersey herd. William Behrmann Jr. of Cornelius, Ore., whose purchase of a herd of 16 registered Jerseys from Mr. Hiatt of Creswell, Ore., in January, was mentioned in these columns, also purchased two very fine young cows from William Schulmerich of Hillsboro, Ore. One of them, Melissa Monmouth Noble, has a register of merit record of 402 pounds 14 ounces of butter, begun at one year and 10 months. She was put on test with second calf and prodced 60 pounds of fat, or over 70 pounds of butter. She promised a big record, but Mr. Behrmann, when he got her, did not keep up the test. She is by Monmouth Noble. The other heifer is by Golden Maid's Prince. Her year's test was almost as good. She is decidedly a show cow an won first prize as a calf at the Pacific International. Helena of Xanthadale, one of the Hiatt heifers, freshened July 1 and was milking 30 pounds a day when I called. Mr. Behrmann regrets that he was not ready to put her on official test, as she would make a great record with proper feed and care. She is by Oxford's Torono, a son of Hood Farm Torono, that is sire of three 1000-pound cows and nearly 50 others were register of merit records. On the dam's side she goes back in two generations to Eminent and is a showy cow. Four of the 16 are by the same bull and 12 are bred to a son of his out of Brighton Lad's Eminent, a well-bred, heavy-milching cow.

Coomassie's Lulu's Noble, Mr. Behrmann's herd bull, is a grandson of Noble of Oaklands, with Coomassie and Tormentor on the dam's side. Mr. Behrmann has an unborn bull contracted for from choice of two of Ed Cary's best heifers. He plans to begin an official testing not later than next year. He has an excellent foundation herd, is ambitious and is likely to "be heard from" a little later. H. A.

Figures From White River Valley Tests

The White River Valley Cow Testing association of western Washington reports 605 cows tested in the month of July. Average pounds of milk per cow was 902 and butterfat 31.32, according to the report of Robert Cowan, tester. Average feed cost per cow was $4.41 and the average feed cost per 100 pounds of milk was 48 cents. A. Zeeuw's cow No. 117 gave during the 92 days of May, June and July 5876 pounds of milk and 230.03 pounds butterfat, or an average of 7½ gallons per day, testing 3.9 per cent butterfat. She is on pasture and receives no grain.

The following table gives records of the cows in the association which have produced more than 60 pounds of butterfat during the 30 days ending July 31:

Owner of Cow.	Name of Cow.	Breed of Cow	Age (Yrs.)	Lbs. Milk.	Per Cent of Fat.	Lbs. Butter-fat.
A. Zeeuw	No. 143	Grade Holstein	5	1547	5.0	77.35
Cochrane Bros.	E123	Grade Holstein	7	2142	3.3	70.69
A. Zeeuw	No. 117	Grade Holstein	8	1857	3.7	68.71
A. Zeeuw	No. 22	Grade Holstein	3	1528	4.3	65.70
Fred Nelsen	No. 40	Guernsey	4	1386	4.7	65.14
Cochrane Bros.	E188	Grade Holstein	5	1916	3.3	63.29
A. Zeeuw	No. 1	Grade Holstein	5	1658	3.8	63.00
John Steel	No. 42	Grade Holstein	6	1550	4.0	62.00
Fred Nelson	No. 28	Ayrshire	5	1308	4.7	61.48
O. E. Ingebright	No. 2	Grade Holstein	7	1575	3.9	61.43
A. Zeeuw	No. 35	Grade Holstein	6	1516	4.0	60.64
A. Zeeuw	No. 87	Grade Holstein	6	1724	3.5	60.34

Frakes' Bull to Japan.

P. A. Frakes, the pioneer Holstein breeder of Scappoose, Ore., recently sold to S. Ban of Tokio, Japan, and Portland, Ore., the young bull Oriental Ring Segis Pontiac, and the heifer Oregon Homestead Friesland. Mr. Ban, who for some years was Japanese consul at Portland, Ore., and is a well-known importer and merchant, took the two animals on the same steamer with himself to Tokio, Japan, where the bull will head his Holstein herd.

Oriental King Segis Pontiac was sired by King Segis Pontiac XIII., a grandson of the two great bulls King Segis and King of the Pontiacs, and his dam and sire's dam average 571.6 pounds of milk and 30.39 pounds of butter in seven days with a per cent of fat of 4.25. His dam is Chloe Mechthilde Korndyke, and she is a daughter of the great show cow Chloe Mechthilde, that was grand champion at the Lewis and Calrk exposition in 1905 and the state fair in 1906. His breeding is practically the same as the Holsteins that are selling in the east for the extreme high prices.

The heifer's sire, Lunde Oregon Friesland, was grand champion at the Pacific international in 1916, and Mr. Ban is to be congratulated in selecting such breeding stock for Japan.

H. A.

Sterilizer for Farm Dairy.

If you wish to have high-grade dairy products, clean, free from bacteria and disease germs, and milk and cream which will remain sweet longer, cleanliness and sterilization of the dairy utensils are absolutely essential. The sterilizers now generally used are often considered too expensive, especially on farms where only a few cows are milked. A simple, inexpensive sterilizer is described in farmers' bulletin 748, issued by the bureau of animal industry, U. S. department of agriculture, Washington, D. C.

U. S. WANTS HORSES

Buying in Open Market Planned

The war department has authorized its agents to proceed with the purchase of war horses to considerable numbers in the open markets. In the instructions sent out, it is stated that any responsible dealer, breeder or farmer who can supply one or more carloads of animals at a sanitary place, suitable for feeding, inspecting, branding and loading on cars, is invited to get in touch with army purchasing officers.

The types required are cavalry horses, light artillery horses heavery artillery horses for siege batteries, wheel mules, lead mules and pack mules.

Breeders, farmers and dealers are asked to notify purchasing officers of the zones in which they desire to supply animals, the prices and points of delivery.

The quartermaster's depot, Fort Keogh, Mont., is the headquarters for the purchases in the states of Washington, Oregon, Idaho, Montana and other northwestern states.

Veterinary

Dr. S. B. Nelson

May Be Cow Pox—My cows' teats have become covered with little lumps like warts. The top of the lump is scabbing over. There are many of these small lumps.—H. A. G., Porthill, Idaho.

Answer—Your cow is probably affected with cow pox. This is an infectious disease. The cow should be milked last if you have more than one cow to milk. Wash her udder and teats with a 2 per cent solution of creolin before milking, also affer milking. Then apply to the teats a little benzoated zinc oxide ointment.

Rabbits Are Diseased—In the two years we have lived here we have killed jackrabbits, which are quite numerous here, to eat and among them were two which we did not consider fit for food because each one had on the body a soft, spongy lump about two inches through, filled with a substance resembling white of an egg and floating in that were little tiny white eggs somewhat after the manner of frogs' eggs. We killed both affected in the winter time. Recently I bought two Belgian hares and I find one of them is affected the same as the rabbits. I supposed the trouble was caused by the sting of some kind of fly similar to the warbles on backs of cattle, but I do not know and would like any information you can give me on the matter. I would like to know what is the cause of it and if it makes them unfit for food and also if young ones would be liable to be affected the same way, as I think the affected one is the female rabbit.—F. H. F., Leese, Wash.

Answer—If you will send a specimen of the diseased rabbits to the veterinary department of the State College of Washington we will be glad to make a bacteriological examination of the tissues and advise you what the trouble is and if possible, what to do for it.

Secure Clearing Supplies.

The freight situation is, in the words of that certain old easterner, "getting no better fast." The day of half-a-mile-an-hour progress of anything in less than car lots and even of the larger shipments is upon us, and it is resting heavily on those farmers who are planning to take advantage of the war prices to cash in on the store of plant food in new ground next year.

The acreage of pasture land and logged-off land that has been selected by the owners for clearing this fall and winter perhaps is larger than for many a year, but the amount of powder that has been bought and delivered is reported to be unusually low.

The farmer who wants to harvest the greatest profit from the present opportunity and at the same time to serve his country by producing extra supplies will put out all his new ground that is possible next year. To do it he will have to clear the land this fall and winter, however, and he should be looking now to the securing of his powder or other supplies for the work.

Fitting Horses for the Show Ring

By E. L. POTTER

In no class of live stock does beauty count for as much as it does with horses, and beauty is the result of condition as much as of natural conformation.

A draft horse, to show to any advantage at all, must be fat. The fat horse will weigh from 200 to 400 pounds more than a thin horse; he will be wider in body, deeper and, in proportion, shorter in the legs. He will have a better sprung rib, a wider chest and will be smoother all over. There is not one person in 5000 who can recognize the true value of a thin horse. There is a saying that "fat covers up a multitude of sins," but it is even more true that lack of fat covers up a multiude of virtues.

It takes a good while to fatten a horse properly, and in selecting horses for the season's shows the very thin ones are usually left out. Horses that have been running on poor feed or suckling a colt or working very hard will be hard to put in show condition unless they are unsually easy feeders. The latter point is really quite important. A horse with a broad back, deep flank and short coupling will fatten easily, while the opposite kind fatten with difficulty, and if once made fat get thin at the first opportunity.

Temper Him to Grain.

The best method of fattening a horse is to put him in the barn and feed him all the grain he will eat, taking some time to get him on full feed, of course. Oats are the best single feed. Ground barley is good to the extent of one-third of the ration, and a small portion of bran may be added. Grain is so high priced this year that horses that are thin enough to require a long period of fattening had better be left at home.

In addition to fat, grooming and training are required. The horse must be thoroughly broken so that he can be handled in any crowd. Stallions are led with a stallion bridle, while fillies and mares are more commonly handled with a halter, although a bridle may be used if necessary, especially with Percherons and Belgians. For Clydesdales and Shires showring custom demands a clean new halter made out of twisted cotton rope. The use of surcingles, side straps, cruppers and similar arrangements is not allowed in the larger show rings. It is customary, however, to braid the manes and tails with yarn.

Use Blanket for Shine.

Blankets are used for several weeks, before the showing begins, and it is hardly possible to keep the hair short and glossy without them. Blankets and plenty of brushing are the things that make a fine coat. Many people are looking for some mysterious sleight-of-hand method of making a horse shine, but there is no easy way. It takes grooming of the old-fashioned kind and it must be done every day for several weeks before the show.

The essential points of training are to make the horse stand well and to lead up properly. The proper standing position is with both the two front feet and the two hind feet exactly side by side and stretched slightly, that is, with the front and hind feet rather farther apart than usual. A horse will learn this quickly if handled carefully. Move him around until the hind feet are in the right position. Then move the front feet into position by pulling upward and forward on the bit. Tapping the back of the fetlock with a whip or stick will often make the horse move the foot. After the horse has once learned the position desired he will take it whenever he is asked.

In showing a horse in action the horse must lead up beside the attendant so that the latter can hold backward and upward on the rein instead of forward and downward, as is usually the case. The horse is really driven instead of led. Holding the rein high will keep the horse's head up, lengthen the stride and keep him from stumbling. In order to hold the rein steady the attendant must keep step with the horse, otherwise he will jerk the horse's mouth every step.

On the whole, fitting horses for show is not difficult if one tries. Plenty of hard work and strict attention to business are sure to bring success.

FUR INDUSTRY

United States Captures Traffic.

Before the war Paris and Petrograd were not only the centers of the industry for undressed skins, but supplied the opulent customers the finished fur products.

After the war those European capitals may again outbid the world for this fur wealth; but the United States has captured the traffic that for hundreds of years has been the monopoly of Europe's adventurous characters.

It is estimated that $10,000,000 worth of the 1916-17 fur exports will pass into the American channels before next June. The manufactured product, of course, will more than double these figures, for every one who touches a skin increases the profit which the ultimate purchaser must pay to the ancient industry.

Flax Not Hard on Land.

The more or less common belief that flax is hard on the land, and particularly bad for the crop that follows it, is unwarranted, according to the specialists of the United States department of agriculture. Farmers can safely plan to grow wheat or other crops on flax land the next season. The increased demand for flaxseed to supply linseed oil, widely needed for naval and other war purposes, has caused more than usual interest in flax production.

Farmers need not hesitate to plow up new land or sow old land to flax. While in much of the flax-growing territory flax grown after flax may fail because of flax wilt, this disease does not affect the health or productivity of any other crop than flax. Flax wilt introduced into the soil under most conditions prevents profitable repetition of flax, but does not deteriorate the soil.

Farm Sanitation

Losses in Eggs

Often Occur on Way to Market

In a former article I showed how great losses occur in the handling of eggs on the farm during warm weather. It is a question of heat. High temperature causes the kernel of grain to decay and a plant to grow from it. So it is heat that starts the process of decay in the egg and a chick to grow in it. If a proper temperature is maintained a live chick will develop in the egg, if it has been fertilized. If the temperature is not steady the embryo chick will start to develop and die, making a bad egg. If the egg be put in cold storage and kept at a temperature of about freezing neither will the various forms of bacteria or germs, which are other forms of life, develop. It is heat that causes bacteria to develop and the growth of bacteria causes the egg to decay or decompose.

It is imperative, therefore, if we want to eat eggs that we keep them at a temperature that will inhibit the development of life in them. This is the first principle of preservation or conservation of eggs for human consumption. Let this lesson be learned thoroughly by all egg producers and it will mean millions of dollars added to the value of the eggs produced in the United States in a year.

There are losses in eggs before they are sent to market, but there are also great losses after the eggs leave the farm. Let us see how the losses occur from the time the eggs leave the farm till they get to the consumer. I refer now to losses due to heat. There are losses from other causes, such as broken or wirty eggs and stale eggs. Let us leave those out of consideration and discuss only losses due to heat or hot weather.

First, the keeping of males with the laying hens is the primary cause of the large part of the loss in warm weather. The fertilized egg very often shows chick development between the time it leaves the farm till it reaches the city. There are sections of the country where the weather is so hot in summer that it is impossible at times to get the egg to market without the incubating process beginning. In some states the heat may reach incubation temperature and continue at that both night and day for several days at a time. In such places there is little probability of getting the fertilized eggs to market in good condition. But in our northwest country where the nights are usually cool, though the day temperature may be high, there is not the same danger from heated and spoiled eggs. The rooster is not the same menace to the egg supply here as in warmer states such as Missouri and Mississippi. In this respect we should have a better egg country than those states. The cool nights serve to prevent great losses in eggs that other states must suffer. If we can take advantage of this fact there need be no loss, or very little, in this country from overheated fertile eggs.

To get the eggs to market in good condition there are certain things that must be observed to prevent losses from heat. First, the eggs may be in good condition when taken out of the cellar, but before they get to town the hot sunshine may strike on the egg case and start incubation. The case or basket of eggs is very often put back of the buggy seat where the sun will strike on it. If the eggs are not fertile this will not hurt them very much, but the combination of heat and fertility means bad eggs. In taking the eggs to market, they should not be exposed to the sun.

Second, if the eggs are taken to a store in town they are very often kept in a warm room for a day or two before being shipped to the city, and the incubation started on the way to town continues. This is the second place where losses occur. The storekeeper who handles the eggs for farmers keeps them too long and does not keep them cool enough before he ships them to the city market.

Third, the eggs are next taken to the depot for shipment, where, very often, the cases stand on the platform for several hours in the full sunshine, and the incubation process, the wastage of the egg, continues.

Fourth, sometimes the temperature of the express car is such as to make it a good incubator and eggs lose value here.

Fifth, after the eggs reach the city and are carted a mile or two through oppressively hot streets and perhaps exposed to the sun at times, there will be a further loss in egg quality.

The dealer now finds it necessary to candle them to separate the good from the bad; then they are sold out to the trade, some at 40 cents and some at 20, and a great many are thrown into the dump. All because proper care was not exercised from the time they were laid by the hens, till delivered in the city. The heat of the broody hen and the heat of the sun has destroyed a large part of their value. And all this loss can be prevented by keeping the eggs cool, or reasonably cool.

The producer, of course, pays the bill, or the large part of it. Why should the farmer feed $2 wheat to his hens or other high priced feed, and then let the broody hen and the sun rob him of his profit. The sun is good in many ways for the farmer. It makes the crops grow. It kills disease germs and purifies things generally. It does not make eggs grow, however. It makes chicks grow in them, but kills the egg so far as its human food value is concerned. It makes for life in one case and death in another.

How is all this loss to be prevented, this loss of millions of dollars in a valuable food product? First, by a clear knowledge on the part of the farmer and poultryman of the effect of heat on the egg. When they know that the heat of the sun and of the broody hen starts the chick to grow in the egg they will naturally exercise more care.

But this is not enough. A great many farmers do take good care of the eggs, but they get no more for their eggs at the store than the farmer who takes no care. They are all thrown into the same hopper and paid for at the same price in cash or groceries. What can we expect of the average human being from such a system?

The second point, then, in the prevention of this loss is that eggs should be bought and sold on the basis of food value, not of numbers. They should be paid for according to quality, the same as other food products are paid for. When that is done there will be some justice in the marketing of eggs and this almost criminal waste of food will be stopped. J. D.

Success With Turkeys

Thomas W. Brunk, the veteran breeder of Salem Ore., is best known as a breeder of Poland China hogs, though his Mammoth Bronze turkeys have a wide reputation. What many people do not know is that Mrs. Brunk is the turkey breeder. She has wonderful success with them, due, she thinks, to a few simple rules, some of which are contrary to those usually advised. She uses mostly chicken hens for setting, especially early in the season, allowing the turkey hens to set later. Mrs. Brunk says a hen can be taught just as easily as a horse to be staked by the foot. So when the young turkeys come off she stakes the hen with a long, soft string, usually of old cotton cloth. She has a coop for the hen and turkeys, into which they go at night or when it storms. She feeds the hen as well as the young turkeys well and in about a month the hen will begin to lay, but will continue to hover the turkeys and care for them.

Mrs. Brunk's method of dealing with a setting turkey is to put her in a wire net coop about three feet square, with a small board coop inside, with the nest in it. An oil cloth is thrown over the wire coop when it rains. After a while she arranges so the young turkeys can go in and out, but the hen has to stay in until the turkeys are better able to travel. Mrs. Brunk feeds the turkey hen every day while she is sitting and while in the pen. Then when she is turned out with her brood she is not thin and will not run all over creation trying to find enough to eat and lose the little turkeys. Both hen and turkeys are fed liberally until the grain fields are cut, when the turkeys, chickens, hogs and horses are all turned in. The turkeys, besides the shattered grain, eat grasshoppers and grow and get fat. A sour milk bran or bran and rolled oat mash is a favorite and principal feed for the turkeys while young. This season so far Mrs. Brunk has saved fully 95 per cent of her turkey hatch and she had a fine hatch. She has White Rock chickens and has equally as good success with them.

Mr. Brunk's turkey Tom is hatched from noted English stock. He is large and most wonderfully colored. H. A.

Not So Very Meek.

"Blessed are the meek," quoted the deacon, in reproving the backslider, "for they shall inherit the earth."

"They may inherit, all right, deacon," said the irreverent one, "but somehow or other they never seem to get possession."

The Scales With A 10 Year Guarantee

Be your own weighmaster. A dependable, all-purpose scale on your farm makes and saves you many a dollar which otherwise you would lose without knowing why or where.

McDONALD— The Original Pitless Scale

Sold under a positive 10-year guarantee of accuracy. Solid steel frame locked at corners, solid steel joists, knife edge bearings protected against frost and clogging, and other distinctive features in design and construction make the McDonald trouble-proof, repair-proof and permanently reliable. Many of them in use over 20 years are giving satisfactory service today.

Easy to erect or move. No pit to dig or expensive foundation to build—no expert needed. Full directions with every scale which anyone can follow.

Ask your Moline Dealer about the McDonald Pitless, or write us for Illustrated Literature.

GRANVILLE LOWTHER
Editorial Contributor

It is estimated that one ton of hardwood ashes for orchards is worth five tons of barnyard manure. I have no question that on the average orchard soil of the United States that this is true, but I question it on the volcanic ash soils of the northwest, where they lack humus.

One of the best ways to get rid of gophers in an orchard is to poison raisins by soaking 48 hours in a solution of strychnine and put them in the holes. This will also kill ground squirrels and sage rates. G. L.

Fruit Exhibitions

The time for exhibitions at the county fairs, state fair and the Spokane Apple Show is near at hand. I will venture a few suggestions growing out of observation, experience, and reading.

First, I think there should be three judges instead of one, because contests are often close, and if there is only one, his judgment might be called in question, whereas if there were three, their opinions would carry weight and influence not possible to one.

Second, at least one of these judges should be a practical fruit dealer, because he is more in touch with the demands and requirements of the trade, while the professional pomologist considers mostly whether the apple is true to an established type, regardless of whether that type is the best suited to the trade, or for commercial purposes. Perhaps I should not have used the word "regardless," but it is true, nevertheless, that a judge is a man, and men incline to emphasize that which comes most in their line of study. The pomologist studies the characteristics of certain varieties, the qualities that under the laws of heredity should belong to that particular quality, and the features that differentiate it from others. Then, that exhibit must in his thinking conform to that type.

Third, since exhibitions are designed to be educational in their nature, and the market value of apples, not their ancestry, is the most interesting question to the grower, there should be a marketing judge on the job.

Spokane Score Card.

One of the score cards in use at the "International Apple Show at Spokane," several years ago, read as follows:

Quality	20
Color	20
Size	10
Uniformity	10
Freedom, blemish	20
Pack	20
Total	100

Items of Pack.

Height of ends	4
Bulge	4
Alignment	4
Compactness	4
Attractiveness and style	4

Changes have been recommended, and not having before me the card of last year, I am not sure but some of these changes may have been adopted, but the above items will give exhibitors and growers an idea of requirements. G. L.

Spray Burn Warning

Recommend Tobacco Spray Highly

By Granville Lowther.

One man near Yakima discovered by experimentation that lime-sulphur, mixed with arsenate of lead, one to 23, burns the fruit. He has lost probably half his apples in one orchard by that mistake. He was under the impression that the bulletins recommend one to 20, and in order to be safe, mixed the solutions in the proportion of one to 23. It has always seemed to me dangerous to mix the arsenate of lead spray intended for codling moth with the lime sulphur intended for scale. One is stomach poison; the other kills by contact. Now, if the contact spray is strong enough to kill scale, there is danger that it will injure both foliage and fruit.

It seemed, too, that the apples most exposed to the sun were most injured by the spray. If you are going to spray for scale this summer and had intended to use lime sulphur, don't do it; use tobacco spray. Lime sulphur can be used successfully if properly mixed, but the danger of injury to fruit is so great that the average man can not safely use it.

However, the latest experiments seem to justify the use of lime sulphur in the following proportions:

Thirty-five degrees Baume, one gallon to 45 gallons of water. Thirty-two degrees Baume, one gallon to 40 gallons of water. Twenty-two degrees Baume, one gallon to 22 gallons of water. The average orchardist uses his lime sulphur at about 32, therefore should be added for summer spray to 40 gallons of water. G. L.

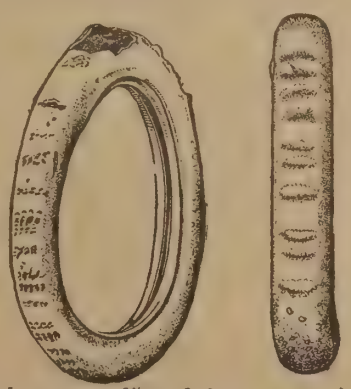
Tree Yields 1500 Pounds Cherries.

Fifteen hundred pounds of cherries from one Bing tree on the L. B. Haberly place, northeast of Salem, Ore., with a value of $90 for the product from one tree, is a record just reported. The cherries sold for 6 cents a pound.

Why We Have Movies.

Next year will mark the silver jubilee of the introduction of moving pictures. Nothing in the world's history has ever happened to so stimulate the prompt serving of the evening meal.—Santa Ana (Cal.) Blade.

The Motor Car
On the Farm



How to Save Tires.

By W. D. ALBRIGHT.

We Americans have been extravagant. We have literally educated ourselves to be careless with the most expensive things we buy. Price has been no object and our prosperity has led us on and on until now we are obliged to face a period of economy.

It is conservatively estimated that the carelessness of American motor car drivers during 1916 cost them in round figures $150,000,000, and this applies only to tires. What has been your share? You have contributed your "bit." You must now take this tire problem seriously. Get every mile out of every tire that the manufacturer has built into it. If you don't, you are the loser, and if everybody is a loser, then the "tire deficit" for 1917 will outrival last year, for there are thousands more motor car owners today than there were a year ago.

The photographs shown here are of the genuine abused tires, hundreds of

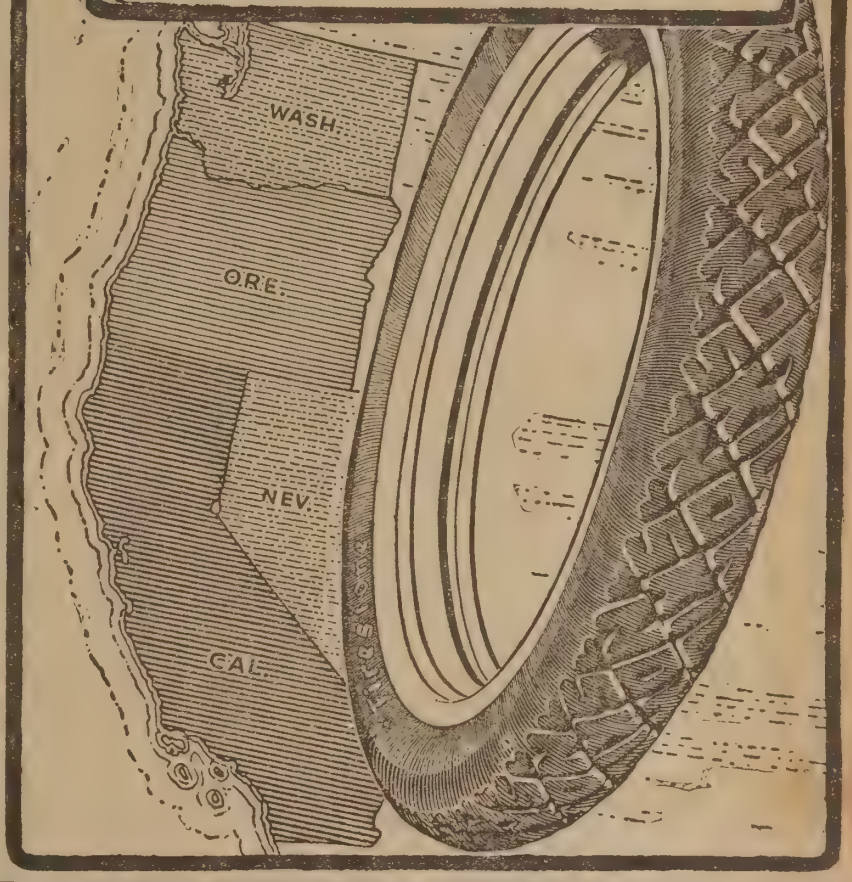
which are discarded every day throughout the United States before they have given the service for which they were built. It isn't the manufacturer's fault. The mileage was built into each tire, but the car driver lost it through carelessness.

Injured by Chains.

The illustration at the left shows the result of improper application of tire chains. Leave chains just loose enough so that every time the wheel turns the cross chains will not strike the same spot in the tire. If you do not heed this advice, you might preserve the illustration as an actual photograph of your tire.

Underinflation.

Underinflation is the "white plague" of the pneumatic tire. More damage, such as shown in the illustration at the right, is done, possibly, by underinflation than by any other cause. The wavy condition of the tread of this tire is due to its having been run soft, with insufficient air, and consequently becoming loose from the fabric through no fault of the manufacturer. Most tire manufacturers have inflation schedules which they are very anxious to place in the hands of every motorist. A tire caliper is the best method of measuring the air pressure in your tires. It is a recent invention of one of the large rubber companies and is made adjustable to all sizes of tires. When adjusted to the size of tire you are using, if the tire is properly inflated, it should slip over the tire snugly. If it does not fit your tire, then the pressure is too high or too low.



These illustrated tire talks will appear regularly in The Farmer for several weeks. It will pay every subscriber who drives a car to read every one of them.

Firestone

WHERE specialization and intensive cultivation of the soil holds sway on the West Coast, Firestone Tires have justly won high recognition. The same attention to detail which has made western groves and fields treble their yield is responsible for the strength of the Firestone Tire and its Most Miles per Dollar.

If you are not a Firestone user, a thorough trial is only fair to yourself. Most Miles per Dollar means just what it says. See your dealer. Write for Free Book, "Mileage Talks," No. 138

Trucks approved for Farm Loans by Federal Loan Bank!

GRASP THIS OPPORTUNITY TO CUT FARM COSTS

UNCLE SAM says he will loan you money to buy trucks. He has studied the farmers' needs for years, and he knows that the truck is both a money-maker and a money-saver for the farmer of today.

That is why he is willing to back you up and help you buy a truck, for in these days of high farm labor, the truck will make profit out of loss by reducing hauling and labor costs.

GMC
GENERAL MOTORS COMPANY
TRUCKS

THE GMC IS THE BEST TRUCK FOR FARM USE

IT IS THE ONE TRUCK THAT HAS MADE GOOD FOR THE FARMER IN THE NORTHWEST

There are more GMC trucks in successful operation on Washington farms than any other make.

For every hauling purpose, wheat, dairy, fruit, livestock, etc., every GMC has saved its owner money from the day it went into operation. FIVE TRIPS to the railroad and back while a team can make but one — that's how the GMC saves you money.

The GMC is decidedly the best Truck for the Northwestern farmer. Built especially rugged to carry capacity loads over the roughest country roads—through chuck holes and sand —the GMC has earned its name, the "Farmers' Truck."

SPECIALIZED SERVICE FOR WASHINGTON FARMERS

The Eldridge Buick Company has made a special study of farm conditions in the Northwest, and our Farmers' Service Department can give you expert help as to special bodies to suit your particular needs.

FARMER.

How Farm Loans May Be Used

"The farm loan law says that loans may be made for one or all of four purposes; (1) To provide for the purchase of land for agricultural uses; (2) to provide for the purchase of live stock equipment, fertilizers and reasonable necessary for the proper and reasonable operation of the land; (3) to provide buildings and for the improvement of the land; and (4) to pay existing debts.

"The Spirit of the Law.

"If a automobile or truck is so constructed and equipped as to be a piece of farm machinery, and if it is used in such a way as to take the place of some other necessary piece of farm equipment, I believe it comes within the field of legitimate purchases with farm loan money," said President O'Shea in explaining his position to a representative of the Farmer. "An automobile for pleasure or mere convenience in traveling certainly would not be in accord with the spirit of the law, for the law is designed purely as a farm development measure. But when the automobile is in the form of a tractor, to plow, or seed, or cultivate, or harvest, or when it is hitched to pump water or to pump to generate electric plant to generate electric as a delivery wagon market, it beco farm equipmen mate purchas "How

From an interview with President OShea of the Federal Farm Loan Bank, Spokane, printed in the Washington Farmer, July 5.

War Power of the Food Control Bill

To Assure an Adequate Supply and an Equitable Distribution of Foods, Feeds and Fuel

Here is given in full the food control act of congress, which became effective on the approval of President Wilson on August 10.

By carefully taking out these four pages from the center of the Farmer, our readers can easily preserve this most important and far-reaching measure, especially affecting agricultural interests of the country.

An act to provide further for the national security and defense by encouraging the production, conserving the supply and controlling the distribution of food products and fuel.

Be it enacted by the senate and house of representatices of the United States of America, in congress assembled:

Section 1. That, by reason of the existence of a state of war, it is essential to the national security and defense, for the successful prosecution of the war, and for the support and maintenance of the army and navy, to assure an adequate supply and equitable distribution, and to facilitate the movement of foods, feeds and fuel, including fuel oil and natural gas, and fertilizer and fertilizer ingredients, tools, utensils, implements, machinery and equipment required for the actual production of foods, feeds and fuel, hereafter in this act called necessaries; to prevent, locally or generally, scarcity, monopolization, hoarding, injurious speculation, manipulations and private controls, affecting such supply, distribution, and movement; and to establish and maintain governmental control of such necessaries during the war. For such purposes the instrumentalities, means, methods, powers, authorities, duties, obligations and prohibitions hereinafter set forth are created, established, conferred and prescribed. The president is authorized to make such regulations and to issue such orders as are essential effectively to carry out the provisions of this act.

Voluntary Agencies.

Section 2. That in carrying out the purposes of this act the president is authorized to enter into any voluntary arrangements or agreements, to create and use any agency or agencies, to accept the services of any person without compensation, to cooperate with any agency or person, to utilize any department or agency of the government, and to coordinate their activities so as to avoid any preventable loss or duplication of effort or funds.

Section 3. That no person acting either as a voluntary or paid agent or employe of the United States in any capacity, including an advisory capacity, shall solicit, induce or attempt to induce any person or officer authorized to execute or to direct the execution of contracts on behalf of the United States to make any contract or give any order for the furnishing to the United States of work, labor or services, or of materials, supplies or other property of any kind or character, if such agent or employe has any pecuniary interest in such contract or order, or if he or any firm of which he is a member, or corporation, joint stock company, or association of which he is an officer or stockholder, or in the pecuniary profits of which he is directly or indirectly interested, shall be a party thereto. Nor shall any agent or employe make, or permit any committee or other body of which he is a member to make, or participate in making, any recommendation concerning such contract or order to any council, board or commission of the United States, or any member or subordinate thereof, without making to the best of his knowledge and belief a full and complete disclosure in writing to such council, board, commission, or subordinate of any and every pecuniary interest which he may have in such contract or order and of his interest in any firm, corporation, company or association being a party thereto. Nor shall he participate in the awarding of such contract or giving such order. Any wilful violation of any of the provisions of this section shall be punishable by a fine of not more than $10,000, or by imprisonment of not more than five years, or both: Provided, that the provisions of this section shall not change, alter or repeal action 41 of chapter 321, 35th statutes at large.

Section 4. That it is hereby made unlawful for any person wilfully to destroy any necessaries for the purpose of enhancing the price or restricting supply thereof; knowingly to commit waste or wilfully to permit preventable deterioration of any necessaries in or in connection with their production, manufacture, or distribution; to hoard, as defined in section 6 of this act, any necessaries; to monopolize or attempt to monopolize, either locally or generally, any necessaries; to engage in any discriminatory and unfair, or any deceptive or wasteful practice or device, or to make any unjust or unreasonable rate or charge, in handling or dealing in or with any necessaries; to conspire, combine, agree or arrange with any other person: (a) to limit the facilities for transporting, producing, harvesting, manufacturing, supplying, storing, or dealing in any necessaries; (b) to restrict the supply of any necessaries; (c) to restrict distribution of any necessaries; (d) to prevent, limit, or lessen the manufacture or production of any necessaries in order to enhance the price thereof, or (e) to exact excessive prices for any necessaries, or to aid or abet the doing of any act made unlawful by this section.

Power to License.

Section 5. That, from time to time, whenever the president shall find it essential to license the importation, manufacture, storage, mining or distribution of any necessaries, in order to carry into effect any of the purposes of this act, and shall publicly so announce, no person shall, after a date fixed in the announcement, engage in or carry on any such business specified in the announcement of importation, manufacture, storage, mining or distribution of any necessaries as set forth in such announcement, unless he shall secure and hold a license issued pursuant to this section. The president is authorized to issue such licenses and to prescribe regulations for the issuance of licenses and requirements for systems of accounts and auditing of accounts to be kept by licensees, submission of reports by them, with or without oath or affirmation, and the entry and inspection by the president's duly authorized agents of the places of business of licensees. Whenever the president shall find that any storage charge, commission, profit or practice of any licensee is unjust, or unreasonable, or discriminatory and unfair, or wasteful, and shall order such licensee, within a reasonable time fixed in the order, to discontinue the same, unless such order, which shall recite the facts found, is revoked or suspended, such licensee shall, within the time prescribed in the order, discontinue such unjust, unreasonable, discriminatory and unfair storage charge, commission, profit or practice. The president may, in lieu of any such unjust, unreasonable, discriminatory and unfair storage charge, commission, profit or practice, find what is a just, reasonable, nondiscriminatory and fair storage charge, commission, profit or practice and in any proceeding brought in any court such order of the president shall be prima facie evidence. Any person who, without a license issued pursuant to this section, or whose license shall have been revoked, knowingly engages in or carries on any business for which a license is required under this section, or wilfully, fails or refuses to discontinue any unjust, unreasonable, discriminatory and unfair storage charge, commission, profit or practice, in accordance with the requirement of an order issued under this section, or any regulation prescribed under this section, shall, upon conviction thereof, be punished by a fine not exceeding $5000 or by imprisonment for not more than two years, or both. Provided, That this section shall not apply to any farmer, gardener, cooperative association of farmers or gardeners, including live stock farmers, or other persons with respect to the products of any farm, garden or other land owned, leased or cultivated by him, nor to any retailer with respect to the retail business actually conducted by him, nor to any common carrier, nor unjust, unreasonable discrimatory shall any thing in this section be construed to authorize the fixing or imposition of a duty or tax upon any article imported into or exported from the United States or any state, territory or the District of Columbia. Provided further, That for the purposes of this act a retailer shall be deemed to be a person, copartnership, firm, corporation or association not engaging in the wholesale business, whose gross sales do not exceed $100,000 per annum.

Fines for Hoarding.

Section 6. That any person who wilfully hoards any necessaries shall upon conviction thereof be fined not exceeding $5000 or be imprisoned for not more than two years, or both. Necessaries shall be deemed to be hoarded within the meaning of this act when either (a) held, contracted for or arranged for by any person in a quantity in excess of his reasonable requirements for use or consumption by himself and dependents for a reasonable time; (b) held, contracted for or arranged for by any manufacturer, wholesaler, retailer, or other dealer in a quantity in excess of the reasonable requirements of his business for use or sale by him for a reasonable time, or reasonably required to furnish necessaries produced in surplus quantities seasonally throughout the period of scant or no production; or (c) withheld, whether by possession or under any contract or arrangement, from the market by any person for the purpose of unreasonably increasing or diminishing the price: Provided, that this section shall not include or relate to transactions on any exchange, board of trade or similar institution or place of business as described in section 13 of this act that may be permitted by the president under the authority conferred upon him by said section 3.

Provided, however, that any accumulating or withholding by any farmer or gardener, cooperative association of farmers or gardeners, including live stock farmers or any other person of the products of any farm, garden or other land owned, leased or cultivated by him shall not be deemed to be hoarding within the meaning of this act.

Libel for Condemnation.

Section 7. That whenever any necessaries shall be hoarded as defined in section 6 they shall be liable to be proceded against in any district court of the United States within the district where the same are found and seized by a process of libel for condemnation, and if such necessaries shall be adjudged to be hoarded they shall be disposed of by sale in such manner as to provide the most equitable distribution thereof as the court may direct, and the proceeds thereof, less the legal costs and charges, shall be paid to the party entitled thereto. The proceedings of such libel cases shall conform as near as may be to the proceedings in admiralty, except that either party may demand trial by jury of any issue of fact joined in any such case, and all such proceedings shall be at the suit of and in the name of the United States. It shall be the duty of the United States attorney for the proper district to institute and prosecute any such action upon presentation to him of satisfactory evidence to sustain the same.

Section 8. That any person who wilfully destroys any necessaries for the purpose of enhancing the price or restricting the supply thereof shall, upon conviction thereof, be fined not exceeding $5000 or imprisoned for not more than two years, or both.

Against Combinations.

Section 9. That any person who conspires, combines, agrees or arranges with any other person (a) to limit the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any necessaries (b) to restrict the supply of any necessaries; (c) to restrict the distribution of any necessaries; (d) to prevent, limit or lessen the manufacture or production of any necessaries in order to enhance the price thereof shall, upon conviction thereof, be fined not exceeding $10,000 or be imprisoned for not more than two years, or both.

Power to Requisition.

Sec. 10.—That the president is authorized, from time to time, to requisition foods, feeds, fuels, and other supplies necessary to the support of the army or the maintenance of the navy, or any other public use connected with the common defense, and to requisition or otherwise provide storage facilities for such supplies; and he shall ascertain and pay a just compensation therefor. If the compensation so determined be not satisfactory to the person entitled to receive the same, such person shall be paid 75 per centum of the amount so determined by the president, and shall be entitled to sue the United States to recover such further sum as added to said 75 per centum will make up such amount as will be just compensation for such necessaries or storage space, and jurisdiction is hereby conferred on the United States district courts to hear and determine all such controversies: Provided, That nothing in this section, or in the section that follows, shall be construed to require any natural person to furnish to the government any necessaries held by him and reasonably required for consumption or use by himself and dependents, nor shall any person, firm, corporation, or association be required to furnish to the government any seed necessary for the seeding of land owned, leased, or cultivatd by them.

To Buy and Store.

Sec. 11. That the president is authorized from time to time to purchase, to store, to provide storage facilities for, and to sell for cash at reasonable prices, wheat, flour, meal, beans, and potatoes: Provided, That if any minimum price shall have been theretofore fixed, pursuant to the provisions of section 14 of this act, then the price paid for any such articles so purchased shall not be less than such minimum price. Any moneys received by the United States from or in connection with the disposal by the United States of necessaries under this section may, in the discretion of the president, be used as a revolving fund for further carrying out the purposes of this section. Any balance of such money not used as part of such revolving fund shall be covered into the treasury as miscellaneous receipts.

Requisition and Take Over.

Sec. 12. That whenever the president shall find it necessary to secure an adequate supply of necessaries for the support of the army or the maintenance of the navy, or for any other public use connected with the common defense, he is authorized to requisition and take over, for use or operation by the government, any factory, packing house, oil pipe line, mine, or other plant, or any part thereof, in or through which any necessaries are or may be manufactured, produced, prepared, or mined, and to operate the same. Whenever the president shall determine that the further use or operation by the government of any such factory, mine, or plant, or part thereof, is not essential for the national security or defense, the same shall be restored to the person entitled to the possession thereof. The United States shall make just compensation, to be determined by the president, for the taking over, use, occupation, and operation by the government of any such factory, mine, or plant, or part thereof. If the compensation so determined be unsatisfactory to the person entitled to receive the same, such person shall be paid 75 per centum of the amount so determined by the president, and shall be entitled to sue the United States to recover such further sum as, added to said 75 per centum, will make up such amount as will be just compensation, in the manner provided by section 24, paragraph 20, and section 145 of the judicial code. The president is authorized to prescribe such regulations as he may deem essential for carrying out the purposes of this section, including the operation of any such factory, mine, or plant, or part thereof, the purchase, sale, or other disposition of articles used, manufactured, produced, prepared, or mined therein, and the employment, control, and compensation of employees. Any moneys received by the United States from or in connection with the use or operation of any such factory, mine, or plant, or part thereof, may, in the discretion of the president, be used as a revolving fund for the purpose of the continued use or operation of any such factory, mine, or plant, or part thereof, and the accounts of each such factory, mine, plant, or part thereof, shall be kept separate and distinct. Any balance of such moneys not used as part of such revolving fund shall be paid into the treasury as miscellaneous receipts.

To Prevent Speculation.

Sec. 13. That whenever the president finds it essential in order to prevent undue enhancement, depression or fluctuation of prices of, or in order to prevent injurious speculation in, or in order to prevent unjust market manipulation or unfair and misleading market quotations of the prices of

(Continued on following page.)

War Power of Food Bill Designed to Insure Supply and Distribution

(Continued from preceding page.)

necessaries, hereafter in this section called evil practices, he is authorized to prescribe such regulations governing, or may either wholly or partly prohibit, operations, practices and transactions at, on, in, or under the rules of any exchange, board of trade, or similar institution or place of business as he may find essential in order to prevent, correct, or remove such evil practices. Such regulations may require all persons coming within their provisions to keep such records and statements of account, and may require such persons to make such returns, verified under oath or otherwise, as will fully and correctly disclose all transactions at, in, or on, or under the rules of any such exchange, board of trade, or similar institution or place of business, including the making, execution, settlement, and fulfilment thereof. He may also require all persons acting in the capacity of a clearing house, clearing association, or similar institution, for the purpose of clearing settling, or adjusting transactions, at, in, or on, or under the rules of any such exchange, board of trade, or similar institution or place of business, to keep such records and to make such returns as will fully and correctly disclose all facts in their possession relating to such transactions, and he may appoint agents to conduct the investigations necessary to enforce the provisions of this section and all rules and regulations made by him in pursuance thereof, and may fix and pay the compensation of such agents. Any person who wilfully violates any regulation made pursuant to this section, or who knowingly engages in any operation, practice or transaction prohibited pursuant to this section, or who wilfully aids or abets any such violation or any such prohibited operation, practice or transaction, shall, upon conviction thereof, be punished by a fine not exceeding $10,000 or by punishment for not more than four years, or both.

Wheat Minimum.

Section 14. That whenever the president shall find that an emergency exists requiring stimulation of the production of wheat, and that it is essential that the producers of wheat produced within the United States shall have the benefits of the guaranty provided for in this section, he is authorized from time to time seasonably and as far in advance of seeding time as practicable to determine and fix and to give public notice of what, under specified conditions, is a reasonable guaranteed price for wheat, in order to assure such producers a reasonable profit. The president shall thereupon fix such guaranteed price for each of the official grain standards for wheat as established under the United States grain standards act, approved August 11, 1916. The president shall from time to time establish and promulgate such regulations as he shall deem wise in connection with such guaranteed prices, and in particular governing conditions of delivery and payment and differences in price for the several standard grades in the principal primary markets of the United States, adopting No. 1 northern spring or its equivalent at the principal interior primary markets as the basis. Thereupon, the government of the United States hereby guarantees every producer of wheat produced within the United States, that, upon compliance by him with the regulations prescribed, he shall receive for any wheat produced in reliance upon this guarantee within the period, not exceeding 18 months, prescribed in the notice, a price not less than the guaranteed price therefor as fixed pursuant to this section. In such regulations the president shall prescribe the terms and conditions upon which any such producer shall be entitled to the benefits of such guaranty. The guaranteed prices for the several standard grades of wheat for the crop of 1918 shall be based upon No. 1 northern spring or its equivalent at not less than $2 per bushel at the principal interior primary markets. This guaranty shall not be dependent upon the action of the president under the first part of this section, but is hereby made absolute and shall be binding until May 1, 1919. When the president finds that the importation into the United States of any wheat produced outside of the United States materially enhances or is likely materially to enhance the liabilities of the United States under guarantees of prices therefor made pursuant to this section, and ascertains what rate of duty, added to the then existing rate of duty on wheat and to the value of wheat at the time of importation, would be sufficient to bring the price thereof at which imported up to the price fixed therefor pursuant to the foregoing provisions of this section he shall proclaim such facts, and thereafter there shall be levied, collected and paid upon wheat when imported, in addition to the then existing rate of duty, the rate of duty so ascertained; but in no case shall any such rate of duty be fixed at an amount which will effect a reduction of the rate of duty upon wheat under any then existing tariff law of the United States. For the purpose of making any guaranteed price effective under this section, or whenever he deems it essential in order to protect the government of the United States against material enhancement of its liabilities arising out of any guaranty under this section, the president is authorized also, in his discretion, to purchase any wheat for which a guaranteed price shall be fixed under this section, and to hold, transport or store it, or to sell, dispose of and deliver the same to any citizens of the United States, or to any government engaged in war with any country with which the government of the United States is or may be at war, or to use the same as supplies for any department or agency of the government of the United States. Any moneys received by the United States from or in connection with the sale or disposal of wheat under this section may, in the discretion of the president, be used as a revolving fund for further carrying out the purposes of this section. Any balance of such moneys not used as part of such revolving fund shall be covered into the treasury as miscellaneous receipts.

Distilled Spirits Regulation.

Sec. 15. That from and after thirty days from the date of the approval of this act no foods, fruits, food materials, or feeds shall be used in the production of distilled liquors, for beverage purposes: Provided, That under such rules, regulations, and bonds as the president may prescribe, such materials may be used in the production of distilled spirits exclusively for other than beverage purposes, or for the fortification of pure sweet wines as defined by the act entitled "An act to increase the revenue, and for other purposes," approved September 8, 1916. Nor shall there be imported into the United States any distilled spirits. Whenever the president shall find that limitation, regulation, or prohibition of the use of foods, fruits, food materials, or feeds in the production of malt or vinous liquors for beverage purposes, or that reduction of the alcoholic content of any such malt or vinous liquor, is essential, in order to assure an adequate and continuous supply of food, or that the national security and defense will be subserved thereby, he is authorized, from time to time, to prescribe and give public notice of the extent of the limitation, regulation, prohibition, or reduction so necessitated. Whenever such notice shall have been given and shall remain unrevoked no person shall, after a reasonable time prescribed in such notice, use any foods, fruits, food materials, or feeds in the production of malt or vinous liquors, or import any such liquors except under license issued by the president and in compliance with rules and regulations determined by him governing the production and importation of such liquors and the alcoholic content thereof. Any person who willfully violates the provisions of this section, or who shall use any foods, fruits, food materials, or feeds in the production of malt or vinous liquors, or who shall import any such liquors, without first obtaining a license so to do when a license is required under this section, or who shall violate any rule or regulation made under this section, shall be punished by a fine not exceeding $5000, or by imprisonment for not more than two years, or both: Provided further, That nothing in this section shall be construed to authorize the licensing of the manufacture of vinous or malt liquors in any state, territory, or the District of Columbia or any civil subdivision thereof, where the manufacture of such vinous or malt liquor is prohibited.

Section 16. That the president is authorized and directed to commandeer any or all distilled spirits in bond or in stock at the date of the approval of this act for redistillation, in so far as such redistillation may be necessary to meet the requirements of the government in the manufacture of munitions and other military and hospital supplies, or in so far as such redistillation would dispense with the necessity of utilizing products and materials suitable for foods and feeds in the future manufacture of distilled spirits for the purposes herein enumerated. The president shall determine and pay a just compensation for the distilled spirits so commandeered, and if the compensation so determined be not satisfactory to the person entitled to receive the same such person shall be paid 15 per centum of the amount so determined by the president and shall be entitled to sue the United States to recover such further sum as, added to said 75 per centum, will make up such amount as will be just compensation for such spirits, in the manner provided by section 24, paragraph 20, and section 145 of the Judicial Code.

Section 17. That every person who wilfully assaults, resists, impedes or interferes with an officer, employe or agent of the United States in the execution of any duty authorized to be performed by or pursuant to this act shall upon conviction thereof be fined not exceeding $1000 or be imprisoned for not more than one year, or both.

Appropriates $150,000,000.

Section 18. That the sum of $2,500,000 is hereby appropriated out of any moneys in the treasury not otherwise appropriated to be available until June 30, 1918, for the payment of such rent, the expense, including postage, of such printing and publications, the purchase of such material and equipment, and the employment of such persons and means, in the city of Washington and elsewhere, as the president may deem essential.

Section 19. That for the purposes of this act the sum of $150,000,000 is hereby appropriated, out of any moneys in the treasury not otherwise appropriated, to be available during the time this act is in effect. Provided, That no part of this appropriation shall be expended for the purposes described in the preceding section. Provided further, That itemized statements covering all purchases and disbursements under this and the preceding section shall be filed with the secretary of the senate and the clerk of the house of representatives on or before the 25th day of each month after the taking effect of this act, covering the business of the preceding month, and said statements shall be subject to public inspection.

Section 20. That the employment of any person under the provisions of this act shall not exempt any such person from military service under the provisions of the selective draft law approved May 18, 1917.

Sec. 21. The president shall cause a detailed report to be made to the congress on the first day of January each year of all proceedings had under this act during the year preceding. Such report shall, in addition to other matters, contain an account of all persons appointed or employed, the salary or compensation paid or allowed each, the aggregate amount of the different kinds of property purchased or requisitioned, the use and disposition made of such property, and a statement of all receipts, payments, and expenditures, together with a statement showing the general character, and estimated value of all property then on hand, and the aggregate amount and character of all claims against the United States growing out of this act.

Sec. 22. That if any clause, sentence, paragraph, or part of this act shall for any reason be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder thereof, but shall be confined in its operation to the clause, sentence, paragraph, or part thereof, directly involved in the controversy in which such judgment shall have been rendered.

Sec. 23. That words used in this act shall be construed to import the plural or the singular, as the case demands. The word "person," wherever used in this act, shall include individuals, partnerships, associations, and corporations. When construing and enforcing the provisions of this act, the act, omission, or failure of any official, agent, or other person acting for or employed by any partnership, association, or corporation within the scope of his employment or office shall, in every case, also be deemed the act, omission, or failure of such partnership, association, or corporation as well as that of the person.

During the War.

Sec. 24. That the provisions of this act shall cease to be in effect when the existing state of war between the United States and Germany shall have terminated, and the fact and date of such termination shall be ascertained and proclaimed by the president; but the termination of this act shall not affect any act done, or any right or obligation accruing or accrued, or any suit or proceeding had or commenced in any civil case before the said termination pursuant to this act; but all rights and liabilities under this act arising before its termination shall continue and may be enforced in the same maner as if the act had not terminated. Any offense committed and all penalties, forfeitures, or liabilities incurred prior to such termination may be prosecuted or punished in the same manner and with the same effect as if this act had not been terminated.

Fix Price of Coal.

Sec. 25. That the president of the United States shall be, and he is hereby, authorized and empowered, whenever and wherever in his judgment necessary for the efficient prosecution of the war, to fix the price of coal and coke, wherever and whenever sold, either by producer or dealer, to establish rules for the regulation of and to regulate the method of production, sale, shipment, distribution, apportionment or storage thereof among dealers and consumers domestic or foreign; said authority and power may be exercised by him in each case through the agency of the federal trade commission during the war or for such part of said time as in his judgment may be necessary.

That if, in the opinion of the president, any such producer or dealer fails or neglects to conform to such prices or regulations or to conduct his business efficiently under the regulations and control of the president as aforesaid, or conducts it in a manner prejudicial to the public interest, then the president is hereby authorized and empowered in every such case to requisition and take over the plant, business and all appurtenances thereof belonging to such producer or dealer as a going concern and to operate or cause the same to be operated in such manner and through such agency as he may direct during the period of the war, or for such part of said time as in his judgment may be necessary.

That any producer or dealer whose plant, business and appurtenances shall have been requisitioned or taken over by the president shall be paid a just compensation for the use thereof during the period that the same may be requisitioned or taken over as aforesaid, which compensation the president shall fix or cause to be fixed by the federal trade commission.

That if the prices so fixed, or if, in the case of the taking over or requisitioning of the mines or business of any such producer or dealer the compensation therefor as determined by the provisions of this act be not satisfactory to the person or persons entitled to receive the same, such person shall be paid 75 per centum of the amount so determined and shall be entitled to sue the United States to recover such further sum as, added to said 75 per centum, will make up such amount as will be just compensation in the manner provided by section 24, paragraph 20, and section 145 of the judicial code.

While operating or causing to be operated any such plants or business the president is authorized to prescribe such regulations as he may deem essential for the employment, control and compensation of the employees to conduct the same.

Or if the president of the United States shall be of the opinion that he can thereby better provide for the common defense and whenever, in his judgment, it shall be necessary for the efficient prosecution of the war, then he is hereby authorized and empowered to require any or all producers of coal and coke, either in any special area or in any special coal fields or in the entire United States, to sell their products only to the United States through an agency to be designaed by the president, such agency to regulate the resale of such coal and coke and the prices thereof and to establish rules for the regulation of and to regulate the methods of production, shipment, distribution, apportionment or storage thereof among dealers and consumers, domestic or foreign, and to make payment of the purchase price thereof to the producers thereof, or to the person or persons legally entitled to said payment.

That within 15 days after notice from the agency so designated to any producer of coal and coke that his or its output is to be so purchased by the United States as hereinbefore described, such producer shall cease shipments of said product upon his own account and shall transmit to such agency all orders received and unfilled or partially unfilled, showing the exact extent to which shipments have been made thereon, and thereafter all shipments shall be made only on authority of the agency designated by

The first step in stump blasting; making hole under the stump.

Loading sticks of Giant Stumping Powder in hole under center.

Giant Stumping Powder left the stump ready for easy handling.

Save money on your stump blasting

The explosives that get stumps out cleanest and cheapest are those that have a heaving and lifting effect, shattering the stumps just enough to break them up. Then you can handle them easily.

"The farmer," says an Experiment Station, "should use an explosive prepared especially for his work; one that stands all ordinary shocks of handling and transportation and does not easily freeze. He does not need and should not use the expensive nitroglycerine explosives." Thousands of farmers have taken this advice and have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

always save them money because they go further than any other stumping powders. Also, because they are made especially to suit *western* farm conditions and because they are always uniform in composition and action.

Giant Farm Powders—the product of the oldest manufacturer of high explosives in the United States—are the only genuine "giant powders" for agricultural use. They are made in two brands—Giant Stumping Powder and Eureka Stumping Powder.

Giant Stumping Powder is the ideal explosive for blasting stumps in wet ground. It keeps perfectly for months, resists water and chilling, and gets the stumps out economically.

Eureka Stumping Powder is the money-saving, low-freezing explosive for blasting stumps in dry soil. It costs less than Giant Stumping Powder and careful blasters save many dollars by using it for wet work also.

EVIDENCE

I bought five boxes of your Stumping Powder and now I want to sell a lot of other powder that I have.
RUDOLPH STADELI, Silverton, Ore.

Your Stumping Powder has a wide breaking power and less fumes to contend with after being exploded than any other on the market.
G. L. METZGER, Hillsdale, Ore.

In using a thousand pounds of your Stumping Powder neither I nor any of my men had the least bit of trouble in getting the very best results. I have used practically every powder on the market and find there is more strength in yours. J. L. EIDSON, Silverton, Ore.

Your Stumping Powder shoots the roots and spreads wide in the ground instead of going down. It is the best powder we have used.
G. S. McCARTNEY, Russellville, Ore.

I find your Stumping Powder all you claim for it. ELI CLINKER, Camas, Wash.

I am a large user of powder in stump blasting as well as in grading roads, breaking boulders and making ditches. I get good results from the Giant brands all the time.
MICHAEL HARVEY, Charleston, Wash.

Giant Stumping Powder gives good results when all other means of removing stumps have failed.
ROBERT CHABOT, Moclips, Wash.

Make This Test

You want to clear your land as cheaply as you can. If you are not using Giant Farm Powders, try them *now*. Mark and mail the coupon at the right. We will have our nearest distributor supply you—at the lowest market price—with a 25-pound or 50-pound case of Giant Stumping Powder or Eureka Stumping Powder. Compare this with any other and *prove* for yourself that Giant Farm Powders will save you money, time and work.

We Issue Five Valuable Books for the Farmer

They tell and show how to remove stumps and boulders, how to increase the fertility of the farm by blasting the subsoil, how to have earlier-bearing, thriftier orchards by blasting holes for trees, and how to drain your land by using Giant Farm Powders. These books are written especially to cover Pacific Coast conditions, and will be helpful to every farmer. Choose the books that you prefer and *mark and mail the coupon.*

War Power of Food Bill Designed to Insure Supply and Distribution

(Continued from page fourteen.)

the president, and thereafter no such producer shall sell any of said products except to the United States through such agency, and the said agency alone is hereby authorized and empowered to purchase during the continuance of the requirement the output of such producers.

To Pay Fair Prices.

That the prices to be paid for such products so purchased shall be based upon a fair and just profit over and above the cost of production, including proper maintenance and depletion charges, the reasonableness of such profits and cost of production to be determined by the federal trade commission, and if the prices fixed by the said commission of any such product purchased by the United States as hereinbefore described be unsatisfactory to the person or persons entitled to the same, such person or persons shall be paid 75 per cent of the amount so determined, and shall be entitled to sue the United States to recover such further sum as, added to said 75 per cent, will make up such amount as will be just compensation in the manner provided by section 24, paragraph 20, and section 145 of the Judicial Code.

All such products so sold to the United States shall be sold by the United States at such uniform prices, quality considered, as may be practicable and as may be determined by said agency to be just and fair.

Any moneys received by the United States for the sale of any such coal and coke may, in the discretion of the president, be used as a revolving fund for further carrying out the purposes of this section. Any moneys not so used shall be conveyed into the treasury as miscellaneous receipts.

That when directed by the president, the federal trade commission is hereby required to proceed to make full inquiry, giving such notice as it may deem practicable, into the cost of producing under reasonably efficient management at the various places of production the following commodities, to-wit, coal and coke.

The books, correspondence, records and papers in any way referring to transactions of any kind relating to the mining, production, sale, or distribution of all mine operators or other persons whose coal and coke have or may become subject to this section, and the books, correspondence, records, and papers of any person applying for the purchase of coal or coke from the United States shall at all times be subject to inspection by the said agency, and such person or persons shall promptly furnish said agency any data or information, relating to the business of such person or persons which said agency may call for, and said agency is hereby authorized to procure the information in reference to the business of such coalmine operators and producers of coke and customers therefor in the manner provided for in sections 6 and 9 of the act of congress approved September 26, 1914, entitled "An act to create a federal trade commission, to define its powers and duties, and for other purposes," and said agency is hereby authorized and empowered to exercise all the powers granted to the federal trade commission by said act for the carrying out of the purposes of this section.

Having completed its inquiry respecting any commodity in any locality, it shall, if the president has decided to fix the prices at which any such commodity shall be sold by producers and dealers generally, fix and publish maximum prices for both producers of and dealers in any such commodity, which maximum prices shall be observed by all producers and dealers until further action thereon is taken by the commission.

Maximum Prices.

In fixing maximum prices for producers the commission shall allow the cost of production, including the expense of operation, maintenance, depreciation, and depletion, and shall add thereto a just and reasonable profit.

In fixing such prices for dealers the commission shall allow the cost to the dealer and shall add thereto a just and reasonable sum for his profit in the transaction.

The maximum prices so fixed and published shall not be construed as invalidating any contract in which prices are fixed, made in good faith, prior to the establishment and publication of maximum prices by the commission.

Whoever shall, with knowledge that the prices of any such commodity have been fixed as herein provided, ask, demand, or receive a higher price, or whoever shall, with knowledge that the regulations have been prescribed as herein provided, violate or refuse to conform to any of the same, shall, upon conviction, be punished by fine of not more than $5000, or by imprisonment for not more than two years, or both. Each independent transaction shall constitute a separate offense.

Nothing in this section shall be construed as restricting or modifying in any manner the right the government of the United States may have in its own behalf or in behalf of any other government at war with Germany to purchase, requisition, or take over any such commodities for the equipment, maintenance, or support of armed forces at any price or upon any terms that may be agreed upon or otherwise lawfully determined.

Sec. 26. That any person carrying on or employed in commerce among the several states, or with foreign nations, or with or in the territories or other possessions of the United States in any article suitable for human food, fuel, or other necessaries of life who, either in his individual capacity or as an officer, agent, or employe of a corporation or member of a partnership carrying on or employed in such trade, shall store, acquire, or hold, or who shall destroy or make away with any such article for the purpose of limiting the supply thereof to the public or affecting the market price thereof in such commerce, whether temporarily or otherwise, shall be deemed guilty of a felony and, upon conviction thereof, shall be punished by a fine of not more than $5000, or by imprisonment for not more than two years, or both. Provided, That any storing or holding by any farmer, gardener, or other person of the products of any farm, garden or other land cultivated by him shall not be deemed to be a storing or holding within the meaning of this act. Provided further, that farmers and fruit growers, cooperative and other exchanges or societies of a similar character shall not be included within the provisions of this section, and provided further that this section shall not be construed to prohibit the holding or accumulating of any such article by any such person in a quantity not in excess of the reasonable requirements of his busines for a reasonable time or in a quantity reasonably required to furnish said articles produced in surplus quantities seasonally throughout the period of scant or no production.

Nitrate of Soda.

Sec. 27. That the president is authorized to procure, or aid in procuring, such stocks of nitrate of soda as he may determine to be necessary, and find available, for increasing agricultural production during the calendar years nineteen hundred and seventeen and eighteen, and to dispose of the same for cash at cost, including all expenses connected therewith. For carrying out the purposes of this section there is hereby appropriated, out of any moneys in the treasury not otherwise appropriated, available immediately and until expended, the sum of $10,000,000, or so much thereof as may be necessary, and the president is authorized to make such regulations, and to use such means and agencies of the government, as, in his discretion, he may deem best. The proceeds arising from the disposition of the nitrate of soda shall go into the treasury as miscellaneous receipts.

Food Survey Bill Is Also Law

Another Important War Measure Stimulating Agricultural Production

The adoption of the conference report on the food survey bill immediately followed the adoption of the conference report of the food control bill and both bills were approved by the president on August 10.

The food survey bill is entitled "An act to provide further for the national security and defense by stimulating agriculture and facilitating the distribution of agricultural products." By the provisions of this bill the secretary of agriculture, with the approval of the president, is authorized to investigate and ascertain the demand for, the supply, consumption, costs and prices of and the basic facts, relating to the ownership, production, transportation, manufacture, storage and distribution of foods, food materials, feeds, seeds, fertilizers, agricultural implements and machinery, and any article required in connection with the production, distribution or utilization of food.

It is provided that whenever the secretary of agriculture shall find that there is or may be a special need in any restricted area for seed suitable for the production of food or feed crops, he is authorized to purchase or contract with persons to grow such seed, to store them and to furnish them to farmers for cash, at cost, including the expense of packing and transportation. The secretary is also authorized to require any person having at his disposal any such seeds, except the producer thereof, to furnish the whole or any part thereof to the secretary of agriculture in such quantities, at such times and at such price as shall be determined by him to be reasonable.

The president, by and with the advice of the senate, may appoint two additional assistants of agriculture, each at a salary of $5000 per annum, and is also authorized to direct any agency or organization of the government to cooperate with the secretary of agriculture in carrying out the purposes of this act.

For the purposes of this act, the following sums are appropriated, available immediately and until June 30, 1918:

For the prevention, control and eradication of the diseases and pests of live stock; the enlargement of live stock production and the conservation and utilization of meat, poultry, dairy, and other animal products, $385,000.

For procuring, storing and furnishing seeds, $2,500,000.

For the prevention, control and eradication of insects and plant diseases injurious to agriculture and the conservation and utilization of plant products, $441,000.

To increase food production and eliminating waste and promoting conservation of food by educational and demontrational methods, through county, district and urban agents and others, $4,348,400.

For gathering authoritative information in connection with the demand for, and the production, supply, distribution and utilization of food, and otherwise carrying out the purpose of this act; extending and enlarging the market news service; and preventing waste of food in storage, in transit, or held for sale; advise concerning the market movement or distribution of perishable products; for enabling the secretary of agriculture to investigate and certify to shippers the condition at such important central markets as the secretary of agriculture may from time to time designate and under such rules and regulations as he may prescribe; provided, that certificates issued by the authorized agents of the department shall be received in all courts as prima facie evidence of the truth of the statements therein contained; and otherwise carrying out the purpose of this act, $2,522,000; provided, further, that the secretary of agriculture, shall so far as is practicable, engage the services of women for the work herein provided for.

For miscellaneous items, including larger informational work of the department of agriculture, $650,000.

This act amends the meat inspection act of congress of August 30, 1890, by authorizing the secretary of agriculture, under joint regulations as may be prescribed by the secretary of agriculture, and the secretary of the treasury, to permit the admission for immediate slaughter at points of entry of tick-infested cattle which are otherwise free from disease and which have not been exposed to the infection of any other disease within 60 days next before their exportation; from Mexico, South and Central America, the islands of the Gulf of Mexico, and the Caribbean sea, into those parts of the United States below the southern cattle quarantine line at such ports of entry as may be designated by said joint regulations and also subject to the provisions of sections 7, 8, 9 and 10 of the act of August 30, 1890: Provided, that the importation of tick-infested cattle from any country referred to in which foot-and-mouth disease exists, which existence shall be determined by the secretary of agriculture, is prohibited: Provided further, that all cattle imported under the provisions of the act shall be slaughtered in accordance with the provisions of the act of June thirtieth, nineteen hundred and six, commonly called the meat-inspection amendment, and the rules and regulations promulgated thereunder by the secretary of agriculture, and that their hides shall be disposed of under rules and regulations to be prescribed by the secretary of agriculture.

The last three sections on the food survey act are given in full:

"That whenever the secretary of the interior shall find any tracts of land in the state of Idaho, subject to entry under this act, do not have upon them such a sufficient supply of water suitable for domestic purposes as would make continuous residence upon the lands possible he may, in his discretion, designate such tracts of land, not to exceed in the aggregate one million acres, and thereafter they shall be subject to entry under this act without the necessity of residence upon the land entered: Provided, That the entryman shall in good faith cultivate not less than one-sixteenth of the entire area of the entry which is susceptible of cultivation during the first year of the entry, not less than one-eighth during the second year, and not less than one-fourth during the third year of the entry and until final proof; Provided further, That after six months from the date of entry and until final proof the entryman shall be a resident of the state of Idaho.

"That the secretary of the interior is hereby authorized in his discretion to suspend during the continuance of this act that provision of the act known as the 'Reclamation Act,' requiring residence upon lands in private ownership or within the neighborhood for securing water for the irrigation of the same, and he is authorized to permit the use of available water thereon upon such terms and conditions as he may deem proper.

"That the provisions of this act shall cease to be in effect when the national emergency resulting from the existing state of war shall have passed, the date of which shall be ascertained and proclaimed by the president; but the date when this act shall cease to be in effect shall not be later than the beginning of the next fiscal year after the termination, as ascertained by the president, of the present war between the United States and Germany."

An Easy Way to Preserve Cucumbers and String Beans

Try the new fermentation method approved by the United States department of agriculture.

Containers cider or wine barrels, kegs, tubs, or crocks. (Do not use any made of yellow or pitch pine.)
Wash thoroughly and steam containers.

Wash your vegetables.
Remove strings from string beans.
Place on bottom of container a layer of dill and a handful of mixed spice.
Pack the vegetables into the container.
When half full, add another layer of dill and spice.
When almost full add another.
When contents come to within a few inches of top, add a layer, one inch thick, of beet tops or grape leaves.
Press down with a clean board, weighted with bricks or stone (not limestone or sandstone).
Add brine to cover material.
Allow it to ferment (in a warm place, from five days to one week; in a cool place, from three to four weeks).
After bubbles cease to rise, exclude air by neither of the following methods:
(1) Set containers where they will not be disturbed.
Cover surface with paraffin hot enough to make brine boil when poured upon it. If paraffin breaks, remove, remelt and replace.
Or (2)—Pack the container as full as possible.
Replace head.
Allow to stand for 24 to 48 hours.
Remove boards and weights.
Head up container tight.
Bore a 1-inch hole in head.
Fill container full with brine.
Let stand until bubbles cease to rise.
Add more brine if possible.
Plug vent tight.
Store in a cool place.

To make brine:
One pound salt.
Ten quarts water.
To each 15 quarts of the brine add one quart of vinegar.

DON'T MISS ANY STEP.

Ups and Downs of a Bunch Grass Boy

(Each instalment of the "Ups and Downs of a Bunch Grass Boy" is complete in itself and will be found full of interest for the new readers of The Farmer.)

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER XXIII.

I have never seen a boy who wouldn't travel half a day to find a mudhole to play in on a hot day. Also, they like to build mounds and hills of cool road dust, which is mud minus water. But when the wind picks up this road dust and peppers it on your hair, nose, eyes, through your clothes and makes you eat it, then it is different—and even a boy does not like soil dosed to him in this way.

We pioneers in eastern Washington did not know the trouble we were making for ourselves when we plowed under the bunchgrass. It was all right for a year or two, for the fibrous roots of the soil and the turned-under grass served to keep the light, fluffy, seldom-rained-upon dust from blowing far and near. Then, too, the farms were far apart. The dust that arose from a pioneer's plowing lost itself in five or ten miles of bunchgrass. The dust-lifting winds came from the southwest. If a farm chanced to be in the wind from a farm lying southwest, then that man was in for a severe dusting several times a year. The soil was dry and fluffy when plowed and uncropped. A heavy southwest wind swept up great clouds of dust and hurled the stifling dust-clouds like pelting needles on the farm of the unfortunate neighbor.

Our pioneer farm was in the wind just right for the dust from Kirkland's farm, lying a mile south. Many a time the prairie gale swept upon us and our house was filled with fine, floury dust that found its way into every crack and cranny, into every stitch of your clothing, into eyes, nose, hair, ears—and if the gale kept up long enough you could feel the grit between your teeth. It was not like ordinary dust. The air seemed to hold it in solution. Where this soluble dust could not blow it soaked. It soaked into the hay our horses ate, swirled down into our well and colored the water brown, soaked into food in our cupboard or stowed away in trunks for protection—wherever the air went the dust went!

We did not know how to handle the soil to keep it from blowing. Kirkland rolled his farm one summer, using a revolving log three feet in diameter to smash the clods. Other farmers near and far did the same thing, all having the idea that this clod-smashing was good for the soil.

For days after that we simply lived in dust. It became as much our native element as water is for a fish. When the duststorms were blowing I rebelled against washing my face and bare feet more than once a day. Washing the face while the dust was in the air seemed to hasten chapping of the lips and cheeks. My lips would crack and bleed and there would be tiny, hairlike, crisscrossed marks of blood on my neck, cheeks, hands and feet. The pelting, grinding dust and wind was chiefly responsible, I think. Putting cold or warm water on the skin at such a time was agony itself.

My rebellion produced a compromise—once a day I must wash up. At other times I must have my face, neck and hair dusted off with a whisk broom or dry cloth. There was a good deal of argument about when I should wash. Mother objected to my going to bed with my hair and face covered with dust—it was hard on white pillows and sheets! Then too, there seemed to be an advantage in starting the day with a clean face. So it came about that it was agreed that I should submit to the torture of washing before the evening meal, and take all possible precautions against dust between then and bedtime.

Of course we longed for rain to settle the dust. But our longing was seldom productive of rain. Not infrequently during the hot, dry summer, storm clouds would gather on the southwestern horizon—great, cool looking masses which were rimmed with white, blue and black underneath and sharply edged against the clean, steely blue sky. The clouds looked cool and inviting, and in the days before aeroplanes I used to wonder if after I had died and gone to heaven I might not ride my buckskin cayuse—who in the transfiguration of the Hereafter would be turned snowy white with lovely wings—on the mountain-like crests of the advancing cloud line. Often the clouds would come up when the sun was getting low in the west. Stretching out in a great arc in the western, sunlit sky, the clouds were clean and cool as the ocean and massed in solid lines of blueish black and green and smoky blue with edges of fire and feather-white through the great distances of the sky. To rise above the swirling, puffing, scorching, smothering dust of my native element was one of my earliest hopes; and I knew of no place to rise except to the clouds that flew overhead.

A neighbor gave me a book to read one time. It was called "The Beautiful Story." It contained many pictures of angels with white wings; and usually they were advancing in heavenly bands through rifts in the clouds, or were surrounded by clouds done in beautiful colors wherein were predominant the tints of gold and purple and white and other lovely cloud-lights symbolizing in my youthful mind, purity and all that was opposite to our peppering dust.

I was told that these pictures were correct representation of Heaven; and that the beautiful tints in the clouds, and that the charming effects which marked the angels' pathway through the cloud-strewn skies were all a part of the Hereafter and would be in the reward of good little boys who were really, unequivocally good.

So I watched the skyward drift of the clouds in the clean, upper reaches of air, sure that I was looking straight into Heaven; and that angels were walking and talking and flying in these cloud-paths, though invisible to my mortal eyes. The wind that roared out of the southwest carried what stood in my mind as the opposite sign and symbol to Heaven—dust! In the advance of the cloud banks through the cool, clean, moist heights of the upper air, and the undersweep and roar of the dusty wind, I came to see a mighty conflict between good and evil, though my boy's mind did not frame the thought in just those words.

The wind whistled and roared and pelted me with dust; high, cool, and clean floated the clouds, sending down a few drops of clean, cool water on our parched, dust-blown prairie. Always we were sure it was going to rain hard this time and settle the dust. But it seldom rained hard, and the roaring, whistling prairie wind swept the clouds over the northern mountains; and in the morning the sky would be a toneless dome of dusty blue, with neither life, nor color, nor angel paths on high, nor a promise of cooling rain.

But once in a while the good angels in the clouds won their battle with the dust demon—and down would fall torrents of rain. We could hear the torrent coming far across the prairie—a low, steady, rising hum like millions of tiny bees flying in the bunchgrass. The wind of a sudden ceased to be sharp and unfriendly. It struck one's face with a moist, kindly touch, and carried to one's nostrils the odor of prairie sage and the earthy, evlusive prairie fragrance which was a stranger to us for long, dry summer months.

One long, hot, dry summer the battle between the angels up in the clouds and the Dust Demon below went on for day after day—and every night the Dust Demon won. During the forenoon the Dust Demon celebrated his victory by stirring up vast clouds of fluffy, smoke-like dust that shaded the sun. I was trudging barefooted to school two miles away every morning, sure always that the morning wind would bring an evening rain. By noon we children in school, a dozen of us, would be looking away from our books at the gathering cloud banks in the southwest. The whisper would run through the school, "It's going to rain!" And it was hard to study when we thought a rain was coming.

By and by the cloud banks would be nearer and cooler and the wind would blow harder. Then with a roar that shook the schoolhouse the storm would be upon us—not rain though; Merely some more dust! While the wind roared and the dust pelted and big black clouds flew overhead with now and then a low rumble of thunder and a flash of lightning we huddled in our seats hoping that it would rain; and longing for the wet swish of the cool grass on our feet as we went home.

The wind blew all night, finally. In the morning we fought our way to school through thick, fluffy, pelting dust clouds that floated in the air as high as smoke.

All of one night and all of one day the wind howled and thundered at us. By mid-afternoon we could hardly see across the road from the schoolhouse. At recess we huddled in the lee of the building, discouraged and dusty. Only a few clouds blew up that afternoon and these hurried across the sky in torn, frightened fragments. The dust was so thick that it shaded the sun. One of the boys remarked that we were standing in the shade of the dust.

We wondered how high up in the air the dust was floating. Jim Paullus said he bet it was a hundred miles up. Tommy East scoffed at Jim; he said it wasn't a foot more than 10 miles high.

One of the big girls spoke up. She didn't believe the dust was even 10 miles high. Clouds didn't float that high, and she was sure the dust wasn't higher than the clouds. Also, it would take all the dirt on Kirkland's farm to fill the air with dust 10 miles high.

Jim Paullus defended his former statement by saying that most of the dust on Kirkland's farm was in the air, and quoted Kirkland to that effect. Only the day before Tom Kirkland had said that if the darned wind didn't quit blowing he'd have to beat it across the bunchgrass after his farm, which was blowing away.

Then Miss Good, the teacher, joined our conversation. She did not tell us how high the dust was floating. She told us to look at the sun, which was getting low in the west. It shone like a great drop of blood through the long distance of moving dust clouds. It was so red that we could look at it without blinking. Now and then a cloud mass scurried across it, but the sun dodged out again and shone steady and red. When the dust clouds thickened it shone redder still, brightening and reddening as the floating dust varied in density.

One of the girls said the sun was very pretty when you saw it in the dust. She said it was so beautiful that she could look at it and forget about the dust getting in her hair and clothes. Jim Paullus said he also thought it was pretty. He didn't care about the dust getting in his hair and clothes, but he wished it would keep out of his dinner pail.

We went home that evening, and I think most of us told our home folks how pretty the sun had looked shining down through the dusty sky. Afterward, when the wind began to rise and the dust came up, we craned our necks to be first to see the red disk of the sun shining in the dusty sky.

Next week the Bunch Grass Boy tells how, after the dust storm, you could see the tracks of bugs and worms, mice, large and small lizards and queer living things of all kinds. Then he tells of a safe and easy way to kill a rattlesnake when you have neither stick, stone or gun and are barefooted.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University)

A Disinfectant for Drinking Water Is Sciences' Newest Aid

While it is true that a few summer maladies are otherwise contracted, the large majority, such as typhoid, dysentery, cholera, summer complaints and the various absurdly named "autotoxemias" or "ptomaine poisonings" enter the human form divine by way of the mouth.

Dr. Hirshberg.

It is not, however, heat, dirt or chemicals which cause such diseases. It is the specific bacteria which enter the water, milk or other substance, there to multiply and nourish microscopically like unseen green bay trees.

Plainly the proof of the pudding of no disease is in the drinking of fluids without germ life being present. Since the bacteria of diseases are sweet, there is no evidence by a sour taste that germs are present, or in the presence of sweetness and cleanliness that they are absent.

Boiling milk or water kills the microbes, but occasions present themselves when there are neither the facilities nor the time to boil. An excellent and sure disinfectant should then be available for use. Such an antiseptic must be safe and harmless and easily applied to the liquids. The man who discovered the great wound disinfectant and wash, Dr. Dakin, has just announced the discovery of a new and efficient disinfectant for drinking water which in no way interferes with the use of the water for vital purposes.

Simpler Than Its Name.

The new chemical has a most ferocious, formidable name :"parasulphondichoraminobenzoic" acid. Luckily it is more benign than its name would justify.

So effective is this new acid that it may be weakened 300,000 times and still destroy all of the germs and microbes present in the contaminated water one-half hour after it is dissolved in it.

Cholera, typhoid and dysentery bacilli placed in water to test it, were all killed half an hour afterwards. Made up in tablet form this new disinfectant could be conveniently carried on vacations, excursions, picnics, and in first-aid kits of soldiers. It acts very slightly upon aluminum vacuum bottles and drinking cups.

Parasulphondichloraminobenzoic acid is hardly perceptible to the taste. The water thus disinfected is perfectly palatable. Its active chlorin is used up so slowly that the taste of it is absent and the disinfection continues over a long time.

How It Is Made.

Moreover it is easily made. To prepare this disinfectant, Dakin and Dunham take 250 grams of commercial sodium dichromate to a mixture of 200 centimeters of concentrated sulphuric acid and 600 cubic centimeters of water. This is put in a two-quart jar, and 100 grams of crude toluene parasulponamid are added to it. The whole mixture is then heated for one hour on a sand bath with a condenser.

As it cools, the crystals are removed and washed well with cold water and redissolved in hot, but weak hydroxide of soda, also called caustic soda. It is then filtered while hot and an excess of hydrochloric acid is added, after which the precipitate acid is filtered, washed with water and dried. Twenty grams of acid are dissolved in 200 cubic centimeters of normal hydroxide of soda, to which are added 200 grams of crushed ice, the mixture being saturated with chlorin gas. The chalky deposit left is then washed and dried in a vacuum. This is the new disinfectant.

Sidelights

Nonpatriotic.

Gladys—Mother, I don't speak to Jeanette any more.

Mother—Why, dearie, what is the matter? And poor little Jeanette has been ill, too.

Gladys—That's just it, mother. She went and had German measles.

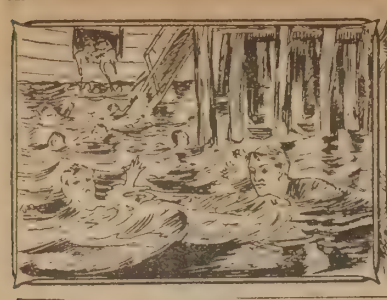
Her Belief.

"Do you believ in the Darwin theory of evolution?" he asked.

"Yes," she replied, "and after the monkey became a man he was given the power of speech that he might again make a monkey of himself at will."

Must See It in Print.

Smith, the hotel manager, and Jones, a manufacturers' agent, were talking one day about their respective business interests.



"I say," remarked Jones, "how ever did you use such an enormous quantity of peaches and pears?"

"Well," replied Smith, "we eat what we can, and what we can't eat we can."

"Indeed!" said the other. "We do about the same in our business."

"How is that?"

"We sell an order when we can sell it, and when we can't we cancel it."

UNDER THE BLACK CANOPY

By Paul E. Triem

SYNOPSIS.

Joseph Dudley, a strong young woodsman, is about to board the boat for one of Stevens' logging camps, where he has secured employment, when suddenly the gangplank gives way and he, with many others, is plunged into the deep, icy water. Forgetting his own peril, he does heroic work in rescuing the others, among whom is a young boy, who, he learns later, is the son of Jerry Stevens.

CHAPTER II.

The Wrestling Match.

Before the last echo of the "Avon's" warning whistle, as she backed away from the pier, had died out, the wharf and the rest of the shore line had been swallowed in the yellow fog. Joe sat beside the open engine house door and peered into the gloom. From somewhere above, the hoarse voice of the fog horn sunded at regular intervals. Sometimes other whistles answered from the smoke, and once a threatening mass loomed suddenly upon them. The gong in the engine room rang for full speed astern, and the "Avon" wheeled sharply, so that the two ships missed each other by a scant foot and passed on into the darkness.

"Ever been over to Buck Harbor?" the mate asked, when he again appeared below decks.

"No. I got a job swamping in one of the camps over there, but I don't know anything about where it lies from the dock."

"What camp you booked for?"

"It belongs to a Mr. Stevens, and the foreman's name is McClosky."

The mate stared down at him. "Well, if that isn't the querest thing I ever heard of," he commented presently. "Jerry Stevens—and it was his youngster you hauled out of the water a while ago. He won't let you go to work swamping—he'll give you a big job."

"See here," Joe replied impatiently, "I thought we had settled that. What I was able to do, I did as much for my own sake as for any one else. I certainly wasn't fishing for any sort of reward, and if Mr. Stevens should make the mistake of thinking that I expected to be paid for being just an ordinary human being, it wouldn't take me long to undeceive him."

The mate was watching him from the corner of his eyes, as if he were some sort of strange insect. Then he laughed ruefully.

"Well, well, don't get mad about it. I suppose you are right from your way of looking at it. And as to finding your camp, you can't miss it. There's just one road away from the Buck Harbor wharf, and that will lead you square through the center of the big camp. As near as I can remember, it's about half a mile from the water front."

"Have you any other passengers for there?" Joe asked, turning from his fruitless inspection of the sound.

"No, I don't believe so. Everybody that didn't land in the hospital is headed for Crystal Springs, around the point from Buck Harbor. There's a summer hotel there—that's where young Stevens and his father are going."

"Didn't he have to go to the hospital?"

"Not he. He's just like old Jerry—game clear through; it's too bad he's such a sickly little chap. They wanted to send him back home, but he wouldn't hear of it, and his father backed him up in doing what he started out to do."

Although it was only 7 o'clock when Joe finally clambered down the gang plank and found himself on the Buck Harbor wharf, night seemed to have fallen. A solitary lantern bobbed toward where he was standing; and as the boat's lines were cast off and she backed out into the Sound, the mate called to Joe.

"There comes old Peterson—he'll start you toward the camp."

The lantern bobbed nearer, and Joe saw that it was carried by a tall, lean old man, who wore his cap pulled down over his ears in spite of the sultriness of the weather. He thumped industriously along, pounding the wharf platform with a heavy cane which he carried in his right hand; suddenly he caught sight of Joe, and pulled up short.

"Stand back thar!" he commanded querulously. "I'm armed, I warn ye—and I'm a desperate man! Stand back! Don't you go to interfering with the United States mail!"

By this time he had discovered that Joe was not the highwayman he had taken him for, and his cane came down from the threatening attitude into which he had thrown it.

"Who be you, anyhow?" he demanded suspiciously.

"I'm a stranger, looking for Stevens' logging camp," Joe explained, striving to hide his amusement at the old man's outburst. "I thought maybe you could show me which way to take."

The man with the lantern concluded his inspection of Joe and hobbled over to where a mail sack had been thrown from the "Avon." He picked up this mail pouch and turned about.

"Come along," he commanded. "I expect I must have scared you considerable, but I really wouldn't have done any daamge without being sure of my man. You see, it's a mighty responsible position I've got—the United States government pays me 12 1-2 cents for every trip I make with this bunch of mail, and I guess they know I'm not the kind of person to be trifled with. There's desperate characters about sometimes, but I'm desperater than any of them, especially when I'm a leetle scared.'

They left the long wharf and struck into a narrow country road. Joe offered to carry the mail bag, which seemed too heavy for the old man, but the latter wouldn't hear of it.

"It's nothing against you, you understand," he explained, "but I couldn't let my own brother carry this mail."

Mr. Peterson told Joe that he always carried the lantern, even on bright summer evenings, on account of cougars.

"But you're armed," Joe commented mischievously. "I should think you would be perfectly willing to let them come, if they wanted to."

The carrier looked suspiciously at him; then he grinned. 'I'm perfectly willing to have 'em come, if they don't come too close," he admitted. "The trouble with a cougar is that he doesn't realize the difference between plenty and too much."

Presently a lighted building loomed ahead; and as the two pedestrians reached the road in front of it, the mail carrier paused.

"All you got to do," he explained, "is to follow this road till you come into the camp—it runs smack through it. And you'd better take my lantern—you can send it down by the fellow that comes for the camp mail."

Joe was very glad to accept this offer, and with the lantern in one hand and his bundle balanced on his shoulder, he strode along the gloomy road.

Half an hour later he caught the glimmer of lights ahead. They came from several directions, and presently he discerned close at hand the ghostlike outline of a great canvas-walled and canvas-roofed building, which glowed phosphorescently with the lights which shone through its walls. Joe groped his way through some bushes and skirted a small mountain of empty cans, and came suddenly around the corner of the tent upon a group of men, some of whom were sitting upon a porch, while others stood in front of it.

They ceased a desultory conversation which they had been carrying on and turned curiously upon Joe.

"Where'll I find Mr. McClosky?" the newcomer asked the man nearest him.

"I guess you'll find him about five feet from here," the stranger replied jocosely. "That's him, there."

He pointed to the only man in the group who had paid no attention to Joe; a huge, bearded fellow, who lounged awkwardly on a corner of the porch and seemed to be communing with himself. He looked indifferently around, on hearing his name spoken, and surveyed Joe from under shaggy brows. His lean, high-bridged nose caught the light from the tent door, and gave him the appearance of a huge bird of prey.

"Is this Mr. McClosky?" Joe asked, advancing a couple of steps, so that he was standing directly before the bearded man. The latter nodded. "I was sent here from an agency in town to fill a job as swamper," Joe explained.

"Name?" the logger demanded laconically.

"Joseph Dudley."

"Ever work in the woods?"

"Till I was 18. I was born in Michigan."

"All right. Go in and see if Neville will give you some supper. It's late, and the chances are that he'll throw you out the back door, but you can try."

As Joe deposited his bundle beside the steps leading up into the tent and turned to enter, he encountered a pair of brilliant eyes fastened upon his own. At first he was conscious only of the eyes; but as he mounted the steps, he caught other details; the man back of the eyes was tall and lithe, and his arms were unusually long. His smooth brown face was that of one who thinks swiftly and acts impulsively; it was not altogether a pleasant expression that Joe had caught upon it, but rather one of challenge and hostility.

He forgot the stranger next moment for as he entered the tent there came to him a swift, high-toned command that brought him to an abrupt stop.

"Here, you, get out of here as quick as your feet will carry you! What do you think this is—an all-night restaurant? Go on—not a bite do you get till morning!"

From the farther end of the tent there emerged a short, fat man, whose bald head glistened in the light of an overhead lamp. He wore a cook's apron, and his arms were bare to the elbow. He came forward with a mincing, affected step and peered into Joe's face.

"I just lit," the younger man explained meekly, for he knew the autocracy of camp cooks. "I came on the night boat, and I thought perhaps you could let me have a little something to eat—though I'm willing to wait till morning if you can't."

The man in the apron threw up his hands in a gesture of exaggerated protest.

"Wait till morning!" said he, "why you ought to be ashamed to talk that way! Sit down—there's a place for you!"

Joe was totally unprepared for this change of front, but he accepted it willingly and dropped into the chair indicated. Mr. Neville disappeared into the kitchen, and returned a minute later with a tray loaded with dishes and food; coffee, corn bread, biscuit, steak, potatoes and two kinds of pie. These he stacked expeditiously around Joe. Then he withdrew, leaving the young man to eat his supper in solitude.

The smoke had cleared somewhat when Joe finally emerged from the tent, and a huge, silver moon peered over the fringe of trees in the distance. The men whom he had left idling about the porch were some distance away now, standing in a semicircle from beyond which came a mysterious sound of stamping feet and heavy breathing. Joe approached the circle, and as he did so there came to him the thud of a heavy body striking the ground, and the men before him began to dance and yell.

"Now you've got him, Andy—pin him down!"

Joe pushed into the fringe of spectators just in time to see the uppermost of two struggling figures on the ground catch the other swiftly, twist him over and plant him with his shoulders squarely against the dirt. Then the two scrambled to their feet and Joe saw that the victor in this wrestling match was the long-armed young man who had watched him enter the dining tent a few minutes previous. Again he was impressed by the brilliant and rather scornful light in the stranger's eyes.

The men had not had enough entertainment and were casting about for a new victim for Andy's prowess. Suddenly one of Joe's neighbors turned upon him and caught him by the shoulders.

"Here, young man, you look like you ought to be able to handle yourself at this game. You're up to Andy's weight, and you can't expect to hang around this camp unless you're willing to sing, play the fiddle or wrestle."

Joe protested, but strong hands gripped him and he was thrust out into the moonlit circle.

"Here, here," he protested, "I'm too tired to wrestle tonight. Wait till I'm rested."

"It wouldn't make a particle of difference," a lazy and somewhat contemptous voice said close to him.

Joe turned and looked at the tall woodsman. The latter was regarding him with eyes that had become openly hostile, and Joe felt his anger rising. He had done nothing to draw down upon himself this feeling.

"All right," he said simply. "If that's the way you look at it, I suppose I might as well take my medicine."

He stripped off his wampus and tightened his belt. Then faced his companion.

"I'm ready," he announced.

The logger was crouching toward him. His eyes shone when the moonlight caught them and his whole being suggested the tense, muscular pose of a cougar. Suddenly he leaped forward and his long arms shot out. Joe ducked under them and caught his antagonist about the waist; swiftly he lifted him from the ground and threw him—but Andy whirled like a cat in the air, lit on his hands and knees and in an instant was up. Joe could see the hard, cruel lines of his mouth as his teeth clicked together.

He approached more cautiously, feinted as if to repeat his former attack, then caught Joe's wrist in a grip of steel and jerked the shorter man toward him. He whirled as he did so and threw his shoulder under Joe's arm pit, and with a swift twist of his lithe body had thrown his prisoner over his shoulder. Joe broke his fall with his heels, pivoting as he did so and breaking the grip on his wrist. He was on his hands and knees now; and as he leaped to his feet he threw himself forward and succeeded in catching the logger with one arm about the waist, while the other hand pressed under Andy's chin. At the same instant Joe kicked his antagonist's feet out from under him and threw him to the ground.

The move had been so expeditiously made that no one was prepared for it, least of all the tall woodsman. For a moment he lay on his back, staring up at Joe. Then he sprang to his feet with the swift and terrible anger of a creature of the forest, for the first time feeling the superior will of man.

For a single instant he crouched. The crowd behind had set up a cry of amazement and congratulation at his downfall, but now everyone was still. Swiftly Andy leaped. He reached for the lower hold, missed it and as swiftly turned himself and threw an arm around Joe's neck. Next moment they were on the ground, and Joe felt the woodsman's arm working around until it crossed his throat and shut off his breath. He realized that the stranger was prepared to resort to any tactics to win, for such a hold is barred from all clean wrestling. He reached up and tried to loosen the steel fingers that were locked on the other man's jacket, enabling Andy to make his hold almost unbreakable. He might as well have struggled to force the lock of a bank vault with his bare hands.

From a great distance he seemed to hear protesting voices—"Andy, not that! That's not square!" But the strangle hold did not relax, and Joe realized that he must do something speedily, or he would be thrown from sheer weakness—and he had resolved not to be conquered by such unmanly tactics. He let himself sink forward, as if overcome; and in the same instant he had taken advantage of a momentary loosening of the hold about his neck, as Andy prepared to follow up his gain, and had torn the other's arm loose, bringing it around and under his own chest. Swiftly he rolled to the side; and with a cry of surprise and pain, the logger was forced to allow himself to be rolled under. The pressure against his arm had been severe, but Joe believed the occasion merited such treatment.

Andy, taken completely off his guard, was whirled to his shoulders before he could catch himself. Joe staggered to his feet and stood swaying. The moon had come out from behind a cloud which had hidden it a moment ago, as he looked down with smarting eyes at his rival—and instantly he stooped and held out his hand.

"I beg your pardon," he cried, for the sight of the logger's bitter disappointment took him by surprise. "I did that without thinking—it wasn't a square hold, and the fall belongs to you!"

Andy climbed slowly to his feet, without touching the proffered hand. For a moment he stood looking curiously at Joe. His lids drooped over blazing eyes, and he held himself stiffly.

"I'm not the kind to beg a favor from anyone," he said softly. "You won—this time."

He turned on his heel and next moment had disappeared.

The men who crowded about Joe were as pleased as children, and for the first time the young man observed that two people on horseback had ridden up to the edge of the circle and

A Quotation to Abide By

What is the quotation or what are the words which have helped you in the journey of life?
Send it to the editor of The Farmer and let it help another.

To the Editor: I think the best quotation I have ever heard for one to abide by is "Trust in the Lord and do good; so shalt thou dwell in the land and verily shalt thou be fed."

MRS. W. C. JOHNS.

Moscow, Idaho.

How to Serve Leftovers

To the Editor: I always plan to save all the leftovers and use them in other dishes soon. For instance, when I buy meat I get a good lean piece of beef either boil or roast, cut off a piece for hamburg steak if I like, roast or boil the main piece, serve hot the first meal, the fat portions hot, the leaner ones cold for supper, and then maybe have pieces left for hash another meal. I find I can serve a 10-pound roast or boil three and often four times to six men and my family of five children. I never throw awy bones without trimming off every bit of lean meat for hash. I could also use the last meat left in a creamed dish, or croquettes,, but we like hash.

Vegetables, except beans and potatoes, are harder to serve the second meal, so I learn by experience how to cook only enough for one meal at a time. Left over tomatoes I use in cream soup or macaroni. Some people like a few tomatoes in beans, especially red or bayou beans, so that is a good way to use leftovers.

If I have not enough eggs for two apiece for each man I scramble them with a cup of milk added, or with stale bread make egg toast, by heating a few eggs and a little milk and dipping the slices in that and frying in good grease.

In making cake I economize on all the expensive items like butter and eggs and make very good-tasting, healthful cake with less.

Stewed fruit I have for breakfast, use the remainder in a pie, if not sufficent use an egg or two, a tabespoon of cornstarch and a cup of milk, makes a fruit custard pie, nicer with a meringue. I often use a tablespoon of cornstarch in puddings to take the place of an egg. I find the humble prune makes a very good pie with the seeds extracted. Sometimes I season it with spice.

I forgot to mention meat dumplings. Every one likes them with boiled meat and that makes meat go farther. I often use them also when I have a ham bone to boil.

These are my main ways of saving. I would like to learn of other ways myself.

MRS. RUBY C. NELSON.

One Crop That Is Not Short.

Let the flag fly in the front yard; the dirt fly in the back yard and the house fly nowhere.

"One thing we have an oversupply of," said the farmer as he paused for a minute at the corner of the field, "and that is advice. We get it from everybody. That is a crop that is never short. If people would watch those who need a little watching and straighten out the kinks in marketing I think the production end of the business will be taken care of."

Under the Black Canopy

(Continued from page eighteen.)

were sitting where they could take in the match. One of these newcomers, whom Joe made out to be a tall, erect man, who sat his cayuse like a cavalryman, spoke, and his voice carried through the tumult like the crack of a whip.

"If you're quite through with your tournament," the stranger said, "I would like to speak with you a moment."

Joe approached the horseman, who held out his hand.

"My name is Stevens," he explained. "This young man here wouldn't rest till I had brought him over to thank you for pulling him out of the water—he's a young rascal who hangs around my house and seems to think he has a claim on me. And of course you know, my friend, that I'm grateful for what you did."

From his mount high up on one of the other horses, the boy spoke with tremulous enthusiasm. "And I say," he cried, "where did you learn to wrestle? You've got to teach me, when I get big and strong!"

(To be continued in the next issue.)

Do You Know That

The consciousness of having helped your neighbor is worth more than the dollars you might charge him for the service?

Old English Initials to Embroider

By WINIFRED WORTH

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under the initial before embroidering. It aids one in washing the color from the finished design.

In padding these old English initials, different methods may be used. Some use the twilled cotton for the purpose; others make the chainstitch, while others let a skein of floss out at full length and embroider a strip of it under the thick parts while forming the letter, clipping the skein when the initial is finished. This is a splendid method, quickly done, and is suggested, too, as a help in padding all large pieces in border or crescent outline.

Initials can be made by filling in the broad space with French knots. This is used largely on elaborate pieces, such as the laundry bag, table scarfs, and ornate gifts.

1 lb.

of Sperry Drifted Snow Flour equals in food value:

18.8 lbs. of celery
18.2 lbs. of lettuce
15.3 lbs. of tomatoes
15.0 lbs. of asparagus

Patterns

2175—Dress for misses and small women—Cut in 3 sizes: 16, 18 and 20 years. Size 18 requires 6 3-8 yards of 44-inch material. The skirt measures about 3 1-8 yards. Price, 10 cents.

2186—Infants' set, consisting of a cap, a sack, a night gown and a dress. —Cut in one size. For the dress of flouncing it will require 1 3-4 yards of 36-inch material with 1 1-4 yards of plain material for yoke and sleeves. Of nainsook or lawn 36 inches wide it will require 2 1-4 yards. The gown will require 2 1-2 yards of 24 or 27-inch material. The cap 1-2 yard of 18-inch material. The sack requires 7-8 yard of 27-inch material. Price, 10 cents.

1817-1818—Ladies' Costume—Waist 1817 cut in 8 sizes: 34, 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Skirt 1818 cut in 8 sizes: 22, 24, 26, 28, 30, 32, 34 and 36 inches waist measure. To make the costume of one material will require 5 3-8 yards of 44-inch material for a medium size. Skirt measures 3 1-3 yards at the foot. Two separate patterns, 10 cents for each pattern.

2163-2179—Ladies' Costume—Waist 2163 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 1-4 yards of 36-inch material for a medium size. The skirt pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3 1-8 yards of 44-inch material for a 24-inch size. The skirt measures about 2 1-2 yards at the foot. Two separate patterns, 10 cents for each pattern.

2036—Ladies' dress—Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 1-4 yards of 36-inch material for a 36-inch size. The skirt measures about 3 1-3 yards at the foot. Price, 10 cents.

1955—Lady's overall apron. Cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. It requires 6 1-2 yards of 36-inch material for a 38-inch size. Price, 10 cents.

2174—Girl's dress. Cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2 1-2 yards of 27-inch material for the dress and 1 1-2 yards for the guimpe, for a 4-year size. Price, 10 cents.

2046—Lady's house dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It required 6 1-2 yards of 44-inch material for a 38-inch size. The skirt measures about 2 3-4 yards at the foot. Price, 10 cents.

2194—Lady's guimpe. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2 1-4 yards of 36-inch material for a 36-inch size. Price, 10 cents.

1829—Girl's dress. Cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3 3-4 yards of 36-inch material for an 8-year size. Price, 10 cents.

1848—Girl's coat. Cut in 7 sizes: 2, 4, 6, 8, 10, 12 and 14 years. It requires 2 3-8 yards of 44-inch material for a 6-year size. Price, 10 cents.

1841—Boy's blouse. Cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 3 1-8 yards of 36-inch material for a 12-year size. Price, 10 cents.

Plan to Save Fuel

To the Editor: "Eternal vigilance is the price of a clean kitchen," but just now the eternal vigilance of the housewife in a clean kitchen needs to be along the line of thrift in every possible way. The patriotic home may serve one o fthe nation's greatest needs in conserving food, fuel, clothing and all else which must be provided for those who are in a more direct way defending these homes of ours.

At this season of the year every extra amount of vegetables the garden affords should be canned if possible when there is a fire in the range so that no extra cost of fuel is attached to it. Fuel is money, and when two women are working in one kitchen the same fuel may be made to serve many purposes. One can iron or attend to canning while the other is baking, brewing and stewing several articles to be used in meals for the next day or two, such as steaming rice, cereals, macaroni and hominy ready for creaming or escalloping. These articles are good substitutes for potatoes. For many meals wood cut very short or coal used under only one round of the stove will give all the intense heat needed while the rest of the stove is hot enough for heating water or for other purposes.

When short of milk the water in which potatoes have been boiled answers for cake making, and a little extra baking powder will allow you to use fewer eggs.

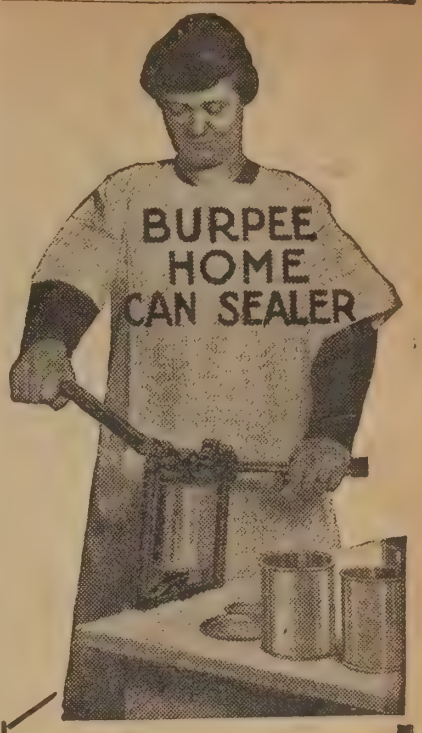
By the dry sugar cure method one can make choice bacon from the fresh side meat which costs only little more than half the price of bacon. Fish furnishes a light, nourishing and cheap substitute for meats. Potato water should be used in soups and stews.

Sweet corn and prunes can be easily dried in the oven and save cans for other purposes. The oven from the gasoline stove can be placed on top of the range to give extra space for drying. Fruit juices heated to boiling point and canned may be made into jelly when sugar is cheapest. Rhubarb and gooseberries can also wait for cheap sugar, and by adding a very little soda to them less sugar is required.

Excess chicken fat is fine for pastry if used in ratio of one to two with lard. Any fats not fit for cooking can be easily made into the finest hard, white soap.

Using local productions as far as possible saves freight and keeps the money at home.

Many articles of clothing can be made to look like new by the use of reliable dyes.



MRS. DAVID DOUNAN.
Weiser, Idaho.

Youngest Bond Holder.

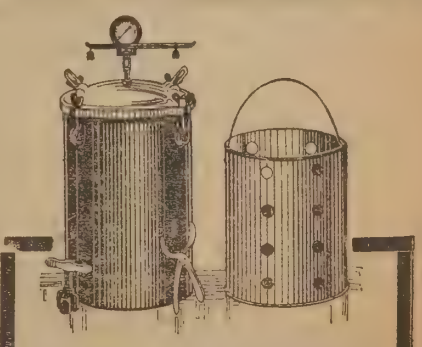
The honor of being the youngest Liberty bond holder is claimed to belong to Henry M. Foley Jr. of Palmer, Mass., who was born at 6:30 in the morning of June 1, and whose father purchased him a bond before he was 2 hours old.

Florence Estelle Rogers of Medford, Mass., whose father purchased a bond for her when she was 8 hours old, has been considered the youngest bondholder.

At any rate, Massachusetts retains the honor of having the youngest Liberty bondholder.

Can Your Foods at Home

Put up your fruits, meats, fish and vegetables for use on your own table—and for sale, direct to consumer—at retail prices.



Use the wonderful BURPEE HOME CAN SEALER—the device that canning clubs all over the country have adopted. No acid nor solder used. Seals sanitary tin cans absolutely airtight.

Duroc-Jersey Record

Rapid Growth of Association

Volume 52 of the National Duroc-Jersey Record association, dated April, 1917, has just been received by the Farmer. The males recorded in this number are from 201501 to 210999; the females from 508700 to 539998. J. R. Pfander, the secretary of the association, calls attention to the rapid growth during the last five or six years, saying: "This association is now the largest swine record association in the world, having at the present time over 6600 members and this number is rapidly increasing." The volume also contains a picture of the "ney up-to-date fire-proof office building of three stories, the entire first floor of which is occupied by the association and it is so arranged that as time and business demand the other floors can also be used by us. It is absolutely the finest building of its kind owned by any simlar association."

The Washington members of the association follow: H. E. Angel, Wapato; T. S. Anglin, Anglin; M. Augstl, Pullman; Attalia Dairy Products company,

New home of the National Duroc-Jersey Record association.

Winter, Everett.

Pure Breeders' Picnic

Suggestions almost sensational in their character, regarding land problems, were made by E. F. Benson, commissioner of agriculture for the state of Washington, in his address at the third annual picnic of the Lewis County Pure Breeders' association at Chehalis, Wash., August 9. And his utterances were vigorously applauded.

A crowd of fully 500 was in attendance. This was the third annual picnic and the importance with which it is viewed in Chehalis is shown by the fact that the stores closed at noon. It is now known as the Breeders' and Merchants' picnic and well-filled baskets came from town as well as country, all being placed on tables that seated 300, but were totally insufficient, the balance of the crowd being served cafeteria style.

Charles Gessell, president of the association, called the meeting to order. He introduced N. B. Coffman, banker and Jersey breeder, who acted as toastmaster.

Mr. Benson began by saying the utilization of the land is the bulwark of civilization; that no person has a moral right to own any kind of land unless he puts it to some reasonable use. Lewis and Chehalis have accomplished more than any other counties in the settlement of the logged-off land problem, but they have only commenced. Much of the logged-off land is held at an unreasonably high price. It should be a price at which the owner is willing to pay taxes and, if not, some one else should have the land.

Logged-off land is of two classes, one that should be kept for timber and another fit for farming. Suckers have had both logged-off and irrigated land sold to them that was totally unfit for agriculture. The state should classify and report which is farming land. The timber land could be turned over to the state, allowing the owner some interest in the timber that again grows, but with protection to the settlers. Some land has been cleared at a cost of $200 an acre and is only worth $100. Instead it should have the undergrowth cleared out, grass seed sown and the growing of more live stock encouraged.

He urged the value of irrigation, even in western Washington, and said the people here have scarcely awakened to the value of the sheep business. He urged small bands of 20 to 200 on each farm and for farmers to unite and send one herdsman with the flocks from an entire neighborhood out to the hills in summer, where they will do well.

He urged farmers to visit and spend time away from home among neighbors and at such gatherings as this. The farm makes for manhood and he pitied the city boy who is raised without that sense of duty developed in the farm boy by performing tasks whether pleasant or not.

P. G. Kinger of the Carnation Milk company; Dr. R. J. Donahue, chief of the dairy and live stock division; M. L. Dean, commisisoner of horticulture; George Walker, secretary of the Southwest Washington fair; Newell Wright, secretary of the Centralia Commercial club, and Professor Nystrom, dairy instructor of the state college, now acting as county agriculturist, all spoke entertainingly. And R. T. Siler of Big Bottom invited the farmers to act on Commissioner Benson's suggestion and send their sheep up in the mountains above "Bottom," which is yearly being more and more encroached on by the Yakima Valley sheepmen.

The afternoon's exercises were closed by a stock-judging contest, in which Professor Nystrom lectured on the points of dairy animals. Holsteins were shown by S. Sventh and J. C. Bush and Jerseys by M. C. Lowery and Paul Winzelberger. E. P. Layton & Sons showed Berkshire hogs and J. A. Scollard large Yorkshire.

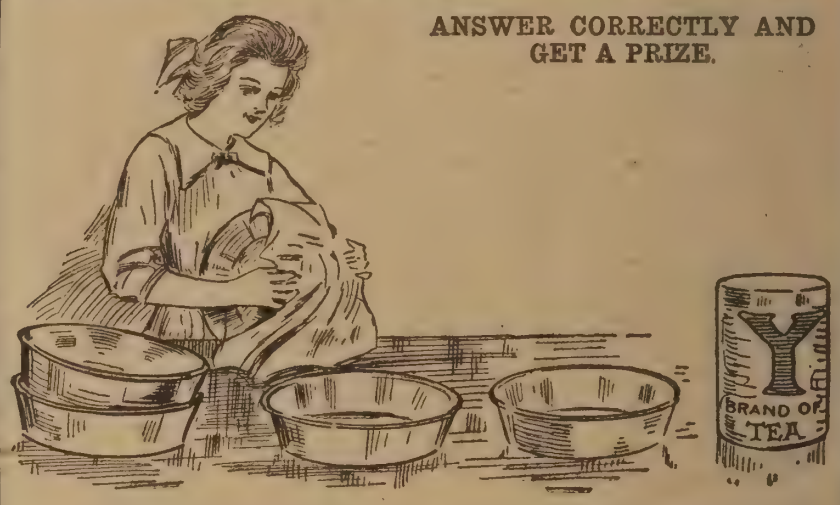
Thrift in Farming.

North Dakota has a state efficiency commission. One of the members of this body remarked at Fargo, after returning from a rather extensive trip over the state, that he noticed many farmers "have gone behind their barns, dragged out abandoned equipment that was believed to be useless and have patched it up for another year's service. They are doing this instead of buying new machinery." In other words, thrift is entering into American farming.

Farm Labor and Products in Yakima

During conferences with Assistant Secretary of Agriculture Carl Vrooman at Spokane L. W. Fluharty, Yakima county agricultural agent, said in part:

"I have spent much of my time in correlating the work of other organizations in Yakima county, who, like the county agricultural agents, were interested in the world work.

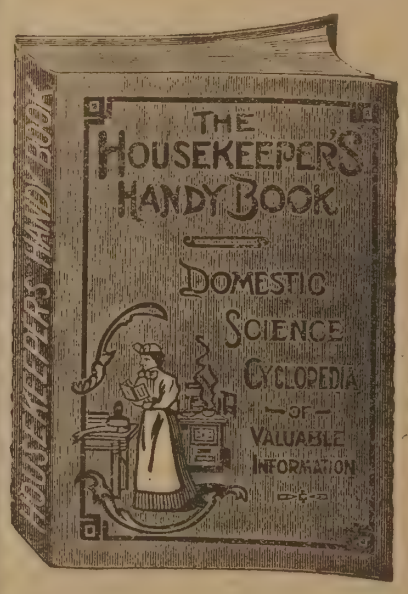


"It seemed that there was going to be labor shortage. By working with the different organizations already there we have come to the conclusion that by the proper distribution in Yakima county we can take care of our crops with approximately 1000 outside helpers. In this labor conservation work the county has been organized into 11 districts. There are labor agents in each district, and the labor agents take care of the labor situation. All men who want work register with the labor agents and all farmers who want help register with the labor agents. In this way those who want work and those who have work to be done are brought together. This plan eliminates the man with a pack on his back going from farm to farm asking for work. It also eliminates the necessity of the man coming to town and hunting the streets for men to hire. The plan minimizes the efforts on both sides, and we know at all times about how much work is to be done and where in our county the needed supply of labor can be secured. Judging from the present indications I do not think we will have any trouble in taking care of our labor situation. We have taken up actively all matters pertaining to increasing the food supplies of Yakima county. There are in Yakima county 255,000 acres of land under irrigation. From project managers and others we have gathered information concerning crop acreages of this year as compared with last, and find a gratifying response to the national call for larger farm production.

"In 1916 we had 345 acres of beans, this year we will harvest 2282 acres of beans. In 1916 we had in 6800 acres of potatoes; this year our potato crop includes at least 11,810 acres.

"For 1916 we have no recorded acreage of sugar beet; in 1917 we have 6324 acres. In 1916 the corn acreage of Yakima county amounted to 4250 acres; this year there are over 6000 acres of corn in the county. I may say that this increase in beans, potatoes, sugar beets and corn does not mean that alfalfa, which is a leading crop of the county, has been decreased. There has been a considerable increase in the acreage of alfalfa, as compared with last year. There has been an increase in the acreage on the Indian service ditch, which represents approximately 25 per cent of the total area under irrigation. In 1916 under this ditch there were 48,123 acres under cultivation; in 1917 there are 57,707 acres under cultivation, an increase of 9584 acres, which is one-fifth of the total irrigated acreage of the county.

"The cold storage facilities of Yakima county have been materially increased. In 1916 we had cold storage for 1150 cars; in 1917 we have cold storage for 2300 cars. I may say that these figures are only tentative, but that they do not overestimate the increases of cold storage facilities in Yakima county. The facilities for food conservation have been greatly increased. We have a cannery in operation now. It has already handled over 500 tons of cherries. There is a sugar factory being built that will handle 6000 cars of beets. Two evaporators will be completed in a short time. There are two cheese factories in operation in the county. Two more are being organized. There is a starch factory, or potato by-product factory, which bids fair to be a success.



What Flower Does This Represent?

ANSWER CORRECTLY AND GET A PRIZE.

The picture above represents a common garden flower. Can you tell what it is? Any person sending the correct answer before August 7th, together with $2 in the form of money order, 2-cent stamps or personal check, will receive THE WASHINGTON FARMER for 3 full years; and in addition will receive a copy of THE HOUSEKEEPER'S HANDY BOOK, described below. If you are not awarded the prize, your money will be refunded.

THE HOUSEKEEPER'S HANDY BOOK

Features of this valuable book: Washable cover; 2200 subjects, including 1700 recipes; cyclopedia of useful information and domestic science; helpful hints on successful marketing, good housekeeping; home cooking and baking; carving and serving. Information on first aid and relief in case of accidents, injuries, poison, sickness. Full directions for preserving, canning, pickling, making home-made candies. Bills of fare for each day. Housecleaning, paper-hanging, calcimining, laundering, dyeing. Invalid cookery. Health hints, Toilet preparations.

Esther's First Day of School.

Dear Aunt Nellie: This is my second letter to the Corner and as I thought you might want to hear about my first day at school I have chosen that as the subject of this letter. I started to school at the age of 6. I lived on a farm four miles from a country town named Morton. The nearest schoolhouse was four miles distant. It was decided that a schoolhouse should be built nearer. It was not yet built when school was supposed to open. Of course, we could not have school in a half built schoolhouse so one of our neighbors said we could have school in their meadow until they fixed their parlor to serve as a schoolroom. There was a brook flowing beneath some trees in the meadow and there were some logs on which we coud sit. We met at the house and when we were all there we took our books, slates, pencils and trooped merrily down to the clump of trees beside the stream with our teacher, whose name was Mrs. Woods, in the lead. We sat on some logs and began to study very hard. It was very still when all of a sudden, splash! splash! Of course we all jumped up. We saw the biggest boy, his name was Willie, just crawling out of the brook. He was wet from head to foot. His books were scattered all about and his pencil, which was floating down stream, was caught by one of the smaller boys. Every one wanted to know how it happened and so Willie told us. He said he was rocking his log back and forth when he rocked a little too far and it rolled into the stream taking him along. The teacher sent him home to get dry clothes and quiet was once more restored. I live on Twin Oaks farm, three miles from Roy. I was 13 years old July 1.—Esther M. Bower, Roy, Wash.

Picks Blackberries and Raspberries.

Dear Aunt Nellie: This is the second time I have written to you. I enjoy reading the Children's Corner. I am 10 years old. My school was out May 19 and I passed in the seventh grade. We live on a little place in Fragaria. We have raspberries and blackberries in summer. I like to pick them, but of course I like to eat them, too. The raspberries are getting ripe now. We have two kinds of them. One kind is yellow and the other kind is red. I like to eat the yellow ones best. I did not earn much money in strawberry picking this year. I earned more last year. I always like to read the letters that you write and I hope there will be one from you soon. There are six rooms in our house, three upstairs and three downstairs. I have gone to Sundoy school every Sunday except July 15. I did not go that day. It was raining in the morning quite hard, but my mother said I couldn't go. When the sun was shining it was after Sunday school. My three sisters, Louise, Josephine and Jennie, go to Sunday school with me, too. It is one and a half miles from my place.—Florence Hwang, Olalla, Wash.

In School They Play Games.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and will be in the fifth grade this year. I like to go to school. I go to school in a truck and in the evening coming home we have lots of fun. In school we play games. My birthday is April 11.—Lois Carmichael, Box 3, Issaquac, Wash.

Clara Would Appreciate Some Letters.

Dear Aunt Nellie: I live out in the country on a big ranch. I like it very much. I used to have a big lamb, but it is gone. I am 11 years old and in the fifth grade. I have brown hair and brown eyes. I wish some other girl would write to me, as I appreciate letters.—Clara Jackson, Turner, Wash.

In the Hills of Stevens County.

Dear Aunt Nellie: We live up in the hills in Stevens county. It is timber all around. There is our field and our neighbors' fields, but the rest is timber. I am 11 years old. I have two brothers. My oldest brother is 6 years old and the other one is 1 month old.—Esther Eastman, Valley, Wash., box 272.

Uncle John Is a Soldier.

Dear Aunt Nellie: I live on a farm and have Rhode Island Red chickens. I have a little brother, George, and a little sister, Isabelle. I walk a mile and a half to school and am in the third grade. We have a Ford and I like to go to Horseshoe Lake and go in wading. My Uncle John is a soldier. I am almost eight years old and may have a birthday party.—Warren Keith, Colby, Wash.

Living in Tents for a While.

Dear Aunt Nellie: I saw my letter in the last Washington Farmer, so I thought I would write again. It is altogether different now than when I wrote before. Our house caught on fire and burned down. It was all burned up in 10 minutes. We four children were there alone. We never got anything out but the sewing machine and the birds. We are living in four tents. I would rather live in a tent than in a house. We live in the mountains. I have read lots of letters from the cousins that I used to play with at school. Their names are Ellen Purcell, Byron Robinson and Grace Wills. We have 13 horses, one saddle horse, five cows, five calves, three birds, two guinea pigs, five pigs, three dozen chickens, two cats, two dogs and many pine squirrels.—Gertrude Ruchest, Peola, Wash.

Brother Plays the Cornet.

Dear Aunt Nellie: I want to join the Children's Corner. I am 8 years old. My birthday is July 10. I am in the third grade. My teacher's name is Miss Lauderdale. I have two and a half miles to go to school. I have blue eyes and light hair. My brother, Elton, plays the cornet. I would like to correspond with Maxine Orr, Northport, Wash.—Juanita Nunn, Meyers Falls, Wash.

Glad She Could Help the Bird.

Dear Aunt Nellie: I am a girl 12 years old in July. My subject is "The Bird's Nest." One day I was helping my sister pick gooseberries and I looked up and saw a bird's nest in a tree not far away from where we were picking the berries and I went up close to it and it had scraps of my dress. I told my sister that I was glad the scraps of my dress could help something somewhere. My oldest brother had to register. I am going to take music lessons from my sister this summer.—Alice Miller, Mayview, Wash.

A Nice Trip to Colville.

Dear Aunt Nellie: I am 10 years old and in the sixth grade. I was reading in the Farmer this morning and saw a girl's letter. Her name was Nettie R. Jackson, from Sunnyside, Wash. My middle name is Nettie, also. I live on a farm, but it is not our own farm. We have 21 horses and three colts. Their names are Dick, Fay and Roy. We also have one cow and a calf. We have about 60 hens and roosters and 60 little chickens. Last week we went to Chewelah, Wash., and the Fourth of July we went to Colville. We had a very nice trip. We are buying a farm of 40 acres near Chewelah. My birthday is the 12th of December. Have I a twin?—Ruth Nettie Draper, Govan, Wash.

Life in the Philippine Islands.

Dear Aunt Nellie: I was 9 years old the last day of July. I am in the fourth grade. I have been to school only two sessions because I lived in the Philippine islands for six years. My father and mother were teachers there. The Filipino children like to go to school and learn English. The Filipino people have brown skin and black hair. When we came from the Phillipines our boat stopped at many places in China and Japan. We stopped at the capital of Japan. We rode in an auto and in a very small buggy with only two wheels and pulled by a man instead of a horse. It is called a jinrikisha. I like to live in America, but I also like to live in the Philippines. It takes 30 days to cross the ocean. The children had a fine time on the big ship.—Martina B. Pruiet, Cowiche, Wash.

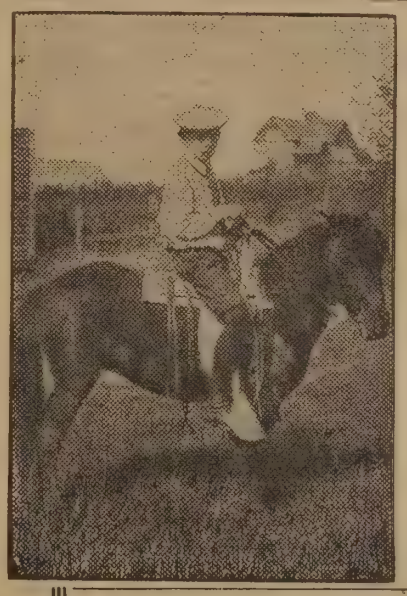
COOLNESS

There's nothing so cool as an oil stove for summer cooking. All the heat is concentrated on the cooking and not radiated about the kitchen.

Cooks everything any wood or coal range will cook, and cooks it better, because of the steady, evenly-distributed heat.

Use it all the year 'round—more convenient than a wood or coal stove, and more economical.

The long blue chimneys prevent all smoke and smell.



In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Aug. 11.—Sensational breaks in prices of corn for immediate delivery almost monopolized attention today in the grain trade. The fall amounted in some cases to 27c a bushel, as compared with 24 hours before. No other reason for the setback was apparent except the fact that distillers were at least temporarily out of the market altogether. Future deliveries closed nervous at the same as yesterday's finish to 3-4c lower, with December $1.14 3-4 to $1.14 7-8, and May $1.12 1-8 to $1.12 1-4. Wheat closed 3c down, but steady at $2.15 September, and oats off 1-4c to 1-2c. Provisions showed advances of 15c to 30c.

Cash Quotations.

CHICAGO, Aug. 11.—Wheat—No. 2 red, $2.37@2.40; No. 3 red, nominal; No. 2 hard, $2.60@2.62; No. 3 hard, $2.55.

Corn—No. 2 yellow, $1.90@1.96; No. 3 and 4 yellow, nominal

Oats—No. 3 white, 68@71c; standard, 68 1-2@70 1-2c.

Rye—No. 2, $1.89.

Barley—$1.30@1.46.

Timothy—$4.@7.50.

Clover—$12@17.

Pacific Northwest Grain.

WALLA WALLA, Aug. 11.—Net prices for new grain, September delivery: Club, $2.27; bluestem, $2.33; barley, $40.

SEATTLE, Aug. 11.—Wheat—Bluestem, $2.40; Turkey red, $2.40; forty-fold, $2.37; club, $2.36; fife, $2.36; red Russian, $2.35.

Barley, $49 per ton.

TACOMA, Aug. 11.—Wheat—Bluestem, $2.40; fortyfold, $2.37; club and red fife, $2.36; red Russian, $2.35.

PORTLAND, Aug. 11.—Wheat—No quotations.

San Francisco Grain.

SAN FRANCISCO, Aug. 11.—Barley—December, $2.40; May, $2.45 bid, $2.45 1-2 asked.

Minneapolis Grain.

MINNEAPOLIS, Aug. 11.—The price of September wheat hardened today and closed 1 cent higher. Corn 3 cents lower. Wheat—Receipts 134 cars, compared with 253 a year ago.

Wheat—September opened, $2.17; high, $2.17; low, $2.15; closed, $2.17 bid.

Cash—No. 1 northern, $3@3.05; No. 2 northern, $3@3.05; No. 3 northern, $2.90@3; No. 4 northern, $2.85@2.95; No. 2 hard Montana, $2.80@2.90; No. 2 durum, $2.40@2.55.

Corn—No. 3 yellow, $2.21@2.22.

Oats—No. 3 white, 67@68c.

Flax—$3.40@3.47.

Flour—Unchanged. Shipments, 37,968 barrels.

Barley—$1.15@1.45.

Rye—$1.93@1.95.

Bran—$33@35.

Wool Market.

BOSTON, Aug. 10.—The Commercial Bulletin of Boston will say tomorrow.

While the volume of business in the wool market during the week was hardly up to the average, the tone was unquestionably better, due in part perhaps to the clarifying announcement with reference to the plan of the federal government to purchase wool for military purposes. Values on all grades are fully firm.

At the mills a considerable part of the machinery is engaged on domestic war orders. No important changes are reported from the west.

Scoured basis:

Texas—Fine, 12 months, $1.65@1.70; fine, 8 months, $1.45@1.50.

California—Northern, $1.70@1.75; middle county, $1.40@1.45; southern, $1.15@1.20.

Oregon—Eastern No. 1 staple, $1.75; eastern clothing, $1.50@1.55; valley, No. 1, $1.45@1.50.

Territory—Fine staple, $1.75@1.80; half blood combing, $1.65@1.70; three-eighths blood combing, $1.35@1.40.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $3 cwt.

Apples—New Washington apples, $1 20-lb box; $1.75@2 50-lb box.

Butter—Blanchard cartons, 44c lb; Medo-Maid, 44c lb; Cascade, 44c lb; Gold Leaf, 44c lb; Better Butter, 44c lb; Attalia, 44c lb; Diadem, 44c lb; Hazelwood, 44c lb; Solid Pack, 42c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 26c lb; Hazelwood Young America, 27c lb; Wisconsin limburger, 29@30c lb; brick cheese, 20c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $12@12.50.

Live Poultry—Hens, 19c lb; old roosters, 10c; ducks, 13@14c; geese, 11c; turkeys, 20@25c.

Dressed Poultry—Hens, 22c lb; old roosters, 13c; ducks, 17c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs to 25 lbs, 23c; calf skins up to 15 lbs, 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under 7 lbs, 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10@75c each; green horse hides, $3@5 each; dry horse hides, $1@2.50 each.

Live Stock Quotations.

At Omaha.

OMAHA, Aug. 11.—Hogs—Receipts, 3900. Market, 25c to 30c higher. Heavy, $15.90@16.40; mixed, $16@16.30; light, $15.85@16.60; pigs, $13@15; bulk of sales, $16@16.0.

Cattle—Receipts, 105; steady. Native steers, $9.15@14.15; cows and heifers, $6.50@9; western steers, $8.50@12.50; Texas steers, $7@8.50; cows and heifers, $6@8; canners, $5@6; stockers and feeders, $6@9.25; calves, $8@12; bulls, stags, etc., $6@8.50.

Sheep—Receipts, 8000; market steady. Yearlings, $9.75@10.50; wethers, $9.50@10.25; ewes, $8@9.25; lambs, $14.25@15.25.

At Chicago.

CHICAGO, Aug. 11.—Hogs—Receipts, 17,000; unsettled, 10c under the opening, which was strong and 15c to 25c above yesterday's average. Top, $17.25, a new high price record; bulk, $16.30@16.90; light, $15.60@17; mixed, $15.75@17.10; heavy, $15.60@17.10; rough, $15.60@15.80; pigs, $11.25@14.40.

Cattle—Receipts, 600; steady; native beef cattle, $7.90@14.35; western steers, $7@12.25; stockers and feeders, $5.80@9.25; cows and heifers, $4.50@12; calves, $8.75@13.50.

Sheep—Receipts, 3000; steady. Wethers, $7.60@11; lambs, $9.75@15.20.

At Portland.

PORTLAND, Ore., Aug. 11.—Cattle steady; receipts, 40. Best beef steers, $8@8.75; good beef steers, $7@8; best beef cows, $6@7; ordinary to good cows, $4@6; best heifers, $6.25@7.25; bulls, $8.30@9.50; calves, $4.50@6; stockers and feeders steers, $4.50@6.75.

Hogs steady; receipts, 10. Prime light, $15.70@15.85; prime heavy, $15.60@15.75; prime heavy, $14@14.50; pigs, $15.60@15.70.

Sheep steady; receipts, 30. Western lambs, $12@12.75; valley lambs, $11@11.50; yearlings, $8@9.25; wethers, $8@8.50; ewes, $3.50@7.

At Seattle.

SEATTLE, Aug. 11.—Receipts, 51 cattle, 263 sheep.

Hogs—Prime, $15.75@15.85; medium to choice, $15.50@15.60; smooth heavies, $15@15.25; rough, $14.50@14.85; pigs, $14.50@14.85.

Cattle—Prime steers, $9.25@9.60; medium to choice steers, $8.50@8.75; common to good steers, $6@7.50; best cows and heifers, $4@4.50; best bulls, $6.50@7; common to good bulls, $3.50@6.05; calves, $6.50@9.50.

Spokane Stock Yards Saturday.

Hogs—Receipts none, market strong. Prime light, $15.40@15.60; prime heavy, $15.60@15.85; pigs, $14@15.25; stockers, $13@14.

Cattle — Receipts, 27; market steady. Prime light steers, $8@8.25; prime heavy steers, $8.25@8.75; good steers, $7@7.80; ordinary to fair, $5.25@6; prime cows, $6@6.75; good cows, $5.25@6; common cows, $4@5; best heifers, $6@7; bulls, $5@7; calves, $7.50@9.50; stockers and feeders, $57.

Sheep—Receipts, 1800; market steady. Prime lambs, $11.50@12; good lambs, $10.50@11.25; prime yearlings, $8.50@9; prime wethers, $8@8.50; best mutton ewes, $5@7.

August Crop Report.

A summary of the August crop report for the state of Washington and for the United States, as compiled by the bureau of crop estimates, U. S. department of agriculture, is as follows:

Winter Wheat—State: Aug. 1 forecast, 10,900,000 bushels; production last year (final estimate), 18,285,000 bushels. United States: Aug. 1 forecast, 417,000,000 bushels; production last year (final estimate), 481,744,000 bushels.

Spring Wheat—State: Aug. 1 forecast, 20,300,000 bushels; production last year (final estimate), 19,350,000 bushels. United States: Aug. 1 forecast, 236,000,000; production last year (final estimate), 158,142,000 bushels.

Oats—State: Aug. 1 forecast, 10,800,000 bushels; production last year (final estimate), 14,300,000 bushels. United States: Aug. 1. forecast, 1,460,000,000 bushels; production last year (final estimate), 1,251,992,000 bushels.

Barley—State: Aug. 1 forecast, 5,320,000 bushels; production last year (final estimate), 6,814,000 bushels. United States: Aug. 1 forecast, 203,000,000 bushels; production last year (final estimate), 180,927,000 bushels.

Potatoes—Aug. 1 forecast, 10,110,000 bushels; production last year (final estimate), 9,900,000 bushels. United States: Aug. 1 forecast, 467,000,000 bushels; production last year (final estimate), 285,437,000 bushels.

All Hay—Aug. 1 forecast, 1,800,000 tons; production last year (final estimate), 2,048,000 tons. United States: Aug. 1 forecast, 100,000,000 tons; production last year (final estimate), 109,786,000 tons.

Apples (agricultural crop)—State: Aug. 1 forecast, 2,840,000 barrels of 3 bushels; production last year (final estimate), 3,225,000 barrels. United States: Aug. 1 forecast, 62,600,000 barrels of 3 bushels; production last year (final estimate), 67,415,000 barrels.

Prices—The first price given below is the average on Aug. 1 this year, and the second the average on Aug. 1 last year. State: Wheat, 200 and 84 cents per bushel. Corn, 160 and 100. Oats, 70 and 42. Potatoes, 161 and 107. Hay, $15.00 and $11.70 per ton. Eggs, 36 and 26 cents per dozen. United States: Wheat, 228.9 and 107.1 cents per bushel. Corn, 196.6 and 79.4 cents. Oats, 73.7 and 40.1 cents. Potatoes, 170.8 and 95.4 cents. Hay, $13.42 and $10.68 per ton. Eggs, 24.3 and 20.7 cents per dozen.

Portland Market.

PORTLAND, Ore., Aug. 11.—The warm weather has put a check to the country produce trade. Eggs are sluggish and buyers are offering less, case count; but candled stock is firmer, owing to the big shrinkage. Poultry sales also drag. Veal is quoted higher this week, as very little is coming in.

Butter is no more than steady, although the make is restricted. The cheese market is firm.

Walla Walla onions are higher this week, at $125@1.40. Potatoes are steady at the old price.

The boom in the hop market shows no sign of abatement. Buyers are offering 26½@27 cents for new Yakimas and Oregons on contract, and choice spots are quoted at 20 cents. It is figured that 75 per cent of the small crop growing on the Coast has already been signed up. The latest estimates of the Coast crop are: Washington, 20,000 bales; Oregon, 35,000 bales; California, 70,000 to 75,000 bales.

Hides are weaker, with the most active kinds a cent lower.

The wool market is still quiet.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $50 per ton.

Corn—Whole, $91; cracked, $92 per ton.

Millstuffs—Bran, $36 per ton; shorts, $39.

Barley—No. 1 feed, $47; brewing, nominal; rolled, $51.

Hay—Buying prices; Timothy, eastern Oregon, nominal; alfalfa, $20@22; grain, $16.

Eggs—Oregon ranch, case counts, 35c per dozen; candled, 37½@40c.

Poultry—Hens, 14@16c; ducks, 13@17 1-2c; turkeys, alive, 18@21c; geese, 8@9c.

Butter—City creamery, prints, 44@45c per pound; cubes, extras, 40½c.

Cheese—Tillamook triplets, 22c; young Americas, 23c.

Dressed meats—Veal, 14½@15c; pork, 19 1-2@20c.

Hops—1916, 20c; contracts, 26½@27c.

Potatoes—New, 2 3-4@3 1-2c per pound.

Wool—Eastern Oregon, fine, 58@61c; coarse, 58@65c; valley, 72 1-2@75c.

Beans — California small white, 16 1-2; large white, 16c per pound.

Portland Wheat.

PORTLAND, Ore., Aug. 11.—Wheat buying, which slowed down in the latter part of the week, came to a full stop Saturday. The enactment of the food control law and the prospect of an early statement by Mr. Hoover as to what the government intends to do about wheat distribution made it wise, in the opinion of wheat dealers here, to withdraw from the market. The few bids put out were at a lower level, based on $2.40 bluestem, Coast.

The opinion prevails that the government's first steps will pertain to the flour industry. It is likely that all the breadstuffs exported to the allies will go abroad in the form of flour. A meeting of the national millers' committee will be held in the east this week and following it an official announcement is expected.

There is a limited business doing in new crop barley on the basis of $47 here. Oats are quoted strong at $50, with very small offerings. The hay market continues firm.

Seattle Market.

SEATTLE, Aug. 12.—Western avenue dealers have had what might be called a tomato and cantaloup week. They have centered their efforts on these two products in order to clear up the great surplus that had accumulated because of a slump and double shipments. At the present time they have succeeeded fairly well, although even yet the houses are flooded with tomatoes and cantaloups and the prices are at rock bottom.

When Yakima first sent over a carload of tomatoes, brokers who controlled the deal forced dealers to sell at too high prices. As a result this produce began to accumulate and become overripe. A few days ago the brokers relaxed and every house on the street started in to clean up the market. Cantaloups have had the same experience. All produce will probably move along at a steady gait hereafter.

Apples are going to hold the limelight in the near future. Already Wenatchee has given the street a small sample of what to expect. The sample included Winter Bananas, Spitzenbergs and Delicious and all were well-formed and matured. The Wenatchee district has contracted for a shipment of 600 boxes of the varieties named by August 20. This is the earliest date ever known for apples.

This is the off year for Wenatchee Gravensteins and receipts in this variety are not expected to amount to much. Dealers are very anxious as to the Yakima crop, as the outcome is as yet uncertain.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transaction by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Poultry—Live hens, fat, over 4 lbs., 18c per lb.; 2 lbs. and under, 14@16c; old roosters, 11c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 10c per lb; broilers, live, 18c per lb.

Butterfat—47c per lb.; dairy butter, 31@32c.

Beef—Buying prices: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c; heifers, 6@8c per lb.

Hogs—Light, 15@17c per lb.; do heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 30c per lb.; green hides, 16c per lb; salted bulls, 16c per lb.; dry hides (short trim, 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12 1-2c per lb.; dry butcher full wool sheep pelts, 36@38c per lb.; green calf, 30c.

Butter and Eggs.

SAN FRANCISCO, Aug. 11.—Eggs—Fresh extras, 40c; fresh firsts, 39c.

ELGIN, Ill., Aug. 11.—Butter price, 39 1-2c; 100 tubs offered; no sale.

FARM LANDS—WANTED 654

WANTED—TO HEAR FROM OWNER OF farm or unimproved land for sale. O. K. Hawley, Baldwin, Wisconsin.

FARM LANDS—FOR SALE 651

REAL SNAPS IN STOCK, HAY, GRAIN AND FRUIT LANDS NEAR SPOKANE.

Improved and unimproved tracts described below are near a good city and good market, on good state and county roads, near railroad, good schools, rural free delivery, good society, etc. The climate is conceded to be the best. Domestic and crop water plentiful. No irrigation needed — crops sure. Write for a folder showing photographs and telling of climate and other facts of interest, such as no failure of crops, freedom from pestiferous insects, frostless belt, amount of wheat, oats, hay, potatoes, fruits, etc., per acre. If the tracts described below do not suit you, tell us what you want.

40 ACRES.

40 acres of raw cut-over land; very productive soil, with an abundance of moisture, as would be indicated by willow bush; in good locality, on public road, close to railroad; on easy terms.

160 ACRES.

25 acres cleared; on county road, rural free delivery, etc.; sandy loam soil; good subirrigation; lies fairly level; in good community. Price right and terms easy.

80 ACRES.

40 acres cleared; on state road and two county roads; very centrally located, in good community; would make an excellent home; would make some improvements for proper party. Small payment and very easy terms.

480 ACRES.

480 acres, within half mile of railroad; cordwood enough to pay for it; in dollar limit of Spokane; (good soil; make good stock proposition; more land could be had adjoining); $12.50 per acre, easy terms.

MILAN FARMS DEVELOPMENT COMPANY,
"REALTORS."
1322 Old National Bank Bldg.
or
ALLIN REALTY COMPANY.
408 West Sprague Ave.
Tel. Main 2750.
Spokane, Washington.

VERY FINEST CRANBERRY PEAT LAND in center of coast cranberry industry, for sale in 1 to 5 acre tracts at $200 per acre, with only 20 per cent cash payment; no other payment for five years, balance in ten years. By planting part of holdings in cranberries, crops should meet future payments. If desired, will plant for buyer. Adjacent lands producing 150 bbls. to the acre, with cranberries selling at $8 to $12 per bbl. The coast consumes 20 times the present production. For a money-maker, do you know of any other crop that compares favorably with cranberry growing? Home markets at $2 per bbl. higher price than eastern grower gets, owing to freight west. Cranberry grower myself. Henry S. Gane, Long Beach, Pacific County, Washington.

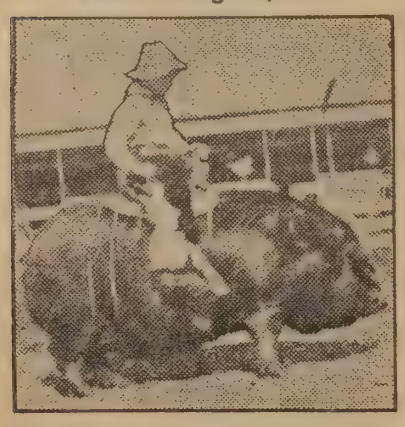
FOR SALE OR TRADE.



10 acres, level, clear, garden land; 3½ miles from center of Seattle; valuation, $16,000, or trade for stock ranch. C. Muller, Columbia station, Seattle.

NEWS FOR BREEDERS

W. O. Morrow of Independence, Ore., is wearing feathers in his hat because four of the cows that sold at high prices at the McArthur & Stauff Jersey sale were of his breeding. It was Mr. Morrow's intention to show Jerseys at the Oregon state fair and Pacific dairy show, but owing to the extremity of the labor problem, the almost impossibility of securing competent help, he has decided to keep the Jerseys at home. He will put quite a number of young cows and heifers on official test this fall.

Pert Peggy, an imported Jersey and a show cow, made the best record in the herd of J. W. Vandervelden & Sons of Roy, Ore., for the year ended April 20, 1917, as shown by the records of the Washington County, Ore., Cow-Testing association. Pert Peggy's production was 492.49 pounds of fat, or 579.4 pounds of commercial butter. What pleases Mr. Vandervelden most is the fact that Peggy is a sister of Simone of St. Saviour, a cow with both show and production records, that topped the Cooper sale at $2000. Twenty-six cows were on test, 13 of them for the full 12 months, the others ranging from nine down to two months. The average age was five years and 11 months. The total amount of fat produced was 8621.07 pounds, or an average production of 417.08 pounds of fat, equal to 490.68 pounds of butter. The value of the product was $4387.20, an average of $212.25 per cow. The feed cost was $2934.48, an average of $142.11 per cow. This shows a profit per cow of $70.14. Several of the cows are pure bred, the balance grade Jerseys. Generally the pure-bred cows had the largest records.

Ferrell's Big Orphan.

The above picture of the wild and woolly west shows "Bronco Pete" riding "Big Orphan." Big Orphan is a Poland China boar owned by J. E. Ferrell of Weiser, Idaho, that was first prize senior boar pig in 1915 and first prize senior yearling and grand champion in 1916, all at the Idaho state fair. He weighed 800 pounds September 28, 1916. The rider is Mr. Ferrell's little boy, who, with his chaps and gun on, very much enjoys the ride.

Red Wing Farm Buys Bull.

A. J. and J. Hughes, proprietors of Red Wing Farm, Oregon City, Ore., this spring purchased from Gene Duluth farm of Minnesota the young bull May Rose Yexa Starlight to serve as a supplemental herd sire to their Guernsey herd. His sire is May King of Linda Vista, that sold for $4600, and whose dam, Queen of the Roses, has an A. R. record of 852 pounds of butterfat in a year. May Rose Yexa Starlight's dam is Lime Girl, leader for the breed in class B (4 1-2 years old), with 728.69 pounds of fat. Her best day's milk was 71 pounds and her best month 84.1 pounds of fat. The young bull was first at the Waterloo, Iowa, dairy congress and several other shows. Red Wing farm does not plan to show this, but it also has some very showy calves. Six of the cows in the herd have official tests, the average being 457 pounds of fat, and the average age 7 3¼ years. The highest record is 664.79 pounds.

H. A.

Poppy's Grace

Poppy's Grace, a Jersey heifer owned by F. E. Lynn of Perrydale, Ore., that freshened at 2 years and 14 days, milked up to 40 pounds the first month and produced over 60 pounds of butter fat, 75 pounds of commercial butter, her first 30 days. Her second month promised to equal the first. Poppy's Grace, whose photo appears above, is a daughter of Mr. Lynn's herd bull, St. Mawes' Golden Poppy, and he is a son of St. Mawes' Poppy, that has an official record of 1120 pounds of butter in a year. Her dam has an official record of 520 pounds of butter in a year, and three daughters in the Register of Merit, two of them with over 500 pounds, and the other 470 pounds as a 2-year-old. As they are all persistent milkers, Poppy's Grace bids fair to make the big record of over 800 pounds with her first calf.

Another cow on official test is Deufrano's Jessie, shown above, a daughter of Cowslip's Ashley, a 5-year-old cow that produced over 400 pounds as a 2-year-old. She is big and strong and has an average test of close to 6 per cent. Another daughter of St. Mawes' Gold Poppy will freshen with first calf in June, and will be put on official test, with first calf. Mr. Lynn has five others of his daughters all heavy milkers, that will be tested at their second freshening. He expects them to establish the bull's reputation as a sire of producers.

Newell Quits Breeding Business.

A few weeks since W. K. Newell, the well-known proprietor of Cloveridge farm, at Seghers, Ore., and president of the Northwest Holstein Breeders' association, has disposed of the farm to M. Olsen of Portland, taking an apartment house in exchange. The trade included both the dairy and fruit ranch and all the fine herd of about 90 head of Holsteins. Mr. Newell has carefully built up one of the front-rank Holstein herds of the northwest. Mr. Olsen has decided to greatly reduce the herd, and about the middle of September will hold a sale of about 75 head, including both cows in milk and young stock of both sexes. George Gue, auctioneer, will have entire charge of the sale, and catalogues, dates and full information will be given in due time.

H. A.

Netherland Baker Mercedes

"Netherland Baker Mercedes," No. 154230, sold by Charles Eldridge to Yarr Bros. of Chimacum. This cow, 100 per cent the same breeding as Margie Newman 2d, is one of the greatest milk factories in the world and is particularly conspicuous for her size and vigor and for the wonderful development of her milk veins and udder. Although she has never been fitted for test, she has an A. R. O. record for seven days of 25.1 pounds of butter and 702 pounds of milk.

Help Out Feed Situation

Silage for Horses, Sheep, Cattle and Swine

By WILLIAM HISLOP, Pullman, Wash.

Hay, grain, mill feeds and oil cake have reached such forbidding prices as to discourage some stockmen. Those men who have silos are less fearful of "dried-up" pastures and winter feed than those who have none. Silage, however, is not a panacea for all these troubles, but it mitigates them to a very large extent. Dairymen are given credit for having used silage first and some people think that it is a feed fit only for the dairy cow. True, the use of silage and profitable dairying are closely associated, but such are not its limitations.

Horses and Mules.

Experiments at the Pennsylvania, Missouri and North Carolina stations have shown that corn silage can be used as a part of the rations for all classes of horses and mules. Mouldy, spoiled, rotten acid or frozen silage is very unsafe as a horse feed and none but the best should be fed. A good daily ration for a 1400-pound draft horse at work consists of 15 pounds of silage, 10 pounds of legume hay and 10 to 12 pounds of oats. Idle horses can consume profitably about 25 pounds of silage daily plus 10 to 12 pounds of hay. Weanlings, yearlings and two-year-olds will make satisfactory growth when silage constitutes a part of their roughage. In addition, they should receive some grain and hay. Mature, in-foal mares, have produced strong foals in a ration of legume hay and corn silage. Silage is also a very excellent winter feed for horses on dry hay or oat and wheat straw. Many horses in the wheat belts of Washington would be in better shape for spring work if they received some silage. In starting horses and mules to eat silage only three or four pounds per head should be given daily along with other feeds. The silage should be increased and the other feeds decreased.

Sheep.

As with horses, the addition of silage to rations for all classes of sheep reduces their cost and supplies succulence, palatability and variety. Likewise rotten, moldy, sour or frozen silage should not be used. Pregnant ewes should receive from three to four pounds per head daily during the winter. This should be supplemented with two or three ounces per head daily of cottonseed cake and some hay. After the lambs are born silage increases the milk flow of the ewes. In the fattening of lambs and yearlings for market the cheapest gains have usually been made when silage constituted a part of the ration. Rams winter well on silage as a part of their feed.

Cattle.

Silage is just as indispensable to successful beef cattle raising as it is to successful dairying. In fact, during these times of high-priced feedstuffs it is highly essential. As with sheep and horses, silage alone is too wide a ration. Cattle receiving silage exclusively will not do well. Cotton seed meal, linseed oil meal, clover, alfalfa or pea hay should be fed with it. Fattening steers will eat 20 to 25 pounds per head daily. Wintering yearlings will do likewise. Calves may be fed all the silage they will clean up twice a day. Grain and legume hay should, in all cases, be fed in addition. Bulls also thrive on silage. Even 10 to 15 pounds per head daily plus hay and some grain are sufficient to keep them in good condition. Pregnant beef cows will eat 30 to 40 pounds of silage per head daily plus some hay.

Swine.

Silage is too bulky for swine. However, it may be fed as a conditioner or tonic, especially during winter; but hogs will not fatten profitably on it. They waste more of it than they consume. When pasture is unavailable sows that are suckling litters would benefit by receiving a limited quantity.

Careful Handling Pays

Careful handling often will get a high-grade and a relatively high price for grain and hay which otherwise would grade low and sell low, say specialists of the United States department of agriculture.

It is worth while for producers to keep this fact in mind now that the harvest season for grain and hay is approaching in many sections. The supply of the best grades of grain and hay on the market is always light. This frequently may be attributed directly to poor handling and care. Quality always demands the best price, hence the greatest care should be exercised in harvesting and storing.

Practical Hay and Grain Hints.

Do not store damp grain or hay unless you have adequate facilities for frequent "turning," otherwise they are likely to go out of condition. Few farmers realize how small a per cent of moisture will cause otherwise good grain or hay to heat and deteriorate.

Never bale damp hay.

If your grain contains a large per cent of foreign material clean it. It keeps better.

Feed low grades and screenings on the farm.

Do not mix varieties. In most cases it can be avoided. It nearly always causes the commodity you are selling to grade low.

Do You Know That

That every spoonful of leftover gravy can be used in soups and sauces or as flavoring for meat pies, croquettes and vegetables?

AUCTIONEERS

AUCTIONEER

Special attention given to live stock sales.
BEN T. SUDTELL. Albany, Ore.

SHEEP

Registered Sheep

Rams—Hampshire, Shropshire, Lincoln and Cotswold. We deal in pure blood registered rams. Grade ewes, one, two and three years old.
GRANT B. DIMICK, Oregon City, Ore.

JACKS and JENNETTES

Jacks and Jennettes

DUROC SPRING PIGS.
15 head, including one service jack, younger jacks ond colts, all at reasonable prices. A few well-bred registered Duroc Jersey spring pigs, only $15.
F. J. CHALMERS, R. 1, Cornelius, Ore.

Real Bargain in Five Jersey Heifers

Four sired by a grandson of Golden Glow's Chief (31 Register of Merit daughters), and double grandson of Rioter B. K. Helma (sire of 8). One a granddaughter and one a double granddaughter of Picabo (734.1 lbs. butter in a year.) All well bred. Ages sixteen months down to two. To feed my herd properly must dispose of part. $350 takes them.
C. A. SWARTS, Springfield, Ore.

FOR SALE— Percherons, Shire Stallions and Mares

Jerico 110196, a dark iron gray Percheron stallion, 3 yrs., wt. 1850; sire Jube 81251 by Coco, dam, Bird 81977 by Brilliant Jr. His 1st, 2d and 3d dams are close descendants of Brilliant. Winnings at Northwest Live Stock show, Lewiston, as suckling colt, first in class and Percheron society gold medal as best stallion under three years, owned and bred by exhibitor. As 2 yr. old, 1st in class and champion under 3 years, three Society medals, best under three years owned and bred by exhibitor, grand champion and best stallion owned and bred by exhibitor and in open class reserve grand champion.

Aaron 117566, a 2-yr.-old half-brother, dark bay, wt. 1550. Sire Salvador 51340 by Calypso. Equally good, (some say better). He has never been shown.

Callie 88642, a dark gray mare, 6 yrs. old, wt. 1750. Sire Apollon 26130. She is very strong in Brilliant blood; has mare colt by Halicite.

Lady Grace II., 15452, a 3-yr.-old Shire, bay, white face and white hind legs, wt. 1650. Sire Imp. Toga VII. 9288; dam Bay Lily 13577, by Imp. Greenham Champion.

All first class in every respect, mostly our own breeding, reserved for our own special use.

On account of the death of one of the partners, must sell to close estate.
FOLLETT & SCHOOLER, Genesee, Idaho.

VOL. XL. NO. 34. AUGUST 23, 1917. * * WEEKLY.

Government Is Ready to Control Wheat Market

Powers Vested in the President by Food Bill Will Be Made Effective

The federal government provided in the recently enacted food bill for complete control of the food situation, especially with regard to wheat, and steps were taken immediately looking toward the exercise of the control. Plans were made whereby the food administration will buy not only the grain needed for the use of its army and navy, but if need be to control the price and distribution will buy for resale. The administration immediately formed a $50,000,000 corporation for the purchase of grain and appointed 13 men as representatives at the 13 great market centers or terminals.

Houser Appointed.

For the northwest, M. H. Houser of Portland, formerly of eastern Washington, was selected. He has announced that he will devote his entire time to this service for the government, and that, in addition, he will devote the proceeds from his grain buying business this season to the Red Cross. He is recognized as one of the big grain buyers of the country, having bought and exported many millions of bushels in recent years.

Looking ahead to next year, the government is making strenuous effort to insure the greatest possible production, and has guaranteed to the farmer that he will receive not less than $2 a bushel for his wheat next fall. Conditions later will determine how much more than that, if any more, he shall receive.

Farmers Not "Preferred."

Thinking of this guarantee of not less than $2, a working man recently wrote to a newspaper complaining bitterly because, as he erroneously asserts, the new food control law makes the farmers a "preferred class for whom special legislation is enacted, while those of us who work day in and day out have to pay their outrageous prices and foot the bill."

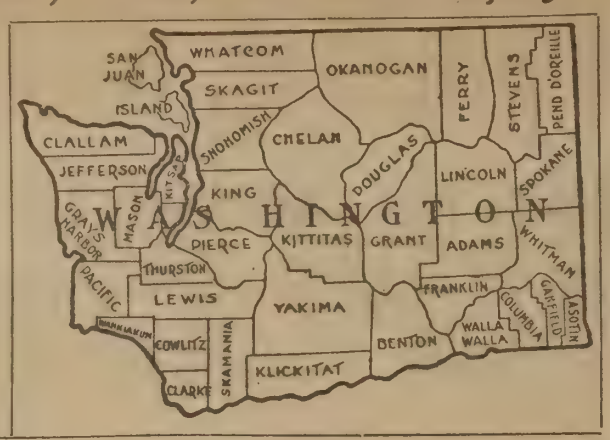
This complaint objects particularly to the $2 wheat guarantee, thinking that it was passed primarily to benefit the farmer. No doubt that misunderstanding of the true intent of the law lies in the minds of many others, and the purpose of this article is to show, by the text of the law itself, and by action just taken by the government, that the broadest object is protection of the consumers and the strengthening of the national defense in order that we may the more quickly win the war.

In the first place the $2 a bushel guarantee does not apply in any way to the 1917 wheat crop. It is offered for next year's harvest, for "stimulation of production"—to encourage the American farmers to grow more wheat and thus hold down prices.

The president and congress wisely foresaw that unless this measure was adopted and speculation curbed there could be no telling where the price of wheat would go. It has been mounting steadily since the outbreak of the war, and it is tremendously important that America grow larger wheat crops to offset decreased production in the fighting countries.

Means Great Benefit.

The Farmer is convinced that this legislation will carry great benefits to the consumers—to workingmen in the towns and cities—and that the American wheat-growers would probably have enjoyed higher prices if the government had taken no action, but will be content with government control out of patriotic considerations.



As said before, the $2 guarantee has no application to this year's harvest, and Food Administrator Hoover, acting under the

Rain, Drouth, Heat, Frost Do Injury

Crop Reports Show Damage From Unusual Season to Be Great; Frost Is Among the Elements of Destruction

LEAHY, Douglas County, Wash., Aug. 10.—Injury to the wheat crop in this part of the county from drouth and frost will be 75 per cent. The frost July 29 did more damage than the dry weather, as it killed all the wheat on the low ground where the drouth did not hurt it. I think the prospective price conditions will have a tendency to stimulate live stock, as there seems to be an increase in stock. Almost every one is trying to raise some stock now where there were but few a few years ago. I think every farmer should make a special effort to grow all the stock that circumstances will allow. W. A. GRAY.

First Rain; Then Heat.

STEVENSON, Skamania County, Wash., Aug. 12.—This has been a very unusual season. In the spring there was continuous rain until the last of June so we could not plow or sow, and since then it has been hot and dry. The potato will be a short half crop. The hay did very well and was saved without damage. Corn will not amount to anything unless rain comes soon. Very high water prevented planting bottom land, so the area in crops is reduced by that much. There is quite an acreage of beans and they seem to stand the dry weather pretty well and will make a good crop. There does not seem to be much disposition to dispose of stock nor to increase herds either. I would suggest to increase the meat supply that they allow no calves to be slaughtered for several years, especially females. This is no hog country, so we do not raise hogs for market. I think an increase in stock is badly needed. The strawberry crop was in many parts of the country a failure, while in the eastern end they had a half crop. Cherries were scattered many places and some had a half crop. Pears are next to a failure, while prunes are the same, which never was known before. Apples are heavy and doing well, with some sun scald this hot weather. Apples seem to be falling badly, which I think is due to dry weather. Crop conditions are about the same all over the county. No grain is raised here. Potatoes, hay and fruit are the main products. Blackberries are a heavy crop.

W. T. JACKSON.

Should Import Seed Wheat?

NEPPEL, Grant County Wash., Aug. 9.—The per cent of loss in the wheat crop is 60 per cent. I know two fields, one an early sowing of spring wheat and one a very late sowing, that showed good yields and I believe the better yield was due, in each case, to an imported wheat, early Baart, which has shown good returns for two years past. I think the strain of wheat that the average farmer seeds in the Big Bend is utterly worn out and hundreds of thousands of bushels are lost to trade by such seed. A new seed every two years is best, and no extra labor or expense is required. The trouble is the farmer too often is loth to pay a cent or two extra for seed. The same condition holds him up in live stock products. He cross breeds his stock so many years, and the stock, in most cases, have lost all their original good points. The prices of live stock are no inducement for live stock interests, on account of feed conditions and price of feed, and the short crop of hay is having a tendency to lower the holding of stock. If the farmer could be induced to raise and cure his own pork and bacon for market instead of paying freight to a packing house and all undue expense and profits to several who handle the pork from him to the consumer, it would raise the live stock industry profitably. The storekeeper could be a medium in that respect, were it not for the fact that the catalogue houses are eliminating him. The best way is for the farmer to make his own products for market, and each store using them should be controlled and owned the same as the other combines. This way he controls his own price and stimulates production with the profits that the packer is now making. But the thing sifts back to one sure of equality to all, and federal control is the remedy.

MARTIN PENHALLICK.

Dairymen Are Quitting.

MEAD, Spokane County, Wash., Aug. 11.—As the injury to crops from drouth has not been uniform, it is difficult to give figures, but I should say a fair estimate would be 35 to 40 per cent injury to winter wheat, 50 per cent to spring wheat, and 60 per cent to oats. Potato, summer fallow and cabbage ground seem to have grown the best crops of oats followed by spring plowing packed with a sub-surface packer. Crops and prices will rather tend to depress live stock industry. There is so much of the gamble in the live stock business that few are able to stay with it, notwithstanding the high prices for stock of all kinds. The shortness and high prices of feeds the last two years have driven most men out of the business in this vicinity, many of them probably for good. Regardless of the increase in milk prices, dairymen are still offering their cows for sale. GEORGE HINGSTON.

Use Home-Grown Feed.

PORT ANGELES, Clallam County, Wash., Aug. 15.—Reports from the farmers indicate that the potato acreage in Clallam county this year is about 500 acres and more than double the acreage of last year. Present prospects are that the yield per acre will be light, owing to the unusual dry weather. The acreage of field peas is probably treble that of 1916, but the dry weather has seriously damaged the yield in some of the more dry localities. The reports of the farmers would justify placing the number of hogs to be marketed from the county at 1880, with an average weight of 175 pounds each; beeves and old cows at 800, not including veals. As near as can be ascertained there has been a decrease of 10 per cent in the number of dairy cows in the county. The decrease is due to the reducing of the number of cows in overstocked herds, to avoid buying so much high priced feed. More feed for dairy cows is, as a matter of fact, being produced this season. Some 30 new silos have been built in the county to house silage crops, which means that the farmers are making efforts to make the dairy business one supported by home-produced feeds.

O. T. McWHORTER.

Baart Wheat Stands Drought.

EPHRATA, Grant County, Wash., August 14.—The crop in Grant county this year will be from 50 to 65 per cent of what can usually be expected. However, some of the yields are exceptionally good and are making more than was thought at first. A number of fields will grow 20 bushel or more. The Baart wheat has withstood the drought much better than the Bluestem, and the Bluestem better than the Marquis. Nearly all of the wheat in the county is of either Baart or Bluestem variety. This is the year when good farming shows up. The fields that have been well taken care of and well farmed and properly handled are giving much better results. The early summer fallowing is much better than the late and the crops show it. At a sale held near here recently, stock cattle brought a good, stiff price, showing that the people were interested in increasing their herds.

H. W. REAUGH.

Cultivation Replaces Rain.

CHEHALIS, Lewis County, Wash., July 30.—There has been no crop injury in this county from drouth and heat. We have had a normal July, that is, practically without rain, which has allowed the hay crop to be saved in fine shape. Of course, rain now would help make the potato crop heavier and would benefit the gardens and pastures, but a dry August will not be a material detriment to the crops of this county, providing we have the usual good rain about the first of September that will start the fall pasture to growing. The people who "hollow" every few days for rain are not the ones who have their ground properly prepared and seeded in the spring and give crops a decent amount of cultivation. Crop conditions and prices, especially for milk, are materially stimulating Lewis county live stock conditions. The farmers who are wise and inclined to look ahead are improving their herds and arranging for more feed for stock.

J. C. BUSH.

Rains Help Whatcom County.

FERNDALE, Whatcom County, Wn., July 29.—It is estimated that the recent rains have added from 50 to 60 sacks of potatoes to each acre planted. Kale and mangels have improved accordingly. Pasture is short at present, but most farmers are feeding their milch cows green feed, consisting of oats and vetch or red clover. Now that the haying season is over farmers are devoting their time to picking raspberries and cherries. The local cannery is running to its fullest capacity, furnishing employment for 40 persons and canning about 500 cases a day. There is the usual shortage of pickers on the big places. Beans will soon be ready for canning also and an enormous quantity of them have been raised here this year. Oats are looking fine and promise a bountiful harvest this fall.

MRS. JACK PLASTER.

Should Raise Cattle.

CHIMACUM, Jefferson County, Wash., July 28.—So far the drouth and heat have not injured any crops, but have dried the pastures to some extent. Grass hay is most all in the barns and grain hay is looking good and indicates good hay crops. Early potatoes are good crop and the lowlands were damaged during June to a certain extent. At the prices of grains, hay, etc., it is hard to tell what the farmers should do in the live stock business, but we think there will be nothing lost if the stockmen raise all they can, of both beef and dairy stock. Pull-U-Out
The little thing with the big pull

Consists of a winding drum, lever crank, 40 ft. of steel cable, two 7 ft. chains and 3 stakes. Weighs only 28 lbs. and fits in space 4x8x14 in.

Pull-U-Out makes child's play of heavy lifting jobs

Easily rigged for similar jobs anywhere

Here's the most wonderful little machine ever invented for farmers. It combines two things—a rescuing device for your automobile and a machine that will do hundreds of lifting and pulling jobs on the farm, easily and quickly. It saves a world of back ache and is worth its weight in gold.

Pull-U-Out fits into the tool box of your auto, yet is so powerful that it will pull a 5,000 lb. auto out of hub-deep mud without delay, expense, trouble or damage to car or clothes. Lifts 2,000 lbs. dead weight; pulls 100,000 lbs. on wheels.

No motorist, however experienced and careful, should venture out, even on the best of roads, without Pull-U-Out, because accidents come *suddenly*—without any warning. Trouble is lurking everywhere. You may get stuck in the mud, skid into a ditch or overturn. It is then that you will bless the day you bought a Pull-U-Out. With powerful, inexpensive little Pull-U-Out in your tool box you need never fear road conditions; you can go wherever your business or fancy leads you. If you meet with an accident you *know* that you have *immediate* and efficient help right at hand. Don't wait for an accident to make you wish you'd bought a Pull-U-Out—buy one today.

Does wonders on the farm!

Wherever there's *any* heavy lifting or pulling to do, use Pull-U-Out. For loading and unloading wagons, scalding hogs, quartering beef, lifting wagon beds and hay racks on and off the running gear, stretching wire fences, loading baled hay, bales of cotton, sacked grain and other heavy things, Pull-U-Out is marvelous. It is light, portable and strong. Easily moved by one man from one place to another. Does lifting and pulling jobs that usually take from 3 to a dozen men.

Test it at our risk

Pull-U-Out is shipped and sold on the make good basis.

Interesting booklet—free
Tells all about Pull-U-Out, how and why it works.

Will Assemble 1000 Head of Stock

Interstate Fair Board Promises Best Features in History of Fair

When the gates of the Spokane Interstate fair grounds open on Monday, September 3, there will be more than 1000 head of the choicest live stock of the northwest and a series of the greatest educational displays and features the fair has ever offered ready for the public to enjoy and profit from.

This is the promise that the fair board is making and which it is striving to fulfill. W. L. Tennant, assistant to President T. S. Griffith, who is handling the entries, expresses assurance that the exposition this year will be the most successful from the standpoint of educational value that the association has ever put on. He states that he has assurance of much larger interest in the live stock departments this year than ever before.

Some idea of the prospects is had from the fact that a total of 3723 prizes are offered this year. There are 120 classes and 15 departments. In every class of each department an unusual interest is already indicated. For instance, in the farm machinery division every inch of space has been sold. The exhibits in this division will include everything from a gopher trap to a combined harvester in operation. The space assigned is double that of last year and all of it was applied for by July 1, where formerly space frequently went begging until a week before the fair opened its gates. This year contracts for exhibition space were actually made while snow was still upon the ground.

This year, with the nation calling for every kernel of grain and every ounce of animal food, the educational scope of the fair becomes broader than ever.

Agricultural products have been the basis of the Spokane exhibition ever since the heavy old time racing program was cut down. In recent years, with the growth of the agricultural area in the northwest, the fair has been offering more liberal cash prizes to induce displays. Until the fair of 1916 the general displays of agricultural products were usually made by counties or district organizations. As a result individuals and small societies objected, claiming that they did not have a fair chance of winning against the competition of the larger organizations. Last year the management adopted the pro rata plan of judging display exhibits in this department.

The New System.

Under the new arrangement, all displays compete together in every section and additional prize money is paid for exhibits made by individuals, farmers' unions and granges, the money in each section being divided according to the score and the extra money offered for the exhibits made by individuals, granges and farmers' unions being added to their winnings in the regular classes.

Under this arrangement a small display of superior quality will win over a large display of poorer quality and every exhibit entered is sure to take away some money. As an instance, the association will give to each grange and farmers' union having an exhibit at the fair, $10 if the society is located within 10 miles of the fair grounds and $15 if it is located beyond the 10-mile limit. This is in addition to the prize of $200 offered for the best display of sheaf and shell grain; $150 for display of grasses and forage crops; $250 for best fruit display; $200 for best vegetable display and $200 additional for displays by local granges or farmers' unions and another $200 added for displays for individuals.

Charles Hebberd

Charles Hebberd, member of the Washington state council of defense, and chairman of the food conservation division of the council, has been appointed state food commissioner by the national food administration. He has gone to Washington, D. C., to consult with national leaders on the work to be done in this state.

Dairymen May Build Condensery

Possibilities of a big cooperative dairy products plant in western Washington loomed up on the horizon of the dairy industry last Saturday when the Skagit County Association of Milk Producers, in called meeting, voted unanimously to raise $200,000 to build a condensery or otherwise control the milk situation in that district. Messages from the associations of dairymen in Whatcom and Snohomish counties indicated support from those counties.

The meeting at Burlington, Saturday, was one of the most significant of the meetings held in connection with the widespread agitation on the part of the milk producers for better prices. A full report of it will appear in next week's issue of The Washington Farmer, and developments will be followed in subsequent issues.

Government Ready

Will Control the Food Situation

(Continued from page one.)

law, has promptly taken steps to cut out speculation, reduce middlemen's profits and hold down wheat and flour prices this year. It is Mr. Hoover's purpose, however, to do that in a way to benefit both the producer and the consumer. As he logically points out in his official announcement:

"It must be clearly understood that the guaranteed minimum price of $2 per bushel for wheat, set out in the food bill, does not apply to the 11917 harvest but only to the 1918 harvest. There is therefore no determined price for the 1917 harvest. The result of this situation is that the normal price-making machinery is entirely broken down, and unless some efficient government action is brought into play, either—

"(a) The American producer may face a slump in wheat, possibly below his production cost.

"(b) The export price of wheat, which ultimately determines the real price, will vary at the will of a single agency (through the allies' plan of concentrating all their buying in the hands of a single agent).

"(c) Some one might buy the surplus wheat at any given moment, and if the surplus passes into speculative hands, it will be held for higher prices later in the year.

"(d) Without stabilized prices extra hazards are introduced into all distribution links, which must be paid for by the consumer."

The Government's Plan.

Therefore, as Mr. Hoover announces, the food administration has determined to take the following course:

First—In order to eliminate speculation in wheat and flour, all elevators and mills of over 100 barrels daily capacity will be required to take out a government license, and the conditions of this license to be that only reasonable and customary charges shall be made for warehouse service.

Second—The grain exchanges are being asked to suspend all dealings and quotations in future wheat.

Third—In substitution of the broken down marketing machinery, the food administration plans to open agencies for the purchase of all wheat at the principal terminals, carrying on its transactions with the usual dealers, and is prepared to take the whole harvest if necessary, in order to maintain a fair price, and will resell wheat for export in such quantities as we can afford to part with in protection of our own people on one hand, and to sell on the other to the millers for domestic consumption.

The price of the 1917 crop of wheat to the farmer will be fixed soon by a committee, of which President Garfield of Williams college, son of former President Garfield, will be chairman. As Mr. Hoover further points out:

"It should thus be clear that it will not be to the advantage of any producer to hold back his grain in anticipation of further advance, for he will do so only at his own cost of storage and interest."

As soon as the wheat and flour industries have been put under regulation, the food administration plans to extend its control to bakeries, hoping to reduce the price now paid for bread.

Mr. Hoover, therefore, is seen to have at heart both the interest of the producer and the consumer, and it is the duty of all patriotic citizens to help him in every way possible. The plan holds out great benefits to the nation.

WILL CONFER ON GRAIN.

Experts Meet in Spokane Aug. 27.

A conference of national agricultural experts, called by the United States department of agriculture, will be held in Spokane on August 27 to formulate a program to stimulate the production of wheat next year. A preliminary conference was held at Washington last week, and before coming to Spokane conferences will also be held at Atlanta, Indianapolis and Kansas City. Dr. I. A. Pearson of Iowa State college will preside.

The new food law has laid a good foundation for this important endeavor by prescribing a guaranteed price for the 1918 wheat crop of "not less than $2 per bushel at the principal interior primary markets," to be "based upon No. 1 northern spring or its equivalent."

Under the law the guaranteed price for the 1918 crop must be not less than $2. It may be more in the discretion of the president. Full investigation by the experts who are called to the Spokane conference may disclose the advisability, from the viewpoint of national interest, of the government pledging a better price than $2.

To increase production we must increase acreage. We must induce the American farmers to sow wheat on

(Continued on page seventeen.)

GRANGES WILL PICNIC

Fair and Good Time Are Promised

Next Thursday, August 30, the Valley Prairie grange near Hillyard, Wash., and other adjoining granges will join in a fair and picnic. Every one is invited, say the representatives of the Valley Prairie grange, who have charge of the affair, whether a grange member or not. Each family is expected to bring a basket of food and every producer is urged to bring a sample of his products to add to the display. The day will be spent at the Valley Prairie schoolhouse.

HEAVY LAMBS GO EAST.

Oregon Producer Ships to Chicago

A shipment of unusually heavy spring lambs was recently made by Smythe Brothers of Pendleton, Ore., to Chicago, and reports of their weight and the price which they brought have just been received. The average weight was 86 pounds, and the price received 15 cents a pound, making an average of $12.90 each. There were over 4000 head in the shipment.

Three New Silos.

Three farmers have definitely decided to put up stave silos as a result of a silo campaign at Neppel conducted by County Agriculturist H. W. Reaugh. There are no silos now within 25 or 30 miles of Neppel.

Should Fix Price on Potatoes

Government Should Protect Farmers Who Answered Call

Unless quick action is taken by the government under the new food control bill, enormous quantities of potatoes will perish in the Pacific northwest.

L. J. Blot, sales manager of the Spokane Fruit Growers' company, which last year handled a big potato tonnage, declares that the situation is critical.

With a total acreage in potatoes this year of 27,783 in Washington alone, according to the figures of the department of agriculture, compared to little more than 10,000 acres in 1916, Washington potato growers face a financial setback the coming season, unless the food administration places a minimum on the price to the grower.

"The Washington potato deal will open in September," said Mr. Blot. "I expect to see it open at 75 cents per 100 pounds and will not be surprised if it opens at 50 cents."

"Potatoes are sprouting now because of the hot, dry, short season. That shortens their life at least 30 per cent and at best they keep in storage not more than seven months. The demand for potatoes is fixed and it is almost impossible to increase it.

"The grower is confronted with the prospect of unusually low prices, for the acreage is large and the crop fairly good in all sections this year. The government last spring urged every farmer to put every acre into potatoes that he could, and the increased acreage is the result, although the farmer had to pay $3.50 to $4 per hundred for his seed, an exorbitant price.

"I believe the minimum should not be less than $20 per ton, or $1 per 100 pounds, net to the grower. That will insure the grower a reasonable profit and will not make a high price for the consumer. If the minimum is not established, many growers will face ruin, and the next season will see a falling off in acreage, for the potato grower, once bitten by a bad year, is twice shy."

This serious situation calls for prompt action by the government, and the new law is framed for just such emergencies. Section 11 provides:

"That the president is authorized from time to time to purchase, to store, to provide storage facilities for, and to sell for cash at reasonable prices, wheat, flour, meal, beans and potatoes."

Under this provision the government could set a reasonable price to the grower, buy up their potatoes, store them and distribute them throughout the year to consumers at reasonable prices.

Quick action is needed. The situation should promptly be brought to the attention of Mr. Hoover by the granges, farmers' unions, farm loan associations and other agricultural bodies, and by senators and representatives in congress.

Alfalfa, "the Best Kind of Fodder"

It is interesting to note that alfalfa is a Spanish word from the longer Arabic word, al-facfacah, meaning "the best kind of fodder." The alfalfa plant is a native of Asia, but has been cultivated in the east since ancient times. It was introduced into South America by the Spaniards. About 1850-60 it began to be cultivated in California and since then has spread throughout the western and eastern states, being now one of the best forage crops of the United States. The plant is also known as lucern from the French luzerne. It is also interesting to note that the American type of alfalfa is sometimes called western alfalfa to distinguish it from the German or eastern type. It grows taller and is more productive, and withstands more cold and drouth. These characteristics have probably been acquired through acclimatic conditions during the slow migration of the Spanish or Arabic type of alfalfa throughout the arid and semi-arid regions of Mexico, California, Colorado and western Texas, so that by the time it has reached the plains and central west and is invading the eastern states, a type more or less distinctly American has been fixed.

In 1916 the alfalfa crop of the United States was estimated by the department of agriculture at 16,591,000 tons, some 3,500,000 tons less than the crop of 1915. In 1916 Nebraska leads with a production of 2,646,000 tons, California following with 1,838,000 tons, Kansas comes third with 1,588,000 tons, Colorado fourth with 1,213,000 tons, Idaho fifth with 888,000 tons, Wyoming sixth with 741,000 tons, Montana seventh with 715,000 tons, Utah eighth with 600,000 tons, South Dakota ninth with 583,000 tons, Arizona tenth with 527,000 tons, Oklahoma eleventh with 487,000 tons, Washington twelfth with 441,000 tons, and Oregon thirteenth with 430,000 tons.

For a score of years more or less the State College of Washington at Pullman has been hammering away on the alfalfa question and many facts of interest and value are connected with the field on the college farm which has been in alfalfa for a series of years. Former President Bryan of the state college declared more than once that the alfalfa campaign waged during the years by the college had been worth a million dollars to the state.

Alfalfa Is Tested

Growers Report Success With It

Wishing to learn something of the progress of alfalfa growing in this state, The Washington Farmer sent out inquiries to several hundred alfalfa growers in different parts of the state. Replies are beginning to come in, the first instalment being herewith given:

B. F. REED, an extensive alfalfa grower of Kittitas county, in speaking of his experiences with the growing of the plant, says: "I have about 850 acres in meadow this year. As almost all of my meadow is timothy and alfalfa mixed, the first crop will be mixed hay, of which I will probably have 2000 tons, and the second crop alfalfa, about 500 tons. I do not have water on all places for the second crop. I pasture my meadows after the second crop has been taken off, mostly with sheep, and it brings about $1.50 per acre. Alfalfa is fine pasture for any kind of live stock. I have had no experience with alfalfa as silage. Two years ago we planted 400 acres of wheat on an alfalfa meadow, which we plowed up. Although we worked the ground over time and time again some of the old roots remained. We got a fine crop of wheat and from the plants which grew from alfalfa roots there came so much alfalfa seed that the thresher offered to accept alfalfa seed for his pay for threshing. However, we saved and cleaned this heed and had some 1200 pounds, which brought us 16 cents a pound for that we sold."

HANS HARDER, owner of one of the largest stock ranches in eastern Franklin county, and whose horses, cattle, sheep and swine are of the best breeds, has been growing a small acreage of alfalfa for four or five years. Mr. Harder is well satisfied with alfalfa as stock feed, especially as cattle pasture. He writes of his experiences as follows: "The average of my 60 acres of alfalfa is about five tons to the acre per season, and the yield now is a little less than last year. After cutting my third crop of alfalfa I pasture the field until New Years and find it excellent cattle pasture. I find it good feed for all stock, horses, cattle and sheep, excepting aged horses and colts. There is a sort of blue grass which succeeds with the help of a little time to crowd out our alfalfa. I find that it is exceedingly hard to start alfalfa on alkali ground, but after it has once shaded the ground, it is practically safe and does quite well. I have had no experience with alfalfa silage."

One of the Best Crops.

Mike Moran, a farmer of Chelan county, who has always had a good acreage of alfalfa, says about its use: "I think alfalfa is one of the most profitable crops any farmer can raise, and one of the best single feeds he can feed to all kinds of stock. Horses do well on it, better than any other hay, and for cattle, hogs or sheep it has no equal. Any dairy farmer who has alfalfa and good corn silage, well eared, need not worry very much about the high cost of grain as his stock will do well on these two feeds alone and look well."

In Columbia county William Chandler has not raised any alfalfa during the last four years, although at one time he had about 15 acres in. Mr. Chandler has had to contend with so many gophers that he has planted his acreage to wheat, but intends to return to alfalfa this fall.

In Benton county the farmers cut on the average three crops a year, although many get four crops, but usually the meadow is pastured in the winter. They do not find it necessary to inoculate the soil before sowing and usually sow wheat as a nurse crop. It is the standard feed in the Prosser valley for horses and cows, with silage also for the cows. There is a mill at Prosser that makes alfalfa meal, which many farmers feed to the hogs and chickens.

Uses Alfalfa Meal.

Another successful grower of alfalfa under irrigation in Franklin county is the Carstens ranch at Pasco. O. Richter, superintendent of the ranch, writes: "We have about 160 acres in alfalfa now and we grow this entirely under irrigation, under our own pumping system. The first and the second crops this year are splendid, although a bit later than other years; the third crop has not been cut and will also be several weeks later than formerly, and owing to that, we may not have any fourth cutting this year, but excellent pasture in late fall. Outside of this ranch there is not a general increase in the acreage or production of alfalfa, owing perhaps to the inability to secure enough water cheaply to irrigate the fields; in fact, this year the production seems to have decreased considerably under the other public water and irrigation systems. We pasture our hogs on alfalfa and add a little grain to the fattening hogs as well as to growing shoats, the latter about one pound of grain per day and all the green alfalfa they can eat. In the winter we make alfalfa meal and feed this to all the stock, hogs, chickens, beef and dairy cattle, horses, plus a certain amount of cut and shredded corn stover (combining the protein with the hydrates). Thus far we have not cut green alfalfa for silage."

Organization of Home Guards

Communities wishing to organize guard companies will find their procedure clearly laid down in the following blank prepared by the state council of defense:

The question of arms to be furnished by the state is as yet undecided, and for the present no definite information can be furnished on this subject. Several of the home guard companies are furnishing their own arms.

I, the undersigned, a citizen of the state of Washington, county of.....

....., do hereby make application to the governor of the state of Washington for permission to organize a company of home guards, as a military company with arms, to the number of not more than.....

men, to be known as home guards company.....of.....;

this permission to extend for one year and until the termination of the present war with Germany; subject, however, at all times to revocation at the will of the governor.

.....

Residing at....., in the County of

....., State of Washington.

Street address .....

I have examined the qualifications of the above applicant and the character and class of men that he proposes to recruit, and I hereby approve of the granting of such application.

.....

Chairman of Council for Patriotic Service

for.....County, Washington.

STATE OF WASHINGTON, COUNTY OF THURSTON, CITY OF OLYMPIA.

The foregoing application of.....

to recruit and maintain a company of home guards, is hereby granted for the period of one year and until the termination of the present war, the applicant to file in triplicate within 30 days with the state council of defense, at Olympia, a list of the names and addresses of the men composing each company, and from time to time to file additions or alterations thereto as any changes in his company demand.

Dated at Olympia, this.....day of.....1917.

.....

Governor.

SWAT POTATO BUG.

Prevention Is Better Than Cure.

To the Editor: Western Washington is a great potato raising section. During the last 35 years here I have not seen or heard of any striped Colorado potato bugs or beetles. If they come every one should fight them as they would a prairie fire or a fire in a neighbor's house that touched their home. An ounce of prevention if worth 50 pounds of cure. Fifty years ago we fought them out of Wisconsin by killing every bug that could fly and crushing every cluster of eggs they laid under the potato leaves. We poisoned the larvae by lightly sprinkling potato tops with water containing a teaspoonful of paris green to a bucket of water or dusting the leaves with road dirt or air slacked lime containing paris green or by a tight bottom sled drawn by a horse through the rows, one bright boy riding the horse and another riding on the end of the sled, turning a crank on one reel connected by a rope or belt that turned a reel on the other side. As the horse rapidly walked, the reels beat the larve into the sled and they were crushed or burned. An extra fast growth of tops keeps ahead of the bugs.

L. K. COGSWELL.

Chehalis, Wash.

Fights Fire With Brush.

To the Editor of The Washington Farmer: In reading Mr. Fishback's list of modes of fighting fires, will add a great improvement on his wet sack. I came from a state where we had more or less fires to fight, spring and fall. What we used there was brooms; one that is half worn is best, as it is stiffer, or a new one with three or four inches chopped off. One man with a broom and one with a bucket of water can sweep out more fire than five men can with sacks, as the sack has a tendency to fan the flame. If you have occasion, try the broom-and-bucket-of-water method. W. S. MALTMAN.

Yelm, Wash.

No Napkins in Germany.

The textile shortage now deprives Germany of napkins and tablecloths, the use of which in hotels and restaurants in that country has been forbidden. Hotels are prohibited changing bed linen oftener than once a week.

King May Join Other Dairy Counties

Western Washington Milk Producers Strengthen Their Organizations

By PAUL E. TRIEM

One hundred King county dairymen attended a meeting at Kent a few days ago, at which addresses were delivered by organizers from Snohomish and Whatcom counties. The officers of the King county association—D. E. Griffith, president; Fred Nelson, vice president; F. B. Cavanaugh, treasurer; and M. F. Swalwell, secretary, report the work of organizing the county as progressing rapidly, in spite of the delays which the progress of harvesting inevitably entails.

O. P. Brown of the Whatcom association presented some interesting figures and calculations on the ratio of investment between the farmers who produce the milk and the condensers who finish it for market.

"My farm is valued for taxation purposes at $20,000," explained Mr. Brown. "In the course of one year, I furnish enough milk for approximately a two-day run of the condensery. That means that it will take about 180 farms like mine to supply the milk for the year's run. These 180 farms will represent an investment of $3,600,000, while the condensery which practically controls our output and makes the price to us for our milk and the price to the public for the finished product is valued at just $50,000."

Taking up the subject of milk, in which butterfat has been replaced with vegetable oil, Mr. Brown stated that one of the condenseries in Mt. Vernon and two in Snohomish county were turning out nothing but this milk produce. Under the milk bill passed by the last session of the state legislature, it can not be sold as "condensed milk"; it can be sold as a "milk product," however, and as it is said to be impossible for any one but an expert to distinguish this article from the best grades of condensed milk, the possibilities to the manufacturer who controls the patented process for making it are seen to be immense. The butterfat taken out of the milk and replaced by vegetable oils can be thrown upon the market in quantities, and just what bearing this will have upon the output of country creameries is a matter of considerable difference of opinion. Some dairymen who have made a study of the subject claim that the process will give the people controlling it practically a domination of the northwest butter market.

In Union Is Strength.

In concluding his address Mr. Brown touched upon the constructive possibilities of the new move for organization.

"So long as we act individually," he commented, "we are absolutely helpless. We can go to the condensery people and tell them that we must have more money for our milk if we are to continue in business, but that is as far as we can get until we are able to act as one body. We must be in a position to have a fair understanding with the manufacturers as to production costs and profits; and if we can not have this understanding and can not get them to agree with us on a fair and constructive program, we must copy their methods by employing the best technical experts to be found anywhere, and setting them to work to determine whether we should build a condensery or a cheese factory or a creamery. From 5 to 7 1-2 per cent added to the present investment of the dairy farmers will build a better plant than the manufacturers now have. We, the producers, already have invested 50 times as much as the condensers have. We must protect our investment by following their method of employing the best technical advisers we can find."

President Lee of the Snohomish association declared that dairymen are making very little more now than they formerly made. Milk prices are high, probably higher than they have ever been before; but the great increase in feed prices has largely offset this.

Great applause following Mr. Lee's declaration in favor of a consolidation of the four associations now organized in King, Snohomish, Skagit and Whatcom counties.

"Every other line of industry is organized," President Lee pointed out, "and the farmer must organize or be frozen out. We are going to see if the farmers for once can't get a square deal."

Give Low Tests.

The Snohomish county man had a few practical details to add to the indictment of the condenseries. After the formation of the testing association, to which he belongs, he was not long in discovering that his test as determined by the association tester was about three points above the test given him at the condensery. He called there, and was told that the association tester didn't know anything about the business. Mr. Lee invited the condensery man to come to his farm and see the association tester work.

"And he came, and I left him and the tester together while the test was made. My test was 3.7—I didn't have a cow in the herd that tested as low as the condensery was rating me. When I asked the condensery man if he was satisfied with the test, he said he was. He had seen it all, and he had to admit that the association tester did know his business after all—but that was as far as it went. My test at the condensery remained just where it had been, and when we suggested that our tester be allowed to come down there and test our milk after it was received at the plant, permission was granted provided he used the testing apparatus furnished by the company. No other apparatus would do. And I am told that the same thing is happening right along at Monroe and in Whatcom county—there is a three-point difference between the condensery test and that of the testing associations. When you go to the condensery to kick, they are sorry—but that is as far as it ever goes. They will promise to investigate—but nothing ever comes of their investigations."

Membership Increasing.

Mr. Lee predicted that before long 90 per cent of the Snohomish dairymen would be members of the association.

J. Guiteau, also of the Snohomish association, said that 2000 cows had been signed up with the association in one period of 30 days, and predicted that 1000 additional cows would be secured within the next 30 days. Mr. Guiteau explained in detail one clause of the contract which is being used in King county, and which is very similar to the contracts used by the other northern counties. This clause, which gives the trustees of the association power to control the sale of milk by all members, has been misunderstood by many dairymen.

"A tight contract is necessary," the speaker commented. "That is where our previous organizations have failed—they have not been sufficiently powerful to act in more than an advisory capacity. When a committee from one of these loosely organized associations called at the condensery office, the members were given a three-minute interview in the outer office with some minor official. Now the company people are going up into Skagit county and are doing the interviewing themselves; their cry is, 'Be fair, boys!' The truth of the matter is that after all expenses have been paid, the dairymen who produce the milk are entitled to a fifty-fifty division of all profits made on it."

Mr. Guiteau concluded by telling a story which he insisted was "true." It seems that J. B. Hall, of the Skagit association, buys calves in the intervals of his other farm work. One day Mr. Hall drove into John Kill's farm yard, only to find that the Kill family was away from home. In the barn, however, the visitor found a calf which he thought he could use in his business, so he dumped the animal into his machine and drove home. He didn't see Mr. Kill for some time, and then they met in the office of the local condensery. The calf buyer explained the details of his visit, and told of finding and helping himself to the calf.

"And I'm going to give you two dollars for him," Joe Hall concluded.

"Why, that is a fine calf," said Mr. Kill. "He's worth more than that—I ought to get at least three dollars!"

"Nothing doing!" his neighbor assured him. "I'm going to pay you two dollars, and that's all."

One of the condensery people had overheard the argument, and at this point he interrupted:

"Is that the way you people do business?" he demanded. "First take a man's property away from him, and then make your own price on it?"

"Sure," said Mr. Kill. "You condensery people have been doing that to us for so many years that we're used to it!"

Interest and Principal Go Together

Land Bank President Illustrates Payment of Farm Loan

There are numerous persons who do not understand the difference between the method of paying off a loan under the farm loan act and the method used in paying off a common loan. The amortization plan of the farm loan system provides that a small payment shall be made semi-annually, this payment to include the accrued interest and a small part of the principal. Thus, with each payment the principal is reduced and therefore the interest accruing for the next payment is also reduced, so that each succeeding payment is made up of a gradually decreasing interest payment and a gradually increasing principal payment. The payments are calculated so that at the expiration of the loan the last payment will completely wipe out the debt, both principal and interest.

The difference between this and the ordinary loan is that when the time of the common has expired the entire loan must be paid off at once, with whatever interest may have accrued.

The Thirty-six-Year Loan.

The farm loan bank prefers to have its borrowers take out loans on the 36-year payment plan. The regular payments under the 36-year plan is equivalent to the payment of 6 per cent interest on a private loan, but at the end of 36 years the principal of the farm loan under the federal act will have been wiped out.

President D. G. O'Shea of the northwest district bank aptly illustrates the payment method as follows:

"It may be illustrated by saying that the charges are similar to a case in which one person would offer to loan to another a stated sum on a farm mortgage and say to him, 'Pay me 6 per cent on this for 36 years and then I will cancel the principal and you will owe me nothing, and during all the time I will ask you for nothing other than the semi-annual payments that will aggregate 6 per cent.' If put that way, every borrower would seek such a lender and not be deterred by a fanciful perplexity of 'red tape.'"

The following table shows the semi-annual payment on a loan of $100 from the farm bank on the 36-year plan, and shows also the proportion of each payment that goes to pay interest and to reduce the principal of the debt. For any sum larger than $100 the payment will be in exact proportion.

Payment No.	Instalment.	Interest.	Applied on principal.	Principal still unpaid.

Washington Portaits No. 29.

W. L. Allen.

W. L. Allen, one of the progressive men of Cowlitz county, believes in raising all that one can at home, such as beans, potatoes and onions. He has a method of treating his soil that prevents wire-worms in the vegetables. Mr. Allen received his early training in farming on a large farm in North Carolina, where he raised a large variety of farm produce, and had a fine herd of choice dairy cattle, horses, sheep and hogs.

The next in the series of Washington portraits will be that of S. S. Wilson of Vader, and will be given in next week's issue of the Washington Farmer.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

It Is Because We Do Not Realize

If one member of your family were sick and required a certain amount of a particular kind of food to sustain life for the coming month, and you had or could get only twice or three times that much for the entire family, what would you do? You would immediately begin to reduce your own eating of that particular kind of food and make your meals of other foods so that the ill member of your family would be assured what he had to have to live.

There is a world-wide parallel to a case just like this. America's allies in Europe are facing a shortage of wheat, meat, fats and sugars that threatens their very existence. America has enough of these articles to supply them, but not enough to supply both them and itself full rations. What are we American citizens going to do about it?

If our patriotism is what it ought to be in the face of this unprecedented crisis we will reduce our eating of wheat bread, wheat cakes, wheat mush, beef, bacon, mutton, butter, lard, sugar and the like, and make a greater part of our meals from such foods as vegetables, fish, poultry, eggs, corn bread, rye bread, oatmeal and other perishable or semi-perishable foods.

A change like this is not going to work a hardship on anybody. It is not going to require anybody to eat less than he wants or needs. It is not going to require anybody to eat less nourishing or less palatable foods. It is merely going to require that foods which the soldiers in Europe can not use satisfactorily, or which can not be shipped to them, be eaten here and the staples—wheat, red meat, bacon, sugar and fats—which they must have if they are to win over Germany, saved for exportation to them.

The idea that the policy of saving these staples will reduce the price of them is likewise foolishly founded. There is need for more of them than the world possesses or can produce. To save them for allies in Europe, includuing our own soldiers, is merely to divert them to a different market. The grower of wheat or beef has nothing to fear from the movement. He should join heartily and loyally in it. Every man, woman and child should join in it. The success of England and France depends upon it; our own success depends upon it; our own liberties depend upon it; civilization itself depends upon it.

When we continue to eat wheat three times a day, or staple meats every meal that we want them, or use more butter or sugar than we need we are disloyal; we are—no, we are not slackers. We just don't realize.

Making Judges of Boys and Girls

When the county and state fairs, and many of the smaller district fairs, established the custom of awarding prizes to boys and girls for judging stock, poultry, fruits, vegetables and all manner of exhibits, they did a great thing for the future of the farming industry. They put a premium on practical study and observation.

Now, in several northwestern counties, the county agents and others directing various movements for the betterment of agriculture are going one step further. They are conducting classes throughout their counties or districts for the purpose of educating the boys and girls along the lines of judging products.

To illustrate, one agent in the state of Washington has arranged 11 stock-judging schools for the last few days previous to the fair, in his territory. Boys in eleven localities covering the county are called together to get pointers on judging, and they will go to the fair and compete for prizes in judging the beef cattle, sheep, hogs, horses and dairy cows.

The live stock and agricultural industry of ten years hence will show the result of this movement. It is making better farmers and better men and women out of the boys and girls.

The Submarine a Benefactor

Kaiser Wilhelm intended that the submarine should prove the downfall of England and America, but he miscalculated. It proved a great weapon. For a time it actually threatened to bring England to her knees, and if it had succeeded, this country would have been in jeopardy. But the submarine is proving a boomerang. It is already turning and very soon will deal a smashing blow to Germany.

Heretofore the ocean shipping of this country has been almost negligible compared to either that of England or Germany, but the submarine made it necessary that the United States build up a merchant marine. Consequently, shipbuilding is under way in American yards now that within a few years will establish this country in the foremost ranks of carriers of ocean commerce. Instead of destroying the power of England and America on the seas as he planned, the German dictator has started the wheels of English and American industry that will not only insure the livelihood of these countries, but will insure to them commercial supremacy over Germany for all time to come.

Quality Rather Than Quantity

Every once in a while we come across a story of somebody who has made surprising records and a large net profit from a few hens, or a few cows. The secret of this is in the quality rather than the quantity of animals.

The successful live stock producer, whether he raises beef cattle, hogs or poultry, is the man who gets high production at a low cost. It is not always true that the good cow costs no more to feed than the poor cow, but it is true that the difference in the production of the two is so great that the slight difference in feeding cost is far overbalanced.

When poultrymen get down to business and prove their layers as thoroughly as the successful dairyman tests his cows, the poultry business will begin to establish itself solidly on right principles.

Community Canning Plant

O. T. McWhorter, county agriculturist of Clallam and Jefferson counties, Washington, reports that the projected community canning plant for the Port Townsend schools has been installed, having a capacity of 800 cans per day. This has been placed in the basement of the high school for the use of the community. The Quilcene school also asked the county agent to secure a family size pressure cooker for their school, and this cooker has been delivered. It will be for the general use of the community.

Weed Out the Culls

"Don't sell your breeding stock!" cry a host of farmers' advisers. Why not add, "if the breeding stock is any good"? Better stock conserved will be of immense benefit to the country. Merely keeping the poorest for foundation stock is of no benefit to the farmer or to his country.

Washington Gleanings

Contract has been let for a $17,000 warehouse at Wenatchee.

Professor A. B. Nystrom, head of the dairy department of the state college, has established headquarters at Chehalis as county agriculturist of Lewis county for at least two months. Dairying is one af the leading industries of that county.

The price of alfalfa in carload lots gives every prospect of being higher than it was last year. Buyers for western Washington deliveries are unable to secure contracts for less than $16 and $17 in carload lots. This means $20 the ton.

Reports that have come to the office of State Fire Warden Pape at Olympia indicate that much of the fire danger in the state is caused by carelessness of motorists and campers, who leave their fires burning to the menace of surrounding timber.

Girls and boys' canning clubs of Spokane county will can close to 50,000 gallons of foodstuffs if expectations of O. S. Fletcher, assistant county agriculturist, are realized. Mr. Fletcher recently estimated that the clubs of Spokane county would make a net profit of $12,000 this summer.

Encouraging reports on corn planted throughout the Pacific northwest this spring as the result of the corn-raising campaign being conducted by the Exchange National bank of Spokane, are being received by the bank officials, who will stage the second annual corn show in Spokane November 19 to 24.

According to an estimate made by F. L. Miller and A. J. Buchet, the number of cattle in Garfield county is 25 per cent below the average, and hogs are still more scarce. A little bunch of hogs running with the Miller cattle last winter, after being fed 300 bushels of wheat in the spring, sold for $5400.

The Pride Brothers' Preserving company of Bellingham have received a $200,000 order from a San Francisco wholesale company for jams and jellies, but will not be able to furnish more than three or four carloads of the 40 carloads required to fill the order, on account of the inability to secure the necessary fruit.

A. L. Rogers, Waterville banker, farmer and former regent of the state university, and now the farm labor member of the state council of defense, says that the Washington State Harvesters' league is the weapon that will put the I. W. W. element out of business as far as interference with the gathering of the crops is concerned.

The 1917 Puyallup summer session has been adapted to present and future war time needs of the country. Academic branches have been dropped and the energy and effort of the school have been concentrated on problems of more efficient production, greater conservation of wealth and energy, and wiser and more economic consumption.

Eighteen hundred acres of potatoes are being grown in the Tieton project, according to a report compiled by G. C. Finley, superintendent of irrigation. Last year 1350 acres were raised. Nine hundred acres of beans are in this year, compared with 160 in 1916, and 650 acres of sugar beets are being grown, where last year there were none.

What Others Say

Advance, Wenatchee: The truest patriotism in times like this is the patriotism that is willing to be fair.

Advocate, Richland: If people would play more they would live longer, work better, accomplish more and be far happier.

Gazette, Colfax: One of the most fatal errors that one can make is to underestimate the strength of a foe. That is one error this government is not making.

Citizen-Journal, Rosalia: If you have plenty of eatables, more than needed, make it known and allow the people who really need it to take it at a price agreeable. This is patriotism and will help solve the food problem in this country this year.

Republic, North Yakima: Reduced to an acreage basis and distributed over a period of 20 years good roads are costing farmers in some of the eastern states from 8 to 10 cents an acre per year. There is no farmer in the Yakima country who would not afford to pay that price for roads which would enable him to come to town 365 days in the year.

Pope Proposes Peace

Terms Not Satisfactory to Allies

The first definite step in the direction of possible peace negotiations from a source of influence recently was recorded last week when Pope Benedict, head of the Roman Catholic church, directed a message to all the warring governments suggesting terms upon which he expressed the hope peace could be built up. At this writing no favorable action has been taken upon it, and it seems assured that the nations opposing Germany and her allies will reject the offer to confer on the proposal. It is considered by them, in unofficial expressions of sentiment, that the proposed terms would not insure the abandonment of the present autocracy and militarism of Germany and Austria, which is the object for which the war is being fought by America and her allies.

The proposal of the pope includes the restoration of Belgium and the northern Franch territory now held by Germany, and the restoration to Germany of all her colonial possessions that have been taken by the allies. It does not, however, provide for the restoration of Serbia and Rumania, which are now held by Germany, and it leaves to later discussion the questions involving the Austrian-Italian front. If the terms of peace suggested by Pope Benedict were agreed upon it would give Germany control of a vast stretch of terrritoy from the Baltic sea to Palestine, including the present territory embraced in Germany, Austria, Serbia, Rumania, Bulgaria, Turkey and Turkey in Asia Minor. It would leave in the control of Germany the Dardanelles and Constantinople, the hoped-for outlet of Russian produce to the Mediterranean and thence to the Atlantic ocean.

The proposal provides that under international agreement armaments shall be reduced, which is one of the objects sought by the allies. But it does not require that the form of Prussian government shall be democratized. It would leave the present autocratic family of Hohenzollerns in control of the German empire, the principle of the divine right of kings still in force. America, England, France and their allies are prone to look upon a continuance of the kaiser's line on the throne as a perpetual menace to free government. Prussian disregard for treaty rights has convinced the democratic governments that nothing short of the complete overthrow of the autocracy in Germany can insure to the world lasting peace, and it is evident that the war will continue until this accomplishment is recorded.

The allied nations are taking time to prepare a courteous and definite reply to the pope's message. They recognize that his humanitarian motives are commendable, but believe that the terms he proposes are not such as to warrant actual negotiations.

The result of the pope's proposal on Germany has been to stir up considerable strife between the various factions. it appears from unofficial reports. There are those in Germany who cling to the hope of complete German success, and there are those who favor the acceptance of anything in the nature of a reasonable peace. The former appear to be vigorously opposed to the pope's suggestions, while the latter look upon them with favor.

Plan Army Transportation.

How to transport the more than 500,000 men who are soon to be taken from their various walks of life to the training camps of the great new national army is the problem now being worked out by the government and the railroad companies. The transportation will begin with the first call to service, about September 5, according to present plans, and the railroads believe that between that date and September 9 they will be able to place 200,000 men in camps if the government requires it. In addition to the new army, more than a quarter of a million national guardsmen are to be taken to camp.

Farmers Not Exempt.

Among the important developments in the army drafting procedure during the last week was the general agreement of exemption boards to whom occupational claims for exemption are referred, that the mere fact a man is a farmer or employed on a farm is insufficient to secure exemption for him. The ruling, while not made by all boards as yet, is based on the idea that a man must be actually essential to the operation of a particular farm before he is entitled to exemption from army service. If his service on the farm can be rendered by another or others not subject to draft, the general holding is that he should not be exempted.

The tendency among all exemption boards is to be less lenient than at first. Exemptions are not being allowed in the case of dependents except where it is shown that such dependents would suffer actual hardship if the party drawn were drafted into the service of the country.

President Wilson has issued a message to the soldiers in the army and national guard and to those being drafted urging them to make a habit of reading the Bible regularly. His message will be printed on the fly leaf of an edition of 75,000 copies of the Bible now being printed for distribution in the army camps.

Congress to Keep Busy.

Congress will be in session till the middle of September or even till October 1, according to present indications. Chief among the matters still to be cared for are the war tax measure to raise about $2,000,000,000, and the new war budget authorizing the issuance of some $7,000,000,000. The measure is also to be fought out providing govererment insurance of soldiers and sailors, such insurance to take care of the pension question that has been so troublesome in the past.

Council of National Defense.

That the scope of the work undertaken by the national council of defense is remarkably broad is indicated by an official statement of its accomplishments up to date. The statement shows the following branches of its endeavor:

The active direction and adaptation of the nation's railway facilities for war purposes; further development of sources of supply for all kinds of war munitions and their component parts, from artillery and machine guns to various forms of motor transport; unusual progress on a comprehensive aviation program; very material assistance to the war department in the construction of the new army cantonments; the adaptation and augmentation of the electric communication lines, both telegraph and telephone.

The procuring of leather and textile supplies of all kinds for the new armies; the cooperative development of lumber, copper, aluminum, steel and other raw material sources for the war needs of the government; notable progress on many phases of the difficult labor problem; extensive assistance in the consummation of the medical preparations for the care of the military forces of the country and the definite accomplishments in the adjustment of commercial conditions and methods to war needs.

Increases Wheat Yield

Government Wants Billion Bushels

With a view to insuring the production in this country of a billion-bushel crop of wheat next season, the United States government through the department of agriculture has started a movement to increase the fall sowing this year to over 47,000,000 acres. Increase of rye sowing is also planned to a total of 5,000,000 acres.

The state of Washington is asked to increase its acreage about 13 per cent, Idaho about 17 per cent, and Oregon about 50 per cent. The large increase required of Oregon is due to an abnormally low acreage last fall. The average increase the country over will be about 13 per cent.

The planting of approximately 47,337,000 acres to winter wheat, on the basis of the average yield for the last 10 years indicates a total production of 672,000,000 bushels, which exceeds all previous winter wheat crops harvested in the United States, with the exception of the crops of 1914 and 1915, when the acreages harvested and yield per acre were both above normal.

It is too early to determine the area which should be sown to wheat next spring, but if this is equal to that sown in the spring of 1917, or 19,000,000 acres, and the yield is up to the average of the last 10 years, a crop of 251,000,000 bushels of spring wheat will be harvested, and if the yield per acre should equal that obtained in 1915 the crop will be 350,000,000 bushels, the same as the greatest spring wheat crop ever produced.

Negro Population.

There are 10,000,000 negroes in the United States.

A Truck Is a Paying Investment 12 Months in the Year

This Velie truck is used by the State of Washington at the Monroe State Reformatory. It is used for hauling farm produce—shingle bolts—or for carrying their men to their various jobs—and it is **used advantageously twelve months in the year.**

How much could you make with a Velie truck? Your transportation facilities must equal everything else or you lose money. It is our business to figure out the usefulness of our trucks, AND HOW THEY CAN MAKE YOU MONEY.

HOW MUCH LAND HAVE YOU?
WHAT DO YOU RAISE AND WHERE DO YOU MARKET IT?
ARE YOU INTERESTED IN THE LUMBER INDUSTRY IN ANY BRANCH?
IT DOESN'T COST ANYTHING TO INVESTIGATE, BUT IT MAY MEAN MONEY IN YOUR POCKET. USE THE ATTACHED COUPON.

BIG GAME RIFLES and METALLIC CARTRIDGES

A SPORTSMAN often has to travel a long distance nowadays to get a shot at big game.

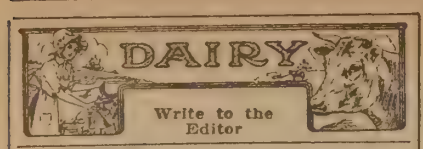
The Remington UMC Big Game Rifle (*whether slide action, hand operated repeater or the autoloading model*) will take care of any kind of game found on this continent. Handles easily—is as comfortable to carry as to shoot—is free from delicate parts and complications.

In ammunition—Remington UMC Metallics will give you results enough *better* to be distinctly worth while. All calibers and models for every kind of sporting arm in the world.

Sold by Sporting Goods Dealers in Your Community

Clean and oil your gun with REM OIL, the combination Powder Solvent, Lubricant and Rust Preventive

THE REMINGTON ARMS UNION METALLIC CARTRIDGE CO., Inc.
Largest Manufacturers of Firearms and Ammunition in the World
Woolworth Building, New York



HIDES

WOOL, PELTS, MOHAIR, CASCARA BARK

We do the largest consignment business in the northwest. Equally fair treatment on all shipments, large or small. Returns at full market value mailed same day goods are received. Trial shipments wanted and appreciated, but are handled as regular shipments and not at inflated values.

Who Gets Best Milk?

The People in the Large Cities

Dairy and Food Commissioner Weigle of Wisconsin has been investigating the milk supply of the cities of that state, and the facts there revealed are interesting and important.

The commissioner's department inspected dairy farms supplying milk to 221 towns and cities, and took and tested 691 samples of milk and 347 cream samples, testing them for butterfat, and making lactometer tests with sediment tests. He told the results of his investigations to a national convention of food officials at Atlantic City last week.

The average test of butterfat in milk was found to be 3.8 per cent. Only 1.01 per cent of the samples taken contained less than 3 per cent. Much of this below-standard milk was the normal product of the herd. To overcome this condition cows known to produce milk rich in butterfat should be added to the herd in order that the fat content of the milk from the entire herd might be increased. About 18.93 per cent of the milk samples taken tested between 3 and 3.4 per cent, 37.33 per cent between 3.5 and 3.9, 30.82 between 4 and 4.4, 8.40 between 4.5 and 4.9 and 3.47 between 5 and 5.6 per cent of butterfat. Of the cream samples taken 5.76 per cent tested between 12 and 17 per cent, 80.31 per cent between 18 and 27, 21.03 between 28 and 37 and 2.86 between 38 and 50 per cent of butterfat. The average per cent of butterfat in the cream was found to be 24.1 per cent—the standard being 18 per cent.

Commissioner Weigle divided the 221 cities, towns and village into four groups—A, B, C and D.

Group A. In this group may be found the cities where nearly all of the milk is handled by dealers who depend upon dairymen for their supply.

Group B. This group comprised the cities where possibly 50 per cent or more of the milk is handled in the same manner as Group A, while the balance is furnished to the consumers by dairymen who sell their own product bottled at the farm. City milk plants in groups A and B deliver pasteurized milk of low bacterial count. In some of the city plants it was found that the bacterial count before pasteurization ran as high as 3,000,000 per cc., and after pasteurization the milk contained only 87,000 per cc. Here was an infusion of dead bacteria. Milk for city supply with a high bacterial count should not be permitted to be pasteurized and sold.

Group C. In this group may be placed the large number of villages and cities of the state that do not have a milk plant. Possibly 50 per cent or more of the milk is delivered by dairymen who bottle and sell the product of their own dairies; the balance is obtained by the consumers directly from neighbors who may own one or more cows. The milk from these "family cows" is sold in bottles or in pails furnished by the person who calls for the milk.

Group D. This group consists of the villages or communities where the entire population depends upon families who own one or more cows. All of these so-called "family cows" are located within the cities.

These investigations overturn the long-cherished popular notion that if you want the best, purest and richest milk you must seek it far out in the country districts, and that the people of the larger cities have to take an inferior product. In Wisconsin, at least, "it is the other way around." City dwellers get the best and purest milk. On that point the commissioner says:

"The cities of group A are not so much in need of state investigation; it is the smaller cities where our trouble begins. Although the milk inspection may be under the jurisdiction of the local health officer, little work is done owing to political reasons, or perhaps because the young practicing physician acting as health officer does not wish to antagonize people lest he lose their patronage. We have tried to introduce a uniform milk ordinance, but not two cities have the same ordinance. It is in the smaller cities also that the greatest danger of epidemics lies. We have had several epidemics during the last year in Wisconsin. A very severe one occurred in Galesville in February of this year, when there were 325 cases of disease and when 16 people died. This epidemic was traced to milk produced from diseased cows. There was an absolute lack of supervision of the milk supply. The barns were in dilapidated, filthy condition, and the barnyards were filled with filth through which the cows had to wade. It is epidemics of this kind that open the eyes of the local health departments, but 16 lives is a terrible toll to exact. I regret that we have no law in our state making pasteurization compulsory. I realize that pasteurization does not necessarily mean clean milk, but at any rate it means a safe milk."

Silo a Necessity

"You ought to conserve feed so that you can conserve food," said Frank Welch, secretary of the Pacific National Dairy show the other day. "I am a strong advocate of the silo—any kind of a silo. A good many of the silo manufacturers have been a little inclined to give the idea to the dairyman that his particular silo is the only one that has any real value. This is natural enough, but I believe that for the good of the dairymen he should know that anything which will permit of packing feed in it and keeping it practically airtight, will do as a silo and is far better than no silo at all.

"'I am figuring on putting up an experimental silo myself, and if it proves a success I'll let the plans be published. I do not believe it will keep the feed in better shape than all silos; I doubt if it works quite as well; but it will be practical and low priced and serve for the man who can not afford to put up one of the better ones.

"The day is coming, if it is not here already, when some sort of a practical silo is a necessity for every dairy farmer. It is more important to get some kind than it is to hesitate over what kind."

Mr. Welch reports the affairs of the Pacific National Dairy show as rounding into shape very nicely, and he anticipates a big show this fall.

Wellsville Cow Testing.

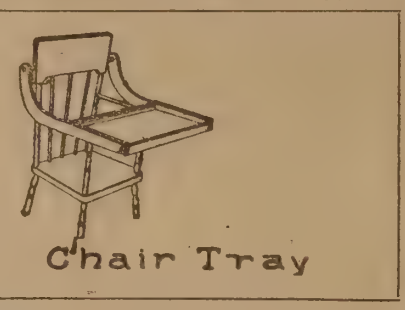
Hot weather and flies caused a slight drop in the average production of the Wellsville, Utah, Cow Testing association last month. During this period 419 cows were tested with an average of 748 pounds of milk and 29.8 pounds of fat per cow for the whole association. This is practically three pounds of butter fat per cow lower than June's average. Of these 419 cows 70 are on the "honor roll" each having produced over 40 pounds of butter fat for the month. Nineteen of this number produced over 50 pounds of fat, while two produced over 60 pounds. Ninety-three cows produced over 1000 pounds of milk.

The high cow for the month was Rosie, a grade Holstein, owned by John Stuart. She produced 1628 pounds of milk testing 4 per cent, producing 65.1 pounds of butter fat. This is the second month this cow has led the association out of the three months in which she has been fresh. Second place went to John Darley's grade Jersey Blooch; she produced 1398 pounds of milk, testing 4.4 per cent, making 61.5 pounds of fat. Roanie II, a grade Jersey, also owned by John Darley, was third, with a production of 1168 pounds of 5 per cent producing 58.3 pounds of fat.

Twenty-three herds with a total of 211 cows out of the 46 herds on test averaged over 30 pounds of butter fat per cow.

Close Quarters.

Ethel has the gift of graphic description. Until recently she was a little country girl; now she lives in a large town. The first letter she wrote back to her old home began like this:

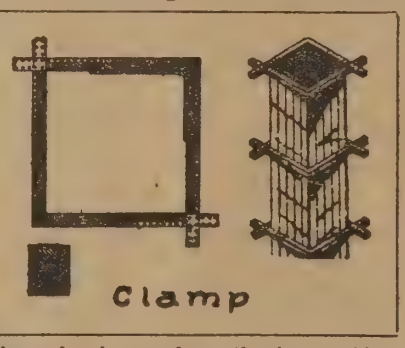


"This is a queer place. Next door is fastened on to our house."—Baltimore Sun.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

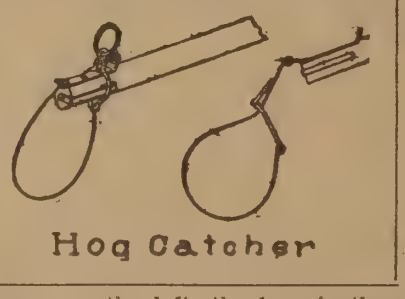
Baby Chair.



The tray shown here can be turned over the back out of the way; also

it can be tilted forward over the front edge to seat the baby or for convenience in cleaning.

Column-Form Clamp.



These clamps are made of iron and have interlocking slots at the ends.

They also have, along the inner sides, grooves for the wooden strips to which the boards are nailed.

Hog Catcher and Holder.

When it is desired to catch a hog with this device, the ring is drawn back over the end of the handle, as

shown on the left, the loop is then slipped over the nose or neck of the hog and a slight jerk loosens the ring and causes the loop to tighten.

NO DOSE TO MEASURE.
NO LIQUID TO SPILL.
NO STRING TO ROT.

BLACKLEGOIDS are small pills. Each pill is an accurate dose of blackleg vaccine.

BLACKLEGOIDS are easily administered—simply inject them under the skin with a vaccine injector.

TAKE NO CHANCES.

Don't wait until your calves become infected. This means certain loss—there is no *cure* for blackleg. Vaccinate now—before the deadly disease shows itself.

THE COST IS SMALL.

BLACKLEGOIDS are economical. The expense is trifling compared with the loss you are liable to sustain if you do not use them.

ORDER THROUGH YOUR VETERINARIAN OR DRUGGIST.

Write for free booklets on Blackleg, with full information about Blacklegoids.

Purebred Registered Holstein Cattle

Enthusiastic Holstein Clubs, county, district and state, have been organized all over the country, and they are making wonderful progress in establishing testing associations, and in co-operative effort in eradicating disease among their animals. They inspire in their members a high standard of dealing, and in many ways accomplish the maximum of good for all breeders of Holsteins in their localities. There's big money in the big "Black and White" Holsteins. Send for FREE Illustrated Descriptive Booklets, THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA, F. L. Houghton, Sec'y, 205 Brattleboro, Vt.

THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

Gombault's

Caustic Balsam

IT HAS NO EQUAL

For the Human Body —It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Exterior Cancers, Boils Corns and Bunions. CAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

A Perfectly Safe and Reliable Remedy for

Sore Throat
Chest Cold
Backache
Neuralgia
Sprains
Strains
Lumbago
Diphtheria
Sore Lungs
Rheumatism
and
all Stiff Joints

REMOVES THE SORENESS--STRENGTHENS MUSCLES

Cornhill, Tex.—"One bottle Caustic Balsam did my rheumatism more good than $120.00 paid in doctor's bills." OTTO A. BEYER.

Pure Bred Cows

What Is the Best Grain to Feed

By E. L. POTTER.

J. K. T. writes: "What is the best grain to feed to calves that are to be crowded as rapidly as possible. They are good purebred registered calves."

A mixture of ground barley, oats, bran and oil meal is the most satisfactory in nearly all cases. The common proportions are 3-3-3-1 by weight, but sometimes twice as much of either the barley or oats may be used, and where there is plenty of green feed the oil may be left out. We would not recommend any of these feeds alone except oats, and that seems hardly as good as the mixture. The barley should be coarsely ground or rolled. There is some question as to whether the oats should be ground or left whole. We have found that cattle seem to prefer whole oats and that they should not be changed from whole to ground after they have been on feed a while, but if fed ground oats from the start we prefer them to whole grain. During the past winter we have used whole oats. Our results seem hardly as good as in prevous seasons on ground oats, but we have not been able to change successfully from whole to ground after the cattle were on full feed. One will not make a great mistake with either.

Where good corn is available it should be used in place of the barley, and for fattening as much as two-thirds corn may be used. Corn and barley are much alike except that barley is not so palatable and so can not be fed in such large amounts.

Veterinary

Dr. S. B. Nelson

Udder swollen and hard— About two weeks ago I found a clot of blood in the milk. The cow's udder on the right side hangs heavy and seems swollen and hard. There is a knot the size of a pea at the root of the teat. It takes longer to milk that teat and seems to pain some. I am feeding shorts and bran, sometimes alfalfa meal and oil meal. D. C. M., Newberg, Ore.

Answer—I would advise you give your cow one teaspoonful of sodium hyposulphite of soda in a pint of water once daily for a week or 10 days. Also take the teat where the clot is located, or lump as it may be, and paint it with iodine after each milking. Do this for 10 days to two weeks if necessary. In feeding your cow you can nearly always figure that you are feeding her about right when she gets what hay she will eat, and about three pounds of grain for every gallon of milk she gives per day, and then she should have roots or succulence, either silage or roots, to the amount of 10 to 40 pounds a day, according to her appetite. If she is on green pasture, naturally she does not need the succulence when taken to the barn to be milked.

Cow Affected by Worms.—One of our cows is passing a curious worm from her intestines. The worm is about one inch long and of a dirty whitish color like a grub, but having a thin, wiry tail as long as itself. The worms crawl out of the excrement each morning. The cow gives good, rich milk, but does not have a good appetite and looks rather thin and poor. C. C. L.
Benton Siding, B. C.

Answer: If you will select a few specimens of the parasite affecting the cows, and mail them to the veterinary department at the state college, they will examine these for you and advise you just what the specimen is and what the treatment should be. It is nearly impossible for me to say without seeing the parasite what it is.

I have a calf a little over a week old and I notice this morning that the navel string has come off and there is a protrusion. It looks like a small piece of raw flesh. There is no swelling, only this little piece of flesh hanging through the skin about three-quarters of an inch.—W. H. L., Tumwater, Wash.

Answer—I would advise you to wash the protruding portion with a two per cent solution of lysol. Then dust the part with a dusting powder composed of two parts of boracic acid and one part of tanic acid. Dust lightly but cover completely. Repeat the dusting two or three times daily.

Cow Makes Profit.

An unusual cow, owned by B. L. Patterson of Lacombe, Linn county, Oregon, under ordinary herd care, fed and milked twice a day, in the last six months of lactation period gave 352.58 pounds of fat, valued at $141.59, according to the report of E. W. Bartruff, official tester of the Linn County association. The feed cost was $59.01.

On the Farm

Saving Your Tires.

By W. D. ALBRIGHT.

The illustration at the left, below, shows the correct use of the tire caliper in judging the proper amount of air pressure to carry in the tires. A scale is arranged along the polished steel surface along which the two prongs that fit over the tire, slide. In this way the pressure in the tires is

Neglected Cuts.

determined without disturbing the valve of the tube.

The illustration at the right, above, shows a casing with two-thirds of its life wasted, for neglected cuts in the tough rubber tread have caused it to blister. In this instance sand and dirt had been forced into the cuts and worked around under the tread. Note the several large "bumps" where the sand and dirt have accumulated.

Rut Worn.

This illustration shows a tire that has been run in ruts. Whether the ruts in the road are too large or too small for the tire, this wear on the side walls occurs regardless. What's the answer? Keep out of the ruts. Tires were not made to withstand wear of this kind.

Fast Coming Into Its Own.

Here is the story told by J. B. Hahn of Forks, Wash. Mr. Hahn is the proprietor of a transportation company, and part of his work consists in freighting over the mountainous road between Forks and Clallum Bay. The grade runs as high as 14 per cent, and one stretch of three miles is all gear work. Under conditions such as these, his truck has averaged 13 miles to a gallon of gasoline, and from the time of purchase up to the present date there has been no expense for repairs.

Rumania After the War.

A great majority of the large land owners of Rumania will be confronted by the problem of reequipping their estates after the war. Much of their land lies in the occupied portion where the soil is richest. They will find it necessary to replace oxen in great part with machinery, says a land owner who has large interest in Rumania. They will require easy terms of payment as they are for a time deprived of their revenues.

Athena Ranch Sold.

Joseph N. Scott has purchased of W. R. Taylor, of near Athena, Ore., the Mansfield land comprising 320 acres and 40 acres of the Dudley land adjoining, for a consideration of $50,000. The land adjoin 160 acres already owned by him, and with his home place, gives him 925 acres all west of Athena.

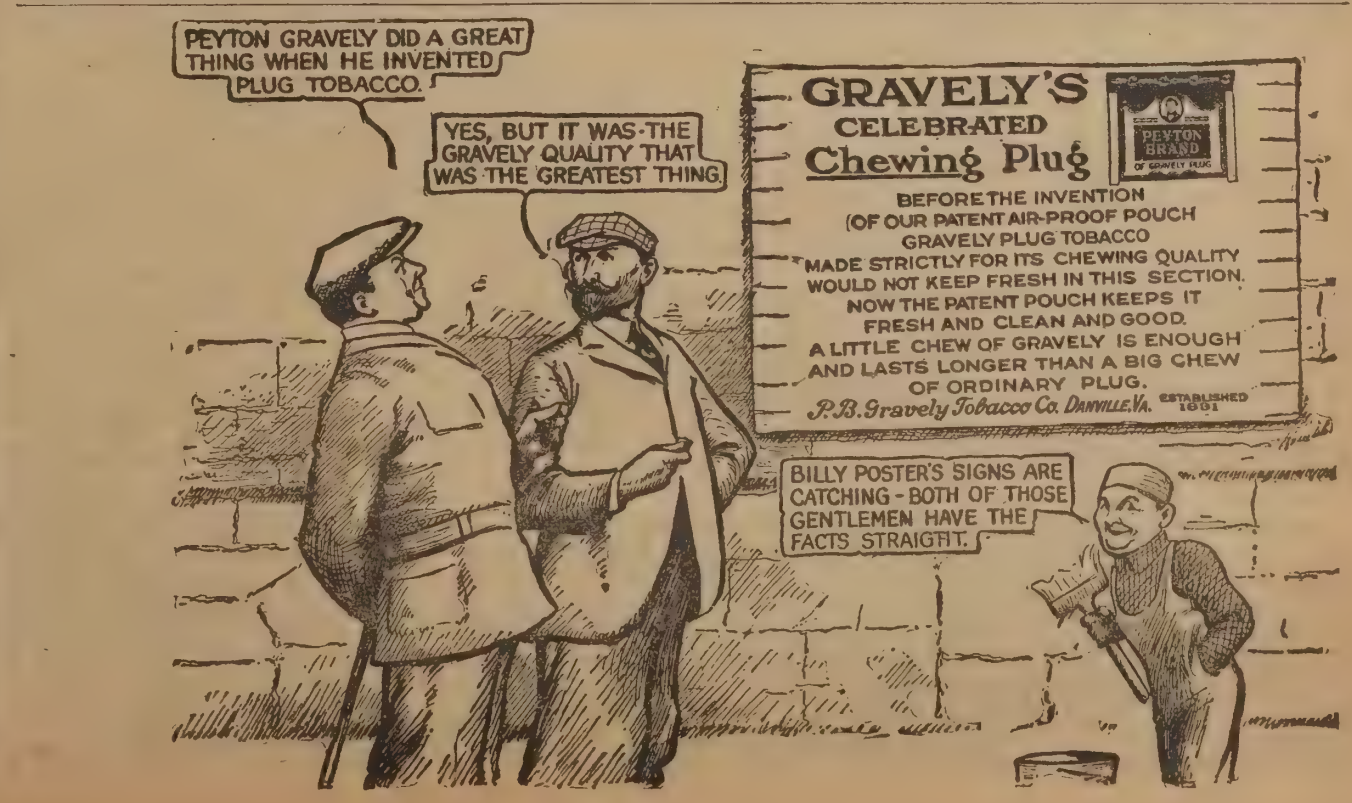
Again We Say—"Go To It"
Spokane Interstate Fair
and Live Stock Show

Spokane, September 3-8.

AND DON'T FORGET

The Pure Bred Live Stock Auction Sale
Friday, September 7, at fairgrounds.

Pure Bred Stock ONLY will be offered at this sale, to include cattle, horses, swine and sheep.
(Sale will be held in Judging Arena, in Live Stock Department, starting at 10:30 a. m.)



As stock judging will be completed on Thursday, this date (Friday, September 7) has been selected as giving exhibitors and buyers an exceptional opportunity to devote undivided attention to the careful buying of high class live stock.

Consignments should be made as early as possible. Sale Catalog will go to press on Monday, August 27th.

TERMS OF SALE—CASH, UNLESS ARRANGED WITH OWNERS.

Feeding Linseed Meal

To the Editor: 1. What is a good method of feeding poultry to keep them laying through the moulting period? and,

2. How should linseed meal be fed for best results.

I have often heard it advocated by those who ought to know that the best way is to keep chickens laying right through the moult by increasing the quantity of feed and the addition of certain other kinds in such proportions as to provide for both egg production and also new feathers at the same time, but I can not find any recommended formula. I recently purchased some linseed meal for this purpose, but now that I have it I am at a loss as to how to feed it. L. C. R.

Rupert, Idaho.

1. To get the largest number of eggs during the moulting period the fowls should be fed practically the same ration that has been fed during the rest of the year, providing, of course, that the ration gave good results. A little heavier feeding of bran, linseed meal and meat scrap is advisable. A little sunflower seed is also good at this season of the year. Less of the heat-producing foods, such as corn and wheat, especially corn, should be fed during the summer and early fall than during the winter. If a dry mash is fed in a hopper the meat scrap or fish scrap, whichever is fed, should be increased 20 or 25 per cent. If a moist mash is fed and the meat scrap is hopper fed the fowls will eat just what they need and this system on the whole is very satisfactory. It is very important also that the moulting hens have all the green food they can eat all the time. Free access to alfalfa will help them in the growth of new feathers and therefore shorten the moulting period. Other green food will serve the same purpose.

2. Linseed meal should be mixed in the mash, one part to six or seven of other ingredients by weight. The following will make a good dry mash for the hopper:

Bran, four parts; middlings or shorts, one part; ground corn, one part; ground oats or barley, one part; linseed meal, one part; meat or fish scrap, two parts.

If the mash is fed moist, omit the meat scrap and feed it in a hopper, keeping the hopper supplied all the time.

For whole grain food, give wheat, oats and barley, equal parts, fed in a stray litter. If corn is cheaper than wheat, omit the wheat and feed corn.

It should be understood that no system of feeding will keep the fowls laying all through the moulting period. We find that some individual hens lay right through the moult, but this is a question of hen, not feed, probably hereditary J. D.

Need Green Feed

To the Editor: I had about 30 little chicks, apparently in good health, till a few days ago, when they all began to look stupid and seemed to be sick. At first they would all stand around with their heads hanging down, then they were not able to stand up. They all seemed to get blind. Within two days 29 little chicks were dead. Now my old hens seem to be getting the same way. I feed my chickens corn and wheat and I give them milk and good, pure water to drink. Can it be the heat? C. R.

Edenbower, Ore.

It could not be said without further information and possibly an examination of the chickens whether this is a contagious disease or not. So far as the information contained in the letter would indicate it may very probably be that the excessive heat and the feeding were responsible for the losses. A high summer temperature combined with rather heavy feeding is hard on chickens and especially on overfat hens. It is much better in hot weather to feed liberally on mashes in which there is a large proportion of bran and to reduce the amount of whole grain fed, especially corn. The latter has a high caloric value, in other words a large percentage of the corn goes to the production of heat in the body. That is one of the uses of food, to keep up the heat of the body, and corn is especially high in heat value compared with most other grains. If the chickens were fed liberally on corn and wheat only, as the letter states these were fed, I would expect trouble during the excessively hot weather. The chickens should have an abundance of cooling green feed to eat and not too much whole grain during hot weather. They should also have plenty of shade.

If the trouble continues in the flock it would be well for you to make a postmortem examination of the different organs and then write us as to what condition you find them in.

J. D.

Cause of Scaly Leg.

To the Editor: What causes scaly leg on chickens and what is the cure? R. F. T., Dungeness, Wash.

Scaley leg on chickens is caused by a mite which works underneath the scales. The cure is to kill the mite. In ordinary cases it is sufficient to dip the leg in a can of coal oil and hold it there about half a minute. The oil works up under the scales and kills the mite. Use a tomato can and pour the oil in it till near the top. If there are considerable growths on the legs, it is well to rub them with vaseline or other ointment to soften the scales when they can be removed without causing bleeding. When the scales come off rub with vaseline.
